How California Prepares for Floods

By R. L. JONES, Deputy State Engineer in Charge of Flood Control and Reclamation.

THE State of California has materially increased its direct interest and activity in the maintenance of flood control works in the Sacramento Valley, where, in a large region of the state, a comprehensive system of flood protection is an accomplished fact. This has been brought about in connection with the revised flood control project plan, and the recent legislation of the state and the United States, in which the financial participation of both governments in the project has been substantially increased. The assumption of responsibility by the state, for a limited period, for the maintenance of flood control works, is a part of

R. L. JONES.

an active program of the state government for relieving the financial difficulties of the landowners within the project. It looks toward the liquidation of the large outstanding indebtedness, which has deeply involved the lands for a number of years.

Legislation and Appropriations.

As a matter of information, the arrangement being comparatively new, the details of the state legislation and appropriations in respect to this maintenance are set out rather fully below.

The Sacramento and San Joaquin Drainage District includes the lands in the Sacramento and San Joaquin valleys subject to inundation by flood waters and was created by the legislature in 1913. In 1927 the legislature, by the enactment of chapter 774, directed that the operation and maintenance of certain units or portions of the flood control works within the Sacramento and San Joaquin Drainage District in the Sacramento Valley shall be under the direction and control of the Department of Public Works and that the cost of such operation, control and maintenance shall be defrayed by the state. The act was amended slightly in chapter 387, Statutes of 1929, which provides that this arrangement shall continue for eight years, or until August 14, 1937.

The flood control works specifically placed

in charge of the Department of Public Works are as follows:

- (1) The east levee of the Sutter By-pass north of Nelson Slough.
- (2) The levees and channels of the Wadsworth Canal, the intercepting canals draining into the same, and all structures incidental thereto.
- (3) The collecting canals, sumps, pumps and structures of the drainage system of Project No. 6 east of the Sutter By-pass.
- (4) The by-pass channels of the Butte Slough By-pass, the Sutter By-pass, the Tisdale By-pass, the Yolo By-pass, and the Sacramento By-pass with all cuts, canals, bridges, dams, and other structures and improvements contained therein and in the borrow pits thereof.
- (5) The levees of the Sacramento By-pass.
- (6) The channels and the overflow channels of the Sacramento River and its tributaries within the Sacramento and San Joaquin Drainage District.
- (7) The Sacramento River outlet enlargement project below Cache Slough to the extent of the state's liability thereof.

These acts further state:

The Sacramento and San Joaquin Drainage District and the Reclamation Board and the members thereof, during said period, are hereby relieved of all responsibility or liability for the operation or maintenance

Levee revetment of quarry rock.

of all levees, overflow channels, by-passes, weirs, cuts, canals, pumps, drainage ditches, sumps, bridges, basins, or other flood control works within or belonging to the Sacramento and San Joaquin Drainage District.

The passage of this law places upon the Department of Public Works the entire responsibility, so far as the state is concerned, for the maintenance of the physical works of flood control. It imposes upon the Department the duty of maintaining and operating

TECHNOLOGY

1529943

the specific project units enumerated, which include, as near as the segregation can be practically made, all of the works of the Sacramento and San Joaquin Drainage District constructed for flood control purposes as distinct from reclamation. It was the intention to limit the expenditure of state funds to the maintenance of "flood control works."

Section 7 of the Reclamation Board Act was amended by chapter 343, Statutes of 1925, to include the following paragraph:

The operation, control and jurisdiction of all weirs on the Sacramento River, so far as the State of California is concerned, shall be under the direction of the Division of Engineering and Irrigation, Department of Public Works.

This has special application to the Sacramento Weir, which is the only one now built

Sutter By-pass, 300-h.p. vertical motor driving a 42-inch pump.

on the project requiring operation, the others functioning automatically. The maintenance of the weir structures is cared for by the Federal Government through the California Debris Commission.

The sum of \$150,000 to defray the cost of flood control project maintenance, was provided by chapter 766, Statutes of 1927, "to be expended by and under the direction of the Department of Public Works in the operation and maintenance of such of the flood control works of the Sacramento and San Joaquin Drainage District as by law may be imposed on the State of California." This appropriation was expended from September, 1927, to July 1, 1929.

Provision of funds for maintenance and operation for the current biennium is made

Timber toedam to prevent undercutting of levee.

in the budget appropriation act of 1929. This act provides as follows:

For maintenance, operation and emergency protection of the Sacramento flood control project, including the purposes contained in section 2, chapter 771, Statutes of 1927—two hundred thousand dollars (\$200,000).

Funds for emergency protection and co-operative bank protection work on the Sacramento River system are obtained from the above maintenance appropriation. It is contemplated in the revised project plan, which is the report of the California Debris Commission, dated January 5, 1925, that the cost of maintenance shall be divided practically as is the cost of the project, that is, one-third each to the state, the United States and the local property owners. The state appropriation of \$100,000 per year matches an equal amount made available by the Federal Government to the California Debris Commission for maintenance, both including bank protection work. It is presumed that local interests will expend an equal amount, making a total of \$300,000 per year. Whether or

The Why of Your License Plate; It's Easy Now to "Get Your Number"

By B. A. TRAVIS, Assistant Chief Clerk, Division of Motor Vehicles.

THERE'S a story behind the yellow and black automobile license plates which have begun to make their appearance in such large numbers on California highways since the Division of Motor Vehicles began its final license renewal drive.

These plates may not appeal to you as being either dainty or even pretty. The rather crude black letters stand out boldly against a background of deep yellow, giving a lasting impression, but rather lacking in artistic appeal.

They are not meant to be pretty. Their function is not to ornament the car displaying them, but to identify it. More than any other thing, have they served in the year just past to bring the "hit and run" driver to justice.

EXPERIMENTS MADE

Recognizing the inadequacy of the style of plate being used at the time he assumed office, Chief Frank G. Snook undertook a series of experiments to determine what style would provide the greatest degree of visibility.

Up to that time a small, rather aristocratic-looking plate had been used. When registrations increased beyond the million mark it became necessary to put seven numbers on one plate. The old plate was rather pretty, but it took a keen-eyed traffic officer to read it on a

The new and the old system of numbers, showing the greater visibility of the new system.

moving vehicle for a distance of more than fifty feet.

"Hit and run" accidents were frequent with the old plate. A few feet away and the driver was safe because no one could read his number.

GOVERNOR APPROVES PLATE

After casting about for several months Snook chose a plate modeled closely after the style adopted in New York. The choice met with the enthusiastic approval of Governor C. C. Young and the plate was adopted.

Colors of deep yellow and dull black were chosen as the combination with the greatest visibility. Yellow letters with a black background were used in 1929. These colors were reversed this year, providing a yellow background with black letters. Next year they will be reversed again to provide the same arrangement as in 1929.

The new plate is much larger than the old one, being 13½ inches in length and 6½ inches in width. It is of much heavier steel, and the old border that formerly detracted so much from visibility has been replaced by an inverted bead that will provide greater rigidity.

LETTERS CHANGED

The big change is in the lettering system. If you watch cars on the roads closely you will

Comparative visibility at 50 feet distance; old plate on left of auto, new plate on right.

observe no plate has more than six characters on it. Memory training lessons are not necessary for officers any more.

By using the combination of letters and numerals it is possible to provide for a registration of 2,070,000 without exceeding six characters on the plate.

Under the new system, the lowest number issued by the state has three characters. The first plate is number 1A1. They run from that to 9A9-999. The series then shifts to 1B1 and go up to 9B9-999 and so on through the alphabet to 9Z9-999.

The letters I, O and Q were left out because of their resemblance to the numbers one and naught.

NUMERALS ARE LARGE

These letters and numerals purposely are big enough to fairly shriek the identity of the driver. They are three and three-quarter inches in height.

There is a reason for putting the words "Cal" and "30" in inconspicuous positions. They were made small purposely so as not to detract from the visibility of the numbers.

Actual tests made on the roads show the new numbers can be read nearly three times as far away as the old ones.

Traffic officers reported a larger number of arrests of hit and run drivers last year than ever before. Fewer mistakes were reported in the reading of numbers. Drivers naturally reckless were made more cautious by the knowledge that they could be identified more easily.

Realizing this, lawbreakers have resorted to the practice of smearing their plates with grease and mud to make them illegible. Others conceal them partly behind spare tires or bumpers. Officers of the California Highway Patrol have been ordered to watch for such violations and to arrest any person caught driving with dirty or obscure plates.

KEEP PLATES CLEAN

In this connection, the division has issued a warning calling the attention of the motorists to a section of the law requiring that plates be exhibited on the car at a point not less than 24 inches from the ground.

Plates must also be fastened to the car in horizontal position. It is not legal to display them in a vertical position or at an angle, and they must be securely fastened.

It is now illegal to drive on any public highway with 1929 plates unless the driver can show he has made application for new plates.

After January 31st, drivers who have not applied for the new plates will have to pay

double. In the case of an ordinary passenger car this means a fee of \$6 instead of \$3. For commercial vehicles it means much more.

Motorists who have not done so should lose no time, therefore, in applying for new plates.

The renewal season now closing will exceed all previous records.

MUST PAY FEE

Another requirement for registration is that motorists must pay the \$1 transfer fee if they have made the final payment on the car during the year and have become the legal owner. Signing over of the pink certificate by the finance company or dealer actually means that ownership of the car has been transferred and this must be noted in the records of the division of motor vehicles.

Besides its main office in Sacramento, the division has six branch offices located, respectively, in Oakland, San Francisco, Fresno, Los Angeles, Long Beach and San Diego. This year's run of plates has been so apportioned to these branches that it will be almost possible to tell where a motorist is from by the letter and number of his license plate.

For example, a half million plates, running in numbers from 1A1 to 5F9-999 have been assigned to Sacramento for immediate delivery while numbers from 6F1 to 9F-999 have been assigned to the same office for open or later deliveries.

PLATES ASSIGNED

Numbers from 1G1 to 6H9-999 go to Oakland, while San Francisco will get numbers from 7H1 to 7K9-999. Fresno gets numbers from 8K1 to 9L9-999.

Los Angeles where the counter registrations are heaviest received everything from 1M1 to 9X9-999. Long Beach received numbers from 1Y1 to 9Y9-999.

The Z numbers, that is, everything from 1Z1 to 9Z9-999, of which there are 90,000 will be distributed to San Diego motorists.

California's example in adopting license plates that can be read is being followed in many other states.

Everywhere, state officials are reaching the conclusion that number plates have but one purpose—to identify the owner and driver of the vehicle.

A Chicagoan visiting Fond du Lac, Wis., had occasion to call Appleton. Upon asking what the charge was, he was told fifty cents.

"Fifty cents. For that distance? Great Scott! In Chicago you can call hell up for fifty cents."

"Possibly," coolly answered the operator, "It's in the city limits."

Problems in Road Building that California is now Investigating

By T. E. STANTON, Member A. S. C. E., Materials and Research Engineer.

THE comparatively recent advent of the motor vehicle occasioned the development of the new science known as "Modern" road building.

Road building, as such, is one of the oldest sciences. In the days of the horse drawn vehicle and slow transportation, however, the need and demand for good roads was relatively limited. The great increase in the wealth of the country and consequent astounding increase in volume and speed of vehicular traffic has occasioned a demand for good roads. The volume of expenditures and importance of the work justifies a thorough investigation and study of improved methods of construction to the end that greater ultimate value may be received for each dollar expended.

We are living in an era of Highway Research, and California, through its State Highway Department, has contributed its share towards the successful development of improved methods of construction and maintenance.

In carrying out this program over sixty special lines of investigation have been carried on during recent years. Many important investigations are now under way.

Some of the most important of these active investigations are the following:

Coarse aggregate department, showing abrasion, crushing and screening equipment.

One end of the asphalt testing department.

1. Study of Concrete Curing Methods.

The accepted method of curing concrete has been by keeping it moist with water usually for a period of ten days or more. Curing by water, however, frequently offers considerable difficulty and expense. Alternative methods of curing by means of an impervious membrane of asphalt, paper-sodium silicate, etc., have been offered and are being thoroughly investigated by this department. Pavements are cured by the different methods and cores cut and tested to determine, if possible, the relative strength secured. A number of sections have been constructed and are now under close observation. In order that the results may be comparable close control must be kept of the proportioning, mixing, and curing operations. Complete records must be kept of slump of the concrete and of the atmospheric conditions during and subsequent to construction.

2. Study of Metal Culvert Performance.

Four years ago a study was commenced of the condition of the corrugated metal culverts which have been installed on the State Highway System. The condition of some 5000 culverts was investigated at that time. This study has been continued and will be continued in the future to determine, if possible, the probable life of culverts made of

metals of different chemical composition. Methods of installation, maintenance, climatic conditions, etc., are being thoroughly studied.

This study has already brought about improved methods of culvert construction and maintenance which will materially increase the life of metal culverts, thus amply justifying the cost of the investigation.

3. *Admixture Tests.*

Extensive laboratory and field investigations are being conducted to ascertain the effect of various percentage admixtures of silica dust, pumicite, tale, and diatomaceous earths.

Advantages claimed for admixtures are improved workability and strength of concrete.

4. *Reinforcement in Concrete Pavements.*

Several test sections have been constructed and are now under observation.

5. *Impact Tests for Rock and Gravel.*

Studies are being made to devise an improved method of determining the quality of coarse aggregate for pavement construction.

6. *Studies of Hydration and Causes for Disintegration of Cement Concrete.*

This investigation is being conducted by our chemical department and is of particular importance in connection with concrete dam construction.

7. *Expansion Joint Materials.*

There is need of an efficient and durable expansion joint. Progress is being made in this direction.

8. *Development of a Quick Hardening Concrete.*

There is frequent need of opening concrete pavement to traffic at an early period after construction. Investigation is being made of the different special brands of cement on the market for this purpose and also relative to methods of using standard local brands for the same purpose.

9. *Study of Light Oil Mix Surfaces.*

Studies are being made relative to the best design of an oil mix as regards grading, oil content, etc.

The successful application of this relatively cheap method of construction has made possible the early improvement of many miles of desert roads at a low cost.

10. *Stability Tests of Asphaltic Concrete Mixtures.*

A great deal of thought at the present time is being given to the design of asphaltic concrete mixtures and the devising of methods of making accelerated laboratory tests which will determine the probable stability of such mixtures. Properly designed asphaltic mixtures should give many more years of service without excessive maintenance as compared with improperly designed mixes.

11. *Development of Accelerated Tests for Determining Quality and Durability of Traffic Line Lacquers.*

Work done to date has resulted in specifications for a high grade of traffic line lacquer with a resultant material saving in renewal costs.

12. *Development of Equipment for Measuring the Relative Coefficient of Friction in Bridge Expansion Plates Due to Differences in Finish and Character of Metal.*

Considerable progress is being made in this work. There is promise of development of procedure which will result in an ultimate saving both in original construction and subsequent maintenance and reconstruction costs.

13. *Non-Corrosive Coatings for Steel Bridge Members.*

An investigation is being made of the value of the various so called noncorrosive metal paints on the market. These tests are being made under adverse field conditions in a location close to the sea.

14. *Fillers for Asphaltic Concrete.*

Lime rock dust or Portland cement have, in the past, been specified as fillers in asphalt mixtures. Investigation is being made relative to the merits of other commercial fillers with a possibility of saving in construction costs.

15. *Miscellaneous Investigations and Studies of a Relatively Minor Nature Which Are Under Way May Be Mentioned as follows:*

(a) Comparative strengths of different brands of California cements.

(b) Field tests for determination of adverse soils.

(c) Strain gauge design and studies.

(d) Development of method for analysis of graphite paint pigments.

(Continued on page 27.)

Making the Prisons Safe at Night

By W. K. DANIELS, Deputy Chief of the Division of Architecture.

THE problem of the control of prisons is a twofold one, involving two very separate and distinct situations.

There is the problem of day discipline, when prisoners are assigned to various tasks, and when of necessity the measure of their liberty is greatly increased.

W. K. DANIELS.

Then there is the problem of night control, a problem much easier of solution than that of day control of prisoners, but which nevertheless presents difficulties of a character peculiar to itself.

It is in the problem of housing criminals that the Division of Architecture enters.

Prior to the housing of the criminal, there is, of course, the period of his capture and trial.

Radio equipped police stations may have had a part in the capture of the criminal, and cruisers and scout cars have patrolled the city in his search. The man hunt is well under way in a few minutes time. Capture of criminals is so certain that arrangements for their housing must be made months in advance of their crimes.

Housing of criminals demands their safe custody. The problem of their safe custody at night has been better solved than that of day control. It is noteworthy that the numerous prison riots and attempted "breaks" that have occurred in various parts of the country recently have taken place during the daytime. Why? Because when the prisoners are locked up for the night, they stay locked.

The Division of Architecture plays an important part by planning cell houses to make good this factor of night safety. At this particular time, the state through the Division of Architecture, is constructing a new unit at the Folsom State Prison. This

unit consists of a cell block, hospital and administration building.

During the daylight hours and in fair weather, all prisoners except those in solitary confinement, are released from the cell house and are detailed to work, some to constructions, others to the quarry, power house, gardens, grounds, etc. One finds prisoners incarcerated for various crimes ranging from petty larceny to murder scattered to all parts of the institution grounds. During this period of the day, escapes are prevented by the river and high walls, which are commanded by elevated towers containing armed guards.

When night comes the whole prison population is placed in cells and locked up. It

New cell block hospital and administration unit, Folsom State Prison.

is obvious that these cell buildings must be escape-proof for here you have a concentration of several hundred men, many of them desperate characters.

What might they not accomplish toward destruction and death under cover of darkness, if the cell buildings were not given thorough study as to planning and construction of absolute soundness and escape-proof?

A cell block is composed of a series of tiers erected inside of a fully enclosed building and constructed of heavily reinforced concrete. Should by any chance a convict free himself from his cell he would still be confined within a strong building.

The new cell block at the Folsom State Prison when completed will contain 310 cells being in tiers of five high and with a distance of 8 feet from tier to tier. The cells are constructed back to back having a utility chamber

separating them which contains the various plumbing pipes and ventilation ducts. The cells are 4 feet 6 inches wide and 11 feet long. Each contains a bed, lavatory and toilet fixture and each cell has mechanical ventilation. The cell fronts are built of heavy steel grilles having a grille door. Entrance to the cell is from balconies along the cell fronts, which serve the stairways at each end of the tiers. The cell doors, besides having a separate lock on each door, are securely locked by a heavy continuous steel bar dropped down in front of the door at the top which is free from any attempted tampering from the cell. This bar is controlled with a lever arm at one end of the tiers and secures all doors simultaneously.

The windows in the building covering the cell tiers are constructed of steel sash and

Section through new cell block, Folsom State Prison.

frames giving an abundance of natural light. By reason of the fact that certain sections of the windows open with awning type operators, plenty of air can be admitted when desired. It is needless to say that heavy steel bar grilles, embedded in the concrete walls on the outside, protect these window openings from any possible escape.

On the interior of the walls of this building completely surrounding the cell tiers are two guard galleries, constantly patrolled at night, which makes possible observation and control of the cells at all time. The guard galleries can not be reached from the cell balconies.

Convicts as other persons require medical attention, so a hospital building is very important and is a part of the unit comprising the new cell block. The Division of Architecture has planned a new modern

prison hospital which is being constructed. The plans for this hospital unit have been drawn to permit the best arrangement for dental, medical and surgical care, bearing in mind also the safety of the attendants handling the convicts while confined to the hospital.

This building is also constructed of heavily reinforced concrete being a three-story structure. The first floor contains a pharmacy, a laboratory with a vault for the storing of narcotics, etc., record room, doctor's office, clinic containing operating table, dentist chair, sterilizers, dark room, etc. On the second floor is a medical ward, kitchen, diet kitchen and serving pantry, dining room and quarters for nurses and attendants. On the third floor are two operating rooms having in conjunction with them an instrument room and sterilizing room, an acute surgical ward, a fracture room, doctor's washup and dressing rooms and rooms for fluoroscopy and radiography.

The present Administration Building was constructed prior to the year 1900. Not only has it become obsolete, but it is not located in the proper position that an Administration Building should be. This is due to the growth of the prison beyond the original plan.

The 1929 legislature approved an appropriation which authorized the construction of a new Administration Building. This construction is now being accomplished, as a unit of the new cell block and hospital building, comprising an extension of the same.

The new location is closer to the main entrance gate of the prison proper. The extension portion will be a two-story structure of the same type of construction as the other parts of the unit. The administration quarters will be on the first floor and will include an entry and reception room, warden's office, office for the secretary to the warden, board room, office for clerk of the board, room for narrative writers, files, barber shop, visiting room and prisoners' tank separated with a steel grille and screen to prevent a personal contact between visitors and prisoners, a mail department, telephone exchange, room for auditor, and a room for auditor's clerks having a file room and vault.

The second floor portion will be an extension of the hospital and will contain a medical ward, pulmonary ward, dining room and eight cells. A portion of this structure will contain a basement where the morgue will be located as well as an execution chamber.

The hospital and administration units are served with an elevator, stairways and corri-

New Location on The Ridge Route Unsurpassed for Mountain Alignment

A DECISION to relocate a section of the Ridge Route on the state highway between Los Angeles and Bakersfield, which has reached its maximum economic travel capacity, and which has proved excessively hazardous to travel, was announced by the California Highway Commission at its December meeting. Bids will be asked within the next few weeks on the first section of the relocated highway.

The decision to relocate the highway was reached after exhaustive studies by the Department of Public Works, showing that the

ment is evidenced by the fact that it will have a total of 7500 degrees of curvature against a total of 35,140 degrees on the present route.

While the capacity of the present road is overstressed by 1500 vehicles daily, due to its numerous grades, its almost continuous and sharp curvature, the large volume of slow moving heavy hauling traffic that uses it, the new road will have a safe and comfortable capacity of 12,000 or more a day, and its alignment standard will be such that when traffic justifies increased width it can be done without distorting that standard.

COMPARISON OF PRESENT HIGHWAY AND PROPOSED ALTERNATIVE

	Proposed route	Present highway	Difference favoring new route
Length	28.5 miles	35.8 miles	7.3 miles
Highest elevation.....	3550 feet	4234 feet	684 feet
Total rise.....	3350 feet	4630 feet	1280 feet
Adverse grade.....	940 feet	2220 feet	1280 feet
Minimum radius curve.....	1000 feet	70 feet	
Maximum grade.....	6% compensated	*6% uncompensated	
Minimum width roadway.....	36 feet	25 feet	
Total central angles in curvature.....	7500 degrees	**35,141 degrees	

* 6% grade has been greatly exceeded in short stretches where realignment has cut distances on curves.

** This is original alignment data. Reconstruction has probably reduced angles about 25%.

traffic load on the present location was costly of maintenance and operation; that the accident record on it was excessively high; that it fails to meet the traffic requirements of the present; and that these conditions could not be remedied by further expenditures on the same location.

ALIGNMENT UNSURPASSED

The new highway will be built to modern standards of construction with low maintenance cost and capable of meeting present and future traffic requirements. Engineers of the Department of Public Works state that its alignment for mountain construction will be unsurpassed by any in the United States. This remarkable character of the new align-

ment is evidenced by the fact that it will have a total of 7500 degrees of curvature against a total of 35,140 degrees on the present route. While the capacity of the present road is overstressed by 1500 vehicles daily, due to its numerous grades, its almost continuous and sharp curvature, the large volume of slow moving heavy hauling traffic that uses it, the new road will have a safe and comfortable capacity of 12,000 or more a day, and its alignment standard will be such that when traffic justifies increased width it can be done without distorting that standard.

PROVIDES SAFE ROADWAY

An important factor in determining upon relocation at the present time was the excessively high percentage of accidents on the Ridge Route, due to alignment and an overstressed travel condition. In addition to remedying these faults, the new location will be free from much of the fog, sleet and snow with which present routing contends. It lies in average lower and more protected position.

Upper heavy line shows new route adopted for state highway on Ridge Route; lower barred line shows present location.

Under agreement with the board of supervisors of Los Angeles County, the present route will be taken into the Los Angeles County road system, and with the opening of the alternate route, the state will be relieved of further maintenance costs upon it.

The change has been approved by Attorney General Webb.

LOCATION OF NEW SECTION

The termini of the relocated road will be at Castaic on the present highway to a reconnection with the state highway at Gorman, near Tejon Pass, a distance of 26 miles, and will effect a saving of 7.3 miles over the present route.

Exhaustive engineering study demonstrated that the most practicable location for this important artery connecting northern and central California and the region south of the Tehachapi Range is controlled by the Tejon Pass. The new location south of this pass differs from the present location by following drainage courses for a more direct southerly descent instead of traversing the ridges from which sudden descents must be developed on inferior grade and curvature. Thereby distance, curvature, adverse grades and steep grades are all reduced.

The grades on the alternate route are far more uniform and will have 1280 feet less elevation in rise and fall than the existing highway. The grade rates will be satisfactory for high gear operation.

The minimum radius of curvature will be 1000 feet, a sweeping alignment satisfactory for legal speed limits. This curvature gives long distance with consequent safety and relief from the strain of guarding against surprises on the sharp curves that characterize the present road, on which a number of curves are built with a radius as sharp as 70 feet.

Traffic census shows a 40 per cent increase in travel over this section in the past three

years, greatly overstressing the maximum economic capacity of the road. It is estimated that present travel will increase 175 per cent in the next ten years.

The Ridge Route was constructed in 1914 as one of the first projects undertaken by the California Highway Commission. The total motor vehicle registration of the state in that year was 125,516 as compared with a present registration of 2,015,418. The road follows the combs of the mountain ridges, adhering to contour alignment for economy in grading, in keeping as near as possible to the top of the ridges, several false summits are encountered on the route. Attempts to improve alignment have been made in the past at heavy cost, but the improvements have failed to do more than temporarily remedy defects, inherent in the original location. On the present routing, it has been found impossible to eliminate the general character of the continuous swing of reverse curves. The road is a marked example of the impossibility of adequately modernizing a location in a heavy mountain district with maximum grade on tortuous alignment. The condition of the road makes it unnecessarily detrimental to the proper flow of travel between northern California and the San Joaquin Valley on the one hand and Los Angeles and southern California on the other.

The new route lies west of the present Ridge Route. It starts near Castaic Post Office. After crossing a flat country for several miles, it begins its ascent on the west side of the canyon to pass over a saddle into Violin Canyon. The route crosses Violin Canyon to Violin Summit; thence it crosses Canton Creek and Oso Creek, and ascends Piru River and Liebre Creek to the divide between Liebre and Alamos Creeks. Thence it follows valley up Alamos Creek to a point 3 miles north of Bailly Patrol Station on the present road. It effectually eliminates the portion of the Ridge Route containing the worst features of that road.

U. S. Supreme Court Okehs California Tax Laws on Gasoline-Motor Vehicles

THE UNITED States Supreme Court on November 25, 1929, handed down a decision upholding the legality of California's gasoline tax laws.

The decision, which was rendered by Justice McReynolds, was as follows:

By acts approved July 11, 1916, chapter 241, 39 Stat. 355, and November 9, 1921, chapter 119, 42 Stat. 212 (23 USCA § 1 et seq.), Congress provided for aid to the states in roadmaking and directed that "all highways constructed or reconstructed under the provisions of this act shall be free from tolls of all kinds." 23 USCA § 9. California assented to the provisions of these acts and under them received large sums of money from the United States.

By the motor vehicle fuel tax statutes, chapter 267, Acts 1923, chapter 359, Acts 1925, and chapters 716, 795, Acts 1927, the California Legislature defined motor vehicle fuel, and directed that all distributors of it should be licensed and pay taxes to the controller of the state, amounting to three cents per gallon sold, less an allowance of 1 per centum. These statutes further provide for reimbursing purchasers of fuel not used for operating vehicles upon public highways.

Appellants, along with thousands of other citizens and taxpayers of California, operate motor vehicles along the highways. They have procured and must hereafter procure the necessary fuel from licensed distributors at prices enhanced by the amount of the three-cent tax.

The original bill, filed in the District Court of the United States, August 4, 1928, names as the only defendant the State Controller—the officer charged with the duty of enforcing the motor vehicle fuel tax statutes. It proceeds upon the theory that those statutes, under the form of taxing dealers from whom appellants and all other operators of motor vehicles must buy, in effect exact tolls for the use of the highways, also grant certain favors to the distributors, and deprive all such purchasers of their property without due process of law. Therefore, it is said, they conflict with the Fourteenth Amendment, the Federal Highway Acts, and the Constitution of California. The prayer is for a decree declaring their invalidity and for an injunction restraining defendant from attempting to enforce them, etc.

In the court below—three judges sitting—the bill was dismissed, without written opinion.

(1) Appellants may not undertake to test the validity of the questioned acts by a proceeding of this character. *Frothingham vs. Mellon*, Sec'y of the Treasury, 292 U. S. 447, 487, 488, 43 S. Ct. 597, 601, 67 L. Ed. 1078, announces the applicable doctrine:

"The administration of any statute, likely to produce additional taxation to be imposed upon a vast number of taxpayers, the extent of whose several liability is indefinite and constantly changing, is essentially a matter of public and not of individual concern."

The Federal courts have no power *per se* to review and annul acts of state legislatures upon the ground that they conflict with the Federal or state constitution. "That question may be considered only when the justification for some direct injury suffered or threatened, presenting a justifiable issue, is made to rest upon such an act."

The decree below is affirmed.

The Chief Justice, Mr. Justice Van Devanter and Mr. Justice Butler are of opinion that the appellants' status is such as entitles them to test the validity of the California statutes in question; that these statutes do not exact tolls for the use of highways within the meaning of the limitation contained in the Federal Highway Acts, and are not subject to the other objections urged against them; and that for these reasons the decree below should be affirmed.

TRANSPORTATION TAX UPHELD

On the same day the Supreme Court of the United States also upheld the legality of the tax imposed by California on carriers by motor vehicles over regular routes. In this decision the Supreme Court held that "A state statute imposing upon common carriers engaged in transporting freight by motor vehicles along public highways between fixed termini and over regular routes a tax of 5 per cent of their gross receipts, in lieu of all other taxes, is not unconstitutional as class legislation, though other freight carriers, common and private, by motor vehicles, are subjected to different and less burdensome taxation."

TEXT OF DECISION

The decision in full follows:

Appellants, as common carriers, are engaged in transporting freight by motor vehicles for hire along public highways between fixed termini and over regular routes within California. The 1926 amendment to the constitution and the statutes of that state lay upon such carriers a tax of 5 per cent of their gross receipts in lieu of all other taxes, while other freight carriers, common and private, by motor vehicles, are subjected to different and, it is alleged, less burdensome taxation. Cal. Const. art. 13, § 15; March 5, 1927, chap. 19, 1927 Cal. Stat.

By this proceeding, instituted July 21, 1928, appellants ask that the constitutional amendment and the statute which undertake to lay such tax upon them be declared discriminatory and in conflict with section 1 of the fourteenth amendment; also, that an injunction issue against the State Comptroller, forbidding him from attempting to enforce payment.

Upon motion, without written opinion, the district court—three judges sitting—dismissed the bill. The

Epochal Grade Crossing Decision Rendered by State Railroad Board

THE most important grade crossing decision in the history of California was handed down on December 7, 1929, by unanimous decree of the State Railroad Commission. The decision involved a grade crossing on the Bayshore Highway over a spur track of the Southern Pacific near San Mateo.

The California Highway Commission and the Department of Public Works opposed any grade crossing on this highway. The Southern Pacific held that the fact that the track was simply a spur track removed objection to its presence.

The issue was submitted to the Railroad Commission by agreement between the parties.

The decision of the Railroad Commission completely upheld the contention of the state that the Bayshore Highway should be kept free of all railroad grade crossings.

The mooted question of the priority of highway and railroad rights at the particular crossing was settled by the Railroad Commission distributing the cost of the overhead railroad structure, ordered by it between the state and the Southern Pacific on a fifty-fifty basis.

TEXT OF DECISION

The decision of the California Railroad Commission in full follows:

The Department of Public Works of the State of California, through its director, raised the question as to whether or not this Commission could afford the department any relief in connection with a controversy which had arisen between it and Southern Pacific Company, in connection with the construction of a new state highway (Bay Shore) over a disconnected spur track built by Southern Pacific Company near the southerly limits of the city of San Mateo. Thereupon the Commission, on its own motion, instituted an investigation into the installation, maintenance, protection and operation of said crossing. Hearings were held at San Francisco on October 18th and 20th, at which time both parties agreed to submit to the Commission, for determination, the question as to how the projected crossing between the railroad and highway should be effected and apportion the cost of the same.

The Bay Shore Highway is being constructed for the purpose of providing, in advance of development, a thoroughfare which can be maintained as a permanent high-speed artery to ultimately connect the city of San Francisco with San Jose by a route along the westerly shore of San Francisco Bay, which is, in general, at some distance from the built-up section of the peninsula. With the intense development of this

territory the need of this artery will be far greater than at present and it has been located so as to avoid the delays incident to travel over El Camino Real, the present state highway. If this purpose is to be accomplished, there must be a minimum of obstructions by the cities en route and by other agencies.

The highway has been constructed and is now open to travel between San Francisco and Fifth avenue, in the city of San Mateo. Beyond Fifth avenue, the proposed route follows a dedicated public street for a short distance and then continues across private property, known as the Emma Rose Estate. The state, at the present time, owns no right of way across the Emma Rose property but, on April 16th of this year, filed a condemnation suit against Emma Rose and Southern Pacific Company. It has declared its intention to construct the highway southerly from Fifth avenue to Palo Alto during the next year.

Southern Pacific Company has, for some time, carried on negotiations with the Emma Rose Estate for the construction of a spur track into the property to be developed for industrial purposes. On March 18, 1929, a fifty-foot right of way for a spur track, connecting with the main line of Southern Pacific Company near its Leslie Station, was deeded to Southern Pacific Company and immediately Southern Pacific Company laid approximately 1400 feet of skeleton track on this right of way, a portion of this construction being across the proposed routes of both the Bay Shore Highway and the Western Pacific California Railroad Company, a subsidiary of The Western Pacific Railroad Company. This skeleton track does not connect with any track of Southern Pacific Company and, at its nearest point, is 2200 feet distant from the nearest operative track. The ties on which the rails are spiked are widely spaced; no ballast has been applied and the entire construction is such as to be incapable of being subject to railroad operation even if it were physically connected to operative trackage.

The Commission can not recognize a mere intention of the state or other political body, to acquire a right of way and construct a public thoroughfare, as constituting a public road such as referred to in section 43 of the Public Utilities Act, nor, on the other hand, can it consider a few connected rails and ties, which are incapable of being operated over as a railroad, as being the track of a railroad referred to in that section. In the present case, however, a full and complete record as to the necessity, hazards, terms of installation and manner of crossing, has been developed and, since both parties have submitted the matter to this Commission for decision, it appears appropriate that the Commission finally determine the crossing matter at this time, particularly since it is apparent that both the highway and spur track will be constructed in the near future.

While the evidence in this case shows that for some time to come the switching operations over the railroad would not seriously interfere with the full use of the new highway, yet, if the purpose of the state

in the construction of this highway is to be realized, the greatest caution should be used in permitting the establishment of any obstacle to the flow of traffic.

From the record in this proceeding, it is apparent that a grade separation is physically feasible and can be constructed at a cost ranging between \$75,000 and \$115,000, depending on the type of structure used. The most feasible manner appears to be to carry the railroad track over the highway and depressing slightly the grade of the highway.

It is my opinion that this crossing should be constructed at separated grades in the above manner but the details as to the type of structure and the fixing of the grades should be worked out between the parties or, if the parties fail to agree, the Commission can then decide as to these details. In fixing the grade lines, attention should be given to the crossing of the spur with the proposed track of the Western Pacific California Railroad Company.

If the area proposed to be developed as an industrial area does reach the full development of which it is capable, the cost of a separation of grades will be very nominal when compared to the revenue derived from freight or the increased value it will give the land to be served. On the other hand, the moving factor in this grade separation is the greater convenience and safety for the automobile using public.

After carefully considering the record in this proceeding, it seems to me that the cost of constructing said separation should be equally divided between the Department of Public Works of the State of California and Southern Pacific Company.

The following form of order is accordingly recommended:

ORDER

The Commission having instituted an investigation on its own motion in the above entitled matter, hearings having been held and both the Department of Public Works of the State of California and Southern Pacific Company having submitted the matter to the Commission for determination as to the manner of constructing the crossing and apportionment of the cost:

It is hereby ordered, that if and when the Department of Public Works of the State of California and Southern Pacific Company, or either of them, desire to construct the crossing of a state highway and a spur track, in the vicinity of engineer's station 725, as shown on sheet 6 of Exhibit No. 1, entitled "Plan and Profile of Proposed State Highway in San Mateo County," filed in this proceeding, said crossing shall be constructed subject to the following conditions and not otherwise:

(1) Said crossing shall be constructed at separated grades and said separation of grades shall be effected by constructing the railroad track above the state highway.

(2) Said crossing shall be constructed with clearances conforming to the provisions of General Order No. 26-C.

(3) Before undertaking the construction of said crossing, a complete set of plans of the grade separation construction, together with profiles of the highway and the railroad, shall be submitted to the Commission, to be subject to its approval.

(4) The cost of effecting said separation of grades, including the approaches on the railroad and any excavation which may be necessary in connection with the change in grade of the highway, shall be borne 50 per cent by Southern Pacific Company and 50 per cent by the Department of Public Works of the State of California.

(5) Within sixty days from the date of this order,

U. S. SUPREME COURT OKES CALIFORNIA TAX LAWS ON GASOLINE-MOTOR VEHICLES

(Continued from page 11.)

cause is here by direct appeal; and the only matter for our determination is the validity of the challenged classification.

The power of a state in respect of classification has often been declared by opinions here. We are unable to say that there was no reasonable basis for the one under consideration; the court below reached the proper result; and its decree must be affirmed.

Appellants voluntarily assumed the position of common carriers operating between fixed termini and enjoy all consequent benefits. That a marked distinction exists between common and private carriers by auto vehicles appears from *Frost & F. Trucking Co. vs. Railroad Commission*, 271 U. S. 583, 70 L. Ed. 1101, 47 A. L. R. 457, 46 Sup. Ct. Rep. 605, and *Michigan Pub. Utilities Commission vs. Duke*, 266 U. S. 570, 69 L. Ed. 445, 36 A. L. R. 1105, 45 Sup. Ct. Rep. 191. Sufficient reasons for placing common carriers, operating as appellants do, in a special class, are pointed out by *Raymond vs. Holm*, 165 Minn. 215, 206 N. W. 166 (Dec. 4, 1925); *State vs. Le Fevere*, 174 Minn. 248, 219 N. W. 167 (April 13, 1928); *Iowa Motor Vehicle Assn. vs. Railroad Comrs.—Iowa*, —, 221 N. W. 364 (Sept. 28, 1928); *Liberty Highway Co. vs. Michigan Pub. Utilities Commission* (D. C.) 294 Fed. 703. Their use of the highways probably will be regular and frequent and, therefore, unusually destructive thereto. Also it will expose the public to dangers exceeding those consequent upon the occasional movements of other carriers.

Although relied upon by counsel, and said to be almost identical with the case at bar, *Quaker City Cab Co. vs. Pennsylvania*, 277 U. S. 389, 72 L. Ed. 927, 48 Sup. Ct. Rep. 553, gives no support to claim of undue discrimination. We regard the controversy as not open to serious doubt, and further discussion of it seems unnecessary.

said Southern Pacific Company shall notify this Commission as to whether or not it intends to construct said crossing.

(6) If said separation is effected, Southern Pacific Company shall, within thirty days after the construction thereof notify this Commission, in writing, of the completion of this work.

(7) If said crossing shall not have been installed within two years from the date of this order the authorization herein granted shall then lapse and become void unless further time is granted by subsequent order.

(8) The Commission reserves the right to make such further orders relative to the location, construction, operation, maintenance and protection of said crossing, as to it may seem right and proper and to revoke its permission if, in its judgement, the public convenience and necessity demand such action.

The effective date of this order shall be twenty days from and after the date hereof.

The foregoing opinion and order are hereby approved and ordered filed as the opinion and order of the Railroad Commission of the State of California.

Dated at San Francisco, California, this seventh day of December, 1929.

THOS. S. LOUITT,
C. L. SEAVEY,
EZRA W. DEOTO,
LEON O. WHITSELL,
W. J. CARR,
Commissioners.

New Highway Along Clear Lake

View on new highway bordering Clear Lake.

THE new section of state highway between Clear Lake Oaks and Lucerne was thrown open to travel on December 14, 1929. An elaborate program had been prepared to celebrate the opening of the road, but heavy storms forced its curtailment. Despite the rain, however, the occasion was duly feted at a banquet held at Lucerne. Robert Austin of the Redwood Empire Association presided as toastmaster, and felicitatory messages were received from many distinguished citizens, including a message of congratulations from Governor C. C. Young.

While the contract had not been entirely completed when thrown open to travel, grading and surfacing was practically completed. The section is a part of the Tahoe-Ukiah Highway.

The length of the section is 10.6 miles, and its cost is approximately \$285,000. The contractors are von der Hellen, Pierson and Logan of Medford, Oregon.

It has required one year to complete this construction, the contractor having started his work December 11, 1928. The highway as completed is graded 24 feet wide and surfaced with untreated crushed gravel 20 feet wide by 6 inches thick, which will be oil-treated during the coming summer. The material for surfacing was obtained locally.

Approximately 225,000 cubic yards of roadway excavation was required in this construction.

W. G. Tinney was resident engineer in charge of the work for the state.

This portion is the first unit of the Tahoe-Ukiah road completed between Ukiah and Williams.

The completion of this unit, together with other projects under way, will make the country in the vicinity of Clear Lake easily reached by highway transportation, the value of which is reflected in the desirability for existing and proposed residences and resorts along the lake.

The State Highway Patrolman

By B. B. MEEK, Director, State Department of Public Works.*

THE purpose of highways is to serve travel.

This being so, the safety, the convenience and the comfort of traffic must ever be uppermost in the minds of highway builders. The highway must be planned to make its use safe. It must be designed to make travel economical. And with these factors of safety and economy, there must always be included the additional factors of comfort and enjoyment in highway use.

But with all the care, the thought and the money road engineers and road builders can put into the highway, their entire effort will fail, if travel using the road is careless and reckless in such use.

The careless motorist can make the safest highway dangerous.

In a moment's time a reckless motorist can undo all the months of effort and time and can bring to naught the millions of dollars that have been expended in the attempt to make our highways safe.

Proper regulation and control of traffic are accordingly as essential to a GOOD highway system as are proper plans for its building and the use of proper materials in its construction.

Engineers and builders are the men behind the line in the battle for good roads. Maintenance forces and traffic officers are the men on the firing line. The maintenance engineers must see that roads once built are maintained in adequate condition for travel. Traffic officers must see that travel uses these roads properly.

This latter task is by no means a small one. I had occasion recently to summarize the job somewhat as follows:

California law permits a driver of an automobile to travel, under favorable conditions, at a rate of 58½ feet a second. The automobile manufacturers and distributors have seen to it that a large portion

of the machines on the highway are capable of traveling easily at the rate of 75 or even 90 feet a second. The hand and eye and mind of man can be coordinated by education to a marvelous degree but a 3000-pound automobile, traveling at a lawful speed of nearly 60 feet a second, or 40 miles an hour, is a force to be reckoned with at any time.

Multiply this by the hundreds of thousands of cars traveling our highways, each operating on its own schedule, coming and going, backing into and crossing traffic, as desire or necessity may dictate, and you have something of the picture of the problem that confronts the men who build and maintain highways, and those who seek to control their operation.

The problem of controlling traffic, however, is by no means, unsolvable. An assisting force in the fight for better highways is the fact that an overwhelming majority of motorists desire to be careful and to do the right

and fair thing by fellow motorists. The problem these drivers present is to bring to them a realization of the great, everpresent and immediate danger that lurks behind the least act in careless driving. The traffic officer becomes here a professor in the College of Safe Driving, the students of which extend over the world and are literally numbered by

THE TRAFFIC OFFICER A "COP" NO LONGER

The successful traffic officer accordingly must possess a rare combination of qualities.

He must be patient, even where impatience would seemingly be justified; he must be courteous, even to those who may not be courteous to him. He must be kindly without sacrifice of firmness. He must be both a teacher and an officer, his attitude instructive toward those who desire to be instructed, and his control courteous but immediate and certain, toward those who refuse instruction.

the millions.

Unfortunately there is a very small minority of motorists who either are congenitally reckless or who for some reason known only to themselves refuse to be careful. This class of drivers must be controlled with both firmness and sternness. Every moment that they are on the road, they constitute a menace to the life of other travelers. In this class belongs the drunken driver. Toward these drivers the attitude of the traffic officer must be that of a policeman, exercising his duties without fear and without favor.

The successful traffic officer accordingly must possess a rare combination of qualities.

He must be patient, even where impatience would seemingly be justified; he must be courteous, even to those who may not be

* Reprinted from the 1929 convention yearbook of the State Highway Patrolmen.

courteous to him. He must be kindly without sacrifice of firmness. He must be both a teacher and an officer, his attitude instructive toward those who desire to be instructed, and his control, courteous but immediate and certain, toward those who refuse instruction.

It may be an idle dream, but I have been hoping, since I knew the Division of Motor Vehicles was to become a part of the Department of Public Works, that we may be able to change both the attitude of some, not all, traffic officers toward the motoring public, and the attitude of the motoring public toward traffic officers.

It seems to me that the chief function of the traffic officer should be to expedite the movement of traffic with safety; that arrests should be made only as a last resort to accomplish this; that the "gas station" traffic officer and the one who lurks behind a tree to pounce out upon the unwary motorist will have to go; that the traffic officer should be a friend of the motorist aiding him in distress and assisting in making his travel safe and pleasant.

To accomplish this would mean that a traffic officer would patrol the highways, always in sight, and distinguishable to the traveling public by the color of his car and uniform. Color of car and uniform, however, will not of themselves accomplish the transformation. The attitude of some of our officers, although I am happy to say, not all of them, toward the motorist would have to change.

I have also hoped that we may be able to change the attitude of the motorist toward the traffic officer.

My observation has been that some men, who are normally courteous and considerate, lose every sense of obligation toward their fellow men when they get behind the steering wheel of an automobile. Happily again this does not apply to all drivers, but rather to a small minority. Their attitude seems to be that they are not only the sworn enemies of the traffic officer but also that they owe no obligation to show consideration for the other fellow's rights and the other fellow's welfare. I have sometimes thought that we should amend the slogan "safety first" to read **SAFETY FIRST For the Other Fellow**. It seems to me that a great many things come before safety first for ourselves. Honor should come first, and consideration for the safety and the wellbeing of the other fellow. Then safety for all would follow. A motorist should not feel angry when stopped by a traffic officer. He should feel ashamed. Let me suggest that if motorists would force themselves, just for

one day, to be courteous and considerate to fellow motorists, they would get so many thrills in that one day that they would never return to the old practices and the old ways.

If the motorist and traffic officer would both play on the same side, the old game which has existed so long between the two would no longer have any zest.

I have the utmost confidence that the California Highway Patrol will come to be known the world over for the possession of those qualities and the exercise of those duties I have attempted to outline in the foregoing paragraphs. I believe that there will be added to the reputation that California highways now enjoys for comfort and beauty, the further encomium that they are the safest in the world, and credit for this will belong to the California Highway Patrol.

MAKING THE PRISONS SAFE AT NIGHT

(Continued from page 8.)

dors of ample width for safe and quick access, and all floors have the necessary baths, toilets, storage spaces and accessories.

The exterior of the structure is designed in a modernistic style of concrete construction and has a military appearance.

The completion of this unit comprising the cell block, hospital and administration quarters will represent an expenditure of \$313,000 including furnishings and equipment.

The State of California in addition has also prepared to care for the expansion in our prison population by appropriations from the legislature of 1929 for a prison for first offenders and a new women's prison. These institutions will be entirely new ones and when proper sites have been selected and approved the Division of Architecture will be called upon to study and plan buildings and auxiliaries to cope with the exceptional housing problems.

With the exception of a superintendent of construction and a foreman to lead in the various trades involved, all labor on these new buildings is performed by the prisoners. We are sometimes asked if we do not have difficulty in handling the convicts during construction. The answer is "not very often," for insolence and disobedience will not be tolerated and such cases are referred at once to the proper prison authorities. If the offense is repeated the prisoner goes into the "hole," which means solitary confinement.

No Loafing For Gasoline Cash.

The speed with which the administration program is progressing to give employment to labor and to give roads to communities is revealed by the balances in state highway funds.

On November 30th cash balances in these funds were at their lowest point since April, 1927, which was before the one-cent gasoline tax became effective through the signature of Governor Young. The balances in the various highway funds on that date totaled \$3,656,917.52.

On the same date there were construction and improvement work orders outstanding amounting to \$10,668,427.15, practically all of which were contracts, and which exceeds the cash available by \$7,011,509.63. Total work order obligations including maintenance and preliminary surveys and plans, right of way and construction engineering totaled \$16,716,166.30, or \$13,059,248.78 in excess of cash available.

Therefore, even after the apportionment of gas tax revenue early in December amounting to \$11,710,898, there were work orders outstanding in excess of cash by \$1,348,350.78.

This policy of putting every dollar at work on the roads as fast as its receipt is assured will be continued.

Detour Maintenance Wins Praise.

The following letter speaks for itself:

Tracy, California,
December 11, 1929.

California Highway Commission,
Sacramento, California.
Dear Sirs:

Re: The highway between Tracy and Mossdale.

I think that the Highway Commission and also the contractor, Clyde W. Wood should be commended for

the speed with which this project has been completed and for the fine job that has been done.

The detour which was in use during construction was kept in the best condition of any detour over which I have ever traveled.

I am just sending this little word of praise because I know that probably words of criticism are more often received, and that you might enjoy some show of appreciation.

Very truly yours,

J. F. DOUGHTY, M.D.

* * * * *

Sounds Incredible But It's True.

Attached is a menu of one of the highway convict camps which has consistently kept its costs from 25 to 27 cents per meal:

BREAKFAST

Eggs, Fried
Hot Cakes and Syrup
Mush, Hominy, Gritz
Apple Sauce
Bread and Butter
Coffee and Milk and Sugar

LUNCH (In Camp)

Roast Rib Beef and Brown Gravy
Baked Potatoes—Beans
Asparagus
Lettuce Salad
Bread and Butter—Pie (Pineapple)
Coffee, Milk and Sugar

LUNCH (Sandwiches for Grade)

Bread and Butter With Pork Sausage, Frankfurters
and pickle filling
Cake and Fruit (Oranges)
Coffee, Milk and Sugar—Taken out while hot by truck

DINNER

Beef Stew and Rice
Lettuce Salad
String Beans
Potatoes (Boiled)
Coffee, Tea, Milk and Sugar
Bread and Butter
Doughnuts

Another Sign of Progress.

We quote in part from a letter received on December 3d by the California Highway Commission:

"Would you grant me a permit to build a new kind of college, hotel, airship port, automobile service station and hot dog stand on the state highway?"

Cornell Magazine Tells of California Highways.

W. F. Faustman, Assistant Engineer in the Division of Highways contributed the feature article to a recent issue of *The Cornell Engineer*. Mr. Faustman's article was entitled "Recent Progress in construction of California State Highways."

Federal Aid Roads Further Improved.

The following dispatch from Washington tells of the year's progress on federal aid roads:

WASHINGTON, Nov. 30.—More than 7400 miles of the Federal Aid Highway System were initially improved by the forty-eight states and Hawaii in cooperation with the National Government during the fiscal year 1929. Thomas E. Macdonald, Chief of the Bureau of Public Roads, announced in his annual report today. Initially improved highways are those upon which no federal aid funds have previously been expended.

Advanced stages of improvement, involving the surfacing of roads previously graded and drained, were completed on 1988 miles of the system. At the close of the fiscal year initial improvements were in progress on about 8358 miles and advanced stage construction was under way on 1167 miles. On that date the actual length of improved roads was 78,096 miles, or about 41 per cent of the total of 188,857 miles in the system.

The cost of the year's improvement was \$195,298,168, of which the Federal Government paid \$82,736,878 or 42 per cent.

Resolution Commends State Highway Work.

The following resolution was unanimously adopted at the ninth annual convention of the Redwood Empire Association:

WHEREAS, The California Highway Commission and the State Department of Public Works have rendered accessible the Redwood Empire counties in safety, comfort, and with pleasure and convenience, by improving the Redwood Empire system of highways during the past year, and

WHEREAS, The Director of the State Department of Public Works, also members of the California Highway Commission, also engineers and attorneys and other officials of the Commission, have cooperated with the Nine Counties Highways Committee of the

Redwood Empire Association at all times in working out the schedule of budget allotments and highway improvements, and

WHEREAS, These highway improvements and budget allotments have made possible the greatest influx of tourist traffic ever had by the nine Redwood Empire counties, which has added to the wealth and prosperity of the Redwood Empire as a whole, as well as to the Redwood Empire communities individually; now, therefore, be it

Resolved, That the officers, directors and the entire constituency of the Redwood Empire Association, including boards of supervisors, the press, chambers of commerce and all interests in the nine counties, do hereby express their hearty appreciation and their thanks to the State Department of Public Works and the California Highway Commission, and

Be it further resolved, That copies of this resolution be transmitted to all interested parties, and to the press.

Mountain Roads in North Kept Open Despite Storms.

The exceedingly heavy rains occurring in the mountainous districts in northern California between December 8 and 17 caused considerable damage in the way of slides and minor washouts.

Rains which reached the volume of cloud bursts occurred in the Sacramento Canyon district and caused many small slides. Only one or two large slides occurred and while they threatened for a time to close the road to traffic, the prompt attention on the part of the maintenance crews kept the road open continuously for traffic.

In Lassen County cloud bursts caused high water which damaged the road to a considerable extent near Doyle. In the vicinity of Chester the Feather River was out of its banks on a short portion of the old county road which is still under state maintenance, making it necessary to detour traffic around the lower end of Lake Almanor for several hours.

Reports coming in from other sections in the same general area show that while the rain was exceedingly heavy, no serious damage resulted.

KENTUCKY—A total hard-surfaced construction program of 200 miles, costing \$700,000, is outlined for counties in the western part of the state for 1930.

KANSAS—The Jayhawk state had a 1929 construction program with a total of 1875 miles, which included 800 miles of grading, 1000 miles "sand and gravel" and 75 miles hard surface.

MASSACHUSETTS—Under the direction of Jas. H. Taylor, highway landscape supervisor, the Department of Public Works is undertaking extensive and permanent beautification of the roadsides on state roads.

WATER RESOURCES

Salinity Investigation

The regular 76 salinity observation stations that were maintained during the summer have been reduced to 30 of which 26 will be continued as all year 'round stations as agreed at the conference of the Advisory Engineering Committee held on September 24, 1929. The regular drainage water stations are to be maintained until further notice. Additional tidal cycle salinity measurements were taken at locations where the desired salinity content and tidal characteristics could be obtained. Due to deficiency of precipitation the river has not increased in flow to an extent that warranted additional tidal cycle stream flow measurements in the various channels. The maintenance of the tide gages has continued and will be maintained throughout the winter. Analytical studies of stream flow and tidal data on relation of salinity thereto have been continued. Statistics on the growth of storage developments on the Sacramento and San Joaquin rivers have been completed.

Salt Water Barrier

A program covering the investigation and study of the economic as well as the physical aspects of the Salt Water Barrier below the confluence of the Sacramento and San Joaquin rivers has been tentatively adopted. However, the final set-up of procedure will not be determined until it has been reviewed and adopted by the joint State-Federal Commission.

The tentative program is designed to include:

1. An investigation and study of other possible sites and types of structure.
2. A study of the relation of the proposed barrier at the several sites to industrial, irrigation and reclamation developments; domestic water supply; flood control; navigation; fish industry; and other items in order to determine the benefits or detriments that would accrue in each particular instance.
3. An analysis to determine the economic feasibility of the barrier in relation to the various elements enumerated above.

The entire plan of the investigation is prepared with a view of evaluating the benefits that would be derived from the barrier and determining whether they would be commensurate with its cost. Until these economic features are thoroughly analyzed the relative value of a salt water barrier located below the confluence of the Sacramento and San Joaquin rivers as a unit in the state-wide plan of water development remains undetermined.

Six men are now employed on this investigation, five men in the office and one in the field. The field work has consisted of the collection of data on reclamation and irrigation developments in the area tributary to Suisun and San Pablo bays.

Bulletin No. 17, Southern California

Preliminary draft of five chapters of Bulletin 17 has been prepared and submitted to the consulting board, which will meet on December 17th in Los Angeles for the purpose of reviewing the report. If these chapters receive the approval of the committee they will be forwarded to the print shop immediately. One chapter yet remains to be drafted and submitted to the consulting board.

Santa Ana Investigation

The work on measurement of percolation from rainfall on the valley floor, measuring of stream runoff, rising water and losses in the stream and the work on transpiration from seeped areas, cultivated areas and areas in native vegetation has continued. In addition to this work it appeared on further study of the legislative enactment of the legislature of 1929 that further investigations into the plan of conservation of the water of the Santa Ana River were authorized and it was decided to take up the matter of spreading on the Santa Ana cone and on the various cones westward thereof belonging to the small creeks discharging on to the Cucamonga plain. Only work of a preliminary nature has been done to date, but a survey party will be in the field shortly to take topography, and it may be necessary to do some aerial mapping on the smaller streams.

Mojave River Investigation

Aerial survey of the entire area involved has been completed. Gaging stations on the two upper forks and at the lower site have also been completed. A map is being prepared of the valley.

Santa Maria River

Stations have been established on Sisquoc River, Cuyama River above the mouth of Huasna Creek and on Huasna Creek. The matter of a more general investigation into the ground water conditions in the valley has been further investigated and a program involving the expenditure of \$2,000 a year in addition to the maintenance of the above stream gages has tentatively been laid down.

Salinas River

Stations have been established on San Antonio Creek near the mouth and on Salinas River near the city of Salinas. The previous intention to place a gaging station on Nacimiento Creek was changed because it was difficult to get a station on that creek, and San Antonio Creek will, it is believed, give a similar unit run off, enabling an estimate of the water supplies from the west side to be made from the records as well as such an estimate could be made from the Nacimiento Creek records.

Santa Margarita Creek

Maintenance of the stations at Nigger Canyon and Temecula Canyon have been taken over as a part of the water resources investigation.

San Luis Rey River

Gaging station has been established at Bonsall and an additional one near Oceanside.

Gaging Stations in San Diego County

Discussions have been had with Mr. H. M. Savage, hydraulic engineer, city of San Diego, and it was agreed that the state would contribute \$75 per month toward the maintenance of stations at or near the international boundary on Campo, Tecate and Cottonwood creeks if the remainder would be contributed by the city of San Diego. However, these stations have not been established because it is felt desirable to secure the approval of the Mexican authorities on any sites for gaging stations which may be selected.

Whitewater River

A station was established on Palm Canyon Creek. In addition to this station, stations have been established on Whitewater River at the upper highway crossing and also below Indio. No attempt is to be made to meter the discharge of these two stations.

Kern River

The matter of gaging stations at Monache and on the North Fork near Whitney was taken up with the Federal Power Commission, but no decision has been reached by that organization to date.

Santa Clara Valley Investigation

November 5th the Santa Clara Valley Conservation District was approved by the voters and request was made to the state for a general hydrographic investigation of the entire Santa Clara Valley, of which San Jose is the principal city, by the State Division of Water Resources. The water plane in Santa Clara Valley has been dropping for many years past and the permanent ground water supply appears to be very much overdrawn by pumping. The program for conservation will consist in its first stages of spreading the runoff from the streams and causing it to sink underground, and probably at some future date in building reservoirs to iron out the peaks of the floods. The investigation desired is similar to those which the State Division of Water Resources has conducted in other coastal basins of the state. A tentative program for such an investigation was outlined, and as a part of the water resources investigation of the state it was agreed that one-half the cost of the investigation could be paid by the state under the appropriation of \$390,000 for water resources investigations made during the last legislature, if the district could advance the remaining half. This was agreed upon by the district and the investigation is being started.

San Joaquin Valley Investigation

About 20 miles of San Joaquin-Kings River Exchange Canal have been retraced and marked with pipes. Topography has been completed on about 6 miles.

About 60 miles of line have been located on the Kings River-Kern River Canal, cross sectioned, and special topography taken at stream and other crossings. The work during the last month has been particularly slow and tedious because of the location passing through the many orange groves in that vicinity. There remains about 5 miles of this type of work before the line emerges into the open country on the tule delta.

The U. S. E. D. survey of the San Joaquin River from Mossdale to Mendota has been completely checked and revised.

Tracing of the topography of the Mammoth Pool reservoir site proper has been completed.

Estimates of the water supply of the entire San Joaquin Basin have been prepared for the period 1889 to 1929 and averages for each stream basin and for the entire basin for the past 40, 20, 10 and 5 years have been made.

The Kings River investigation has been continued in close cooperation with representatives of the Federal Power Commission in San Francisco.

Sacramento Valley Investigation

The preliminary draft of report on Feather River has been completed. Water supply studies of streams in the Sacramento Basin have been continued during the present month. Classification of land and survey of crops have been made on 2,750,000 acres determined from field survey and on 537,000 acres based on data available in the office. Data have been gathered on actual use of water for irrigation and the probable use for certain crops from all available sources.

DAMS

The activities of this subdivision are being directed first to the prosecution of the current work before the office and second to the development of personnel and methods necessary to adequately handle the duties imposed upon the Department by the law providing for the supervision of dams. Considerable time is also being devoted to coordinating this work with other activities of the division in which much attention is being given to the rearrangement of the file system and the establishment of a direct and adequate method of interoffice exchange of data.

During the present month applications have been received for one new dam, namely, the Hansen Dam of the Los Angeles County Flood Control District, and for the revision of two dams, Lake Hodges and Black Rock. Sixteen applications have been received requesting approval of existing dams and two for revisions and alterations of dams already built. The total amount of fees received for the inspection of dams to December 14, 1929, amounts to \$47,062.26.

A total of 32 field inspections of dams has been made since submission of our last report, and certificates of approval have been issued for four dams, namely, Lake Hodges, Lake Almanor, Shaver Lake and Bear Gulch. During the present month a check of the plans and spillway capacities of Sunset Canyon and Hansen dams of the Los Angeles County Flood Control District has been made.

The consulting board retained to investigate and report upon the San Gabriel Dam has made an investigation of the Mulholland Dam of the city of Los Angeles, and is now preparing a report upon its findings. There has been considerable comment as to the safety of this structure, and it was therefore deemed advisable to have this same board make an investigation of this dam.

An analysis of the stresses in this dam has also been made by the Division of Water Resources.

RECLAMATION AND FLOOD CONTROL*Maintenance of Sacramento and San Joaquin Drainage District*

The project maintenance work on the Sutter By-pass system in Sutter County has, during the past period, been confined largely to routine maintenance

work, including the clearing of timber growth in the various flood channels. Arrangements have been made to operate a dragline excavator on a rental basis for cleaning out the Wadsworth Canal, the collecting canals and various intercepting canals.

Cooperative bank protection work is now under way on the jobs mentioned in the last report: Reclamation Districts Nos. 535, 673, 730 and 900; Robinson Bend on the Feather River; and Feather River at Nicolaus Bridge.

Emergency Flood Control and Rectification of Rivers.

The protection work at Lower Tyler Island for Tyler Island Farms and Libby McNeill and Libby has been completed.

Tentative arrangements for protection work in Reclamation District No. 317 on the San Joaquin River have been made; cost approximately \$8,000.

Sacramento Flood Control Project

Satisfactory progress has been made in the clearing work in Sutter and Butte Slough by-passes. A total of 170 men have been employed at four different places, and a contract for clearing 100 acres has been half completed. It has been necessary to discontinue most of this clearing work in the last few days on account of rain and flood water, but it will be resumed as soon as the weather permits. Two camps are in operation.

Contracts have been awarded for clearing in the Feather River channel above Oroville, as follows:

(1) To August Dentener of Marysville, 56 acres, \$2,777.

(2) To L. J. Fallon and A. Frandrup of Marysville, 26 acres, \$1,664.

(3) To C. F. Rednall of Marysville, 34 acres, \$2,606.

(4) To Robert Gisler of Marysville, 50 acres, \$3,200.

(5) To J. E. Ely and W. D. Zervales of Oroville, 70 acres, \$4,480.

Work on these contracts commenced about December 1, but was discontinued on the 12th on account of flood water.

Reports have been prepared on a number of applications before the Reclamation Board, a number of orders respecting applications have been written, and rights of way for the West Intercepting Canal have been secured, in which two condemnation suits have been filed.

Russian River Jetty

The work on the jetty is now confined to placing quarry rock, which involves the operation of the quarry and railroad. Approximately 100 tons per day are being placed with a crew of 14 men. This work will be carried on in this manner without change for a considerable time.

Pajaro River Flood Control

The work of clearing the channel of the Pajaro River is complete, having been finished on December 7, at a total cost of \$3,600. The local people are pleased with the work done.

Mokelumne River Improvement

Work has been continued in the channel of the Mokelumne River in collaboration with San Joaquin County and is approximately 80 per cent complete. The recent rains have hindered the work considerably.

Flood Measurements and Gages

Preparations are complete to send out stream metering parties if this work becomes necessary, and all water stage gages are in operation.

IRRIGATION, WATER STORAGE DISTRICTS

During the month the financial and economic investigations made of the Naglee-Burk, Palmdale and Little Rock Creek Irrigation districts have been completed and reports prepared thereon. Further investigations have been made during the present month as to the feasibility of dissolving the following inactive irrigation districts of the state, namely, Dry Creek, South Capay, Baker, Feather River and Fullerton.

Investigation is being made of the water supply and susceptibility of the lands to irrigation in the proposed Dixon irrigation district located in Solano County, the sufficiency of its petition being approved by the County Board of Supervisors and filed with the State Engineer for investigation and report of feasibility.

Conferences have been held with the proponents of the proposed Feather, Richvale and Dixon irrigation districts and advice given them in connection with the projects proposed. Also, considerable time has been spent in assembling data relative to the financial status of various districts in the state, and a study of their ability to meet their obligations is being made.

The California Bond Certification Commission has under consideration the matter of the approval of the sale of the \$108,000 of bonds by the Nevada Irrigation District for construction purposes of the district from the second division of the second issue of bonds of this district.

WATER RIGHTS

Applications

During the month of November, 32 applications were received, 20 were rejected and 30 approved. 13 permits were revoked, 9 licenses issued and one license revoked.

Snow Surveys

The work on the snow survey investigation has consisted chiefly in completing the arrangements necessary in each basin for stocking shelter cabins and caching equipment in readiness for making the surveys, some of which will begin about January 1. Arrangements are practically complete for making the surveys in each major watershed of the Sierras.

DECEMBER REPORT OF DIVISION OF ARCHITECTURE

GEORGE E. MACDOUGALL, Chief

Contracts awarded from November 21st to December 16th total \$346,076. This includes contracts for general and mechanical work for the two barracks buildings at the Veterans' Home, totaling \$327,606, and minor projects at the Norwalk State Hospital and the Industrial Home for the Adult Blind.

During this same period bids were received upon which awards are pending for projects totaling \$20,900.

Projects now out for bids include the training school and power house at the San Diego State Teachers College and wrecking Strauss Hall at the California School for the Deaf.

MOTOR VEHICLE DIVISION REPORTS

FRANK G. SNOOK, Chief

STATE PASSES 2,000,000 MOTOR VEHICLE MARK

California for the first time has passed the two million mark in the registration of motor vehicles. The total vehicles registered as of November 30, 1929, numbered 2,015,418, an increase of 184,813 or slightly more than 10 per cent over the same period in 1928.

Beginning with March, 1909, when the first \$18,000,000 bond issue was proposed in the state legislature for a state highway system, the registration totals for motor vehicles in California has increased as follows:

1909 (March)-----	10,600
1914 -----	123,516
1919 -----	477,450
1924 -----	1,350,752
1929 -----	2,015,418

STATE PRESSING NEW YORK

A comparison with New York registrations shows that California is pressing that state hard for leadership in the nation in motor vehicle registrations.

The New York figures as of December 1, 1929, are as follows:

Total registration of New York-----	2,293,565
Passenger cars of New York-----	1,872,677
Passenger cars of California-----	1,872,099

New York accordingly has 578 more passenger cars than California.

California leads, however, in the per capita ownership of automobiles with 2.87 persons per automobile as compared with 6.56 persons per automobile—New York.

1930 PLATES

All counters were opened Monday, December 16th, for issuance of 1930 license plates.

Mail applications were invited effective December 1st, but the response has been small, approximately 25,000 having been received up to December 16th. Certificates for those received by mail were practically all typed and were ready for mailing, but were held until after Christmas at the request of the United States Postal authorities.

License plates and necessary supplies sufficient for the 1930 renewal were on hand at all distribution points.

Certification for anticipated extra employees for renewal period at all branch offices was requested through and furnished by the Civil Service Commission, and as the extra help is needed, they were called from such list.

"Miranda, whassat light shinin' in yo' eyes?"
"Tha's my stop light, Rastus."

REGISTRATION FOR DRIVERS

The Division of Motor Vehicles has registered 2,550,956 applicants, who have passed an examination as required by law to drive motor vehicles. This huge task was made possible by the splendid assistance and cooperation given this department by 500 outside agencies, comprised of chiefs of police, county sheriffs, constables, judges and operator examiners employed by the Division of Motor Vehicles.

Without the cooperation of the various chiefs of police and law enforcing agencies throughout the state, and without their aid, a solution of the problem provided by law could have only been accomplished by training a force of 500 operator examiners throughout the state at an annual cost of \$1,050,000. At no time during the peak of the examination did the state exceed 59 paid operator examiners and at the present time is carrying on this work with 26 men.

CALIFORNIA HIGHWAY PATROL

The organization of the California Highway Patrol is progressing as fast as possible. The Purchasing Department has asked for and received bids on the necessary automobiles and motorcycles and as soon as the purchases are completed, motor equipment will be assigned to each officer of the patrol.

STOP, LOOK AND LISTEN

The one sure remedy for grade crossing and highway automobile accidents is safe driving. Accidents generally result from carelessness or incompetence. Instead of burdening the people with compulsory insurance, legislation and tax issues to eliminate all grade crossings, educate the public and enforce practical traffic codes. Reckless and drunken drivers should not be allowed on highways. They are a constant menace to life and property. Those who dash across grade crossings and give no heed to traffic regulations should, after warning be deprived of licenses. The railroads of the country, in their great work to reduce accidents, have succeeded in every phase of the problem but grade crossing collisions. It takes an average of seven seconds for a train to pass any given spot. Yet every year thousands of people, unwilling to wait the seven seconds, lose their lives. Accident reduction is mainly a matter of teaching drivers when to step on the brake instead of the accelerator.—*Pillager Herald*.

Professor: "Take the sentence, 'The Indian sneaked silently into the wigwams.' What tense?"

Mimi: "His sweetie's, I suppose."

Young lady motorist—"It's snowing and sleeting and I'd like to buy some chains for my tires."

"I'm sorry—we keep only groceries."

"How annoying! I understood this was a chain store."—*Judge*.

The efficiency expert is worse than the statistician but he belongs to the same breed. He will tell you that if a farmer's boy can pick six quarts of cherries in an hour, and a girl five quarts, the two of them together will pick eleven quarts. But any farmer knows that the two of them together will not pick any.

Cross-Section of Highway Thought On Problems Affecting All States

A CROSS-SECTION of the view of state highway officials on state highway policies and problems of common interest to all the states was contained in resolutions adopted by the American Association of State Highway Officials at their annual convention in San Antonio, Texas.

California was represented at the convention by C. H. Purcell, State Highway Engineer, and a member of the Executive Committee of the association.

The resolutions adopted by the convention, and which appear in full in the January issue of *American Highways*, covers the following subjects:

FEDERAL AID

Because—

The rate of progress in construction of federal aid highways is not keeping pace with the increase in motor vehicle traffic; and the several states of the Union, in answer to urgent public demands, have to date built more miles of the Federal Aid Highway System without Federal Aid than with it; and during the past year less than 10 per cent of the funds used in construction of state trunk line highways was contributed by the federal government.

It is urged that —

Congress increase the Federal Aid Highway Appropriation to \$125,000,000 for each of the fiscal years 1932 and 1933 and that the present appropriation for the fiscal year 1931 be increased from \$75,000,000 to at least \$100,000,000.

Because—

The Federal Aid System, approved by the Federal Government in 1921, and which connects all the county seats and main market centers of the country, is still less than 50 per cent even gravel surfaced.

It is declared that—

It would be unwise at this time to appropriate funds for any further mileage and that this Association recommend that the federal funds be concentrated on the present federal aid system.

Because—

The present limitation of \$15,000 per mile placed on federal aid participation in highway construction is burdensome to many of the states, in that it has no relation to the actual cost of construction; and because the construction of important gaps in the Federal Highway System are frequently delayed due to this limitation.

It is recommended that—

Congress reserve the limitation of \$15,000 per mile and that the Secretary of Agriculture be authorized to fix a base of participation in all cases with the sole limitation that Federal Aid should not exceed 50 per cent of the cost.

FOREST HIGHWAYS

Because—

The progress being made in the construction of the United States Forest Highway System is lagging behind that being accomplished on other portions of the Federal Highway System in such states; and the improvement of the said United States Forest Highway System is essential from the standpoint of providing continuous important transcontinental highways at the earliest possible date, which would not otherwise be provided until many years after the completion of the balance of the Federal Highway System.

It was voted that—

A bill now pending in Congress be endorsed. This bill increases the authorization for Forest Highways for 1931 to \$10,000,000. The proposed legislation increasing the authorizations for 1932 and 1933 to \$12,500,000 per year, was also endorsed, said increase to be applied on those Forest Highways located on the Federal Highway System until such systems in the several states have been completed.

HIGHWAYS OVER PUBLIC DOMAIN

Because—

The desirability of expediting the construction of interstate highways across the public domain and the progress now being made indicates the urgent necessity for increased federal appropriations for the construction of important connecting links on interstate highways across the forest reservations, unreserved public lands, nontaxable Indian lands, and other federal reservations; and without a large increase of public funds for this purpose it will be impossible for many years to complete transcontinental highway systems; and as the federal government controls a very large percentage of the total area of the 11 western public land states and for that reason should rightfully accept the burden of ownership at least to the extent of building and maintaining roads across its lands.

It was decided that—

The Association of State Highway Officials should go on record in favor of the enactment of bills now pending in the Congress of the United States, S. 121 by Senator Oddie, and a companion measure, H. R. 1416, by Representative Colton, which bills are

designed to lay the foundation for larger appropriations for the purpose indicated herein.

GRADE CROSSINGS

Because—

Progress in the elimination of crossings at grade between highways and railways, one of the major hazards to traffic, is largely dependent upon equitable division of costs between the railroad companies and the state highway departments.

It is asked that—

All of the states should enact statutes requiring the railroads to participate in the cost of grade separation structures and in line with well established precedent, the share of the railroad companies in the total cost of such grade separations, including all necessary approaches and drainage structures, should not be less than 50 per cent; and that all wigwag or flashing signals be installed on the right side of the highway approaching the grade crossing, and that center installation of such signals be used only when side installation is utterly impracticable.

ROADSIDE BEAUTIFICATION

Because—

There is a growing realization of the fact that in the best highway development there is found, in addition to construction and maintenance, a recognition of the aesthetic values present on or near every highway and that it is a proper function of the state highway departments to engage in highway beautification and in the preservation and development of natural and scenic attractions and aesthetic values made available by the highways; and as the construction of highways through natural scenic areas often spoils the doom of the natural beauty and attractiveness of the area by making it accessible for commercialization and denudation and realizing that certain highways are thereby robbed of the very features for which they were built; and as it appears practicable in many places to preserve roadside strips of natural country which may be held for the enjoyment of all the people; and as in many places the natural beauty of the countryside is made uninteresting or invisible by the presence of distracting advertising signs:

It was ordered that—

The Executive Committee of the association appoint a Committee on Roadside Beautification to deal with problems and studies relating to roadside parks, strips of natural timber screen, roadside advertising, and beautification.

TOLL BRIDGES

Because—

Private financial interests are still undertaking to commercialize and exploit the traffic on the roads of the state and Federal Aid highway systems by the construction and operation of toll bridges at points where traffic is concentrated as a result of the vast expenditure of public funds on the construction of these free highways; and these interests, in order to further their own schemes have actively opposed con-

struction and financing bridge programs of properly constituted public authorities; and, in spite of the fact that Congress has, during the past year, in granting franchises to privately owned toll bridge companies, strengthened the situation by making additional requirements of these toll companies to protect the public, there are still a number of features not included in the franchise forms used by Congress, and since the general bridge law, which was passed March 23, 1906, is deficient and the Congress should reenact laws covering the entire toll bridge situation;

It is resolved that—

The American Association of State Highway Officials, is unalterably opposed to privately owned and controlled toll bridges upon state and Federal Aid systems of highways, but is not opposed to publicly constructed, owned and operated toll bridges where adequate public funds are not available for immediate construction of the free bridges needed to complete the interstate and intrastate highway systems as planned; and

That before any additional franchises are granted, the general bridge law should be changed so that the following requirements should also be included in all future franchises granted:

1. All franchises should be effective only on state approval as to location, design, plans, specifications, etc.
2. State supervision of construction.
3. Limitation of amount of securities.
4. Any appreciable change in bridge plans should be subject to approval by the state and should require re-advertising for bids.
5. State supervision of maintenance.

It was further resolved that the association recommend to the Committee on Interstate and Foreign Commerce of the Congress of the United States that it withhold its approval of any measure authorizing or consenting to the construction of a privately owned toll bridge on the state or Federal Aid highway systems unless after a thorough investigation the committee has determined that there is a lack of financial resources or intention of the proper political subdivisions to finance and construct a free or publicly owned toll bridge; and

That the association recommends that there be included in every congressional authorization or consent for the construction of privately owned toll bridges on the state or Federal Aid highway systems, a provision that the bridge, when completed, may be acquired by the public at any time by the payment of an amount not greater than its original cost less reasonable depreciation due to use and the cost of replacement of faulty construction and design.

MOTOR VEHICLE REGISTRATION

Because—

There is considerable variation in the practice of licensing motor vehicles in the several states, some states having an adequate fee which is in lieu of all other taxes, while others have a nominal fee supplemented by a personal property tax;

It is recommended that—

Such states as are issuing such licenses and license plates upon the payment of a nominal fee, that the applicant for a license be compelled to submit a tax receipt showing that all additional taxes contemplated by the laws of the states have been paid, before such licenses and license plates are issued.

HOW CALIFORNIA PREPARES FOR FLOODS

(Continued from page 2.)

not this amount will be found adequate and the division equitable through a period of years remains to be determined by experience.

Organization.

The duties of the Department of Public Works in respect to flood control and reclamation are delegated to the Division of Water Resources, which succeeds the old Division of Engineering and Irrigation. The activities of this division in connection with the maintenance of the flood control project were commenced in September, 1927, and have been carried on continuously since that time.

The routine of maintenance consists of keeping in repair and condition the various works, levees and channels under the direct care of the division, and is carried on during the entire year by an organization engaged exclusively on this work, which includes bank protection. During the flood season, this force patrols and inspects various levees and works, and is prepared to protect weak places as they appear and to make necessary repairs. Equipment, tools and supplies are kept available for immediate use in emergencies. Both the routine maintenance work and the special work which must be done each year during the flood involves work of many varieties, and the crew is so organized that it may be expanded rapidly, with the various gangs in charge of foremen experienced in the particular kind of work required to be done.

During the year the size of the maintenance force varies from about thirty to seventy men, except during emergency when the number may be considerably greater. The larger items of work in connection with the routine maintenance, particularly replacements and improvements, are usually done by contract, but the nature of the greater portion of the activities is such that it can best be performed directly by division forces. The bulk of the routine work is in connection with the Sutter-Butte By-pass Project No. 6 in Sutter County. This is in charge of a maintenance foreman with headquarters in Sutter City, which is also a central point for carrying on activities in the northern portion of the Sacramento Valley, extending from the vicinity of Marysville and Colusa north. All river bank protection work and work in the southern portion of the valley are done directly out of the Sacramento office of the division.

Routine Maintenance.

The levees are kept free of noxious weeds and burrowing animals and the roads on the levees are kept in repair. These roads are used to a considerable extent by the public, but during wet weather the levees are closed by gates so that the surface will not be cut by traffic, when the maintenance force only is permitted to pass along the levees. Willows have been planted along the east levee of the Sutter By-pass for a distance of eleven miles, to produce a growth which will protect the levee from wave wash. The by-pass channel at this place has a width of 4000 feet, and the levee is exposed to a strong wave action during heavy south and southwest winds. These willows are planted in five rows five feet apart at the base of the levee, and it is necessary to irrigate them in the same manner that an orchard is irrigated. It is expected that an effective growth will be produced along a greater portion of this length within a period of three years. At the present time, all of the project levees are in good condition and there are no known weak points.

Pumping plants are maintained and operated to care for the intercepted drainage east of the Sutter By-pass. There are three of these plants, with a total of nine pumps and electric motors of 1500 total horsepower. Drainage water is conducted to these plants through 46 miles of canals of various sizes. These canals are kept clean and the canal structures, which are mostly bridges, are kept in repair.

In the by-passes there are numerous structures requiring maintenance, including bridges, weirs, bulkheads, jetties and current controlling structures. These are mostly of timber and require continuous repair. Some of them have been built for a number of years and replacements are necessary from time to time, which is done as maintenance.

A telephone system consisting of 30 miles of line and 12 telephones connects various parts of the project in Sutter County with the headquarters at Sutter City.

By-pass Clearing.

One of the most serious and vexatious problems in connection with maintenance is that of keeping the by-passes and overflow flood channels clear of timber growth. No feasible and economical method has yet been devised to accomplish this, aside from cutting by hand labor. It is estimated that the area in the by-passes and the overflow channels on which there is a tendency for timber to grow exceeds

6000 acres, much of which has never been cleared.

The clearing of land which has once been cleared is a maintenance operation and approximately \$20,000 per year is spent on this work. It is hoped that eventually those areas in the by-pass which are suitable for cultivation will be put into crop of some sort to eliminate the cost of clearing each year.

Through a state appropriation for new flood control project construction, there has been made available to this office the sum of \$65,000 for clearing land in the Sutter, Butte Slough and Tisdale By-pass, and the sum of \$27,500 for clearing along the Feather River overflow channel. Up to the time it was necessary to discontinue work on account of flood waters, on December 13, three crews were engaged on clearing with a total of 180 men. These were in charge of our own foremen, and were mostly local people. The opportunity for employment on this work was of very great benefit to the citizens in Sutter County. One contractor is also operating a camp in Sutter By-pass with a force of 50 men. This division maintained two camps of 60 men each, and it is proposed to reopen these camps and continue the clearing work as soon as the weather permits.

The clearing work along the Feather River is all being done under contract, at an average price of \$60 per acre. Six contracts have been let covering 60 per cent of the total work to be done, and were all under way during the recent December storm, when work was temporarily discontinued.

It is difficult to picture the varied activities of this division in connection with flood control and reclamation without going into considerable detail. Bare mention can be made here of the numerous things now being done, and no attempt is made to cover the subject of the Sacramento Flood Control Project itself or new construction, in which there is an increasing activity. In this biennium the State of California is expending \$350,000 for new construction in a program involving a total expenditure of \$721,000, in which the Federal Government and local interests participate.

Flood Gagings and Measurements.

During the winter season this division operates 32 automatic water stage recorders in the flood channels and obtains readings from about 50 staff gages. Preparations are complete and the necessary equipment is assembled to send 12 parties of engineers into the field during flood at a few hours notice to measure the quantity of water flowing at

certain strategic points in the flood channels. At certain places rating curves are being established and measurements are taken at various times during the winter. Each season the results of these observations and measurements are compiled in a mimeographed report, making the data available to all who are interested. These data are of particular value in engineering studies relating to flood control, and are obtained primarily for this purpose.

Careful watch is kept on flood stages to give out warnings, to determine when measurements are to be taken, and to guide in the operation of the Sacramento Weir. The weir is lighted and patrolled continuously during the time water is against the gates. The gates have not been opened since March, 1928, when all of the 48 gates were opened for the first time.

Bank Protection.

For a number of years in the past, the state has made appropriation of funds for the use of the State Engineer in rectifying river channels, protecting river banks and performing emergency flood work. Expenditure of this money was usually made in cooperation with other agencies. During the biennium ending June 30, 1929, this cooperation has been required, in which the state usually paid one-third of the total cost. This was known as the "river fund" and is discontinued in the present biennium. The corresponding work for the rivers in the Sacramento system is done out of the flood control maintenance appropriation, and the work in the other rivers of the state is cared for out of a small appropriation for "emergency flood protection and rectification of river channels in cooperation with other agencies."

The protection of banks of the river channels is an essential preparation against floods. The division has recently done, is doing or preparing to do, bank protection work on the Sacramento project in cooperation with other agencies, as follows:

Feather River at Robinson Bend, in cooperation with Butte County and landowners, slough closure	\$8,000
Feather River at Nicholas, in cooperation with Sutter County, seven tree and steel current retards	12,000
Feather River at Nelson Bend, in cooperation with Southern Pacific and California Debris Commission, bank replacement and protection	67,000
Sacramento River near Princeton, in cooperation with Levee District No. 3, repairs to current retards	3,000
Sacramento River near Knights Landing, in cooperation with Reclamation District No. 730, nine tree current retards.....	19,000

Sacramento River at Chicory Bend, in cooperation with Reclamation District No. 900, quarry rock protection-----	\$3,200
Sacramento River at Oak Hall Bend, in cooperation with Reclamation District No. 335, quarry rock-----	3,000
Sacramento River near Isleton, in cooperation with Division of Highways, piling toe wall with bank pavement-----	17,000
Georgiana Slough on Tyler Island, in cooperation with Tyler Island Farms and Libby, McNeill and Libby, timber bulkhead-----	3,000

Most of the above work, especially the construction of bulkheads and current retards, is done by contract, but the placing of quarry rock and the smaller work are done directly by the division. The division has in service a river fleet consisting of seven barges, including mess and sleeping quarters, derrick work barge and pile driver, and also several launches. This outfit is used for certain classes of bank protection work, is well equipped, and may be moved in emergency to any point on the Sacramento project on navigable water.

Outside of the Sacramento Valley.

While the division's maintenance of flood control works is confined to the Sacramento Valley, cooperative bank protection and river rectification work may be done on other streams wherever local interests require it. A small amount of this work has been done regularly in the past few years on the Mad River in Humboldt County, on Yager Creek in the same county, and on the San Joaquin River. Assistance may be rendered at any place during emergencies in flood time.

As provided in chapter 447, Statutes of 1929, the division is improving the channel of the Mokelumne River in collaboration with San Joaquin County. The river and part of the overflow channel are being cleared of timber growth, and numerous snags are being removed, at a cost of \$12,500. The work will be completed by January 8, by a force in charge of a foreman of the division. It is expected that an equal amount will be available to continue the work next year.

In cooperation with the counties of Santa Cruz and Monterey, the channel of the Pajaro River at Watsonville has been cleared of timber growth at a cost of \$4,000, by authority of chapter 524, Statutes of 1929. This was completed on December 23 by a crew in charge of a division foreman, and is a continuation of work undertaken last year, when \$7,500 was expended. A protective district is being organized to control the floods of the Pajaro River from which there is now no protection other than a clean, natural river channel.

Vol. 8 JANUARY, 1930 No. 1

PROBLEMS IN ROAD BUILDING THAT CALIFORNIA IS NOW INVESTIGATING

(Continued from page 6.)

- (e) Asphalt emulsion tests.
- (f) Asphalt extractor.
- (g) Investigation of methods of casting concrete test cylinders to secure uniform results.

(h) Alternate designs of reinforced concrete cribbing members.

Many old studies which were presumably completed are still under observation and are being supplemented from time to time by subsequent information.

The making of new tests and the carrying on of special investigations frequently involves the design and manufacture of new equipment for the purpose. Such equipment is designed and built in the Laboratory and Equipment Shop at Sacramento.

Several such items of equipment may be mentioned:

- (a) California type of field beam breaking machine.
- (b) Asphaltic concrete stability testing machine.
- (c) Strain gauge.
- (d) Equipment for measuring friction of expansion plates.
- (e) Sticky machine for measuring stickiness of asphaltic oils.

(f) Apparatus for determining soil compaction.

(g) Asphalt extractor (California design).

When studies are completed or the preliminary information secured is of such a nature that it is deemed of value, articles are prepared and published from time to time describing the work done and results secured.

Sub: "Can you name the three orders in architecture?"

General: "Sure! First mortgage, second mortgage, and foreclosure."

WEATHER CONDITIONS IN DECEMBER

By R. L. JONES.

DURING the month of December, 1929, the weather in general throughout the state was not abnormal in most respects in comparison with December weather in past years. The only feature at all unusual was the concentration of rainfall, into the single storm of the month and over that portion of the state north of San Francisco and Stockton. During the month of November and to December 9th, no rain fell at any point in the state.

On December 9th the storm commenced, centering its rainfall in the drainage basins of the Sacramento and Feather rivers, and continued until the 15th, with light rains only falling for the next few days. Some rain fell during this storm over most of the northern part of the state. The heaviest recorded precipitation in 24 hours was at Kennett on the upper Sacramento River on December 12th, when 10.79 inches fell, followed on the next day by 3.14 inches. The storm extended into the lower San Joaquin Valley with light rains only. A fall of 11 inches was reported from Buck's Valley on the Feather River on the 11th.

On the North Pacific coast fairly heavy rains fell, but not out of the ordinary. The maximum at Eureka was 1.35 inches on December 14th. The heaviest rain at Santa Rosa was 3.32 inches on December 10th. There was no rain at Bakersfield, Los Angeles nor San Diego. December storms in the past have usually been more general, with some rain in southern California, and also have usually been spread out more evenly throughout the month.

At the beginning of the new year the precipitation throughout the state was far below normal, and in the northern part, where the only considerable rain fell, it is not more than two-thirds of normal, in spite of the fact that in some parts the December storm precipitated rain in excess of the monthly normal. At Sacramento the seasonal rainfall to January 1st has been 4.21 inches as compared with a normal of 6.32 inches. There is practically no snow in the Sierra Nevada, while normally there should be at least 5 feet, hard packed.

No direct general comparison of the weather conditions in the December just past can be made readily with Decembers in previous

years, on account of the unusual distribution of rainfall, both as to time and locality.

At the beginning of the storm all the rivers in the Sacramento Valley were at extremely low stage, but none of them reached dangerous heights. The highest water was in the Sacramento and Feather rivers. The gage at Sacramento read 23.0 as against 26.5 in the March, 1928, storm. The water reached 14.0 on the Marysville gage, while it was at 24.0 in March, 1928.

Water passed down the Sutter By-pass and Tisdale By-pass and discharged over Fremont weir about 2 feet deep. The tidal reclamations in the lower Yolo By-pass were flooded, as was Prospect Island. There was no need to open the gates of the Sacramento weir for this storm.

Why shouldn't husbands be left at home while wives go vacationing? Somebody must consume the sardine catch.

Who remembers the old-fashioned hick who felt real wicked and devilish while watching the Bloomer Girls play baseball?

How the pastor talked to the highwaymen who sought the cash that he did not have: "Ah, gentlemen, I might, indeed, have something to give you if only I had such energetic fellows as you to pass the plate now and then."—*Christian Register*.

"Yassah," said old Link, "business very good. Done bought a pig fo' ten dollars, traded pig fo' a barrer, barrer fo' a calf, calf fo' a bicycle, and sol' de bicycle fo' ten dollars!"

"But yo' don' make nothin,' Link!"

"Sho' nough, but look at de business ah been doin'."—*Montreal Star*.

"Anatomically considered, laughter is the sensation of feeling good all over, and showing it principally in one spot. Morally considered, it is the next best thing to the Ten Commandments. Theoretically considered, it can out-argue all the logic in existence. Pyrotechnically considered, it is the fireworks of the soul. If a man can't laugh, there is some mistake made in putting him together, and if he won't laugh he wants as much keeping away from as a bear-trap when it is set."—Josh Billings.

An old colored woman who came to the Governor of Tennessee:

"Marse Govenah, I want my Sam pahdoned," said she.

"Where is he, auntie?"

"In de pententuary."

"What for?"

"Stealin' a ham."

"Did he steal it?"

"Yes, sah, he suah did."

"Is he a good nigger, auntie?"

"Lawdy, no, suh. He's a pow'ful wo'thless niggah."

"Then why do you want him pardoned?"

"'Cause, yo' honoh, we's plum out of ham ag'in."

Congress Urged to Enlarge Road Aid

THE FOLLOWING article is from the *United States Daily*.

There are two schools of thought in congress regarding increased appropriations for federal aid to the states for the federal aid highway system throughout the country. Representative Kelly (Rep.), of Pittsburgh, Pa., stated orally October 11. The major element in congress in all probability, he said, favor augmented highway facilities. The opposition is on the ground that the more prosperous states are carrying on the burden of the less prosperous. Mr. Kelly is a majority member of the House Committee on Post Offices and Post Roads.

"I believe the sentiment of the country and of congress favors expansion of highway facilities," Mr. Kelly said: "I am in favor of the announced program of the chairman of the House Committee on Roads, Representative Dowell, of Iowa, for \$145,000,000, instead of \$75,000,000, annually for federal aid for highways and for \$10,000,000 instead of \$7,500,000 annually for roads and trails in the forest reserves of the United States. I would favor going even further than that increase, if it should be felt to be necessary and the federal government and the states could properly and economically make use of such augmented funds each year.

OPPOSITION NOTED

"I realize that there is opposition from some in the east. They take the position that we are taking out of the income tax revenues of the east to help carry the road burdens of states that do not contribute to any great degree to the income tax revenues of the federal treasury.

"But I do not agree to any such contentions with respect to the federal aid highway system that is now a part of the great system of communication between the whole country. The United States today is a nation—not just a community of states.

"American citizens in all sections are entitled to the benefits of good roads. On a recent trip through Yellowstone National Park I saw hundreds of Pennsylvania and New York cars on the roads and they were all through that part of the country. The same is true in other sections. We are envisaging the federal aid system as a national program of import to the country as a whole.

"Good roads mean advantages to American citizens and to American business—no matter what their particular state may be. We should continue along the lines already established by increasing our national expenditures, along with the state expenditures, in order to keep pace with the steadily advancing tides of business.

ROADS IN FORESTS

"As a broad-visioned permanent national policy of gauging national expenditures according to the growing needs of the country as a whole I hope and believe that congress will carry out the roads committee program of \$145,000,000 for federal aid roads and \$10,000,000 for forest roads and trails annually hereafter. The former is a proposed increase of

\$70,000,000 over the present regular annual federal aid funds. The latter is an increase of \$2,500,000.

"And the increase of the forest road construction program is also important to the nation's economic welfare. Both funds are to meet national needs.

"Road construction is an important part of the country's activities everywhere. I recall that the head of the Federal Bureau of Roads, Thomas H. MacDonald, just back from an important international road meeting in South America, told our House Committee on Appropriations within the past year that the federal aid highway system then approximated 188,000 miles, that there was a total of upwards of \$5,000 or \$6,000 miles approved for federal aid. Then he estimated that, as of the same date, the states had improved about 70,000 miles without the aid of the federal cooperative funds.

"There are innumerable ways in which the facilitation of highway traffic wherever it may be is just as important to the great stream of interstate travel as to the immediate residents of a given city or commonwealth."

COOPERATION SOUGHT

The Chief of the Bureau of Public Roads, Thomas H. MacDonald, in his last statement of views before a congressional committee, told of the demand for cooperation in road building reaching his Bureau. "There is an insistent and growing demand for an increase in the federal support of the annual road-building program" he told the House Committee on Appropriations in urging the appropriation for the current fiscal year 1930. "For about eight years the country as a whole has been spending from \$1,000,000,000 to \$1,500,000,000 annually for highway purposes. This has been roughly equally divided between work done under state supervision and that done under local supervision. The federal aid road system coincides with the state roads to the extent of about two-thirds of the total mileage of the latter system. The federal aid projects have constituted about one-half of the states' annual program, and the federal contribution has been about 17 per cent of the total expenditures supervised by the states, or only about 8 per cent of the whole of the annual highway expenditures.

"The most generous contributors to the highway program by far have been the local units, particularly the counties. So we find now that in many states the counties have about exhausted their credit for aiding the building of the roads which legally are state, or state and national responsibilities, and there are no funds left to build the feeder roads."

PENNSYLVANIA—Contractors engaged in state road work were employing 8134 men, according to the last report compiled by the Department of Highways. An additional 8294 were employed in road maintenance by the department.

TENNESSEE—The State Highway Department has opened a new 20.7-mile stretch of concrete pavement near Atwood. In the construction the contractor averaged 1000 feet per day.

U. S. is Seeking Low-cost Plan for Oiling Highways

LOW-COST METHODS of oil-treating hundreds of thousands of miles of gravel, sand-clay and topsoil highways in the United States are greatly needed. H. S. Fairbank, engineer of the Bureau of Public Roads, Department of Agriculture, stated October 30 in announcing that a detailed study of this problem would be inaugurated by the bureau.

In explaining highway needs before the recent asphalt paving conference at West Baden, Ind., Mr. Fairbank said that traffic on thousands of miles of dirt roads was such as to require a smooth, dustless surface, but was not great enough to warrant cementing or other costly systems of hard surfacing.

His discussion of research work to be conducted by the bureau is reported by the United States Daily as follows:

A joint technical committee created in March and representing the asphalt industry and the bureau proposes to make a detailed study of the results of the methods of bituminous treatment developed in many parts of the country, to study the efficacy of the methods of applying and mixing asphalt and aggregates, to analyze the asphaltic materials actually used in work done to date and all available materials which might be used, and to build and study experimental roads of various types. Some of this work has been under way for some time.

A detailed analysis of the methods, materials, cost, and service of the various types of low-cost surfaces thus far developed in various localities will be made. Among the types to be studied are the sand-clay and topsoil surface treatments in the southeastern states; sand-asphalt surfaces in Massachusetts, North Carolina, and other states; bituminous treatments of clay roads in Illinois, and elsewhere; the retreated method of Indiana and somewhat similar treatment of stone roads in other states; the so-called blotter treatment of gravel roads in Minnesota and adjacent states; oiled sand roads in California, Nebraska, Nevada, and elsewhere; and in the mixed-in-place treatment of fine-crushed rock and gravel surfaces, which has reached its highest development in the western states.

Studies have already been made of surfacing treatments of sand-clay and topsoil in Florida and South Carolina, and also of oil treatments of clay roads in Illinois and of the retreated method in Indiana. The data gathered by engineers of the bureau, the asphalt industry, and the respective states, are being analyzed and reports on the three types will be published shortly.

Studies of the efficiency of construction methods and equipment are being conducted by the bureau with the advice and assistance of the asphalt industry. These studies are similar to those previously made by the bureau in grading and concrete and bituminous pavement construction.

The study and analysis of the available bituminous materials is the particular responsibility of the industry, under the plan of cooperation that has been agreed upon.

The construction and study of experimental roads has been started and will be actively prosecuted, mainly by the Bureau of Public Roads, in cooperation with several of the state highway departments, but always with the active assistance and advice of representatives of the asphalt industry.

THREE EXPERIMENTS IN PROGRESS

Three experiments are now in progress. One is the continuation of surface treatments of topsoil in South Carolina; another is a series of experiments in California involving the treatment of fine-crushed rock and gravel surfaces with several types of bituminous materials by surface treatment and mixing in place; the third is a series of experiments in the treatment of sandy soil in the sand-hill section of Nebraska with various asphaltic materials.

There is today a need for low-cost methods of improving hundreds of thousands of miles of highways in the country, consisting of gravel, sand-clay, and topsoil and graded and drained earth roads. The traffic on these roads is such as to require a smooth, dustless year-round surface, but not great enough to justify the costlier high-type surfaces.

DUST NUISANCE COMBATED

About six years ago the bureau first became interested in the development of low-cost surfacings, using bituminous materials to lay the dust and reduce the loss of surfacing material. At that time, increase in traffic on the forest roads, which had been constructed under supervision of the bureau, gave rise to a dust nuisance and loss of surfacing material. The forest roads had a surfacing of finely crushed rock or gravel, which had been adequate for traffic up to that time. A similar type of surface had been adopted by a number of the western states and a rather considerable mileage had been built.

Oregon and California took the lead in the experimental use of petroleum oils by various methods. Later the bureau joined with the California highway department in an investigation of the various methods that had been tried with a view to ascertaining what methods or combination of methods and materials would afford the greatest relief. At about the same time the bureau was cooperating with the highway commission of South Carolina in similar experiments of topsoil roads.

"A task without a vision is drudgery,
A vision without a task is a dream,
But a task with a vision is the hope of the world."
—*Cornelia Adair*

BUT NOT OLD CARS

Our house contained some furniture
That we had thought were freaks;
An antique dealer came along,
And said they were antiques.
And for a chair and an old settle
He paid a sum that staggered me.
I said: "This system's very fine—
It ought to work on cars;
My bus is old and very rare—
I'll take it down to Starr's";
The sum he offered was immense,
It staggered me—"twas thirty cents.

—*Georgia Highways.*

"I can't marry you," said the justice of the peace to the nervous bridegroom. "If this girl is only seventeen you will have to get her father's consent."

"Consent!" yelled the groom. "Say, who do you think this old guy with the rifle is, Daniel Boone?"

People differ on all the essentials to success except one, and on that one they all agree—it is **HARD WORK.**

State Highway Progress Reports

ALAMEDA COUNTY

Hanrahan Company of San Francisco, contractors, have the 8.8 miles of state highway reconstruction between Hayward and Niles well under way. The concrete shoulder and asphalt surfacing, including a small portion of 30-foot concrete pavement, is rapidly progressing, a considerable portion of the Portland cement concrete having already been placed. The asphalt concrete surfacing has commenced and a large portion of the base course has been laid. The placing of the surfacing course is now under way and the contract should, in a very short time, present a nearly complete appearance. A considerable portion of the grading of shoulders is yet to be done, together with the construction of side road approaches, before the road can be thrown open to full use of traffic. All structures are completed; which include the widening of a number of concrete structures and the widening of corrugated pipe culverts.

Considerable improvement is to be made at the north end of the town of Niles. The plan here was the reconstruction of the curved road approaches using the longest possible radii, giving the greatest visibility and throwing the intersection with the counter road to Niles Canyon some 200 feet northeasterly of the underpass. The underpass formerly had a 5-foot sidewalk on split grade along the westerly side. This sidewalk is to be torn out, as a pedestrian underpass has already been installed under the railroad tracks west of the underpass structure. This improvement, while a seemingly minor one, is a particular advantage to traffic, as it increases the roadway width in the clear to 28 feet.

During the interim all local and through traffic is being handled along the work.

ALPINE COUNTY

Widening operations between Markleeville and Woodfords have just been completed and surfacing with crushed gravel is under way and will be completed by January 1, 1930, placing this section in good shape for winter travel.

AMADOR COUNTY

Hemstreet and Bell have completed placing crushed rock surfacing on the newly graded section of the Mother Lode Highway between Dry Town and Amador City. This rock surfacing will be armor coated next spring. Jess Cole was the resident engineer on the grading and surfacing.

BUTTE COUNTY

The contract from Oroville to Feather River, a distance of four miles on the Feather River lateral, Ariss Knapp Company, contractors, is proceeding

normally. The work will probably be completed late in January unless exceedingly bad weather conditions prevail.

CALAVERAS COUNTY

The new grade on the Mother Lode Highway between Mokelumne Hill and San Andreas has been surfaced with crushed gravel by the Adams Company.

FRESNO COUNTY

The old Herndon Bridge, which served traffic for 25 years, has at last been demolished, having been replaced by the modern structure on the west side of the Southern Pacific tracks, which was completed early last summer, eliminating two dangerous grade crossings.

Tieslau Bros. has completed its contract for surfacing with premixed oil and rock from Coalinga to 7 miles west on the Sierra-to-the-Sea Highway.

Convict Camp Number 19 in the Kings River Canyon is making good progress and already some four or five miles of completely graded highway provides an excellent example of what this modern mountain scenic highway is to be. The entire personnel, including free men and convicts, are taking a keen interest in their work and are endeavoring to make not only the highway but also the reputation of Camp 19 somewhat above the average.

IMPERIAL COUNTY

Los Angeles-Imperial Valley Route—Contractor A. M. Peck of Los Angeles is starting work on a 10.4-mile Portland cement concrete paving project from Brawley to 4 miles west of Westmoreland. The new pavement will be 20 feet wide and will be laid on a sand cushion placed on top of the existing oil-treated surfacing.

Borderland Highway—Bids will be opened for paving from El Centro to Holtville on January 22. The improvement will consist of a 20-foot pavement laid on a sand cushion over the existing oil-treated surfacing.

A contract has been awarded to R. E. Hazard Contracting Company of San Diego for asphalt concrete widening and resurfacing from Dixieland to Seeley.

Bids will be opened January 15 for alignment improvement and cement concrete pavement from Myers Creek Bridge to 3 miles west of Coyote Wells. The pavement destroyed by floods in December, 1926, will be replaced with this project. Over part of this project the roadbed was constructed under a previous contract.

KERN COUNTY

State forces have placed 8 miles of nonskid surface on the slippery portions of the long tangent south

of Bakersfield and are now engaged in placing sand and gravel borders and oil-mixing same. It is hoped that this work will reduce the number of accidents on this road.

Hartman Construction Company was successful bidder for two miles of realignment and macadam surface on the Cholame Lateral between Wasco and Lost Hills. This work will be started at once and will eliminate two very dangerous right angle turns.

Force-Curragan & McLeod, Contractors, have completed grading and surfacing with oil-treated crushed gravel 11.5 miles of State Highway Route 57 from east city limits of Bakersfield to within one mile of the mouth of Kern Canyon on the Kern River road. A portion adjoining the city of Bakersfield was graded to a wide turnpike section in view of the fact that a considerable proportion of adjacent land is subdivided into lots and built into a residential section. The remainder of the route is a 24-foot roadbed with a 20-foot oil-treated surfacing. The easterly three miles has been changed radically from the former highway, the curvature has been radically reduced and about 0.5 mile of distance saved. Construction of a line change involved a large cut and fill each with a maximum depth and height of 70 feet, involving about 70,000 cubic yards. The resulting highway has caused much favorable comment.

KINGS COUNTY

Day labor forces under Foreman Milford are widening the roadway west of Lemoore and covering the adobe soil on the roadsides with a sand surface, which will remedy the slippery condition heretofore encountered after every rain.

LASSEN COUNTY

The contract between Goodrich and Coppervale, Doveri & Company and J. A. Maddox, contractors, is proceeding. While the long dry spell this fall was a great boon to these contractors, they will be unable to complete their work this year under normal conditions. However, the job is in such condition that it will carry traffic without difficulty during the winter months as all of the newly graded road which will be used by traffic has been surfaced.

Hein Brothers and Chittenden, who have a contract from Susanville to Milford, for surfacing and stockpiling screenings, are nearing completion of this contract. It is anticipated that with the weather holding good they will finish about January 10.

LOS ANGELES COUNTY

The contract for a line change immediately north of the Newhall Tunnel has been awarded to McCray Co. Normal progress is being made on this work. It is expected that this contract will be completed next June.

The work of grading the Newhall Alternate Line between Tunnel Station and the Santa Clara River is completed. LeTourneau and Lindberg were the contractors. It consisted of grading a 46-foot roadbed, 8.6 miles long, and eliminates from this route the Newhall Tunnel and several dangerous curves in the vicinity of Newhall and Saugus. Work is to be started immediately on paving this section with Portland cement concrete, 30 feet wide.

The first contract on the La Canada-Mt. Wilson Highway for grading 2.6 miles of 40-foot roadbed was awarded to H. W. Rohl Company on August 14th. Rough grading is in progress on one and one-half miles.

LOS ANGELES AND VENTURA COUNTIES

A contract for oil mix shoulders between Calabasas and Conejo Summit has been awarded to the Southwest Paving Company. It is expected that this contract will be finished in April.

MADERA COUNTY

A. Teichert & Son, Contractors, have completed about half of the surfacing on their contract for widening and resurfacing with asphaltic concrete from Califa to the north county line.

The Valley Paving Company has completed the paving from Califa to Berenda.

The subway connection and wyes connecting with Route 32 are still to be paved. This work, together with that of A. Teichert & Son, adjoining, and the subway at Califa, will, when completed, furnish a modern, 20-foot highway free from grade crossings between Merced and Fresno.

Otto Parlier has the contract for the subway at Califa, which connects the above two jobs and his work will be completed shortly after the pavement is finished.

MARIN COUNTY

Marin County has been the scene of considerable highway activities during the past year. A very large sum of money has been expended in the reconstruction work along Route 1 (the Redwood Highway). Some of the more important jobs have been the reconstruction of the Point San Quentin Road from San Rafael to San Quentin, a distance of three miles, where the roadbed was raised to an elevation above high water and widened, a portion of it being constructed 40 feet wide. This new section affords the East Bay cities an adequate connection to the Redwood Highway.

In line with the Commission's policy of reconstructing the state highway obviating the dangerous Corte Madera grade and the numerous small towns adjacent to the existing road, the contract awarded May, 1929, to Granfield Farrar & Carlin, is now practically completed in so far as the grading of the new way is concerned, which, by way of direction, extends very nearly in a straight line from Alto to San Rafael. This new aligned portion has not been opened to traffic, nor will it be, until the completion of the surfacing contract, which will be let in the near future.

Contracts have been recently awarded to:

1. Bids for the construction of an overhead crossing of the Northwestern Pacific Railroad at detour, about one-half mile south of Greenbrae, were recently received.

2. A second contract has been awarded to Fredrickson & Watson for the construction of an overhead crossing of the Northwestern Pacific Railroad's main line tracks at California Park. Here an extensive structure is contemplated, including a long steel truss span with approach steel beam spans and timber trestles on pile and frame bents.

3. A contract has but recently been awarded to the Butte Construction Company of San Francisco for the construction of the Corte Madera Creek bridge, including a small bascule span approximately 40 feet of clear width of opening.

These three structure contracts are planned to be completed by July 1, 1930, together with the surfacing contract from San Rafael to Alto, when they all can be opened to carry the heavy Redwood Highway traffic. At the southerly end at Alto, we have recently reported the completion of the overhead crossing of the Northwestern Pacific Railroad at Alto, together with approximately 0.6 mile of approaches, which completes that portion of Route 52 at the westerly termini at Alto. This new connection will also serve as a temporary connection with the new reconstructed highway which eventually is to extend from Sausalito to San Rafael, funds for which have been provided in the present budget; and it is hoped that the construction will be under way during the early summer of 1930.

Immediately north of San Rafael, the Commission has under way a contract 1.8 miles in length from Gallinas Creek to San Rafael, Granfield Farrar & Carlin of San Francisco being the contractors. This project covers the construction of heavy graded roadway which will be surfaced with bituminous macadam and Portland cement concrete on the excavated sections. This work is progressing rapidly and the contractor is endeavoring to get as much grading work done as possible prior to the heavy rains, in order to take advantage of the settlement of the fills.

The heavy cuts on the contract just north of San Rafael have been opened and much material moved. This work does not interfere with through travel as most of it is on an extensive line change and the old road is open to traffic with no obstructions. It is expected that a contract will soon be let to construct an overhead crossing over the tracks of the Northwestern Pacific Railroad at Forbes and that the completion of roadway will coincide with the completion of the overhead crossing and allow the section to be opened about the middle of the year.

MARIN AND SONOMA COUNTIES

In order to complete the reconstruction of the highway between Petaluma and San Rafael, the 11.9-mile section between one mile south of Petaluma and Ignacio is under reconstruction by Haurahan Co., contractors. Grading is approximately three-fourths complete with construction of concrete boxes, corrugated metal pipe culverts and cattle passes practically completed. With the settlement of the new fills during the winter rains, a bituminous macadam surface will be placed on all new alignment and second story concrete pavement will be placed on the old road wherever practicable. The concrete bridge and stream approaches on the new line at Novato Creek have recently been completed by W. L. Proctor, contractor. The improvement of this section, together with the previously noted section just north of San Rafael, will furnish a 20-foot roadway from San Rafael to Petaluma and should be ready to carry the mid-summer heavy traffic. At San Antonio Creek on a line change and to take the place of the structure on the old road, a contract has been awarded to McDonald & Maggiora of Sausalito for the construction of a reinforced concrete bridge on a new line which will materially shorten the distance over the existing roadway.

An outstanding saving in the highway activities in

Marin-Sonoma counties is the shortening of the distance by the reconstruction work. The present distance from Santa Rosa to Sausalito is approximately 52 miles and, upon the completion of reconstruction, will be reduced nearly 5 miles when the last section from Alto to Sausalito will have been completed during 1930-1931.

MENDOCINO COUNTY

The construction of three timber bridges with approaches and several line changes on the McDonald-to-the-Sea road is practically complete. The contractor, W. C. Colley of Berkeley, has a little finishing work yet to do; the graded sections are surfaced and this section will be much appreciated by the traveling public when the rains are finished and free use of the road is possible.

MERCED COUNTY

Day labor forces under Superintendent Nelson are widening three narrow bridges on the main Valley Highway north of Merced. This work will remove the last "bottleneck" on this road.

The Pacheco Pass Road west of Los Banos is being widened by maintenance forces under Foreman Berry. Material is being hauled from the narrow cuts and the roadway graded to a 30-foot width.

NAPA COUNTY

Fredrickson & Watson Construction Co. and Fredrickson Bros. have brought their contract on the road from Napa Wye to Solano County line so close to completion that a week of good weather will finish it. Traffic is enjoying this section together with the adjacent section to the north as recently completed by the same contractor, and as this road is one of the principal connections between the bay cities and Sacramento and the central and northern sections of the state, these improvements are a benefit to both tourist and business traffic.

ORANGE COUNTY

The contract for a line change 0.7 of a mile in length between Serra and San Juan Capistrano was awarded to Matich Bros. on August 12th. This work consists of constructing a 40-foot graded roadbed with Portland cement concrete pavement, 20 feet by 7 inches. Work is nearly completed.

A contract for paying one-half width between Santa Ana and Anaheim was awarded on June 11th to Griffith Company. This section is 4.9 miles long. The paving work is being done in cooperation with Orange County, the state paying for a strip of pavement 28 feet by 7 inches and the county paying for a like amount. The state's portion of this highway is completed, and work is in progress on the county's portion.

A contract for widening the roadbed between Sunset Beach and Newport the entire width of the 90- to 100-foot right of way, and the placing of an additional 10-foot strip of Portland cement concrete has been awarded to the Maceo Construction Co. When this work is completed the pavement will be 50 feet

wide for the entire distance. Work is getting under way on this contract.

PLUMAS COUNTY

A contract in Plumas County from the westerly boundary to two and one-half miles southwest of Chester was completed in October by Charles Harlowe, Jr., contractor. The section immediately to the west of this contract between the county line and Morgan Springs in Tehama County was completed about the same time by Johnson Brothers of Portland, under the direction of the Bureau of Public Roads. These two jobs eliminate the high summit at Feather River Meadows and make it possible to maintain this road during the winter months with greater ease, owing to the lower level and the lighter snowfall. Since the completion of these two jobs, arrangements have been made to handle the snowfall during the coming winter, and equipment is on the ground awaiting the first fall.

PLUMAS AND TEHAMA COUNTIES

A contract was recently awarded to E. B. Bishop and covers the construction of a primary highway from a point two and one-half miles southwest of Chester to the Lake Almanor causeway, and also, the production of screenings for next season's armor coat work from Morgan Springs to Lake Almanor causeway. It is doubtful if the work will start before the spring.

RIVERSIDE COUNTY

Riverside-Ontario Route—Bids will be opened January 22 for grading and paving through the new undergrade crossing under the tracks of the Union Pacific Railroad Company.

Plans are being prepared for the widening of three narrow bridges between Riverside and Ontario.

SACRAMENTO COUNTY

Due to the lack of rain this fall, the grading and surfacing job between Arno and McConnell, the main Valley Highway south of Sacramento, has practically been completed. The firm of Larsen Brothers is the contractor. A. K. Nulty is resident engineer.

SAN BERNARDINO COUNTY

Foothill Boulevard—The Steele Finley contract for widening and resurfacing the Foothill Boulevard from the east city limits of Claremont to Cherry avenue is now complete. The work consisted of widening the existing 18-foot pavement to 30 feet.

Arrowhead Trail—The Gist and Bell contract for realignment of approximately 4 miles near the summit of Cajon Pass is nearing completion.

The George Herz Company is making excellent progress with the grading on their contract between Barstow and Yermo. This contract includes the laying of oil-treated plant-mixed surfacing 20 feet wide.

The Dillon and Boles contract for grading and oil-treated surfacing from Yermo to Dunn has been completed.

National Old Trails Highway—A contract for grading and plant-mixed oil-treated surfacing from 4 miles west of Hector to 2 miles west of Argos is complete. This work was done by the Allied Contractors, Inc.

Two new contracts have been awarded to the New Mexico Construction Company, extending the improvement of the Old Trails Highway from 2 miles west of Argos to 1½ miles west of Siberia and from 1½ miles west of Siberia to 6½ miles east of Amboy. The contractor has started work on both projects.

Crest Route—A contract has been awarded to Lewis Construction Company for completion of the gap between 4½ miles west of Running Springs Park and Squirrel Inn.

SAN DIEGO COUNTY

Work is nearly completed on constructing oil rock borders on portions of the Coast Route between the city limits of San Diego and Oceanside. The R. E. Hazard Contracting Company of San Diego are the contractors.

A contract for grading the Rose Canyon road between Balboa avenue and Torrey Pines road was awarded on August 13th to the R. E. Hazard Contracting Company. This section is 5.4 miles long and is to be a 46-foot graded roadbed. About two miles have been graded to date.

The contract for grading a roadbed 36 feet wide and placing of Portland cement concrete pavement 20 feet by 7 inches is nearly completed between Pine Valley and Kitchen Creek on the San Diego-El Centro Highway. Basich Brothers are the contractors.

A contract for 4.5 miles of 38-foot graded roadbed between La Posta Creek and Miller Creek on the San Diego-El Centro Highway was awarded on May 27th to the Nevada Contracting Company. Grading is completed for a distance of about four miles.

A contract for grading 3.9 miles of 36-foot roadbed from Kitchen Creek to La Posta and paving with 20 feet by 7 inches Portland cement concrete was awarded on June 25th to Basich Bros. About three miles of rough grading is completed, and grading is now in progress on about one mile. This section is on the San Diego-El Centro Highway.

SAN JOAQUIN COUNTY

The lack of the usual fall rains has enabled two contracts in San Joaquin County to be much nearer completion than would normally have been the case. Contractor C. W. Wood has completed laying the concrete pavement between Banta and the San Joaquin River on the main road between the San Joaquin Valley and the bay region. This job eliminates a dangerous stretch of narrow old county built macadam. The shoulder grading alone remains to be done.

The two line changes on the Hogan Road on the main Valley Highway south of Stockton have been graded and surfaced by the firm of Lilly, Willard & Biasotti. This job is nearly complete.

SAN MATEO COUNTY

H. W. Rohl, contractor on the section of the Bayshore Highway, San Francisco to South San Fran-

cisco, has completed his work with the exception of the section through the deep cut at Sierra Point where extensive slides prevent finishing roadway. Also, the Spring Valley Water Company's pipe line as situated on the hillside above the cut, is to be relocated to lie in the roadway, digging of trench being under way.

In the meantime a small amount of the contractor's equipment is being kept to care for the cut during the rainy season.

A contract is being advertised to continue the Bayshore Highway construction by building the section from San Mateo to Redwood City, for which bids will be received on January 8th.

SAN MATEO, SANTA CLARA AND SANTA CRUZ COUNTIES

The section of the Skyline Boulevard between the La Honda Road and Saratoga Gap has been completed.

Twohy Bros. Co. and J. F. Shea Co., contractors on grading and surfacing, have completed their work and Tieslau Bros. having furnished screenings, the state forces have constructed an armor coat oil surface. This opens the boulevard from San Francisco to the gateway into the California Redwood Park and allows of another through route to Santa Cruz. Due to the fact that California Redwood Park Road is an unsurfaced, graded roadway, it will be closed to traffic during the winter of 1929 and 1930.

SANTA CLARA COUNTY

The program for the improvement of the Peninsula Highway between Palo Alto and Santa Clara is proceeding satisfactorily. The section between Sunnyvale and Santa Clara has been completed by Contractor N. M. Ball and he is just completing a channel change of Calabazas Creek under day labor contract. This change is of major importance as the stream paralleled the roadway on the easterly side for over 3000 feet and was so close to the pavement as to forbid widening on that side, and even threatened the existing work, causing heavy maintenance with a permanent type of retaining structure necessary in the near future. After many attempts to come to an agreement with property owners, permission was obtained to continue Calabazas Creek across the property to the east, and following the eastern boundary of the property, empty into the channel of Campbell Creek about one-fourth mile east of the present connection. The original channel is being filled with material from neighboring dykes and from a private borrow pit.

The section from Palo Alto to San Antonio avenue is being advertised for bids to be opened January 8, 1930, and the connecting section, San Antonio avenue to Sunnyvale, is to be advertised early in the spring, so that the end of 1930 should see the entire 13 miles from Palo Alto to Santa Clara completed with Portland cement concrete widening and asphalt surface, a total width of 30 feet as compared to 20 feet existing.

The pavement of that portion through Palo Alto from San Francisquito Bridge to the south city limits of Mayfield (Palo Alto) is to be 40 feet wide.

SHASTA COUNTY

Grier and Taylor who have a contract for furnishing and hauling surfacing material from the end of the

pavement to La Moine, are setting up their plant at Pollock and will be ready to operate about January 10. Their plan is to supply all of the material from this one plant as it is centrally located and will speed up the job by eliminating additional setups although a much longer haul is involved.

SHASTA AND TRINITY COUNTIES

The contract for surfacing and screenings from Weaverville to Tower House on the Trinity Lateral was completed by A. Milne, contractor, on December 10, just in time to escape the delay incidental to the heavy rain immediately following.

Contractors in this district, as well as over the entire state, have been especially fortunate this fall with weather conditions. Normally, road work is hampered by stormy weather early in October. In higher altitudes it is necessary to close down most jobs on account of snow. However, with the exception of the stormy period between December 8 and 17, the weather has been warm and dry and ideal for highway construction.

SISKIYOU COUNTY

The contract of T. M. Morgan Paving Company, contractors, between Shasta River and Gazelle, is nearing completion. The 7-mile stretch of pavement which was under construction on this job was completed last month and was opened to traffic on December 10. The opening of the pavement was very opportune as the detour which was in use between Edgewood and Gazelle was through adobe country on which only a light coat of surfacing had been placed to carry the traffic through summer months. During the week following the opening of the pavement, this detour undoubtedly became impassable although no traffic was routed over it. Unless bad weather conditions prevail, the Morgan Company will complete their contract during the month of January.

The contract for reconstructing a short piece of pavement 0.6 of a mile in length at Spring Hill near Mt. Shasta City has been completed and was opened to traffic on December 8. This reconstruction eliminates a very dangerous 200-foot radius curve at the foot of Spring Hill where numerous accidents have occurred during the past few years. The grading for this improvement was completed by Young Brothers, contractors, earlier in the year, following which the paving contract was let to the Mathews Construction Company, who have now completed their portion of the work.

Beerman and White have been awarded a contract for the producing of surfacing material and screenings between Gazelle and Yreka. They have one plant operating at Gazelle and will start another plant on the Yreka end about January 10. The hauling of the material is being handled by O. McKeynolds on a separate contract.

SOLANO COUNTY

A serious traffic hazard on a heavily traveled highway has been eliminated by the completion of the grading and asphalt macadam surfacing of the stretch of road from the Napa County line easterly through The Jameson Canyon. This is the highway connecting

the Napa Valley and Redwood Highway country with the Sacramento Valley. The firm of Fredrickson & Watson and Fredrickson Brothers was the contractor. The moving of several miles of pipe line supplying the city of Vallejo was also involved.

TEHAMA COUNTY

A. F. Giddings has completed his setup near Battle Creek on the Red Bluff-Susanyville laterat and is ready to operate. The surfacing will be spread westerly from the plant to Paynes Creek during the winter as it is desired to have this portion well compacted for next summer's oil program. The remainder of the surfacing and stockpiling from the plant to Morgan Springs will follow during the spring months.

TRINITY COUNTY

Recent rearrangements of the convict forces employed on construction in the state have resulted in a reduction of forces at Camp 12, located in Trinity County 25 miles west of Redding, to a force of 55 men. The work of this camp will be concentrated upon the completion of the section in Shasta County immediately west of the Buckhorn Summit. This work is now completed to within about a mile of the summit and its use will eliminate a very long, heavy climb several miles in length on the existing county road. This work should be completed during the coming season and will enable traffic to make use of the new construction next winter. As the road on the Trinity side is on comparatively light grades, work on it will be delayed until a later date.

TULARE COUNTY

The Valley Paving Company is making rapid progress on its contract for widening and resurfacing on the Golden State Highway between Delano and Pixley. H. B. La Forge is Resident Engineer for the state.

Bids will be opened January 2d on a contract for resurfacing from Pixley to Tipton on Route 4.

TUOLUMNE COUNTY

The Adams Company has been awarded the contract for surfacing the newly graded section of the Mother Lode Highway between near Shaws Flat and the Columbia-Sonora Road. This lies a short distance north of Sonora. Work has started.

Just east of Sonora a grading and surfacing job between Sonora and Sullivan Creek has been completed by Lilly, Willard and Bisotti. This road carries a heavy traffic for a mountain road and the improvement is much appreciated by the local people.

VENTURA COUNTY

A contract for second story paving with asphaltic concrete from Conejo Creek to Carmarillo has been awarded to Griffith Company. Work is just starting on this contract.

Record of Bids and Awards

HIGHWAY BID OPENINGS AND AWARDS

From Nov. 27 to Dec. 26

IMPERIAL COUNTY—Between Brawley and 4 miles west of Westmorland grading and paving with Portland cement concrete 10.4 miles. Dist. VII, Rt. 26, Sees. 11 and A. Griffith Company, Los Angeles, \$338,519; E. Paul Ford, San Diego, \$353,319; R. E. Hazard Contracting Co., San Diego, \$353,785; McCray Co., Los Angeles, \$341,908; Jahn & Bressi, Los Angeles, \$325,737; Basich Brothers, Los Angeles, \$349,140; George Herz & Co., San Bernardino, \$335,115; Watson & Sutton, San Diego, \$335,195; T. M. Morgan Paving Co., Gazelle, \$365,637; Sander Pearson, Santa Monica, \$333,048; J. F. Knapp, Oakland, \$349,477. Contract awarded to A. M. Peck Company, Los Angeles, \$312,057.05.

IMPERIAL COUNTY—Between Dixieland and Seeley, 5 miles to be graded and paved with asphalt concrete. Dist. VIII, Rt. 12, Sec. C. Basich Bros., Los Angeles, \$113,522; Y. R. Dennis Const. Co., San Diego, \$135,922; Gibbons & Redd, Burbank, \$140,818; Ben Pearce Const. Co., San Diego, \$129,910. Contract awarded to R. E. Hazard Contracting Co., San Diego, \$110,426.30.

LOS ANGELES COUNTY—Reinforced concrete arch bridge across La Canada Canyon $1\frac{1}{2}$ miles northeast of La Canada. Dist. VII, Rt. 61, Sec. A. E. S. Johnson, Pasadena, \$33,433; George J. Ulrich Const. Co., Modesto, \$43,788; Oberg Bros., Los Angeles, \$32,061; Sharp & Fellows, Los Angeles, \$46,388; John Simpson Co., Los Angeles, \$35,951; William J. Shirley, Los Angeles, \$38,182; A. R. and C. O. Bodenhamer, Hemet, \$42,828; Sydney Smith Contracting, Los Angeles, \$37,182; Carpenter Bros., Inc., Beverly Hills, \$34,717. Contract awarded to Whipple Engineering Company, Monrovia, \$31,419.75.

LOS ANGELES COUNTY—Between Tunnel Station and Santa Clara River, 8.5 miles to be paved with Portland cement concrete. Dist. VII, Rt. 4, Sec. F. Will F. Peck Company, Los Angeles, \$277,270; J. F. Knapp, Oakland, \$287,560; McCray Company, Los Angeles, \$288,366; Basich Brothers, Los Angeles, \$280,975; Fredrickson & Watson, Oakland, \$324,435; Griffith Company, Los Angeles, \$293,836; Wells and Bressler, Santa Ana, \$282,044; O. A. Lindberg, Newhall, \$329,864. Contract awarded to Jahn and Bressi, Los Angeles, \$253,126.

ORANGE COUNTY—Between Dana Point and Serra, 0.2 of a mile to be graded and paved with Portland cement concrete. Dist. VII, Rt. 60, Sec. C. Chas. and George K. Thompson, Los Angeles, \$13,543; Western Construction Company, \$14,725. Contract awarded to Matich Bros., Elsinore, \$12,583.

SAN BERNARDINO COUNTY—Between 4.5 miles west of Running Springs and Squirrel Inn, 6.7 miles to be graded. Dist. VIII, Rt. 43, Sec. B. W. H. Hauser, Oakland, \$253,513; Isbell Const. Co., Fresno, \$225,299; Triangle Rock & Gravel Co., \$232,012; Kern Contracting Co., Bakersfield, \$251,641; Yglesias Bros., Inc., San Diego, \$270,709; Gist & Bell, Arcadia, \$238,465; J. G. Donovan & Son, Los Angeles, \$202,920; Wm. C. Horn Co., Puente, \$228,649; Mutual Income Properties, Los Angeles,

\$244,303; J. F. Knapp, Oakland, \$251,219; Nevada Contracting Co., Fallon, Nevada, \$244,647; O. A. Lindberg, Newhall, \$213,510. Contract awarded to Lewis Construction Company, Los Angeles, \$189,687.

TEHAMA COUNTY—6 timber bridges at various points east of Red Bluff, total length approximating 665 feet, bridge decks to be surfaced with bituminous macadam. Dist. H, Rt. 29, Sec. A. Brunk and Case, Corning, \$24,970; E. B. Skeels, Roseville, \$25,616; Lord and Bishop, Oroville, \$24,990; A. Young, Yreka, \$27,125; R. B. McKenzie, Red Bluff, \$23,925; J. P. Brennan, Redding, \$26,103; M. A. Jenkins, Sacramento, \$24,865; M. B. McGowan, San Francisco, \$25,990. Contract awarded to F. H. Nielson, Orland, \$22,504.

TEHAMA-PLUMAS COUNTIES—Between Morgan Springs and Lake Almanor. Grading and surfacing with untreated crushed gravel or stone, 21.7 miles. Dist. H, Rt. 29, Secs. C and A. Contract awarded to E. B. Bishop, Sacramento, \$59,265.

YUBA COUNTY—Buildings, appurtenances, and utilities to be moved from within to without the limits of the state highway right of way at Wheatland. Dist. H, Rt. 3, Sec. A. William Grebe, Sacramento, \$4,649; McDaniels & Burroughs, Marysville, \$3,029. Contract awarded to O. F. Brown, Sacramento, \$2,347.

ACCEPTANCES OF HIGHWAY CONTRACTS

AMADOR COUNTY—Contract for producing and placing untreated crushed rock surfacing between Drytown and Amador City, Mother Lode Highway, 2.7 miles, at an approximate cost of \$28,100. Hemstreet & Bell of Marysville, contractors.

EL DORADO COUNTY—Contract for surfacing with untreated crushed gravel between Logtown and 4 miles southerly, about 4 miles, approximate cost \$12,850. Hemstreet & Bell of Marysville, contractors.

FRESNO COUNTY—Contract for placing premixed oil-treated surfacing on crushed gravel base from three miles east of Parkfield Junction to Coalinga, 6.7 miles, at an approximate cost of \$53,800, has been satisfactorily completed in accordance with the plans and specifications. Tieslau Brothers of Berkeley, contractors.

HUMBOLDT COUNTY—Contract for producing and stockpiling broken stone and screenings between Mill Creek and Little River, Redwood Highway, 6.4 miles, approximate cost of \$18,100. Wm. C. Elsemore, Eureka, contractor.

HUMBOLDT COUNTY—Contract for constructing an overhead crossing and 7 timber bridges at points between one and 3½ miles north of Arcata, Redwood Highway, at an approximate cost of \$57,500. Mercer-Fraser Company, Inc., of Eureka, contractors.

HUMBOLDT COUNTY—Contract for constructing a graded roadbed and placing a crushed rock surfacing from Arcata to a point 0.3 of a mile north of Mad River, Redwood Highway, a length of about 3 miles, at an approximate cost of \$92,700. H. J. Kennedy and Daniel Bayles of Oakland, contractor.

KERN COUNTY—Contract for constructing graded roadbed and placing oil-treated crushed rock surfacing between Bakersfield and 1½ miles east of Cottonwood Creek, 11 miles, approximate cost \$186,800. Force, Curigan & McLeod of Oakland, contractors.

LOS ANGELES-SAN BERNARDINO COUNTIES—Contract for grading roadbed and placing asphaltic

concrete pavement between Claremont and Cherry avenues, 10.4 miles, at an approximate cost of \$234,000 has been satisfactorily completed and accepted. Steele Finley of Santa Ana was the contractor.

MARIN COUNTY—Contract for constructing an overhead crossing over the tracks of the Northwestern Pacific Railroad near Alto, Redwood Highway, approximate cost of \$38,400. Contractors, Tibbitts Construction Company of San Francisco.

MONTEREY COUNTY—Contract for constructing a graded roadbed and placing asphalt concrete pavement between Chualar and Salinas, Coast Route. The Peninsula Paving Company of San Francisco, contractors.

ORANGE COUNTY—Contract for constructing a graded roadbed and placing Portland cement concrete pavement westerly of San Clemente, about 0.2 of a mile, at an approximate cost of \$10,100. Matich Bros. of Elsinore, contractors.

SACRAMENTO-EL DORADO COUNTY—Contract for constructing oil-treated crushed rock borders on both sides of existing pavement between Folsom and Placerville, 28 miles, approximate cost \$77,800. W. H. Larson of Sonoma, contractor.

SAN DIEGO COUNTY—Contract for constructing a bridge across Pine Valley Creek, approximate cost \$48,700. Contractor Linderman and Dueker, Inc., of Harbor City.

SAN JOAQUIN COUNTY—Contract for constructing graded roadbed and placing untreated crushed gravel or stone surfacing between a point 2½ miles north of Turner Station and the Mariposa Road, 1.1 miles, approximate cost of \$38,400. Lilly, Willard and Biasotti of Stockton, contractors.

SAN LUIS OBISPO COUNTY—Contract for constructing a bridge across Graves Creek about 2 miles south of Templeton, at an approximate cost of \$11,000. William Lane of Paso Robles, contractor.

SHASTA COUNTY—Contract for constructing bridge across Mears Creek about 5 miles south of Castell, approximate cost of \$20,000 has been completed. Carlson Bros. of Turlock, contractors.

SISKIYOU COUNTY—Contract for placing a Portland cement concrete pavement at Spring Hill near Mount Shasta, distance of 0.6 of a mile, at approximate cost of \$22,800. Mathews Construction Company of Sacramento, contractors.

TEHAMA COUNTY—Contract for constructing untreated crushed rock shoulders between southerly boundary and Red Bluff, 10.8 miles, approximate cost \$11,600. Hemstreet & Bell of Marysville, contractors.

TRINITY AND SHASTA COUNTIES—Contract for placing crushed stone surfacing between Weaver-ville and Tower House, 22.2 miles, approximate cost of \$81,400 has been satisfactorily completed, etc. A. Milne, Portland, Ore., contractor.

MISSOURI—This state has built 1291 miles of all types of highways this year and will follow next year with 917 miles more, giving it a total of 2876 miles hard surfaced.

NEW MEXICO—All oil surfaced highways built in the future will be twenty feet wide, the State Highway Department has decided, to increase the success of the oil surfacing type of road and to insure its durability. The move to widen roadways has been made in order to overcome shoulder breaks. The greater width of road will combat the tendency, and from experience in other states, will eliminate it.

WATER PERMITS AND APPLICATIONS

Applications for Permit to Appropriate Water, Filed with the State Department of Public Works, Division of Water Resources, During December, 1929.

DEL NORTE COUNTY—Application 6503. C. R. Ward and J. L. Ward, Crescent City, for 0.15 c.f.s. from unnamed creeks tributary to Smith River to be diverted in Sec. 19, T. 17 N., R. 2 E., H. M., for domestic purposes. Estimated cost \$2,000.

SUTTER COUNTY—Application 6504. Frank Berry, Yuba City, for 0.5 c.f.s. from Feather River tributary to Sacramento River to be diverted in Sec. 14, T. 14 N., R. 3 E., M. D. M., for irrigation purposes. Estimated cost \$1,100.

AMADOR COUNTY—Application 6505. Preston School of Industry, State of California, Waterman, for 10 c.f.s. from Sutter Creek tributary to Mokelumne River via Dry Creek to be diverted in Sec. 1, T. 6 N., R. 10 E., M. D. M., for power purposes. Estimated cost \$75,000.

AMADOR COUNTY—Application 6506. Preston School of Industry, State of California, Waterman, for 8.5 c.f.s. and 3750 acre-feet per annum from Sutter Creek tributary to Mokelumne River via Dry Creek to be diverted in Sec. 1, T. 6 N., R. 10 E., M. D. M., for domestic and irrigation purposes. Estimated cost of \$75,000.

SAN BERNARDINO COUNTY—Application 6507. Joseph J. Campbell, Glendale, for 0.02 c.f.s. from underground water tributary to Lake Arrowhead to be diverted in Sec. 21, T. 2 N., R. 3 W., S. B. M., for domestic purposes. Estimated cost \$150.

INYO COUNTY—Application 6508. W. B. Grey, Beatty, Nevada, for 5 c.f.s. from (1) Jail, (2) Birch, (3) Tubler Springs tributary to Jail, Birch and Tubler Dry Gulches to be diverted in Sec. 21 projected, T. 20 N., R. 45 E., M. D. M., and Sec. 20 projected, T. 20 N., R. 45 E., M. D. M., for mining purposes.

NEVADA COUNTY—Application 6509. Nevada Irrigation District, Grass Valley, for 100 c.f.s. from Auburn Ravine tributary to American River to be diverted in Sec. 13, T. 12 N., R. 6 E., and Sec. 22, T. 12 N., R. 6 E., M. D. M., for irrigation purposes.

SAN DIEGO COUNTY—Application 6510. Ed Fletcher, 1020 9th St., San Diego, for 0.15 c.f.s. from unnamed spring tributary to Los Choccos Creek to be diverted in Sec. 13, T. 15 S., R. 1 E., S. B. M., for irrigation and domestic purposes.

LOS ANGELES COUNTY—Application 6511. Ernest E. Pottinger and Ralph Wagner, Saugus, for 0.05 c.f.s. from Drippy Spring tributary to Haskell Canyon Creek to be diverted in Sec. 25, T. 5 N., R. 16 W., S. B. M., for irrigation and domestic purposes.

SONOMA COUNTY—Application 6512. Joe M. Fernandez, Box 490, Sonoma, for 0.22 c.f.s. from Sonoma Creek tributary to San Pablo Bay to be diverted in Sec. 13, T. 5 N., R. 6 W., M. D. M., for irrigation purposes.

TRINITY COUNTY—Application 6513. Trinity Farm and Cattle Company, Redding, for 15 c.f.s. from Trinity River tributary to Klamath River to

be diverted in Sec. 9, T. 36 N., R. 7 W., M. D. M., for irrigation and domestic purposes.

SISKIYOU COUNTY—Application 6514. A. F. Westover, care Geo. G. Underhill, Etna Mills, for 140 c.f.s. from (1) Trail Creek, (2) Fish Lake Creek, (3) E. Br. 6 Mile Creek, and (4) W. Br. 6 Mile Creek tributary to E. Fk. of Salmon River to be diverted in Secs. 25, 15 and 16, T. 39 N., R. 10 W., M. D. M., for mining purposes.

SAN FRANCISCO COUNTY—Application 6515. Karl Brehme, Hobart Bldg., San Francisco, for 200,000 acre-feet from Cache Creek tributary to Sacramento River to be diverted in Sec. 5, T. 10 N., R. 2 W., M. D. M., for industrial and domestic purposes. Estimated cost \$12,000,000.

PLACER AND NEVADA COUNTIES—Application 6516. Bear River Water & Power Co., care J. L. Rollins, Colfax, for 111,020 acre-feet from Bear River and its tributaries tributary to Feather River to be diverted in Sec. 22, T. 15 N., R. 9 E., and Sec. 27, T. 15 N., R. 9 E., M. D. M., from either or both for power purposes. Estimated cost \$2,500,000.

SHASTA COUNTY—Application 6517. Frank Rausch, Dunsmuir, for 0.011 c.f.s. of 7200 g.p.d. from unnamed spring tributary to Sacramento River to be diverted in Sec. 1, T. 38 N., R. 4 W., M. D. M., for domestic purposes. Estimated cost \$275.00.

MODOC COUNTY—Application 6518. Irwin C. Evely, Davis Creek, for 700 acre-feet from Fletcher Creek and Drainage area of Reservoir tributary to Clear Lake Reservoir to be diverted in Sec. 16, T. 47 N., R. 12 E., M. D. M., for irrigation purposes.

MONO COUNTY—Application 6519. W. O. Garner, 450 S. Kenoak, Pomona, for 150 g.p.d. from unnamed spring tributary to Mammoth Creek and Owens River to be diverted in Sec. 9, T. 4 S., R. 27 E., M. D. M., for domestic purposes. Estimated cost \$100.

LOS ANGELES COUNTY—Application 6520. Candido Herreres, R. 2, Box 1134, San Fernando, for 1,240,000 gallons per annum from underground water developed from Muerte Canyon tributary to Little Tujunga Canyon to be diverted in Sec. 34, T. 3 N., R. 14 W., S. B. M., for irrigation and domestic purposes. Estimated cost \$2,000,000.

Permits to Appropriate Water, Issued by the Department of Public Works, Division of Water Resources, During December, 1929.

STANISLAUS COUNTY—Permit 3386. Application 6293. Issued to Lloyd B. and Elizabeth M. Crow, San Francisco, December 2, 1929, for 7.5 c.f.s. from San Joaquin River in Sec. 17, T. 6 S., R. 9 E., M. D. M., for irrigation on 480 acres.

SAN DIEGO COUNTY—Permit 3387. Application 6445. Issued to Harold S. Kibbey, Lakeside, December 2, 1929, for .05 c.f.s. from unnamed spring in Sec. 5, T. 15 S., R. 1 E., S. B. M., for domestic use. Estimated cost \$1,000.

SUTTER COUNTY—Permit 3388. Application 6454. Issued to Austin Kramer, Knights Landing, December 3, 1929, for 1.3 c.f.s. from Sacramento River in Sec. 29, T. 12 N., R. 2 E., M. D. M., for irrigation on 104.3 acres. Estimated cost \$5,000.

SAN JOAQUIN COUNTY—Permit 3389. Application 6397. Issued to W. H. McFall, Manteca, December 3, 1929, for 1.47 c.f.s. from Lone Tree Creek in Sec. 14, T. 1 S., R. 7 E., M. D. M., for irrigation on 117.36 acres. Estimated cost \$1,000.

PLUMAS COUNTY—Permit 3390, Application 2186. Issued to Feather River Power Company, San Francisco, December 4, 1929, for 70,000 acre-feet from Bucks Creek in Sec. 25, T. 19 N., R. 3 E., M. D. M., for irrigation on 44,314 acres. Estimated cost \$3,209,500.

SIERRA COUNTY—Permit 3391, Application 6395. Issued to Belle C. Brown and Wm. S. Brown, La Porte, December 5, 1929, for 65 c.f.s. from Whiskey Creek and Unnamed Ravine in Sec. 16, T. 22 N., R. 10 E., M. D. M., for mining. Estimated cost \$2,000.

SIERRA COUNTY—Permit 3392, Application 6396. Issued to Belle C. and Wm. S. Brown, La Porte, December 5, 1929, for 5 c.f.s. from North Branch of Slate Creek in Sec. 21, T. 22 N., R. 10 E., M. D. M., for mining. Estimated cost \$1,000.

BUTTE COUNTY—Permit 3393, Application 6449. Issued to Holly Citrus Land Company, Hollywood, December 6, 1929, for 1.25 c.f.s. from two unnamed streams in Sec. 6, T. 18 N., R. 5 E., M. D. M., for irrigation on 100 acres. Estimated cost \$2,500.

EL DORADO COUNTY—Permit 3394, Application 5989. Issued to E. C. Sawtelle and Mrs. Bess Lewis, Roseville, December 7, 1929, for .01 c.f.s. from unnamed stream in Sec. 24, T. 11 N., R. 16 E., M. D. M., for domestic use. Estimated cost \$200.

EL DORADO COUNTY—Permit 3395, Application 6431. Issued to V. A. Palmer, Sacramento, December 7, 1929, for .01 c.f.s. from unnamed stream in Sec. 24, T. 11 N., R. 16 E., M. D. M., for domestic use. Estimated cost \$200.

EL DORADO COUNTY—Permit 3396, Application 6440. Issued to C. H. Parrott, Roseville, December 7, 1929, for .01 c.f.s. from unnamed stream in Sec. 24, T. 11 N., R. 16 E., M. D. M., for domestic use. Estimated cost \$200.

MONTEREY COUNTY—Permit 3397, Application 6420. Issued to George P. Tolman, Watsonville, December 9, 1929, for .01 c.f.s. from unnamed spring in Sec. 6, T. 20 S., R. 5 E., M. D. M., for domestic use. Estimated cost \$200.

TRINITY COUNTY—Permit 3398, Application 5925. Issued to R. S. Gurley, Hyampom, December 14, 1929, for 1.0 c.f.s. from Allen and Backham Creeks in Secs. 13 and 23, T. 4 N., R. 6 E., H. M., for irrigation on 80 acres. Estimated cost \$1,000.

SANTA BARBARA COUNTY—Permit 3399, Application 6259. Issued to 4 H Club of Santa Barbara, Goleta, December 16, 1929, for 0.1 c.f.s. from Arroyo Burro Creek Canyon and 2 springs in Sec. 12, T. 5 N., R. 28 W., S. B. M., for domestic use. Estimated cost \$2,500.

RIVERSIDE COUNTY—Permit 3400, Application 6400. Issued to O. P. Sanders, Riverside, December 16, 1929, for .025 c.f.s. from unnamed spring in Sec. 8, T. 4 S., R. 2 E., S. B. M., for irrigation on 20 acres. Estimated cost \$750.

SAN JOAQUIN COUNTY—Permit 3401, Application 6430. Issued to C. B. Orvis, Stockton, December 17, 1929, for 12 c.f.s. from State Canal in Sec. 15, T. 4 N., R. 5 E., M. D. M., for agricultural purposes on 960.5 acres. Estimated cost \$6,500.

MONO COUNTY—Permit 3402, Application 6270. Issued to Champion Sillimanite, Inc., Merced, December 18, 1929, for .025 c.f.s. from Dry Creek in Sec. 10, T. 4 S., R. 33 E., M. D. M., for agricultural purposes. Estimated cost \$1,500.

MONO COUNTY—Permit 3403, Application 6271. Issued to Champion Sillimanite, Inc., Merced, December 18, 1929, for .025 c.f.s. from Dry Creek in Sec.

10, T. 4 S., R. 33 E., M. D. M., for agricultural purposes.

MONO COUNTY—Permit 3404, Application 6272. Issued to Champion Sillimanite, Inc., Merced, December 18, 1929, for .05 c.f.s. from Dry Creek in Sec. 10, T. 4 S., R. 33 E., M. D. M., for mining purposes. Estimated cost \$1,500.

PLUMAS COUNTY—Permit 3405, Application 6241. Issued to Feather River Power Company, San Francisco, December 19, 1929, for 120 c.f.s. direct diversion 6,000 acre-feet from Mills Ranch and Bucks Creek tributary to North Fork Feather River in Secs. 5, 6, 7, 12, 18, 19, 20, 29, 32, 34, T. 24 N., R. 6 and 7 E., M. D. M., for power purposes. Estimated cost \$9,531,000.

SACRAMENTO COUNTY—Permit 3406, Application 6434. Issued to Golda G. Whipple, Sacramento, December 19, 1929, for .31 c.f.s. from dry Creek in Sec. 33, T. 10 N., R. 5 E., M. D. M., for irrigation on 25 acres. Estimated cost \$450.

ORANGE COUNTY—Permit 3407, Application 5910. Issued to Rome Miller, Los Angeles, December 20, 1929, for 0.15 c.f.s. from Six Springs in Secs. 9 and 10, T. 5 S., R. 7 W., S. B. M., for domestic purposes. Estimated cost \$3,000.

ORANGE COUNTY—Permit 3408, Application 5911. Issued to Rome Miller, Los Angeles, December 20, 1929, for .05 c.f.s. from an unnamed spring in Sec. 15, T. 5 S., R. 7 W., S. B. M., for domestic purposes. Estimated cost \$500.

VENTURA COUNTY—Permit 3409, Application 6294. Issued to Topa Topa Company, Ojai, December 21, 1929, for 1 c.f.s. from two wells in Sec. 34, T. 5 N., R. 22 W., S. B. M., for irrigation on 122 acres. Estimated cost \$18,000.

HUMBOLDT COUNTY—Permit 3410, Application 6152. Issued to Wm. Campbell, Salyer, December 21, 1929, for 5 c.f.s. from Madden Creek in Sec. 21, T. 6 N., R. 5 E., H. M., for mining purposes. Estimated cost \$2,000.

TRINITY COUNTY—Permit 3411, Application 6373. Issued to Aaron Willburn, Zenia, December 23, 1929, for .56 c.f.s. from West Branch of Bluford Creek in Sec. 5, T. 3 S., R. 6 E., H. M., for irrigation on 45 acres. Estimated cost \$200.

COLUSA COUNTY—Permit 3412, Application 6333. Issued to Northern California Duck Club, Sacramento, December 23, 1929, for 3 c.f.s. from Lurline Creek in Sec. 19, T. 16 N., R. 2 W., M. D. M., for irrigation on .440 acres. Estimated cost \$1,000.

SAN BERNARDINO COUNTY—Permit 3413, Application 6374. Issued to L. C. Wylie, Maywood, December 24, 1929, for 0.1 c.f.s. from two unnamed springs in Glen Canyon in Sec. 23, T. 2 N., R. 6 W., S. B. M., for irrigation on 15 acres. Estimated cost \$900.

TRINITY COUNTY—Permit 3414, Application 5222. Issued to Chester A. Freeman, Salyer, December 24, 1929, for 1 c.f.s. from springs in Sec. 27, T. 6 N., R. 6 E., H. M., for mining purposes. Estimated cost \$400.

TRINITY COUNTY—Permit 3415, Application 6263. Issued to C. A. Freeman, Salyer, December 24, 1929, for 1.0 c.f.s. from unnamed springs in Sec. 2, T. 5 N., R. 6 E., H. M., for mining purposes. Estimated cost \$100.

TRINITY COUNTY—Permit 3416, Application 5770. Issued to W. P. Anderson et al., Weaverville, December 24, 1929, for 1.5 c.f.s. from North Fork Trinity River in Sec. 24, T. 35 N., R. 12 W., M. D. M., for power purposes.

Contracts Provide Improvements of Major Character

A NUMBER of important improvements on the state highway system are assured in awards of contract made during the past 30-day period by B. B. Meek, Director of the Department of Public Works. Some of the more important projects included in these awards are the following:

SAN BERNARDINO-EL CENTRO HIGHWAY—A contract was awarded to the A. M. Peck Company of Los Angeles to grade and pave with Portland cement concrete 10.4 miles between Brawley and 4 miles west of Westmoreland. The contract price was \$312,057.05, making it one of the largest contracts awarded during the year. The roadbed is to be graded to a width of 36 feet and the paving will be 20 feet in width, thus providing for two 10-foot travel paths. The grade of the road is being raised and wide drainage ditches constructed on each side of the highway to eliminate flooding of the roadside from irrigation overflow. The new concrete pavement is to be laid on a sand cushion over the present oil-treated gravel surfacing, thus affording a more adequate roadway for the heavy produce trucking that this artery is called upon to carry.

H. E. Hazard Contracting Company of San Diego received the contract for grading and paving with asphalt concrete 5 miles between Dixieland and Seeley. This pavement will be 20 feet wide and will be placed on sand cushion over the existing oiled surface. The project will construct wide drainage ditches which will eliminate any danger from flooding. Contract price is \$110,426.30.

PACIFIC HIGHWAY—A contract small in amount, but one that will be welcomed by travel inasmuch as it marks an improvement of the highway route through Wheatland in Yuba County was awarded to O. P. Brown of Sacramento for \$2,347. The contract calls for moving buildings, appurtenances and utilities from within to without the limits of the state highway right of way.

CREST ROUTE DRIVE—The Lewis Construction Company of Los Angeles was awarded the contract to grade 6.7 miles from a point west of Running Springs Park to Squirrel Inn. This section is located in the mountains north of San Bernardino and leads to the popular recreational district around Lake Arrowhead and Big Bear Lake. The improvement connects the recently graded highway from the head of Waterman Canyon on the westerly end with the oiled surfaced road to Big Bear on the east. The roadbed will be graded to a width of 28 feet and on a high standard of alignment. The contract price is \$189,687.

RED BLUFF-SUSANVILLE LATERAL—A contract was awarded to E. B. Bishop of Sacramento for grading and surfacing with untreated crushed gravel or stone from Chester to 2½ miles south of Chester, and stockpiling screenings along highway from Morgan Springs to Chester, 21.7 miles in all. This project will complete a continuous improved highway from Dale's Ranch 17 miles east of Red Bluff to Millford, 26 miles east of Susanville. The contract price of this project is \$30,245. This project lies in Plumas and Tehama counties.

ARROYO SECO HIGHWAY—A contract for the construction of a reinforced concrete arch bridge across La Canada Canyon was awarded to the Whipple Engineering Company of Monrovia. The bridge will consist of one 96-foot span and two 25-foot approach spans on concrete abutments with wing walls. The contract price was \$31,419.75.

WATER PERMITS AND APPLICATIONS

(Continued from page 39.)

SOLANO COUNTY—Permit 3417, Application 6444. Issued to A. C. and Minnie T. Sullivan, Winters, December 27, 1929, for 0.37 c.f.s. from Miller or pleasant Valley Creek in Sec. 12, T. 7 N., R. 2 W., M. D. M., for irrigation on 30 acres. Estimated cost \$1,400.

LOS ANGELES COUNTY—Permit 3418, Application 3808. Issued to H. Hay as trustee and San Dimas Water Co., Covina, December 28, 1929, for 16.8 c.f.s. from Pudding Stone Canyon in Sec. 15, T. 1 S., R. 9 W., S. B. M., for irrigation on 4422.21 acres. Estimated cost \$60,000.

SHASTA COUNTY—Permit 3419, Application 6424. Issued to Laura Chandler, Castella, December 31, 1929, for .025 c.f.s. from Mullin's Gulch in Sec. 22, T. 38 N., R. 4 W., M. D. M., for irrigation on 2 acres. Estimated cost \$250.

DEL NORTE COUNTY—Permit 3420, Application 6456. Issued to Russell Reid, Klamath, December 31, 1929, for 0.3 c.f.s. from Branch Creek in Sec. 28, T. 14 N., R. 1 E., H. M., for irrigation on 24 acres.

AWARD OF CONTRACTS DIVISION OF ARCHITECTURE

Dec. 4 to Dec. 22, 1929

NORWALK STATE HOSPITAL, Norwalk, for construction of assistant physician's residence. Contract awarded to T. R. Hyatt of Alhambra; price, \$6,439.

INDUSTRIAL HOME FOR ADULT BLIND, Oakland, for construction of a sales building, and office and addition to warehouse. Contract awarded to J. B. Bishop of Oakland; price, \$13,031.

JUST THINK

Every minute—
A baby is born.
Two husbands get shot.
Three fires break out.
Four girls leave home.
Five girls come back.
Six automobiles wreck.
Seven cashiers go out walking.
Eight people get hurt.
Nine men need automobiles—and—
Ten salesmen are after 'em.—*Exchange.*

She had done everything wrong. She had disregarded the signal lights, then stalled in the middle of the street, and before starting, had taken out her powder puff and started to apply it to her face. An irate traffic cop rushed up: "Say, lady, do you know anything at all about traffic rules?"

"Why, yes, what is it that you want to know?"

Investigating the Water Resources of Southern California Counties

THE Water Resources Investigation now in progress throughout California constitutes the most extensive water survey and study ever attempted in the United States. Southern California water studies constitute a major part of this important investigation.

The area south of the Tehachapi contains over half the population and one-fifth of the agricultural lands in the state, but only one per cent of the total water supply (exclusive of the Colorado). The value of water in the cities and highly developed citrus lands of the south is much greater than in other parts of California and has made it possible to pump from wells with lifts as great as 400 or even 600 feet. Nearly all of the natural water supplies in southern California have been used up and there is an immediate and pressing necessity for more water which can only be secured from the Colorado. However, there still remains in some streams water which has not yet been put to use.

On account of the extreme scarcity and great value of water in the south a large amount of engineering investigation has been carried on by the state and local interests for many years. However, accurate and continuous measurements of stream flow, water supply from rainfall, waste into the ocean, have not been available, the reason being that the physical conditions make such accurate measurements extremely difficult and expensive to obtain.

PROBLEMS PECULIAR TO SOUTH

Geological and topographical conditions in southern California are different from those in the north. The stream flows are very erratic, and large and destructive floods occur, followed by seasons of almost no run-off. The stream channels in the mountains are very steep, which results in there being few reservoir sites of value. On the other hand, the great floods flowing down the steep channels have carried out tremendous quantities of gravel and sand and have built up porous detrital cones which afford underground storage reservoirs. The existence of these under-

ground reservoirs has made possible the agricultural developments of southern California, which would have been limited otherwise. For instance, in the Santa Ana Basin the usable underground storage capacity is estimated at a million and a half acre-feet, which is about twenty times as great as the surface storage now in use on this stream. These same conditions obtain generally in southern California with the exception of San Diego County, where there are no underground reservoirs of consequence, but where as in the northern part of the state advantageous surface reservoir sites do exist.

STREAM GAGING OF VITAL IMPORTANCE

These different physical conditions widely change the character of the water resources investigation in southern California from that in the area north of the Tehachapi. As more accurate knowledge of the stream flows is basic information necessary for proper engineering analysis, an intensive stream gaging program, in addition to that which has heretofore been carried on by the federal and state governments was planned and is now in operation as follows:

Santa Maria Valley (Santa Barbara County): Stations have been established on Huasna Creek at mouth; Cuyama River above Huasna Creek; and on the Sisquoc River at its debouchure into valley.

Santa Ynez River (Santa Barbara County): Discharge will be calculated from records at Gibraltar Reservoir of the city of Santa Barbara.

Ventura County: Stations on Santa Clara River, Sespe and Santa Paula creeks, and Ventura River.

Little Rock Creek (Los Angeles County): Data will be secured at the reservoir of the Little Rock-Palmdale Irrigation District for calculation of stream discharge.

San Gabriel (Los Angeles County): A total of 27 stations have been in operation for several years past by the state.

Santa Ana (Orange, Riverside and San Bernardino counties): A total of 58 stations in the watershed.

Mojave River (San Bernardino County): Stations established at the mouths of Deep Creek and West Fork above irrigation and also at Afton below all irrigation.

San Jacinto River (Riverside County): One station near San Jacinto.

Whitewater River (Riverside County): Station at highway crossing at debouchure, and also below Indio. Also a station on Palm Canyon, a tributary of Whitewater River.

San Juan Creek (Orange County): Station at ocean.

Santa Margarita River (Riverside and San Diego

This article constitutes a report made by B. E. Meek, Director of the Department of Public Works, to Governor C. C. Young at the January session of the Governor's Council.

counties): At Nigger Canyon reservoir site and at Temecula Canyon near Fallbrook.

San Luis Rey River (San Diego County): At the mouth and also at Bonsall about 15 miles upstream.

San Dieguito River (San Diego County): Discharge will be calculated from Lake Hodges reservoir records.

Tia Juana River tributaries are to be measured at international boundary as follows: Campo, Tecate and Cottonwood creeks.

SANTA ANA RIVER INVESTIGATIONS IN ORANGE, RIVERSIDE AND SAN BERNARDINO COUNTIES

An intensive investigation along several lines is being made in the Santa Ana River Basin. Conservation in the Upper Santa Ana Basin can be best accomplished by "spreading," which consists of diverting the flood waters, which would otherwise flow to the ocean unused, onto the gravel cones extending into the valley and sinking this flood water into the underground reservoir, from which it is later drawn by pumps. Much work along this line has already been done by the Tri-Counties Water Conservation Association, but it is planned to increase the facilities for spreading by means of a permanent weir or dam across the mouth of the canyon and larger spreading works. The state is making a detailed survey of the Santa Ana Cone, and the topographical survey of possible diversion works at the mouth of the canyon is almost completed. This is to be used as a basis for preliminary plans for diversion works which will function during high water periods and allow the diversion during floods of 1000 second-feet for spreading which will cause it to percolate into the cone on the north side of Santa Ana River. Diversions of this magnitude under conditions of violent floods found in southern California rivers are unprecedented and the problem presents many new and extremely difficult features.

AERIAL SURVEYS; OTHER STUDIES

Arrangements have been made for an aerial survey of the entire area in the Cucamonga Plain from San Antonio Creek eastward to Day Creek and from the mountains southward to Foothill Boulevard in the western part of the area and to Base Line road in the eastern part of the area. This will cover the cones of all the streams of any magnitude issuing from San Gabriel Mountains onto the Cucamonga Plain and will provide a basis whereby systematic plans for spreading these waters on the cones can be worked out and also will provide a basis for plan for a channel to carry the surplus waters of extremely excessive floods safely to the Santa Ana River. Recent studies made by the state have indicated that there is a very material accretion

to the groundwater supplies from rainfall on the valley floor itself and from return water from irrigation. Also, there is a considerable loss from evaporation from swamps and waterlogged land. In addition to the stream gaging program mentioned, a comprehensive study is being made of rainfall percolation, evaporation from waterlogged lands and allied subjects. This work is being done in conjunction with the United States Geological Survey and Department of Agriculture; also with the three counties.

MOJAVE RIVER, SAN BERNARDINO COUNTY

A program for a thorough investigation of the Mojave River Basin has been laid out, consisting of stream gaging, measurements of depth to water plane at wells, together with mapping of irrigated and other areas more or less swampy which are dissipating water. The results of this investigation will show what further agricultural development can be made with the water supplies available in the Mojave River.

An aerial survey of the entire valley has been completed which will yield the needed information as to extent of irrigated lands and also areas dissipating water through evaporation. A close estimate showed that this work could be performed more cheaply by aerial survey and a great deal more quickly than by other standard surveying methods.

VENTURA COUNTY

An intensive water resources investigation is being made of the watersheds of Ventura River, Santa Clara River and Calleguas and Conejo creeks, lying southward in the Oxnard section of Ventura County. In short it is an investigation of the entire water resources of Ventura County, looking toward plans for as complete conservation by surface and underground reservoirs as is possible to make together with the determination of the areas in which the water can be best used. Work under way during the month consisted of measuring percolation, determining capacity of underground reservoirs and assembling and analyzing data gathered in the field. Ventura County cooperates in this work.

GENERAL

A general underground water investigation of the entire Pacific slope of southern California is nearly completed. Well records over several years on 968 wells have been obtained by the state itself or furnished from other sources, and all these data are being compiled into a report, which together with maps will be published at an early date.

Battling Snow on State Highways

By T. H. DENNIS, Maintenance Engineer.

THE blanket of snow which covered California's recreational roads, and a portion of the mainline routes, while of immense benefit to the agriculturist and untold delight for the enjoyment of winter sports, presented a real task to the maintenance organization of the State Division of Highways. Most of the maintenance crews in this region were on duty day and night for the entire week ending January 11th. While the average Californian has been enjoying the warmth of his fireside, these men have been out all day and night, battling the icy blasts and snows of winter that the roads might be kept open.

On the Redwood Highway snow fell as far as Eureka to a depth of 6 inches, while on Oregon Mountain east of Patrick's Creek there was a fall of 3 feet. However, travel at all times was able to use this route.

On the Pacific Highway the ground was covered with snow from Orland to the Oregon line, ranging from 20 inches at Redding to some 4 feet near Castella. Rotary and push plows were operated continuously during the period of the storm and a two-way road maintained at all times.

On the Trinity Lateral, between Redding and Arcata, snow was removed from the entire lateral, the snow ranging from 2 feet to 3 feet in depth.

On the Alturas Lateral men labored continuously with truck plows, tractor plows, and graders in removing snow. The snow extended from Redding to the state line, a distance of 180 miles, the depth ranging from 2 to 4½ feet.

On the Red Bluff-Susanville Lateral the snow extended from Red Bluff to the state line, a distance of 179 miles, and some eight crews, equipped with rotary and push plows, disregarding time entirely were able to keep

the road open at all times. The maximum fall was at Fredonia Summit, where a fall of approximately 3½ feet occurred.

Snow was also plowed on the Klamath River Lateral from the mouth of the Shasta to Weitchpec, a distance of 132 miles.

The foothill country east of Sacramento was entirely covered with snow, the snow extending down into the valley. However, all of these foothill roads, including the Mother Lode, were, by continuous effort, maintained at all times open to travel. By reason of these efforts, people were enabled to enjoy snow sports at various points.

Snow was removed on the Tahoe Road as far east as Riverton, 20 miles above Placerville.

On the Auburn road snow was removed from Auburn to a point 21 miles above Colfax, the government airport, which is at an elevation of some 5200 feet. Tractor, push and rotary plows were necessary to provide a continuous two-way opening of this route, the maximum depth of which was 10 inches at Auburn and 4 feet at airport.

Snow fell as far down as Auburn on the Downieville

Lateral, and the strenuous efforts of the highway crew enabled this route to be kept open to Nevada City at all times, and succeeded in opening to Downieville within a week after the peak of the storm. The heaviest fall of snow occurred at the 3500-foot elevation, east of Camptonville, where a fall of 4 feet was removed.

The interstate traffic between the state line and Truckee was uninterrupted, even though the fall averaged in excess of 24 inches between these points, tractor plows and truck plows being operated continuously by our crews. Truck plows, by continuous operation during the past week, were enabled to clear the snow between Sonora and Long

MAINTENANCE FORCES

OFFICIALLY COMMENDED

The work of maintenance forces in battling snow on state highways was recognized in the following vote of the California Highway Commission.

Voted, That the California Highway Commission expresses appreciation of the untiring and able manner with which maintenance forces of the Division of Highways battled with snow on state highways during the storms terminating January 11, 1930.

The Commission feels that the record is one in which the entire people of California can well take pride and is an example of the unselfish devotion to duty which permeates the entire state highway organization.

Motor grader on Victory Highway.

Barn, a distance of some 20 miles, the average depth exceeding 24 inches of snow, with a maximum of 3 feet at Long Barn.

By strenuous efforts and continuous operation a rotary snow plow maintained a two-way road between Murphy's and the Big Trees, where the winter sports were enjoyed by thousands of people over the week end. Traffic on this route was not interrupted at any time.

Truck plows and tractor plows performed their share in the work of keeping the All-Year Highway open into the Yosemite. Some trouble was experienced on January 12th, between 6 a.m. and 10 a.m., due to a 15-inch fall on the Briceburg Hill, but this, too, was

Scene on State Highway during January snow storm.

removed, and travel allowed to complete their journey from the park.

In the southern portion of the state some 70 miles of the Ridge road was blanketed with a cover from one to three feet deep. Some 12 pieces of equipment operated over this stretch, consisting of truck and tractor plows, which later were supplemented with a rotary.

Two-way and one-way travel was allowed over this route, with the exception of the

period between Saturday at 9 a.m. and Sunday at 3 p.m. Considerable trouble was experienced on this route, due to the heavy trucks which attempted the grade without being provided with chains. The storm also caught many of the motorists unprepared, and they were restrained from attempting the trip not being provided with chains.

On the Arrowhead Highway leading eastward across the Desert to the state line some 4 feet of snow fell at Cajon Pass. Some 6 pieces of equipment labored continuously during this period, supplemented by men with shovels, to maintain a continuous one-way road throughout this storm.

Between Beaumont and Banning, at the Desert's edge, east of Redlands, the pavement was covered with some two feet of snow.

Snow plow at work on State Highway in Calaveras County.

However, this at no time interfered with traffic.

East of San Diego on the Border Highway, falls of snow were had near Pine Valley, Buckman Springs, and Boulevard, yet by the efforts of our crews this route was kept open.

All in all, the weatherman has provided an

View of snow conditions on Ridge Route on January 12.

Night Patrol Being Organized

By ROY YOUNGBLOOD, Assistant Superintendent, California Highway Patrol.

IF THE scream of a siren on a powerful white ear disturbs your reveries along a quiet road some night soon, don't get excited over it. Pull over to the side of the highway and let the white ear pass for it probably will be only the night patrol chasing another drunken driver or speeder.

It may be some weeks before that happens. It takes time to organize a night patrol

they submit lists of candidates from which additional appointments to the regular force could be made, in compliance with the law. In all, 122 additional men were requested it being contemplated to use this number of men at the beginning for night duty.

Although the average number of men requested in each county was two, some counties will need as high as four.

To date practically all the supervisors have responded and have submitted their lists. It now remains for these appointments to be made after the manner set up by civil service regulations.

After the men have been appointed a considerable period of training will be necessary before they will be permitted to go out on night patrol duty. This type of work is very different from day patrol duty and will require a special type of training.

We also have taken steps to provide the men with inexpensive but substantial automobiles. Motoreycles will not be used to any extent for night duty because of the hazard of operating them at night.

The additional men appointed are to be assigned to the captain of the county from which they were nominated. Whether assignments for permanent duty to the night patrol will be made or whether it will be arranged in shifts so that all members of every squad are assigned to it a portion of each month remains to be worked out.

Both arrangements have their advantages. In nearly every squad there are, unquestionably, men who would prefer night duty the year round and the privilege of using an automobile to day duty on a motoreycle. Indeed, there are some of our men unable to ride a motoreycle because of injuries received in the service. To such the night patrol will be a godsend.

As contemplated at this time, the night patrolmen in each county will work under instructions from their county captains. However, we are working on plans for providing some sort of central supervision for these men inasmuch as it obviously is impossible to expect the regular captain to work day and night or to have a day captain and a night captain in all the counties.

It may be possible to work out this problem

ROY YOUNGBLOOD.

just as it has taken time to get the regular patrol in working order. But happen it will for California highways are going to be protected against the reckless and criminal driver by night as well as by day.

Section 30-1 of the motor vehicle act states that "the chief of the division (meaning the Division of Motor Vehicles) shall make adequate provision for the patrol of the highways both day and night."

The executives of the California Highway Patrol regard this as a mandate of the legislature as, indeed, it was intended to be when put into the act, and have taken steps to organize patrol to the end that a part of every county unit shall be on night patrol duty all the time.

Some weeks ago, requests were sent to the supervisors of forty-five counties asking that

with the district inspectors in some way to provide night supervision.

The men will work in pairs, never alone. Experience has taught us this is the safest plan. On night patrol the officers are likely to encounter the most hardened type of criminals who would not hesitate even at murder to carry out their evil intentions. Sawed-off shotguns and possibly tear bombs will be a part of the equipment of every car operated at night. The patrol must be prepared for every emergency.

While the men will be instructed to enforce every part of the Motor Vehicle Act and to arrest persons violating any of its provisions, we intend to give them specific training along certain lines to catch the type of offender operating at night.

Most important, perhaps, is the crying need for abatement of the headlight evil. We have conducted statewide raids at various times against glaring lights but this gives us only temporary relief. The night patrol will be instructed to pay particular attention to this type of offender.

Traffic counts made all over the state have developed the fact that the highways are used at night by large numbers of trucks engaged in commercial transportation.

Night patrolmen will be instructed to keep an eye out for the overloaded truck. And, of course, special training in the technical aspects of the law governing overloading will be needed before the officer can be sure when he is right and when he is wrong.

The schools for the officers we are arranging to establish will solve the problem of fitting the men for the special task of night patrol work. General J. J. Borree, head of the schools and education bureau, has just returned from the east where he was sent to make a special study of traffic officers' training schools. The information he secured will be turned to good account in the special training.

As stated before, it is our hope that the night patrol will serve in a large measure to reduce the toll of death and injury on the highways. While the volume of accidents occur in the late afternoon when traffic is at its peak, the accidents involving the greatest number of fatalities occur at night. The drunken driver is a heavy contributor to this toll and we are going to make a special effort to get him. In general we have found that cars involved in accidents at night are cars traveling at excessive rates of speed. Naturally when an accident occurs under such conditions it means a bad smashup and a death.

Governor Inducts Highway Patrol Into New Duties

The California Highway Patrol was officially inaugurated in ceremonies held in Los Angeles January 29th and at Sacramento February 4th at which Governor C. C. Young reviewed members of the patrol of the southern and northern counties.

The Los Angeles ceremonies were held on the north side of the Coliseum grounds. Approximately 100 officers in their new two-tone uniforms and equipped with new white motorcycles were drawn up for review. Governor Young passed along the line shaking hands with each man. Accompanying him were Bert B. Meek, Director of Public Works, Eugene W. Biscailuz, superintendent of the patrol, Mayor Porter of Los Angeles, Sheriff Traeger, Chief of Police Steelkel and others.

Governor Young made a short address, congratulating the men on their appearance. He declared the primary object of the patrol was not to make arrests but to protect the motorists on the highways and to assist traffic.

More than a score of photographers and talking picture cameramen were on hand to record the ceremonies.

A spectacular parade preceded the ceremonies.

The scene was reenacted in Sacramento on February 4th when approximately 50 officers and executives lined up for review in the square between the two Capitol extension buildings.

Governor Young expressed the hope at the Sacramento ceremony that the inauguration of the new patrol would do much to reduce the toll of accidents on the highways. Biscailuz pledged the efforts of himself and the patrol in making this possible.

VIEWS ON OPPOSITE PAGE

Youngblood, Assistant Superintendent, standing in front of the line to the right; northern traffic officers on inspection before the State Office Building in Sacramento; the two lower pictures show southern traffic officers on parade in Los Angeles, with Governor Young, Superintendent Biscailuz and Assistant Superintendent Youngblood inspecting the squad.

Hail the New State Highway Patrol!

State Safeguards its Construction By Thorough Supervision in Field

By J. W. DUTTON, General Superintendent, Division of Architecture.

THE evolution of a construction project is very often quite interesting. The man with the money finds himself in need of a building. He looks about for his architect and when he finds one to his liking, he lays his desires before him, giving him all the information he can think of, how much he expects to spend, what sort of a building he

agreed upon, the responsibility of the architect continues throughout the entire progress of the work and on to its satisfactory completion.

STATE PROCEDURE SIMILAR

With the State Department of Public Works, Division of Architecture, the general scheme is very much the same. Instead, however, of the business being arranged by a private owner and a private architect, it is done on the one side by the State Architect and his designing force and estimators, and on the other side by the executive head of the institution, under the guidance and direction of the head of the department under which the particular institution comes, such as the Department of Institutions, Department of Education, or the State Board of Prison Directors.

In many cases, due to the similarity of requirements and the general trend toward standardization of buildings for similar purposes throughout the typical institutions, and the accurate cost data which are kept on all of the construction carried on by the Division of Architecture, and the familiarity of all parties concerned with the latest approved plan layouts, etc., the preliminary arrangements can be decided upon without undue loss of time. However, occasionally a project comes up calling for design of a building for some exceptionally special function on which the division has no first-hand information available. Considerable research is obviously then required in order that no detail neces-

J. W. DUTTON.

wants, the type of architecture he favors, and the type of construction he thinks is best for the use he proposes to give it. The architect then proceeds to design the building and after various degrees of modification or elaboration he is successful in selling the owner a design which it is shown by the estimate can be built within the funds available.

This being settled upon and approved, the architect gets out complete working drawings and specifications and the job is put out for bids and finally a contract is let for its construction.

Then follows usually the selection of a satisfactory superintendent of construction to represent the architect and owner and the work goes merrily forward. Unless otherwise

The new cell block at Folsom.

sary to the successful and practical use of the building is omitted.

FROM OFFICE TO THE FIELD

Very naturally, when a set of finished drawings is gotten out for a job, comprising complete architectural and engineering drawings and details, including mechanical and electrical layouts and details, and the specification writer has completed his work, the office force, particularly those in charge of the various sections, is pretty thoroughly familiar with the project.

The job then goes out for bids and contract. It is then that the field force gets its first look at what has taken months possibly to devise. Within a few short weeks at most, the job is started and the field superintendent

construction by the field force. On account of the often remote locality of the work there is difficulty in obtaining a detailed explanation of the scheme from the designer and it is possible that the job superintendent does not grasp the entire import of the matter and later finds that adequate provision has not been made in earlier work to make the best installation possible.

It is fully realized that there must be a limit to what is shown and detailed in a set of drawings and called for in the specifications and a lot must be left to the intelligence and experience of the field superintendent but it is a wonderful help to him and an invaluable guide against error if his attention is called to the exceptional by a brief note on the drawing.

Plant quarantine inspection station being planned by the Division of Architecture for the Department of Agriculture.

is expected to have acquired a pretty thorough knowledge of what is on those plans and in the specifications and be able to protect the state against errors or omissions such as are so easily possible during the progress of a job.

Thus, attached to the field force of any construction organization, there is a degree of importance and responsibility which is not always fully realized or appreciated.

In some minor cases, where the work is regular in character, the field superintendent needs no particular assistance from the office in addition to the plans and specification in order to carry out the job as called for, but in the case of major construction, there are peculiarities of requirement and design attached to practically every project turned out that call for unusual application of known principles and methods of construction. Quite often the actual success of the detail from the builder's standpoint, calls for further study and preparation or arrangement of earlier

DRAWINGS ARE EXPLICIT

It is conceded by contractors generally that there is very little to guess at on drawings gotten out by the Division of Architecture and it is not often that a difference of interpretation arises between the superintendent and contractor. This happy situation can only be brought about and maintained by advance knowledge and conclusion as to what is called for, and proper directions given before errors are made.

Where a field superintendent is already on the ground, in connection with other work, he is supplied with drawings and specifications of the forthcoming new project as early as possible before the contractor arrives to start the work. The field superintendent is instructed to apply any spare time he may have to a detailed study of these drawings and to make notes of any and all points on which he is not fully clear so that these may be explained to him in ample time. After the con-

Machine Finishing for Hot-Mixed Highway Pavement in California

By C. S. POPE, Chief Construction Engineer, California Division of Highways.*

THIS paper relates to the use of mechanical means for spreading, raking, and finishing hot asphaltic mixture for highway and street paving.

The information presented herewith was obtained over a working period of about three years, during the construction of some 250 miles of asphaltic concrete surfaced highways and thousands of square yards of city streets.

The purpose of this paper is not to provide a comparison between the asphaltic type of pavement and any other type, but rather to describe an important advance in improved structure in the asphaltic type and a more economical construction which has been made possible by the introduction of machine finish.

CONCLUSIONS

The advantages which have become apparent and the improvement in asphaltic construction which have followed upon the introduction of mechanical spreading and finishing have been summarized as follows:

(1) Removal of limitations on plant capacity, due to former inability to handle large tonnages on narrow highways.

(2) Decrease in unit costs of asphaltic mixture, due to quantity production and quantity handling on the street.

(3) Greater uniformity of structure of the asphaltic paving base and surface.

(4) Decrease in surface roughness to a point where there is now little difference between the best laid asphaltic type and any other type of pavement in this respect.

(5) Production of a uniformly smooth non-skid surface which will be safe in any weather for a number of years.

(6) Elimination of poor workmanship through the substitution of machinery for hand labor on all of the more important phases of the work.

(7) Reduction in rolling due to the particular arrangement of the paving mixture previous to rolling.

(8) Decrease in plant and street costs due to mass production and decrease in general

contract costs due to speed of operations as a whole.

HISTORY

In this mechanical age, it may seem strange to you as it does to me that contractors were so many years in adopting the use of power operated spreading and raking machines for asphaltic concrete. Similar machines were readily accepted for producing smooth, well compacted concrete pavement, but the practical asphalt paving man always visualized innumerable difficulties which would assail him if he attempted to use similar machines on his work.

Proposals that it was feasible to spread and rake asphaltic mixtures with machines were met with many objections, since proved unsound. These objections impeded the general adoption of mechanical spreading for two or three years in California at least, after it was first suggested.

During 1924 or 1925, spreader boxes for spreading macadam rock came into general use and their success gave rise to our opinion that these boxes might be used to spread asphaltic concrete base, if contractors could be induced to try them. Their use on the first job on which they were tried allowed the contractor to take off a number of shovelers, so he was entirely agreeable to the next experiment which was to attach rakes to the spreader boxes to rake out the mix. This improvement allowed the contractor to take off one or two more men and convinced us that asphalt concrete could probably be raked and spread by machine methods.

Our spreader boxes were not so economical on the thin $1\frac{1}{2}$ -inch surfaces we were then laying in 1926, so we investigated the use of a large drag rake spanning the entire 20-foot width of roadway to be followed by a strike-off screed. These implements were at first drawn by hand and later by horse power. Both implements operated successfully and gave us a surface smoothness superior to anything we had been able to obtain by hand raking methods, but did not tend to increase plant output.

Through the cooperation of one of the larger road machinery manufacturers, we

* This paper was delivered before the annual convention of the Asphalt Associations, held at West Baden, Indiana.

1. 1929 model raking and finishing machine with four-wheel drive. 2. Spreader boxes as used on asphaltic concrete work. 3. View of work immediately preceding the raking and finishing machine. Tops of rakes are just visible above the front screed. 4. Furrows left by rakes assist compacting. 5. Appearance of newly laid asphaltic concrete just prior to rolling. 6. General view of a machine-finished job under construction, showing sequence of operations. 7. Typical furrow marks of machine-raked asphaltic concrete after rolling.

secured a standard concrete finishing machine and proceeded to remodel it at our own expense and thus completed the first attachments for raking and finishing asphalt concrete by mechanical means.

This machine was furnished on trial by the state to one of our contractors engaged in resurfacing a 10-mile section of highway. The working out of the usual defects which seem inherent in a new machine caused us all more or less concern but in the end the machine got down to work and turned out an excellent job

which showed a roughness of about half of what we had been getting by hand raking. The successful use of this machine was followed very shortly by a decrease in our costs of asphalt concrete paving. So much for the early history of the development of the raking and finishing machines.

OBJECTS SOUGHT

The earlier purposes sought in the use of machines for raking and finishing asphaltic concrete pavement were several.

It was desirable to increase the amount of material which could be handled on the road beyond what was possible by hand spreading. Plant capacity could be increased by building larger plants and hauling equipment could be handled on the road, but because of the nature of the material it did not seem possible to place enough shovels and rakers on a 20-foot road to handle the greatly increased tonnage required for economical work. In other words, the spreading and raking operations constituted the bottle neck of the job.

It was desirable that smoother pavements be laid because of the unfavorable comparison which constantly arose between Portland cement concrete pavements smoothly finished by machine methods and asphaltic pavements still finished by hand raking.

It was desirable that a nonskid surface be constructed which, while smooth, would still afford as safe driving in rainy weather as was claimed for the Portland cement concrete.

It was desirable to incorporate in the pavement construction such qualities as would insure a long life and freedom from objectionable waviness.

A considerable mileage of thin Portland cement concrete pavement, usually 15 feet wide and 4 inches in thickness, was constructed on the California highway system between 1912 and 1922. An unusual feature of this pavement was its high crown which averaged about $2\frac{3}{4}$ inches or about 3 per cent of the half width. This high crown eventually added about one inch additional average thickness for leveling course over the 15-foot width.

Due to the enormous increase in traffic, to faulty foundations, to under-design of the slab and other causes, a considerable mileage of this pavement began to show distress as early as 1916 or 1917 and the state has launched a program of reconstruction or surfacing these pavements to a width of 20 feet.

Highways in especially bad condition or which are subjected to truck traffic or to unfavorable climatic or topographic conditions are resurfaced with Portland cement concrete, while those in better condition or which are located in the valleys or other more favorable locations are surfaced with asphaltic concrete.

The asphaltic concrete type of asphaltic pavement has been chosen generally in California because of its economy combined with a durability equal to any other asphaltic type, and also from the fact that it presents a nonskid surface for a longer time than other plant-mixed asphaltic surface.

PREPARATION

In modern resurfacing operations because of the greatly increased output, great care is necessary in planning to insure smooth coordination between the plant, the hauling equipment, and the spreading and rolling operations.

PLANT

I will refer briefly to certain plant arrangements which have a bearing on our practice. A plant of considerable capacity is desirable, and common practice in California at the present time has fixed on plants producing from 2500 to 5000 pounds per batch as the economical size. Such a plant will turn out up to 65 batches per hour, if properly arranged and average outputs of from 500 to 800 tons per day are not unusual. While our specifications limit output to 65 batches per hour, the number may be increased should our laboratory and field investigations indicate that improved methods introduced by the contractor will produce a satisfactory mix in a shorter mixing cycle.

We have found it desirable to premix all of our aggregate before it is passed to the proportioning bins and this is accomplished either by mixing in layers at stockpiles or else by means of chutes which deposit layers of coarse and fine aggregate on a belt running under the storage bins and which feed the dryer. Weigh boxes are always placed with their outlets at right angles to the mixing shafts of the pug mill instead of parallel with the shafts, since the latter arrangement has a tendency to defeat complete mixing of the different sizes of aggregate.

HAULING EQUIPMENT

Because of the precarious condition of many of our concrete pavements, it is usually required that all hauling be done with pneumatic-tired trucks.

Since the usual load of mixture varies from 5 to 6 tons, the dual type of tire is in common use.

Trucks are usually fitted with convenient coupling devices placed forward of the middle of the truck for ease in attaching the chains by which the spreader boxes are drawn.

SPREADER BOXES

Two usual types of spreader boxes are in common use one of which is equipped with skids on which it is dragged forward and the other is supported by means of rollers. Both are equipped with more or less satisfactory gates extending the full width of the back to permit spreading the mixture to the proper

Engineers Discuss Maintenance Problems

A CONFERENCE of District Maintenance Engineers and Superintendents was held in Sacramento on January 6th and 7th. This meeting was called by Maintenance Engineer T. H. Dennis, with the thought that it would offer an opportunity for a mutual exchange of ideas to the general benefit of the maintenance program.

Papers were prepared and read, covering the various phases of maintenance work, a general discussion following each paper as presented.

During the first day a number of oil company representatives were present to give the latest data on road oils, to which this day was largely devoted. The second day was devoted entirely to other maintenance problems. The program for the two days was as follows:

January Sixth

Opening Remarks—

Mr. Dennis, Maintenance Engineer.

Bitumuls for Maintenance—

Mr. McKesson, American Bitumuls Co. (Paper presented by Mr. Moskowitz).

Asphaltic Road Oils—

Mr. MacSwain, Gilmore Oil Co.

Asphaltic Road Oils—

Mr. Blood, Standard Oil Co.

Asphaltic Road Oils—

Mr. Borden, Shell Oil Co.

Dust Palliatives, Blanket Patches—

Mr. Vickrey, District Maintenance Engineer, District III.

Oil Macadam Blankets—

Mr. Holbrook, Maintenance Superintendent, District IV.

Asphalt Cutbacks—

Mr. Harris, Union Oil Co.

Oil Macadam Blanket—

Mr. Green, District Maintenance Engineer, District V.

Dust Oiling—

Mr. Fite, District Maintenance Engineer, District IX.

E. D. Willis, Maintenance Superintendent.

District IV—

R. P. Duffy, District Maintenance Engineer.
R. A. Wilson, Maintenance Superintendent.
W. F. Holbrook, Maintenance Superintendent.
A. S. Moore, Maintenance Superintendent.

District V—

E. R. Green, District Maintenance Engineer.
Roy S. Peck, Maintenance Superintendent.
Kenneth Mendenhall, Maintenance Superintendent.
L. D. House, Maintenance Superintendent.

District VI—

E. Evers, District Maintenance Engineer.
Thos. Eastman, Maintenance Superintendent.

District VII—

I. S. Voorhees, District Maintenance Engineer.
C. J. Sawyer, Maintenance Superintendent.
E. T. Scott, Assistant District Maintenance Engineer.

TWO VIEWS OF SAME HIGHWAY SECTION

Above are two photographs which are typical of recent improvement on part of the Los Angeles-San Bernardino Route, known as the "Foothill Boulevard." The photographs were taken at the same location before and after completion of the contract.

Note particularly that the culvert has been lengthened, the pavement has been widened from 18 to 30 feet in width, the pole lines have been set back, and the earth shoulders have been widened.

J. G. Standley, Office Engineer.

Keep Scenic Highways Scenic

By MRS. CHARLES N. FELTON, Chairman, California Committee for Restriction of Outdoor Advertising.

THERE is something more important for California than the mere building of roads and highways, and that is the preservation of California's scenic beauties. In commercial districts where facilities of travel and the need for rapid transportation are the chief consideration, it can hardly be hoped, even by those who are most enthusiastic over the natural gifts of nature, that the native loveliness of the landscape be kept entirely unscarred, but it can be hoped that greater efforts will be made, wherever possible, in the near future, for the preservation of the scenic wonders which are such an asset to California.

Today California can boast of splendid highways, miles and miles of perfect pavement which traverse the entire length of the state and cross and recross its mountain ranges and broad, fertile valleys. Truly, Californians can be proud of the rapid steps which have been made in the development of routes of communication, but can we all be proud of the unsightly fringes which border our most traveled routes?

Glaring billboards, endless rows of signs, frightfully mixed vivid colors to attract attention; *these* are the scenic wonders of romantic California which visiting travelers can remember!

Each year the State Highway Division spends more and more money in order to open up new and lovely regions for the travelers and pleasure seekers. Mountain ranges and deep canyons, which until a few years ago were accessible only by pack train, can now be reached by the vacationist in his automobile in a few hours. Those who love the natural wildness of the hills and those who love the beauty of vast fields of grain and productive orchards, object to having the scenery ruined by the vast multitude of obstructing signs which dot our roadsides.

Just as the public schools of the state are advocating a broader educational program for the children, a program based on taste and appreciation, so are private individuals and organizations pitching into the task to educate the public to a keener appreciation of our natural wonders.

On September 12, 1929, a group of California men and women organized the California Committee for Restriction of Outdoor

Advertising, the object of the organization being to help preserve the natural loveliness of the California scenery by striving to abolish unsightly signs which mar the majority of our highways. The incentive which is uniting these men and women in their protest has already gained the approval of many well known outdoor organizations of the state, among which are the Mills Club, the Redwood Empire Association, the San Francisco Garden Club, the San Francisco Society of Women Artists, the Sausalito Woman's Club, the Tamalpais Conservation Club, and the Tamalpais Centre Woman's Club.

The objects of the California Committee for Restriction of Outdoor Advertising are as follows:

- To influence public opinion to protest against defacement of the landscape.

- To influence advertisers to see that they are destroying an economic as well as an aesthetic feature of California by advertising on the highways, as this state depends more on her scenery for economic welfare than any other state.

- To work for legislation which will prohibit advertising on rural highways.

The program which has been drawn up is:

- To secure individual members by their endorsement of the pledge and an annual membership fee of one dollar.

- To secure as cooperating members, sympathetic organizations by their endorsement of the pledge and their allowing their names to appear on the back of the C. C. R. O. A. stationery.

- To promote state-wide interest in the objects of the committee.

- To give to the cooperating member in each community a program to be carried out.

The men and women who are thus working for the beautifying of the state feel that it is not fair to those who love the glorious scenery which lies along the Pacific slope from the Mexican line past the summit of Mount Shasta, to allow a comparatively few business concerns to litter hilltops and creek beds, forests and pastures, mountain passes and desert wastes, with their huge, glaring placards which have multiplied to such an extent that they have become a well known foundation for national ridicule. It is felt that the state authorities could help, if when lovely sections of the mountains are opened to automobile travel, steps were taken to check roadside advertising. California is growing at such a rapid rate that unless open war is

Support for the position of B. B. Meek, Director of the State Department of Public Works that the through street as a means of traffic control presents difficulties not generally understood, comes in a letter to Director Meek from the National Safety Council with headquarters at Chicago.

Commenting on Mr. Meek's statement as published in the newspapers, the letter states that the National Safety Council has completed a "very careful study of accidents on through streets" and that its conclusions are much the same as those of Mr. Meek's, namely that "through streets are an overworked means of traffic control."

"We feel that through streets have a very general place in general scheme," the letter continues, "but especially where they are right of way highways, they may be a menace rather than a safeguard to the driving public."

Among other conclusions cited in the letter is the following:

"When properly established a through street will reduce collisions between automobiles, but pedestrian accidents often increase and the net result is ordinarily no material reduction in the number of persons killed and injured on the through street."

"Traffic on through streets can move more rapidly than that on unprotected streets without being granted special right of way privileges. After making a full stop, a vehicle on the cross street should be authorized to enter under the usual right of way rules."

"Too many through streets defeat their own purpose. Requiring the driving public to stop too often tends to belittle the importance of through-street stops, and makes enforcement difficult, if not impossible."

Railroad Signboards To Be Removed.

Newspapers in Marin County published the following article during January:

One more forward step in its campaign for the beautification of the Redwood Empire Highway System was taken Monday when, at a meeting of the

executive board of the Redwood Empire Association, E. H. Maggard, president of the Northwestern Pacific, and vice president of the Southern Pacific-Golden Gate Ferries, Ltd., agreed upon the removal of signboards erected by those two concerns in the empire district.

The agreement to remove the signs, according to Maggard, was made in order to comply with the wishes of the people the rail and ferry companies serve, as expressed through the Redwood Empire Association.

All signs will be taken down immediately with the exception of a few directional boards, which Maggard said do not detract from scenic attractions and are not to be classed as traffic hazards.

This Letter Speaks Volume in Itself.

The following letter tells its own story:

Santa Monica, Cal.,
January 16, 1930.

California Highway Commission,
Sacramento, California.

Gentlemen:

With the conclusion today of nine days of continuous stormy, rainy weather in southern California I wish to take this opportunity to commend in the highest terms the work your representatives in this section have done.

No finer devotion to duty nor exhibition of capability has come to my attention than the efficiency of Mr. Jim Stauff, superintendent of maintenance in the Coast Highway division immediately northwest of Santa Monica.

During stormy weather this particular stretch of highway along the Malibu coast is undoubtedly the most difficult to maintain in passable condition of any major state road on your maps. Boulders by the thousands, rock, shale and mud slides, storm waters and a raging sea are the things with which this division has to contend.

Stauff and his crew met the emergency by working ceaselessly early and late to keep the highway clear. Our school buses at 6:30 a.m. found a clear road every day and the passenger buses at night had an equally passable right of way. And this has been true for 5 years.

We have found the Highway Department here to be most courteous and ready to cooperate at all times, including several favors from Mr. S. V. Cortelyou. I feel the least that can be done to express the obliga-

tion I owe your department is to express my thanks in this manner.

Whatever advancement may come to Mr. Stauff in the future I am sure will find him capable of meeting the situation as he has this and many other stormy weather emergencies.

Yours truly,

FRANCIS BRUNNER, Pres.
Santa Monica Mountain Coach Lines.

Property Owners

Have Final "Say-so."

Owners of private property have the absolute "say-so" as to whether posters or unsightly advertising signs or structures are to be placed upon their land. Laws now on the California statute books not only prohibit placing of such signs on state property, which includes state highway right of ways, but provides for the possible removal of signs from private property.

The law is based on the fundamental invested right of property, points out the Automobile Club of Southern California, which broadcasts the state ruling which "prohibits the placing or maintaining of signs, mechanical devices, transparencies, pictures or advertisements upon property of any person or private corporation WITHOUT CONSENT IN WRITING THEREFORE HAVING BEEN FIRST OBTAINED."

* * * * *

Drunken Drivers Have Licenses Revoked.

Warfare waged against the drunken driver continuously during 1929 by state traffic officers resulted in the revocation of the driving licenses of 708 persons for periods of one year or more.

This was announced by officials of the California Highway Patrol who said drunken driving exceeded all other causes of revocation, being responsible for nearly two-thirds of all revocations for the year.

The records show 1162 persons in all were given official invitations to put their cars away for a year and try walking for a change.

* * * * *

Information Wins

Appreciative Letter.

The following letter was received by State Highway Engineer, C. H. Purcell, from H. J. Whitley of Los Angeles:

Paso Robles, Cal.,
January 6, 1930.

It was very kind and thoughtful of you to advise me through your secretary, Mr. Cook, of the advertis-

ing of the "gap" in the paving of the highway to the valley, and I want you to know that I appreciate it.

This action on your part, it seems to me, is quite typical of the thoughtful consideration of the public and the thorough capability shown by every member of the highway organization with whom I have come in contact, from commissioners down to maintenance men.

The early completion of this work, in my opinion, should be of great benefit to this entire community and to the portion of the San Joaquin Valley served by this road.

* * * * *

A Little Late, But Still Welcome.

Here is a belated clipping that should have been reprinted in last month's issue of CALIFORNIA HIGHWAYS AND PUBLIC WORKS. It is taken from the columns of the *Petaluma Argus-Courier*:

A beautifully illuminated living Christmas tree in the yards of the maintenance and equipment department of the California Highway Commission on the Redwood Highway, below this city, is the center of attraction.

The tree, twenty-five feet in height, is covered with thirty lights, automatically controlled, which burn each evening from 5 to 10 o'clock.

The tree was placed in position by the maintenance and equipment employees of the commission in this district.

* * * * *

Says Stripe Adds Two Feet to Road.

George W. Ashley writes as follows relative to a road improvement on Cherokee Lane in San Joaquin County:

Greetings, and I wish to remark on the aid to driving the white stripe down the center of the state highway (Cherokee Lane) gives one. I think 90 per cent of the drivers respect it and it seems to have widened that road a couple of feet. I had a chance to specially notice this when driving to the south of Stockton in the rain to attend a public meeting the other night. Cherokee Lane pavement seemed wider than the new highway south of Stockton.

* * * * *

Scatter Salt To Fight Snow.

The following news article emanated from Redding:

Five thousand pounds of salt for distribution on the highway up the canyon was purchased by the State Highway Commission from the McCormick-Saeltzer Company yesterday. The salt was hauled away in one of the Commission's big trucks equipped with a snow plow.

The salt is scattered on icy turns on the highway, resulting in a loosening of the snow and ice for easy removal from the roadway.

OHIO—With a total of 6660 miles of hard-surfaced and 3837 miles of gravel roads, the state added 300 miles to each of these systems in 1929.

1929 Registration of Motor Vehicles

Announced by Class and Counties

The Division of Motor Vehicles, Department of Public Works, has announced the total fee paid registration of motor vehicles by counties, for the period January 1, 1929, to December 31, 1929, as follows:

Counties	Autos	Solid trucks	Pneu. trucks	Motor-cycles	Solid Trailers	Pneu. Trailers
Alameda	135,892	1,590	3,503	847	418	1,172
Alpine	71	1	1	1	---	1

Salinity Investi-
gation

Now Asking Per-
mits for Dams

Review of January Activities

In the

Division of Water Resources

EDWARD HYATT, Chief of Division

Flood Control and
Reclamation

Irrigation District
Matters
Water Rights

WATER RESOURCES STUDY

A statement of the work being conducted in southern California will be found on page one of this issue.

SALINITY INVESTIGATION

This intensive investigation has been continued during the past month with 26 regular salinity observation stations and 8 drainage stations being maintained.

Additional measurements have also been made to determine the division of stream flow in the Sacramento along the several channels. During this month ten sets of complete stream flow measurements were made including Georgiana Slough, Sacramento River below Georgiana Slough, Steamboat Slough, Sutter Slough and Three-Mile Slough.

Analytical studies are in progress in the office to determine the relation of salinity to the inflow into the delta and to tidal action. The study showing the variation of salinity throughout a complete tidal cycle for various degrees of salinity and for various characters of tide has been completed. A compilation has been made of the combined stream flow into the delta from 1924 to October 1, 1929.

SALT WATER BARRIER

Since the last report the division has received from the State Printing Office and distributed Bulletin 22, "Report on Salt Water Barrier below Confluence of Sacramento and San Joaquin Rivers, California," by Walker R. Young, Engineer, United States Bureau of Reclamation. This investigation was carried on from 1924 to 1928 by the United States Bureau of Reclamation, under contracts executed jointly by the Bureau of Reclamation, the Department of Public Works and the Sacramento Valley Development Association. The bulletin contains 667 pages of text and 131 plates and maps. Nineteen estimates of cost for barrier at several sites are included.

This bulletin is the first to be published and distributed to the public under the Water Resources appropriation made by the 1929 legislature.

The economic and engineering investigation of the salt water barrier outlined in last month's report is being actively pressed.

An agricultural field survey of the areas adjacent to the barrier is under way. Questionnaires have been prepared which will be submitted to the various interests which might be affected by the construction of the barrier. These will cover industrial, reclamation and agricultural developments.

Negotiations have been initiated for the cooperation of this department with the State Highway Commission, Fish and Game Commission, State Board of Health, United States War Department, Bureau of Reclamation, Coast and Geodetic Survey and Geologi-

cal Survey on the several features in which each particular agency is interested.

A research of the historical records on irrigation and reclamation development has been started.

SACRAMENTO VALLEY

Water Supply Estimates—Estimates of seasonal run-off of all streams in the Sacramento Valley for the period 1889 to 1929 have been completed. Averages for the last five, ten, twenty and forty years for each stream and for the entire basin have also been estimated.

Land Classification and Crop Survey—The land classification has been completed on 4,250,000 acres and a crop survey made for the year 1929 for 3,500,000 acres. The map in the office of land classification and the compilation thereof are about one-half completed.

Well Records—Observations have been made on 230 wells distributed geographically in the Sacramento Valley during the past two months. Efforts were made to use as many of the wells measured by Kirk Bryan in 1913 as possible.

SAN JOAQUIN VALLEY

Main Supply Canal Survey—The surveys of the main canal from the Kings River to the Kern River have been continued throughout the month under unfavorable weather conditions. However, a total of 100 miles of line has been located from Kings River to McFarland in Kern County. About 60 miles of this have been mapped in the office. One route of the line from the San Joaquin River to Kings River has been completed and mapping is about one-half completed. A survey has also been initiated for the purpose of locating a canal from the Sacramento River at a point above Courtland along Snodgrass Slough to Mokelumne River and thence to the San Joaquin River.

Well Records—About three-fourths of the records on 3500 wells in the San Joaquin Valley have been transcribed and analysis of these ground water data has been started which required employment of additional men.

Land Classification and Crop Survey—Land classification and the crop survey of the entire valley from Stockton to Bakersfield have been completed in the field. A report on the area south of the San Joaquin River has already been rendered and a supplemental report on the area north of the San Joaquin River will be made within a month. Good progress has been made in the mapping of both the land classification and the crop survey.

SANTA CLARA (SANTA CLARA COUNTY)

Gaging stations have been installed on Los Gatos Creek, Guadalupe Creek, Stevens Creek and Alamos Creek. An engineer and assistant have been retained who are actively engaged in the preliminaries of get-

ting the work started. Construction of additional gaging stations is under way.

NAPA VALLEY (NAPA COUNTY)

The work of measuring water levels has been started for the year and the work of measuring run-off and loss from the valley is actively under way.

SNOW SURVEY (STATE)

All arrangements have been completed for the surveys in each major watershed. The work in the past month has consisted of getting out final instructions and equipment to local observers. Field trips have been made to instruct observers at key stations where monthly surveys will be made and the January surveys have been made on some of the key station courses but complete surveys of the key courses can not be made until the present storms have abated.

In the office, work has continued in preparing maps for office and field use showing all pertinent data relative to the surveys. The data for past snow surveys, stream flow, precipitation, etc., are being compiled, analyzed for normals, etc., for use in connection with the bulletins and forecasts to be published when coming snow survey data are available.

DAMS

The law providing for state supervision of dams sets February 14, 1930, as the date on or before which applications for approval of existing dams shall be filed. Forty-two such applications were received during the month.

The city of Los Angeles has been sending in its applications steadily and its list is nearing completion. The San Jose Water Works has submitted applications for all of its dams. Aside from these two, there have been very few of the larger owners whose application record is nearly complete. Attention is called to the requirement of the law that applications for existing dams should be made by February 14. A great many are not in as yet, and all owners of dams should send their applications in immediately, if not already filed.

Applications for construction or enlargement have been received as follows:

Dam	County	Owner	Estimated cost
Brand Park	Los Angeles	City of Glendale	\$120,000
Hollywood High	Los Angeles	City of Los Angeles	34,000
Evler Dam	Modoc (Enlargement only, to be raised two feet)		

Applications for repairs or alterations as follows:

Dam	County	Owner
Yorba	Orange	Anaheim Union Water Company
Spooner	Lassen	J. J. Fleming & Company

Both the above applications are for minor changes. Plans approved for construction or enlargement:

Dam	County	Owner	Estimated cost
*Hansen	Los Angeles	Los Angeles County Flood Control District	\$1,000,000
Brand Park	Los Angeles	City of Glendale	120,000
**Morena	San Diego	City of San Diego	

* This will be a flood control dam on Tujunga Creek, of the concrete arch type, 150 feet high.

** This is a rock fill dam on Cottonwood Creek, which is to be raised 5 feet, necessitating 11,000 yards of rock fill.

Plans approved for repairs or alterations as follows:

Dam	County	Owner
Lake Hodges	San Diego	City of San Diego
Chatsworth A	Los Angeles	City of Los Angeles
Shaver Lake	Fresno	Southern California Edison Company

Dam	County	Owner
Big Meadows (also known as Almanor)	Plumas	Great Western Power Company
Bear Gulch	San Mateo	Bear Gulch Water Company

Inspection of dams under construction, enlargement or repair:

Twenty-eight dams are under construction, enlargement or repair in the state at the present time, all being regularly inspected by the division. The larger of these are:

Dam	County
Lake Hodges	San Diego
Glendale Park Manor	Los Angeles
Lower San Fernando	Los Angeles
Hansen	Los Angeles
Juncal	Santa Barbara
Shaver Lake	Fresno
Moccasin	Tuolumne
Calaveras	Calaveras
Salt Springs	Calaveras
Chenery	Contra Costa
Big Meadows	Plumas

FLOOD CONTROL AND RECLAMATION

Maintenance of Sacramento and San Joaquin Drainage District

Sutter By-Pass—Routine maintenance; drainage pumps operated for short periods.

Wadsworth Canal—One dragline excavator engaged in clearing out northerly mile of Wadsworth Canal.

Tisdale By-Pass—During the last high water, on December 17 or 18, a section of the sheet pile wall of timber along the cut in the center of the Tisdale By-Pass washed out. The length of the section is approximately 80 feet, and the levee adjoining was also taken out. Temporary retard work has been done to prevent a further breaking of the wall and washing of the levee until such time as a new section of wall can be driven.

Cooperative Bank Protection—Cooperative bank protection work for Reclamation Districts No. 673 and No. 900 has been completed. The completion of the work for Reclamation District No. 535 will have to wait for a lower river stage.

Retards—On the Feather River at Nicolaus two of the seven tree retards are completed, and preliminary work done for a number of others.

Feather River—At Robinson Bend a dragline excavator is constructing the barrier across Hefner Slough, which work is approximately 75 per cent complete.

Highway Protection—Contract has been awarded to Leonard T. Isham of Rio Vista for the construction of 850 feet of redwood bulkhead in the Sacramento River at Isleton. This work is in cooperation with the Division of Highways. Emergency work has been done in this place to protect the highway. This work consisted of placing brush mattresses to prevent further wash, and a timber bulkhead to hold the fill adjacent to the highway.

Emergency Flood Control and Rectification of Rivers—On Seven Mile Slough, in Reclamation District No. 2067, a section of bank 100 feet long has been protected with quarry rock, in cooperation with that district.

A small job of bank protection work on the Mad River (Humboldt County), on the property of James B. Moore has been completed at a cost of \$400.

Sacramento Flood Control Project—The project construction clearing work in the Sutter and Butte Slough by-passes has been seriously interrupted by the rains. The two camps on the lower Sutter By-pass were discontinued on December 17, and the operations in Butte Slough were also discontinued at the same time. In the last week of December approximately 100 men were returned to work in the Butte Slough By-pass and in one of the lower Sutter By-pass camps, which was opened again for the purpose.

Five contracts are under way for clearing timber in the Feather River channel above Marysville, but not a great deal of work has been accomplished during this period on account of the weather. The work is approximately 25 per cent complete.

A field examination of the situation at Nelson Bend on the Feather River was made with the construction committee of the Flood Control Association, and a meeting of this committee was held in Sacramento on January 16 for discussion of this and other problems.

Russian River Jetty—The placing of the quarry rock along the jetty has been continued with a crew of approximately fourteen men. An average of 42 cars of rock are being placed per day, or about 150 tons. The job is 60 per cent complete.

Mokelumne River Improvement—The work of clearing the channel of the Mokelumne River in collaboration with the county of San Joaquin has been completed at a cost of \$12,500.

Flood Measurements and Gages—During this period there has been much activity in connection with setting staff gages, conditioning the automatic water stage recorder stations, and preparing for making flood measurements.

Complete personnel has been arranged for 12 metering parties, and equipment has been prepared and set aside for each party. Each party chief has been furnished with a schedule giving all the information necessary to carry out the metering work under his charge.

During the minor flood in December, measurements were made as follows: South Fork of American River at Coloma, North Fork of American River at Rattlesnake Bridge, American River at Fair Oaks, Bear River at Wheatland, Sacramento River at I Street Bridge, Tisdale By-pass, and Sacramento River at Verona (U. S. Engineers).

IRRIGATION, WATER STORAGE DISTRICTS

Irrigation Districts—Investigation and report made on progress and status of Vista Irrigation District (San Diego County).

Field investigations and studies were made for report on proposed Dixon Irrigation District (Solano County), comprising 5589 acres.

The users of water under the Sutter-Butte Canal system (Butte and Sutter counties) are dissatisfied with the operations of the company and are considering the formation of one or more irrigation districts. The Canal Company is a public utility with a service area of 140,000 acres in these counties, but actually serves water to less than half this amount of land. Rates have been increased in the past and an application for increase is now before the Railroad Commission. It is proposed to organize either one or several

irrigation districts within this area, the proposed districts being as follows: Feather, Richvale, Rio Seco, and Sutter-Butte. Petitions for organization are being prepared for some of these districts and one, the Rio Seco (Butte County) comprising from 8000 to 10,000 acres, has been filed with the State Engineer. Investigations of the proposed districts are under way.

In 1929 the division issued Bulletin No. 21, containing histories and financial statistics of all irrigation districts in the state. It is intended to keep these data reasonably up to date and available to the public, and for this purpose a questionnaire has been forwarded to all districts requesting information as of January 1, 1930.

Water Storage Districts—A hearing has been set for February 4, at Hanford, at which the State Engineer will consider applications for exclusion of lands from the Tulare Lake Basin Water Storage District (Fresno and Kings counties).

The Kern River Water Storage District (Kern County) was dissolved by court action some months ago. The records of the district contain valuable engineering and other data and it has been arranged that these will be filed in the office of the county clerk at Bakersfield available to the public.

WATER RIGHTS

Application to Appropriate—During the month 18 applications were received; 35 of those pending were approved and 11 canceled.

During the period nine permits were revoked and five licenses issued.

During the year 1929 there was a reduction in the number of pending applications from 589 to 532, which indicates that the office is eliminating much of the "deadwood" which came during the period of activity in recent years.

ADJUDICATIONS

Whitewater River (Riverside County)—Five orders were entered, granting extensions of time to complete incomplete appropriations.

North Cow Creek—Report covering water-master service and investigation during the 1929 season was completed and copies thereof were forwarded to the various attorneys involved in the proceedings.

Shasta River (Siskiyou County)—Three opening briefs and two reply briefs covering issues raised by exceptions to Division's Order of Determination were completed and filed with the Superior Court.

MOTOR VEHICLE DIVISION REPORTS

FRANK G. SNOOK, Chief

The number of registrations including both pay and exempt vehicles for 1929 totaled 2,029,879, an increase of $7\frac{1}{2}$ per cent over 1928. This registration was divided as follows:

Pleasure cars and commercial vehicles under 3000 pounds	1,916,379
Trucks	89,033
Motorcycles	10,180
Trailers	14,287
Total	2,029,879

The registration figures are of interest inasmuch as they check closely with the traffic counts conducted by the Division of Highways. These counts show that the volume of traffic on highways has increased at the rate of 9 per cent annually for the past 5 years. If this rate continues to hold until 1940, the Division of Highways will be expected to maintain the roads for twice the present volume.

The large registration, and particularly that of Los Angeles County, has created a problem of handling applicants for licenses to which consideration is being given. The state now has some land which may be available as a site for a Motor Vehicle Building in Los Angeles. This land is so located as to provide ample parking space for cars, and will be constructed to provide protection against inclement weather to applicants.

SUBSTANTIAL SAVING IN REGISTRATION COSTS

It is worthy of note that the registration this year was accomplished in 15 days less time than a year ago, with the same force of employees, and at a substantial saving to the state. The coming legislature should give consideration to a change in the time for license renewals so that mailing of plates could avoid delays consequent upon mail congestion during the holiday season.

SOLID TRUCKS DISAPPEARING

The figures also reveal that solid tired trucks are fast disappearing from the highways of California. During 1928 the registration of solid trucks totaled 36,618, as compared with similar registration of 20,543 in 1929.

CALIFORNIA HIGHWAY PATROL ORGANIZATION

The California Highway Patrol has been very active in organization work since the last report. To date 50 county captains have been formally appointed. The full strength of the patrol's personnel, including inspectors, captains, traffic officers, patrolmen and border checkers, now numbers 321, exclusive of all clerical help. Notifications have been served upon the board of supervisors of the several counties, requesting them to forward the names of men they desire to recommend for appointment.

FINE WORK OF FOG AND SNOW PATROL

During the recent snow storms extending over the state and a period of heavy fogs in the lower San Joaquin Valley, exceptionally fine service was rendered by the Highway Patrol. In the areas where fog was proving unusually hazardous, a special patrol was put into service. Its duty was to inform each individual motorist of the conditions they would encounter in driving through the fog. This patrol was kept on the job for 36 hours, and during this time no accidents were reported. Previous to the installation of this fog patrol, the accident death rate during the period of fog peril had averaged one motorist a day with many injured.

In the heavy snow storms of early January fine service was rendered the motoring public by the Highway Patrol, and particular mention should be made of the service of the Los Angeles Patrol on the Ridge Route and that of San Bernardino County at El Cajon Pass.

IOWA—In hard surface road building Iowa, which now has 1900 miles, heads the list of states in mileage to be constructed—750 miles will be paved each year in 1929-30-31, making a total of 4150 miles.

WORK SECURED BY JANUARY HIGHWAY CONTRACTS

In accordance with the policy of the Department of Public Works to award contracts so advantage can be taken of favorable climatic conditions for construction, the majority of the awards made during January were on southern California highways. The following statement shows the improvements that will be accomplished through January awards:

San Diego-Yuma Highway

A contract was awarded to the R. E. Hazard Contracting Company of San Diego for grading and paving with asphaltic concrete 5 miles of highway in Imperial County between Dixieland and Seely. The pavement will be 20 feet wide on a sand cushion over the existing oiled graveled surface. The construction of wide side ditches and raising the grade of the highway will eliminate flooding of the road from irrigation overflow. The contract price was \$110,436.30.

A second contract on this same route provides for grading and paving with Portland cement concrete, 2.9 miles of highways in Imperial County extending from Meyers Creek bridge to 3 miles west of Coyote Wells. The pavement is to be 20 feet in width and will be placed on the roadbed which was built following the destruction of the old paved road by the flood of December 1926. The present improvement is located high enough on the mountain side to be safe from damage by future storms. The contract was awarded to Basich Brothers Construction Company of Los Angeles. The contract price being \$121,148.90.

Nine miles of this highway between El Centro and Holtville will be graded and paved with Portland cement concrete under a contract awarded to A. M. Peck Company of Los Angeles. The contract price is \$264,955.35.

Cholame Lateral

The Valley Paving & Construction Company of Visalia was awarded a contract to grade and surface with bituminous macadam 15.5 miles of this highway in Kern County. The termini of the contract are the westerly boundary of Kern County and the Junction Pumping Station. This highway connects the Coast Route at Paso Robles with the Golden State or the Valley Route at Formosa. Under this contract the roadbed is widened to 36 feet and surfaced with an adequate pavement which completes the paving of this entire route. It is a long step in bringing to a modern standard of construction, lateral highways connecting main arterials. The contract price was \$264,655.25.

Coast Highway

Will F. Peck Company of Los Angeles was awarded a contract to grade and pave with Portland cement concrete, a section of the Coast Highway in Los Angeles County at Liberty Grade, about 1½ miles in length. The roadbed is to be graded 40 feet wide and the paving is to be 20 feet in width. This project is on the Ventura Boulevard and is located about 5 miles north of Calabasas. The new alignment straightens the present crooked road and gives a much easier grade. It marks the elimination of one of the few remaining "bad spots" along this artery. The contract price is \$69,953.45.

In San Luis Obispo County between Santa Maria River and Los Berros Creek, on the Coast Highway, 7.2 miles will be graded and paved with Portland

cement. This will be possible through a contract awarded to J. P. Knapp of Oakland at a contract price of \$272,648.05. This project is another step in bringing this important artery between Los Angeles and San Francisco to modern high standards. The work consists of widening the present 24-foot roadbed to 36 feet and placing new concrete 20 feet wide over the existing 15-foot pavement.

Also on this same artery in Santa Barbara County between Zaca and Wignore, 4 miles are to be graded 36 feet wide and Portland cement pavement laid 20 feet wide over the existing 15-foot pavement. This improvement also includes several sections of realignment. Contract was awarded to Cornwall Construction Company of Santa Barbara at a contract price of \$153,239.50.

Another contract on the Coast Highway extends from San Francisco Creek to San Antonio avenue in Santa Clara County, a distance of 4.4 miles. It is to be graded and paved with Portland cement concrete and asphaltic concrete. The roadbed is to be graded to a width from 50 to 100 feet and the paving will be from 20 to 40 feet in width. Existing bridges will be widened. By straightening alignment and widening the highway and bridges this contract brings another section of the Coast Highway up to a very high standard of construction. The contract was let to Hanrahan Company of San Francisco for \$264,926.95.

Arroyo Seco Highway

T. M. Morgan Paving Company of Los Angeles was awarded a contract to grade 1.5 miles of this highway in Los Angeles County immediately north of La Canada and to build a reinforced concrete arch bridge across Slide Canyon. The roadbed will be graded to a width of 36 feet. This project is a continuation of the road now under construction from La Canada along the canyon wall of the Arroyo Seco and will add another mile and a half to this scenic drive. The contract price is \$272,790.50.

Riverside Highway

Approaches to the Wineville subway under the tracks of the Union Pacific Railroad on the road between Pomona and Riverside in Riverside County will be graded and paved with Portland cement concrete 30 and 40 feet wide for 0.5 of a mile. This contract was awarded to Matich Brothers of Elsinore for a price of \$42,592.50.

Cuyama Lateral

Contract was awarded to the V. R. Dennis Construction Company of San Diego to grade and surface with oil-treated crushed gravel or stone a section of the Cuyama lateral, 9.7 miles in length between San Emigdio Road and the Main Valley Route. The roadbed is to be 36 feet wide and the surfacing 20 feet in width. This project is on the newly adopted alignment of the Cuyama lateral which extends between Santa Maria on the Coast Highway and the Valley Route south of Bakersfield. The project is designed on a high standard of construction with adequate drainage enabling the road to be kept passable at all times. The contract price is \$126,455.

Bayshore Highway

Following the decision of the State Railroad Commission upholding the California Highway Commission and the Department of Public Works in the contention that there should be no grade crossings on the Bayshore Highway, a contract was immediately awarded for a section of the highway between Redwood City and Steinberger avenue, San Mateo, over which connection can be made with the Peninsula Highway. The contract was awarded to Frederickson

& Watson and Frederickson Brothers of Oakland for \$406,145.20.

The roadbed of this section is to be graded 60 feet wide, and as soon as the roadbed has had time to thoroughly settle it will be followed by a surfacing contract. The roadbed in this contract is to be built up across tide lands by hydraulic fill from nearby sloughs and by material taken from higher ground just south of San Mateo. This contract calls for the removal of three-quarters million cubic yards of material and 320,000 pounds of reinforcing steel.

Golden State or Valley Route

A contract was awarded to the California Construction Company of San Francisco for grading and paving with asphalt concrete 8.6 miles between Pixley and Tipton on the main Valley Route in Tulare County. This improvement consists of widening the existing 20-foot roadbed to 36 feet and placing 20-foot surfacing over the present 15-foot pavement. Contract price is \$240,109.60.

Pacific Highway

Wren and Greenough of Portland, Oregon, were awarded a contract for grading and surfacing with untreated crushed gravel or stone 7 miles between Yreka and the Klamath River in Siskiyou County. This project begins just about 2 miles north of Yreka and consists of grading the roadbed 30 feet wide and placing surfacing 20 feet wide. The new alignment, replacing the old crooked road by skirting the top of Shasta Canyon and crossing intervening divides, shortens this portion of the route. This project adjoins a recently completed section of the Pacific Highway between the Klamath River and the Oregon line. Contract price \$571,626.25.

C. W. Wood of Stockton was awarded a contract for grading and paving with Portland cement concrete 0.7 of a mile of new alignment through the town of Dixon, Solano County, thus eliminating two well known and dangerous grade crossings. The new alignment follows Adams street through Dixon, remaining on the westerly side of the S. P. tracks. Contract price \$27,974.80.

COMPLETION OF CONTRACTS

Coast Route

A contract for constructing the state's share of the grading and Portland cement concrete paving between Santa Ana and Anaheim in Orange County for a distance of 4.9 miles, and at an approximate cost of \$190,000, has been satisfactorily completed and accepted. Griffith Company of Los Angeles was the contractor.

Another contract in Orange County for constructing a graded roadbed and placing Portland cement concrete pavement between Serra and San Juan Capistrano, for a distance of 0.7 of a mile, at an approximate cost of \$36,100, has been accepted. Matich Bros. of Elsinore were the contractors.

In Santa Clara County, contract for constructing the Calabasas Creek channel change near Santa Clara, at an approximate cost of \$6,975, has been satisfactorily completed. N. M. Ball of Porterville was the contractor.

Contract for constructing a graded roadbed and placing Portland cement concrete and asphalt concrete pavement between Sunnyvale and Santa Clara, Santa Clara County, for a distance of 4.5 miles, at an approximate cost of \$220,100, has been completed and accepted. N. M. Ball of Porterville was also contractor on this work.

In San Diego County, a contract for placing bituminous macadam borders and constructing timber curbs between San Diego and Oceanside, for a distance of 3 miles, at an approximate cost of \$36,600 has been satisfactorily completed. R. E. Hazard Contracting Company of San Diego was the contractor.

Markleeville Routes

A contract for producing and placing untreated crushed gravel or stone surfacing between Jackson and Pine Grove, in Amador County, on the Jackson-Markleeville road for a distance of 3.3 miles and at an approximate cost of \$15,600 has been satisfactorily completed and accepted. George French, Jr. of Stockton was the contractor.

In Alpine County a contract for grading and surfacing with untreated crushed gravel or stone at Markleeville on the northern portion of the Bishop-Owens Valley-Los Angeles Route, a distance of but 0.3 of a mile, and at an approximate cost of \$19,200, has been satisfactorily completed and accepted. Camino Construction Company of Palo Alto were the contractors.

Mother Lode Highway

Contract for producing and placing gravel surfacing from a point 2 miles south of Mokelumne Hill, in Calaveras County, for a distance of 2.2 miles at an approximate cost of \$5,100, has been satisfactorily completed and accepted. The Adams Company of Angels Camp were the contractors.

Valley Route

In Sacramento County between Arno and McConnell's Station, on the main Valley Route, distance of 1.2 miles, a contract for grading roadbed and placing untreated crushed gravel or stone surfacing at an approximate cost of \$61,100, has been satisfactorily completed in accordance with plans and specifications. Larsen Brothers of Sonoma were the contractors.

Redwood Highway

Contract for constructing a bituminous and water-bound macadam surfacing between Elk Valley and Smith River in Del Norte County for a distance of 3.8 miles at an approximate cost of \$16,500 has been satisfactorily completed. J. C. Compton of McMinnville, Oregon, was the contractor.

In Marin County a contract for constructing a bridge across Novata Creek at an approximate cost of \$29,758 has been completed and accepted. W. L. Proctor of Santa Rosa was the contractor.

McDonald-to-the-Sea Highway

In Mendocino County, contract for constructing a graded roadbed and placing surfacing, also building timber bridges between McDonald and Navarro, for a distance of 1.6 miles at an approximate cost of \$88,300, has been satisfactorily completed and accepted. W. C. Colley of Berkeley was the contractor.

Pacific Highway

Contract for constructing a graded roadbed and placing asphaltic concrete and Portland cement concrete pavement from Ben Ali to Sylvan School, Sacramento County, for about 8.7 miles, and at an approximate cost of \$347,700, has been satisfactorily completed and accepted. Frederickson & Watson and Frederickson Bros. of Oakland were the contractors.

Timid wife (to husband who has just fallen asleep at the wheel): "I don't mean to dictate to you, George, but isn't that billboard coming at us awfully fast?"

Hoover-Young Water Commission Organizes

THE joint commission appointed by President Hoover and Governor Young to study the water resources of California was organized at a meeting held in San Francisco on January 13th. This meeting was attended by Governor Young, State Engineer Edward Hyatt was appointed secretary. An invitation was extended to the Joint Legislative Committee to attend all the meetings of the committee. Appearance before the committee should be arranged through the secretary.

The membership of the Federal and State California Water Resources Commission as appointed by President Hoover and Governor Young are as follows:

United States members:

F. E. Bonner, Executive Secretary, Federal Power Commission, Washington, D. C. (representing Federal Power Commission).

Elwood Mead, Commissioner of Reclamation, Washington, D. C. (representing United States Interior Department).

Thos. M. Robins, Lieutenant Colonel, Corps of Engineers, United States Army, Division Engineer South Pacific Division (representing United States War Department).

California members:

George C. Pardee, Chairman, formerly Governor of California, President of the Board of Directors of the East Bay Municipal Utility District, and Chairman of the State Board of Forestry; Oakland.

William Durbrow, President of the California Irrigation Districts Association, and Manager Nevada Irrigation District; Grass Valley.

B. A. Echeverry, Professor of Irrigation Engineering, University of California; Berkeley.

Alfred Harrell, Publisher *The Californian* and Director of the State Chamber of Commerce; Bakersfield.

W. B. Mathews, Member of the Colorado River Commission and Chief Counsel for the Los Angeles Department of Water and Power; Los Angeles.

Warren Olney, Formerly Associate Justice of the State Supreme Court; San Francisco.

Frank E. Weymouth, Formerly Chief Engineer of the United States Reclamation Bureau, and Chief Engineer of the Metropolitan Water District of Southern California; Los Angeles.

Ex officio members:

W. J. Carr, Commissioner, State Railroad Commission.

B. B. Meek, Director of the Department of Public Works.

A Chinese truckman in Vancouver sent the following bill to a grocer for delivering orders:

10 goes
10 comes—at 50 cents a went.....\$5 00

BATTLING SNOW ON STATE HIGHWAYS

(Continued from page 4.)

unusual task for the Division of Highways, but their tireless efforts have proved equal to the task. During this period snow has been removed on some 800 miles of road.

The following letters indicate the appreciation of the public for the work done in keeping highways open.

Letter from C. G. Thomson, Superintendent Yosemite National Park:

I have just sent three wires to the News Services complimenting your Mr. Wallace on his fine maintenance of the All-Year Highway to Yosemite during the recent storms.

If the occasion arises, count upon our reciprocating this fine service.

Very truly yours,

C. G. THOMSON,
Superintendent.

Letter from the Automobile Club of Southern California:

January 16, 1930.

Mr. B. B. Meek,
Director of Public Works,
State of California,
Sacramento, California.

My dear Mr. Meek:

We want to tell you how much we appreciate the splendid work of District Engineers, Cortelyou and Sullivan, and their assistants in keeping the mountain roads of southern California passable during the recent storm. Maintenance crews and extra gangs were on the job day and night and in the face of the heaviest snow fall which southern California has experienced in many years kept travel moving with a minimum of inconvenience.

The Highway Commission is to be congratulated upon its efficient organization and I can assure you that its work is appreciated by the motoring public.

With kind personal regards, I beg to remain

Very truly yours,

AUTOMOBILE CLUB OF SOUTHERN
CALIFORNIA.
E. E. EAST, Chief Engineer.

Letter from Ed. Hess of Stockton:

The writer was at Long Barn and Twain-Harte Lodge since January 9th, during the recent storms. While up there, many times I watched the road workers at their work, surely some rather hard work—blizzard and other bad weather and they managed to keep the road plenty clear of snow—several cars wide practically all the way.

I happened to read in a metropolitan newspaper "All points above Sonora reported totally cut off," etc.

After reading this I could not but help thinking of those road men, working as they did, and had the road cleared plenty wide—even working at night in blizzard weather, and then have the newspapers print such untrue reports. Please understand I have no

property interests or business place along that highway, and no one asked me to write this.

About 40 to 60 cars were at Long Barn (20 miles above Sonora) Sunday. I stayed over two days more, and not one car that did not get away Sunday.

Letter from the Colfax Lions Club:

Colfax, California, January 22, 1930.

Mr. C. H. Purcell,
Sacramento, Cal.

Dear Sir:

At the regular weekly noon luncheon of the Colfax Lions Club, held on January 13th, a unanimous vote of thanks and appreciation was given your office for the wonderful work you were doing in keeping the Lincoln Highway, Route 40, open to travel and free from snow as far as the Blue Canyon Airport. There were over 1500 cars on this highway Sunday, January 19th, which traveled up into the snow. This work on your part means a lot to Colfax and the surrounding country as well as to the people who are able to come up and play in the snow, and the Colfax Lions take this means of expressing their appreciation of your good work.

Yours in cooperation,

COLFAX LIONS CLUB.
By F. E. West, Secretary.

Letter from George Herz:

San Bernardino, California, January 13, 1930.

Mr. C. H. Purcell,
State Highway Engineer,
Sacramento, California.

My dear Mr. Purcell:

I wish to take this opportunity to express to you and to the Highway Department, my observation and appreciation of the manner in which the highway employees handled the traffic congestion on the snow-bound Cajon Pass, on Sunday, January 12.

I was snowbound on the Pass from one o'clock in the afternoon until after seven o'clock that evening, without being able to move in either direction, which gave me ample time and opportunity to watch your men trying to untangle one of the worst traffic jams that I have ever seen. It was one of the worst blizzards that I have ever experienced anywhere, not excepting the Rocky Mountains, and your men were right in the thick of it at all times. They never lost their tempers and were always cheerful, giving a helping hand wherever they could, until the knot was untied and the traffic began to flow in both directions again, which was after 7 p.m.

In talking to several of your men, I was informed that they had not been off of the job for over twenty-four hours, and had not had anything to eat during that time.

Inasmuch as I am engaged in road construction, I know from personal experience what it is to keep traffic moving and to keep everybody satisfied and in good humor. Therefore, I repeat again, that your men did everything humanly possible to keep everybody satisfied, and did the best that could be done under the circumstances.

With best regards, I remain

Yours sincerely,

GEORGE HERZ.

STATE SAFEGUARDS ITS CONSTRUCTION BY THOROUGH SUPERVISION IN FIELD

(Continued from page 9.)

tractor has laid out his lines it is the duty of the field superintendent to personally check every measurement for correctness and see that each nail or saw cut is properly indicated on the batter boards before any construction is begun. He must then see that these points are properly guarded and preserved during their entire usefulness and that they are available for future checking of work.

BEARING VALUES OF SOIL

Before a projected building is started in the designing room, a survey of the proposed site is made and where the soil bearing values are already known, test holes are dug adjacent to and within the lines of the foundation so that approximate footing depths can be determined.

When a site is selected on entirely new and unknown ground, the bearing value of the soil is determined by load tests prior to the design of the foundation footings.

During the excavating of footing trenches, etc., it is the express duty and responsibility of the field superintendent to carefully observe the nature and character of the formations encountered and the depths at which the proper bearing soil is found so that any necessary changes in the footing depths can be made by the structural designer which will effect a saving by change order to the contractor.

These observations also sometimes result in extra depth excavation requirements to reach proper bearing and in such cases the result is an extra charge by the contractor. The amount of this saving or extra, as the case may be, is determined by a fixed unit price in the contractor's bid which covers the material and labor involved. This unit price is called for in anticipation of possible variations and due to the fact that in order to obtain comparable bids the bidders must have definite depths to figure on.

These variations are measured both by the field superintendent and the contractor and agreed upon before concrete is poured. The figures are reported to the main office where the exact deduction or addition is calculated and settlement is made with the contractor accordingly.

One of the most important functions of our field superintendents at the start of a project is to see that the contractor proceeds early

to arrange for delivery of concrete aggregates which he believes will pass the tests provided for in our specifications. Obviously this is necessary so that the contractor does not find himself without approved material when he is ready to pour footings.

TESTING MATERIALS

Usually only small amounts of each size of aggregate are delivered, pending result of tests, representative samples of these being selected by the field superintendent and divided into two parts, one to be forwarded to the testing laboratory and the other retained by him for comparison with subsequent deliveries in case the test proves satisfactory and the material is approved for use.

Reinforcing steel is also subjected to rigid tests and must be approved by the laboratory before it can be used. This test is sometimes made at the vendor's warehouse by a testing engineer from the state's laboratory to avoid expense of shipping and delay in case of rejection, and especially in cases where bending and fabricating is to be done at the warehouse before shipping to the job.

This method is obviously advantageous to all parties concerned and invariably results in more accurate bending than is usually obtained where the work is done on the site with the use of portable hand tools only. Contractors generally throughout the state have come to realize that this phase of the work on state construction is rigidly inspected and that narrow variation limits are imposed, and as a result, a constantly increasing better class of workmanship is being obtained.

Steel carefully bent to detail makes for simplicity in placing and saves labor cost in the field. Most experienced contractors prefer to sublet this branch of the work "furnished and installed" and naturally a better class of workmanship is obtained due to the skill and knowledge of specialists who install the work.

Many other materials which enter into the construction of the building from foundation to roof and finally on the finish such as stucco and paint, require tests and written approval before they are allowed to be used. When it is realized that the state is in the business of designing and constructing buildings for permanent use at the various institutions, and never for sale, it will be readily understood why these rigid tests are made and the specified requirements insisted upon.

REQUIREMENTS OF INSTITUTIONS DIFFER

Carefully thought out layouts for all piping and fixtures such as plumbing, steam, and electricity, are made by our mechanical section and these often call for special methods of installation due to the unusual requirements of individual institutions.

That which is proper practice at a hospital for insane is not altogether a proper installation in a prison and very naturally neither of these are suitable in administration buildings or residences. From observation and study reaching back over a period of many years, it has been possible to devise installations that meet practically every requirement and the various schemes are now pretty well standardized and satisfactory.

TRAINED IN WORK

It is an old truth that repetition of performance increases accuracy and efficiency and in the building game this is truly demonstrated.

By far the majority of our field force is composed of men who have been in the employ of the division for many years and have successfully conducted work of various kinds and magnitudes both by day labor and on contract basis and they have come to know the standards and methods which by test have proven most satisfactory and adaptable to the requirements of the various institutions. In their constant effort to obtain the best finished results, they have become weaned away from the practice of slipshod or questionable methods sometimes attempted by the less reliable or more careless contractors and are able to detect at once any tendency toward inferior work.

Since there is an appreciable degree of variation between most of our work and the every day run of work encountered by contractors, it can be readily understood that the experience of both our designing and field forces is a valuable asset to the division and represents a distinct intrinsic value that can not be denied.

Experience is a safe teacher and requires time and opportunity to achieve. The only known short cut to experience is constant contact with the work and an inquisitive and observing nature which demands to know why as well as how things are done, and an exceptional memory for detail of the things observed. A man with these characteristics will, and unquestionably does, go further in his line of endeavor in a shorter time because his knowledge is supported by a background of experience which is ever at hand to provide resources to guide him. This is usually the type of man who finds new applications of old principles, or combinations of them, which tend to advance his profession.

Some of the greatest requirements of a field superintendent or resident engineer are, fundamental knowledge of building principles, wide experience in the various applications of those principles, ability and willingness to acquaint himself with the detailed requirements of the project in hand through the medium of the plans and specifications, a forceful character with executive ability and tact, and above all, integrity and loyalty to his superiors.

The Division of Architecture is now busily engaged in keeping up with the construction program for the present biennium and the work both in the office and in the field is being carried forward according to schedule.

KEEP SCENIC HIGHWAYS SCENIC

(Continued from page 15.)

declared against the roadway advertisers in real earnest by those who love and appreciate the beauties of the state, it will not be long before the lovely drives which are still unmarred will likewise fall a prey to the sign board artist and the out-of-door paper hangers.

When the need for state legislation directed against the inroads of the advertisers is fully realized by the public the members of the California Committee for Restriction of Out-door Advertising feel that their efforts will be appreciated and sponsored. The desire to make the whole of California into a glorious

LARGE FILL MADE BY SLUICING METHOD

The above view is that of a large fill on Kern River road about 10 miles east of Bakersfield which has recently been completed. The fill has a maximum height of 77 feet and was constructed mostly by sluicing. This section is on the Santa Maria to Freeman highway via Bakersfield and Walker's Pass.

This second picture is that of the large cut lying just to the west of the large fill above mentioned and from which material was obtained to construct the fill. The cut has a maximum depth of 66 feet and approximately 80,000 cubic yards were removed, all of which was used to construct the fill. This large cut and fill are portions of a line change about three miles in length, which shortened the distance between Bakersfield and Kern Canyon by one-half mile.

park is the end in view. No public parks in the state permit roadside advertising to detract from the beauty of the surroundings, and therefore the entire state can never lay claim to being a continuous park until regulations, which hold good in more restricted areas, are enforced along the highways.

MACHINE FINISHING FOR HOT-MIXED PAVEMENT IN CALIFORNIA

(Continued from page 12.)

thickness. Some difficulty is experienced in making the ribbons of mixture deposited by the spreader boxes lap over each other without rock pockets developing. One of the best methods to secure this result is to cut holes about six or eight inches square in the ends of the spreader box near the front of the box which will allow sufficient average mixture to run out to make the junction of the ribbons satisfactory.

We have found spreader boxes economical and satisfactory whenever a uniform thickness of surface of considerable depth is to be spread. Some contractors claim little saving where a surface less than 3-inch loose is to be spread. In spreading leveling course, contractors have resorted to numerous ingenious methods of spreading the surface of the course parallel with the true surface.

SIDE FORMS AND RAILS

Since it is now our common practice to require that side forms be left in place, such forms are of wood, usually a commercial, three inches in thickness and as deep as the pavement.

They are supported on hubs at four-foot intervals and are securely staked to prevent lateral movement. We require all forms to be surfaced on both edges. While it is quite possible to spread base or leveling course from the wooden side forms, it is not possible to spread surface with spreading machines as at present designed.

It is necessary to make an allowance for compression and for this purpose it is common practice to lay flat steel rails about three-quarters to seven-eighths of an inch in thickness by $2\frac{1}{2}$ inches to 3 inches in width on top of the wooden side forms to elevate the finishing machine a sufficient distance above the side forms to allow for compaction during rolling. These rails usually have a V-shaped or tongue and groove connection with each other to preserve alignment and are about ten feet in length. Usually three or four sets of rails are sufficient on the average job, as they are taken up and moved ahead as the work progresses. It is usual to nail the rails temporarily to the side forms.

FINISHING MACHINES

Two types of finishing machines are now in use in California both of which will spread,

rake, and finish asphalt concrete. Both types of machine are motor-driven and consist essentially of front and rear screed plates set about 10 feet apart, having a motion transverse to the pavement at the same time that the machine advances along the side forms. The raking elements are set in between the screeds and consist of steel pins set in heavy pipe as described elsewhere.

We require not only spreading but also raking and respreding by the rear screed on all of our work and in this respect our practice differs somewhat, I believe, from other localities where spreading only without raking is a usual practice. Since we have not tried our machines on sheet mixtures, I am unable to say from actual experience whether raking of these mixtures is essential with a screed machine, but from a large experience in laying sheet asphalt by hand methods, I would consider raking such surfaces as essential as raking asphalt concrete.

The two types of rakes mentioned, and which I will designate as the pendulum type and the sliding type, represent the different ideas of the manufacturers but they perform similar work.

The rake teeth which consist of steel pins from 8 inches to 14 inches in length and one-half to five-eighths of an inch in diameter are set 6 inches or less apart in two lines of double thickness pipe of 2 inches to $2\frac{1}{2}$ inches nominal diameter. The teeth are adjustable for projection and are fixed in place with set screws. The rake assembly extends the width of the machine, 10, 15, 20, or 30 feet as the case may be. The essential difference in the two types of machine now in use is the method of raking used.

In one machine, the rake teeth swing with a pendulum motion in opposite directions which stirs up the mixture in line with the direction of travel.

In the other machine, the entire rake assembly slides backward and forward between guides, the teeth plowing under and lifting the mixture at each forward stroke, and on the backward stroke assisting slightly perhaps the forward movement of the machine.

Both the pendulum and sliding motions are induced by means of an eccentric connected to a countershaft and operating crank arms which swing the rake's teeth or cause the whole raking element to slide.

The second method has, I think, certain advantages over the first, especially for thin surfaces.

The teeth are set to rake at from 16 to 20

strokes per minute, and have a travel independent of the forward motion of the machine of from 4 to 8 inches. It is not desirable that the rake speed should be too fast nor the stroke too short. The sliding type of rake may have a longer stroke and be slower than the pendulum type.

Essential features of the raking are the lifting of the coarser aggregate to the surface of the mixture and the formation of compression ridges. The coarse aggregate being lifted to the surface allows it to be reimbedded in the immediate wearing surface by rolling and thus forms a nonskid surface. The compression ridges between the furrows left by the rake teeth have a tendency to assist compression without distortion or travel in the mixture since the ridges are flattened out sideways by the roller instead of being driven ahead by it.

PAVING OPERATIONS

The paving operations in the construction of base and surface are as follows:

Paving mixture heated to approximately 280° F. is brought to the road in pneumatic-tired trucks of 5- to 6-ton capacity.

If a leveling course is to be laid on old concrete, a paint coat of emulsified asphalt is first applied to the concrete base.

The trucks are backed up to spreader boxes and are attached to them by means of a quick detachable chain hitch.

The mixture is roughly spread about 2 inches thicker than it will be left by the finishing machine and is at once spread to a uniform thickness using the screeds of the finishing machines only as a usual thing. Some operators use the rakes also as they think they assist compression. Rolling is begun as soon as the machines have spread a sufficient amount of material. Practically no handwork is required on the base mixture.

Base mixture is usually carried forward for such a distance as to allow a full day's run on surface, or for even a longer distance so that it will not be necessary to make so many shifts of the finishing machine. On one large job at present under construction, two finishing machines are in use, one on base and one on surface, which obviates the necessity of moving either one back on the job. Machines are usually moved off the pavement at night to permit its use by through traffic.

Surface operations follow closely on the methods used in constructing base with a number of additional operations, however. It is first necessary to lay steel rails three-quarters to seven-eighths of an inch thick on top of the side forms, as hereinbefore

described, to give the screeds the proper elevation above the side forms to allow for compression in rolling.

The screeds, which are cut at the center, are adjusted to the correct crown by means of hand wheels. The rake teeth are lowered into the mixture and in the sliding type are set at an angle of about 45 degrees.

During operation, it is desirable to carry a wave of mixture about half the height of the front screed in front of that screed and a smaller wave of mixture in front of the rear screed.

During the operation of the machine, the rakes are forming ridges and furrows longitudinal with the road and the rear screed is just knocking the top off the ridges, leaving coarse aggregate exposed for rolling. The machines are usually equipped for four wheel drive and will operate at a forward speed of up to 10 feet per minute.

ROLLING

Rolling is done with 10-ton macadam rollers for the first compaction followed by 6- to 8-ton tandem rollers for final smoothing.

Following the first rolling of the surface, our customary practice is to scatter asphalt coated stone chips, passing three-eighths inch and retained on one-quarter inch over the surface to fill any small voids which may be left in the surface and to provide additional assurance that the surface will be of uniform nonskid texture. Rolling is then continued until no more compaction is possible and the surface is as smooth as it can be made.

SMOOTHNESS

Surface smoothness is checked during construction by several different methods devised by ingenious resident engineers. The simplest method is, of course, to use a 10-foot straightedge, but as this requires a good deal of stooping, other means have been devised.

One automatic device consists of a straightedge on three wheels so arranged that a rise or fall of the central wheel of more than one-quarter inch rings a bell; another has a similar bell arrangement but the straightedge consists of two sled runners, while another is a weighted sled which scores the high points as it is dragged after the roller.

The official record of roughness, however, is recorded on a vialog or roughometer attached to an automobile operating at twenty miles per hour. This machine is left constantly calibrated by checking its operation over two or three standard sections of pavement which have been run over many times

and on which the roughness has been accurately determined.

The following tabulation indicates the average smoothness we have obtained on some 200 miles of asphalt concrete pavement laid in the last five years:

Year	Miles laid	Roughness index	Remarks
1924	23.84	30.1	Hand finish
1925	24.11	33.2	Hand finish
1926	49.34	24.1	Hand finish
1927	35.35	25.2-14.6	Machine finish begun
1928	60.81	30.9-14.7	

We have been able to reduce the roughness to as low as eight units on some especially well finished jobs without sacrifice of the nonskid feature.

We find that roughness increases with each year a pavement is in use. One of our asphalt pavements laid three years ago with a roughness index of 11 now has a roughness index of 14.

OUTPUT

The introduction of finishing machines has, as stated before, greatly increased the average tonnage output of paving plants, and has also decreased the cost per ton as shown in the following tabulation:

Year	Tonnage Mar.	Per 8-hr. day average	Average cost per ton
1924	244	194	\$7.27
1925	319	214	6.43
1926	388	333	5.13
1927	366	352	5.68
1928	574	404	4.89

Naturally, this increase in output has required larger plants, and where a 1500- or 2000-pound batch box was the usual size in 1924, we are now using batch boxes up to 5000 pounds capacity with the cost of the plant in proportion.

In conclusion, I wish to predict that the more extensive use of machinery in the construction of asphaltic pavements has opened a new era for this material and that with the growth of knowledge as to the economic and engineering considerations which should govern the selection of pavement types, the use of asphaltic pavements in their proper locations will reach proportions sufficient to satisfy its most ardent advocates without detracting from the merits and usability of other types of pavement in their proper environment.

For those who wish to trace the development of machine finished asphalt construction, the following references will be of value:

THE ROAD BUILDERS

O, Brothers of the open road,
Be mindful in your motors,
Of this, our common gift bestowed
By less enfeebled voters.
Be mindful how these thoroughfares,
Were made to serve all comers—
The meek and humble millionaires,
The plutocratic plumbers.

O, Brothers, when you motor out
In double fours or fivers,
To lamp the landscape round about
And agitate your livers,
The while your gas-consumer flies,
O'er beaten trails and byways—
O, breathe a prayer and bless the guys
That built the bloomin' highways.

Be mindful of their lowly lot,
They rarely ride as you do.
You drive nice cars, but they do not,
At least a very few do.
And life would be a dreary hike
If it were not for fellows like
The ginks that give us highways.

—C. Wiles Hallock.

Vol. 8 FEBRUARY, 1930 No. 2

CALIFORNIA—PLAYGROUND OF THE WORLD

Records of the Division of Motor Vehicles and the California Highway Patrol revealed that motorists from every state in the Union and practically every important country in the world visited California during the tourist season of 1929.

The time-honored slogan of California boosters that the state is the "playground of the nation" changed to the playground of the world for even such obscure countries as New Zealand, Guam and Panama sent their quota of pleasure seekers by motor.

Under the law providing that visitors permits be issued for nonresident cars in the state ten days or more, the records reveal 90,083 permits issued for the year. Approximately 140,000 nonresident cars were checked through the border "courtesy" stations maintained by the patrol. It is estimated that some 30,000 more came into the state over routes on which stations are not maintained.

State officials estimate the average number of persons in each car at three and that these tourists spent sums here totaling millions. Thousands of these motorists remain to make their homes here.

The largest number of foreign cars—53,909 in all—were checked through the border station located at Yuma. The Daggett station checked 36,657 more, the Dunsmuir station 29,257 and Clam Beach station 15,694. The stations at Donner Lake and Myers, operated only a portion of the year because of the heavy snow, checked in 7712 and 1598 respectively.

Of the states from which nonresident cars came, Washington led with 11,312 and the sister state of Oregon was second with 9600. Colorado was fourth with 6000 and Arizona fifth with 5100.

The Down East country was well represented with 151 cars from Maine, 71 from Vermont, 105 from New Hampshire, etc.

All the Dixie states had their quota, Virginia leading with 224. The folks from Iowa had 2660 visitors and 4560 came from Illinois.

France had nine cars here during the year and Germany had four. One motorist came from Japan and another from Italy. Our Canadian neighbors were interested enough to send 800 visitors.

California offers extremely liberal registration inducements for the out-of-state motorists as they may stay here six months without securing a California license.

Nonresident permits by state and country follow:

Total Nonresident Permits Issued for Year 1929			
Alabama	182	Mississippi	96
Alaska	48	Missouri	2,340
Arizona	5,100	Montana	1,340
Arkansas	530	Nebraska	2,140
Australia	4	Nevada	2,160
Baja California	3	New Hampshire	105
Brazil	1	New Jersey	840
Canada	800	New Mexico	890
China	4	New York	3,240
Colorado	6,000	New Zealand	1
Connecticut	360	North Carolina	155
Cuba	4	North Dakota	630
Delaware	4	Nova Scotia	2
Dist. of Columbia	344	Ohio	3,400
England	8	Oklahoma	3,040
Florida	530	Oregon	9,600
France	9	Panama	18
Georgia	162	Pennsylvania	1,800
Germany	4	Philippine Islands	14
Guam	4	Rhode Island	138
Hawaii	283	South America	3
Idaho	2,050	South Carolina	55
Illinois	4,560	South Dakota	810

LINES TO EINSTEIN

In intellect you're over us
By something like 1,000,000 +
You plot your theory and its sequels,
Nor need to bow to peers or —
And tell professors how you've fared
With 7y or 2x².
While we don't even dare to try
To guess what light's —,
We've not the sense to give a hoot
About infinity's V
—And yet we hope you won't malign us
Because our intellect is —.

—Passing Show.

Stopped by a motor cop for speeding, a motorist explained that he was rushing to see his lawyer. "That's fine" said the cop, "you'll have more news for him now."

U. S. State Join to Solve Problems of Water, Bay Bridge

The following articles were carried by the Associated Press dispatches under the dates appearing below:

WASHINGTON, Aug. 13.—President Hoover announced today that he and Governor C. C. Young of California had agreed to the appointment of federal and state commissions to study two outstanding problems of the golden state; water power development and the bridging of San Francisco Bay.

The decision was made known at the White House by the President who holds a two-fold interest in the undertakings, that of chief executive of the nation and as a citizen of California.

TWO COMMISSIONS

One commission will take under advisement the development of California rivers with a view to irrigation, navigation, flood control and power. The other will devote its attention to a solution of the problems involved in the proposed construction of a bridge from San Francisco to Alameda.

The commissions are the result of extended collaboration between the President and the Governor, in the course of which the two subjects were gone into thoroughly.

The Water Commission is to develop a coordinated policy of water development. Mr. Hoover explained that at present there were nine independent agencies involved in water development in the state and that it was proposed that the work and programs of each should be coordinated.

The Bridge Commission is to determine upon a suitable location for the proposed span.

President Hoover's policy is expected to have far reaching effects on the future development of California, both agriculturally and industrially.

COMPLETE COORDINATION

The policy embraces complete coordination between federal and state governments in policies to be pursued in a long view development of the President's adopted state as to immigration, flood control, navigation and power.

The President announced he had requested the War Department, which controls navigation channels and flood control, the power commission, which controls water power permits, and the Interior Department which is interested in irrigation, to designate one member each on the commission which Governor Young is appointing from among state agencies and leading citizens.

Some years ago Mr. Hoover advocated coordination of a multitude of activities, government and otherwise, engaged in direct and indirect control and development of a California water supply. This long has been the subject of deep interest to him because of intimate personal knowledge of the situation gained in his many visits to various parts of the state.

WATER PLAN ESSENTIAL

His view, as expressed often to friends in days before he became President, is that a comprehensive plan for development and utilization of its existing water supply is absolutely essential to the full growth of the great empire west of the Rockies. He esti-

mated that hundreds of thousands of potential horsepower flowed annually to the sea almost unbarrened and unchecked. With this went millions of gallons of water which might be utilized for irrigation purposes, making fertile thousands of acres of now practically waste lands.

The task ahead of the state and federal governments is recognized as a gigantic one, but opinion in administration circles is that it at least can be simplified through closest cooperation between federal and state agencies which for years have been acting independently and in more or less haphazard fashion.

TO PRESERVE FORESTS

Involved in the program is the preservation of forests so that snows will not melt rapidly in the spring, causing floods and a resultant shortage of water in late summer. This problem has long given concern, and for many years there has been an almost imperceptible but gradual shortening of the water season, not only in California, but also in other states.

Anxious to remove difficulties which have stood in the way of erection of a bridge across San Francisco Bay, President Hoover, in cooperation with Governor Young, has determined upon appointment of a commission representing state and national interests to make a study of the project.

HOOVER WANTS BRIDGE

Mr. Hoover said he regarded the proposed bridge as of great economic value to San Francisco, Alameda and Oakland, and a project which should be carried through to completion.

The commission determined upon is to consist of two representatives of the War Department, two from the Navy Department, two from the State of California and one each from San Francisco and Alameda, and a westerner to represent the Federal Government generally, who will be Mark L. Requa, Mr. Hoover said, if he will undertake the task.

One of the first duties of the commission will be to determine upon a suitable location for the bridge. The next step will be securing complete consent of the War and Navy department for construction of a span at that place. Construction of the bridge has been the subject of considerable dispute in Washington in recent years. Hearings have been held by both houses of Congress and the War Department. Considerable objection has been raised by the War and Navy departments on the ground that such a bridge would be a threat to the defense of San Francisco Bay.

YOUNG AND HOOVER STUDY PROBLEMS TWO YEARS

LOS ANGELES, Aug. 13.—(AP)—Governor C. C. Young told the Associated Press at his office here today the agreement reached in Washington for a joint federal and state commission to study facts as to developments of rivers in California culminated negotiations begun more than two years ago between himself and President Hoover, then Secretary of Commerce.

The Governor said legislation passed at the last session of the legislature made it possible to bring these negotiations to an end, and Director of Public Works B. B. Meek had been sent to Washington to confer with the President upon the appointment of such a commission.

"I am happy to hear that a basis upon which the state and federal government may proceed together in the development of California rivers for irrigation, navigation, flood control and water power has been reached," Governor Young said.

The Governor added that appointment of the California commission must await the return of Meek, as he wished to talk over with him the attitude of the federal government on the developments before making definite selections.

HOOVER IN SYMPATHY

"Mr. Hoover early expressed sympathy with the projects contemplated and showed a clear understanding of the values to be derived from the development of California rivers," Governor Young said. "The appointment of a joint commission to survey our natural resources virtually guarantees the working out of an acceptable basis of problems arising from their development affecting both the state and the nation."

Governor Young said he had instructed Meek to confer with federal authorities upon questions arising from the proposed construction of a bridge across the San Francisco Bay, after discussion of California river development had been culminated.

BRIDGE PROJECT VITAL

"The project is of vital interest to the state and the San Francisco Bay region," Governor Young said, "but was secondary to the major object of securing cooperation towards the development of rivers."

"Before Meek left for Washington he suggested that while he was there he should seek federal cooperation on the bridge project, and I assented."

Governor Young expressed gratitude that a federal bridge commission had been authorized. In his opinion, he said, a survey by the federal group would be a great factor in the eventual completion of the project.

APPLESAUCE

Dear Editor: Will you answer the following question through your columns to settle an argument: How many apples did Adam and Eve eat?

Some say Adam 8 and Eve 2, a total of 10 only. Now we figure the thing out far differently. Eve 8 and Adam 8 also, total 16. And yet the above figures are entirely wrong. If Eve 8 and Adam 82—certainly the total will be 90.

Scientific men, however, on the strength of the theory that the antediluvians were a race of giants, reason something like this: Eve S1, Adam S2, total 163. Wrong again. What could be clearer than if Eve S1 and Adam S12, would not the total be S93? If Eve S11st and Adam S12 would not the total be 1623?

We believe the following to be a fair solution: Eve S14 Adam: Adam S124 Eve—total S938. Still another calculation is as follows: If Eve S14 Adam, Adam S122 oblige Eve—total S936. We think this, however, not a sufficient quantity, for, though we admit that Eve S14 Adam, Adam if he S081242 keep Eve company, would make the total S,082,056.

All wrong. Eve, when she S1812 many, and probably she felt sorry for it, but her companion, in order to relieve her grief, S12. Therefore, when Adam S18120 pity Eve's depressed spirits. Hence both ate S1,896,864 apples—Irrving E. Tier, *Exchange*.

Despite the things all the other women in the world say about her, Mrs. Anne Lindburgh says some right "cute" things herself. When she visited Mr. Hoover at his camp on the Rapidan, she wrote to some of her Smith College friends, as follows:

You girls have always called me slow,

Now beat this if you can—

When a Great Man named his mountain camp,

He called it Rapid Anne!

JANUARY BULLETIN OF SNOW SURVEY AND PRECIPITATION DATA

The Division of Water Resources, State Department of Public Works has prepared a bulletin covering snow survey and precipitation data up to February 1st for this season. This bulletin is being sent to irrigation districts, water companies, public utilities, water users, engineers and many others, and is available for distribution to any to whom the data are of importance or interest.

The snow surveys have been made pursuant to an act and appropriation by the last legislature, empowering and directing the Department to do this work. During the summer and fall last year "snow courses" throughout the Sierra from the Upper Sacramento River basin on the north to Kern River basin on the south, were established and the necessary preparations made in the way of stocking shelter cabins with provisions, bedding, and wood, providing equipment for the surveys, and making the arrangements for the men to do the work. Most of the surveys are made through cooperation with agencies such as the public utilities, irrigation districts, etc., which have men located in the mountains in connection with their regular duties. One hundred and fifty snow course locations have been made and all of these will be surveyed about the first of April to furnish the data upon which estimates of the April-July stream flow may be made. In each major stream basin certain "key" courses have been selected at which snow surveys will be made monthly from January to May. This is done to furnish data for progress reports of snow and precipitation conditions prior to the time of the main survey about April 1st. The bulletin now being sent out gives the results of the surveys at the key courses up to February 1st and furnishes also the data on seasonal precipitation to this date at nearly all stations of the U. S. Weather Bureau, state and private agencies located in the mountainous portions of the stream basins.

Conditions to February 1st.

As most of the snow courses are newly established, no comparison with results of previous years or reference to "normals" can be made. In a few instances, however, the snow surveys have been conducted for many years, and the comparisons in these cases are given. In Tahoe basin, courses at Tahoe City and Marlette Lake show a water content between 30 and 40 per cent of the entire seasonal normal (October to May). In the Yuba basin, courses at Summit and Lake Fordyce show a water content about 35 per cent of the entire seasonal normal and in the Mokelumne basin a crest course at Blue Lakes shows a water content 45 per cent of the entire seasonal normal.

The comparison of conditions to February 1st with normal, using the data from the precipitation stations shows in general that the precipitation in the northern stream basins, Upper Sacramento, Pit, McCloud, Feather and Yuba, ranges from about 20 per cent above to about 15 per cent below normal. In the central basins, American, Mokelumne, Stanislaus, Tuolumne, Merced, and Mono, it varies from about normal to as much as 40 per cent below, and in the southern basins, Upper San Joaquin, Kings, Kaweah, and Kern, it is practically 50 per cent below normal.

Sister: What shall we give father for his birthday present?

Brother: Let's let him drive the car.

State Highway Progress Reports

COLUSA COUNTY

C. R. Merrill of Willows was awarded a contract for widening the roadbed between Colusa and Meridian. The work consists of widening the present narrow, roadbed to a uniform width of 26 feet throughout. The contractor started work on November 12, 1929 and was making very good progress until temporarily closed down on account of rain December 8.

DEL NORTE COUNTY

The Holdener Construction Company have a contract for stockpiling crushed rock screenings over 35 miles of the Redwood Highway between the new Houchi Bridge over Smith River and the Oregon line. The contractors have approximately 40 per cent of the work completed.

The contractors have engaged Smith Bros. to complete the work and the crushing plant has just been moved to a new location and they are again producing.

Smith Bros. have a contract for placing corrugated metal pipe subdrains along the state highway between a point approximately 5 miles east of Crescent City and the Houchi Bridge over Smith River. The work is practically complete.

EL DORADO COUNTY

Construction of oil-treated rock borders between Folsom and Clarks Corner is completed. The completed project provides a paved traveled way 18 feet wide with super-elevated curves. The work was financed from the State Highway maintenance fund budgeted for eighty-first and eighty-second fiscal years. The improvement was made under contract to W. H. Larson of Sacramento and the period of construction was from May to December, 1929.

Between Riverton and Kyburz on Route 11 the grading of 5.75 miles is in progress. As a Forest Highway, this is a cooperative project to which \$140,000 was subscribed as the state's share. This contract was awarded to G. E. Finnell and is under the supervision of federal engineers.

Hemstreet & Bell completed work on their contract for surfacing with untreated crushed gravel that portion of the Mother Lode Highway between Logtown and about 4 miles southerly. This work was financed from the State Highway maintenance fund.

Nate Lovelace is working on his contract for grading between Bay View Rest and Eagle Falls. Progress is slow. If weather permits, the contractor will carry on his work through the winter.

MONTEREY COUNTY

The reconstruction of the Coast Highway from Salinas south 10 miles to Chualar by the Peninsula

Paving Company is complete. This project covers a 36-foot roadbed with a 20-foot second story asphaltic concrete pavement. The Peninsula Paving Company has made excellent progress in handling this work.

At Spence, 5 miles south of Salinas, Triberti-Massaró, contractors, are constructing abutments for an underpass of the Southern Pacific Railroad. This work is under the supervision of the Bridge Department.

A new bridge across the Salinas River at San Ardo, under supervision of the Bridge Department, is being built by Ben C. Gerwick, contractor. The change of line and approaches to the bridge, 1.5 miles in length, involve grading a 36-foot roadbed and placing a 20-foot Portland cement concrete pavement. Frederickson and Watson and Frederickson Brothers are the contractors.

The plans for a new bridge and a major change of line at the Bradley Crossing of the Salinas River are held in abeyance pending the location of the road northerly from the bridge.

On the San Simeon-Carmel Highway a timber bridge of ten 19-foot spans across Villa Creek is nearing completion. H. C. Whitty is contractor and the work is under the supervision of the Bridge Department.

On the San Simeon-Carmel Highway construction work is in progress with convict labor. Two camps are maintained. At Little Sur a crew of 95 men and two power shovels are working and between Villa Creek and Alder Creek about the same number of men with three power shovels are working. About 7.3 miles of graded roadway has been completed. Surveys for the location of the road are in progress between the two camps.

NEVADA COUNTY

The Callahan Construction Company on December 12 suspended work for the winter on their contract for grading and surfacing between Indian Springs and Soda Springs near the summit of the Colfax-Truckee road.

Grading and surfacing 11.7 miles between Nevada City and Washington Road is being performed under contract awarded to C. B. Adams. This section, consistent with the rest of the Ukiah-Tahoe Highway, will consist of a 24-foot roadbed. An oil-mixed crushed rock surface, 20 feet wide, is to be placed by the terms of the contract. The grading is practically complete and about 60 per cent of untreated surfacing has been placed. On account of weather conditions, it will be impossible to oil-treat the surfacing until warmer weather. Accordingly, this work will not be complete until some time in June.

NEVADA AND PLACER COUNTIES

Between Roseville and one-half mile north of Andora subway, bituminous macadam surfacing and rock borders have been constructed under contract to J. E. Johnston.

T. E. Connolly on January 4, 1930, suspended work for the winter on his grading contract between Air-

port and Indian Springs on Route 37. 9.3 miles of construction is in progress. This project covers the construction of a 28-foot roadbed. Construction will be resumed next year.

ORANGE COUNTY

The contract for a line change 0.7 of a mile in length between Serra and San Juan Capistrano has just been completed. This work consisted of constructing a 40-foot graded roadbed with Portland cement concrete pavement, 20 feet by 7 inches. Matich Bros. were the contractors.

A contract for paving one-half width between Santa Ana and Anaheim was awarded on June 11th to Griffith Company. This section is 4.9 miles long. The paving work was done in cooperation with Orange County, the state paying for a strip of pavement 28 feet by 7 inches and the county paying for a like amount. The state's portion of this highway is completed, and work is nearly completed on the county's portion.

A contract for widening the roadbed between Sunset Beach and Newport the entire width of the 90- to 100-foot right of way, and the placing of an additional 10-foot strip of Portland cement concrete has been awarded to the Macco Construction Co. When this work is completed the pavement will be 30 feet wide for the entire distance. It is expected that this work will be completed by next December.

A small contract for replacing temporary surfacing with Portland cement concrete, 30 feet wide, between Dana Point and Serra is nearly completed. Matich Bros. are the contractors on this work.

SAN BENITO COUNTY

Surveys have been completed and plans are being prepared for the reconstruction of Route 22 from a point 3.2 miles north of Hollister to San Felipe on the Pacheco Pass lateral, a distance of about 5 miles.

SAN DIEGO COUNTY

Work has been completed of constructing oil rock borders on portions of the Coast Route between the city limits of San Diego and Oceanside. The R. E. Hazard Contracting Company of San Diego were the contractors.

A contract for grading the Rose Canyon road between Balboa avenue and Torrey Pines road was awarded on August 13th to the R. E. Hazard Contracting Company. This section is 5.4 miles long and is to be a 46-foot graded roadbed. About 3 miles have been graded to date.

The contract for grading a roadbed 36 feet wide and placing of Portland cement concrete pavement 20 feet by 7 inches is nearly completed between Pine Valley and Kitchen Creek on the San Diego-El Centro Highway. Basich Brothers are the contractors.

A contract for 4.5 miles of 38-foot graded roadbed between La Posta Creek and Miller Creek on the San Diego-El Centro Highway was awarded on May 27th to the Nevada Contracting Company. Good progress is being made on this contract.

A contract for grading 3.9 miles of 36-foot roadbed between Kitchen Creek to La Posta and paving with 20 feet by 7 inches Portland cement concrete was awarded on June 25th to Basich Bros. About 3 miles

of rough grading is completed, and grading is now in progress on about one mile. It is expected that paving will start shortly. This section is on the San Diego-El Centro Highway.

SAN LUIS OBISPO COUNTY

On the Coast Highway between Atascadero and Paso Robles, a distance of 9.6 miles, the road is being reconstructed with a 36-foot roadbed and a 20-foot asphaltic concrete pavement. Steel Finley is the contractor.

In the town of Atascadero, M. J. Bevanda, contractor, is constructing street improvements which include full width street work on the highway through the town. This is being handled through a local improvement district.

Bids have been received on the reconstruction of the Coast Highway from the Santa Maria River to Los Berros Creek, a distance of 7.2 miles. This is to be a 36-foot roadbed and a 20-foot Portland cement concrete pavement.

Surveys have been completed on the proposed reconstruction of the Coast Highway between San Luis Obispo and Cuesta Grade.

SANTA BARBARA COUNTY

On the Coast Highway west of Santa Barbara, between Eagle Creek and El Capitan Creek, oil surface on crusher run base rock shoulder, 3 feet wide, are being placed by the Cornwall Construction Company, contractors.

Bids have been received on the reconstruction of the Coast Highway from Wigmore to Zaca, a distance of 4 miles. The roadbed is to be 36 feet wide and the pavement 20-foot Portland cement concrete. This project is located about 4 miles south of Los Alamos.

Plans are complete for the reconstruction of a portion of the Cuyama lateral from the second crossing of the Cuyama River to the Kern County Line, a distance of about 38 miles. A portion of this project is in San Luis Obispo County.

Plans are being prepared for a change of line at Nojoqui Creek on the Coast Highway about 2 miles south of Buelton. This will involve a new bridge over the creek.

HUMBOLDT COUNTY

The work of producing and stockpiling bituminous macadam rock along the Redwood Highway for a 20-foot by 2-inch bituminous macadam pavement between a point 1 mile south of Orick and the northerly Humboldt County line has been taken over by the state for completion. It is intended that this rock shall be stockpiled during the winter season in order that the Heafey-Moore Company who have the contract for placing the bituminous macadam may proceed with the work as soon as weather conditions permit next summer.

The Heafey-Moore Company who have the contract for placing a 20-foot by 2-inch bituminous macadam pavement for the 10.7 miles between Mill Creek and Trinidad have shut down for the winter and expect to resume the work of completing their contract as soon as weather conditions permit next summer.

Mercer-Fraser Company have completed the construction of the overhead crossing of the highway over

the Northwestern Pacific Railroad and the Arcata and Mad River Railroad approximately 1 mile north of Arcata, and this new section of highway from Arcata to Mill Creek, 4 miles in length, has now been opened up to the traveling public.

The E. C. Coats contract for grading and surfacing a 28-foot standard roadway on that portion of the Redwood Highway between Fish Creek Grove and Stephens Grove in the vicinity of Miranda for a distance of 2.9 miles is progressing very satisfactorily considering the handicaps due to the winter conditions. The work is approximately 25 per cent complete.

The Englehart Paving and Construction Company have the contract for producing and placing crushed rock surfacing on approximately 7.3 miles of the Redwood Highway between Dean Creek and Fish Creek, approximately 6 miles south of Miranda. The contractor has his crushing plant set up and has just started placing material on the roadway.

H. H. Boomer Company who have the contract for grading and surfacing that portion of the state highway, approximately 1.2 miles in length from Garberville northerly, is well advanced with his clearing and drainage structure operations and has started some excavation work. The work is approximately 5 per cent complete, but winter weather conditions prohibit normal progress.

INYO COUNTY

From the southerly boundary of Inyo County to Little Lake, a distance of approximately 9.8 miles, Fred W. Nighbert, is the contractor. This project will be completed in May, 1930. B. M. Gallagher is resident engineer.

From Little Lake to Coso Junction, a distance of approximately 3.7 miles Fred W. Nighbert is the contractor. This project will be completed in May, 1930. B. M. Gallagher is resident engineer.

From Coso Junction to Olancha, a distance of approximately 21.3 miles, the Allied Contractors have commenced grading operations. This project is to be completed in September, 1930. S. C. Risley is resident engineer.

Widening of shoulders is under way north of Independence. This work is being done by day labor forces, under the direction of Paul Peak, foreman.

KERN COUNTY

Bids were opened on January 2, 1930, for grading of a standard 36-foot roadbed and placing thereon 20 feet of oil-treated surfacing, from the end of the present improvement at Cinco to 7 miles north of Ricardo, a distance of approximately 16 miles. George Herz and Company of San Bernardino were low bidders.

From 7 miles north of Ricardo to Olancha, there are at this time five contracts under way, all of which provide for the construction of a standard 36-foot graded roadbed, and the placing of an oil-treated surface 20 feet wide. The first of these contracts, extending to Freeman Junction, a distance of approximately 10.2 miles, is under contract to G. W. Ellis, and will be completed early in February, and is under the direction of V. E. Pearson, resident engineer.

From Freeman Junction to the northerly boundary of Kern County, a distance of approximately 13.9 miles, Bartlett & Mathews, Black & Hagey, are the

contractors. Work on this contract will probably be finished during the latter part of April, 1930. V. E. Pearson is resident engineer.

LAKE COUNTY

The grading of the Ukiah-Tahoe road between Clear Lake Oaks and Sweet Hollow Summit has been completed by convict labor forces. From the summit to Abbott Mine the 20-foot graded roadbed is being widened to 24 feet.

Von der Hellen, Pierson and Logan have completed their contract for grading and surfacing with untreated crushed gravel or stone between Lucerne and Clear Lake Oaks.

LOS ANGELES COUNTY

The contract for a line change immediately north of the Newhall tunnel has been awarded to McCray Co. Good progress is being made on this work. It is expected that this contract will be completed next June.

The first contract on the La Canada-Mt. Wilson Highway for grading 2.6 miles of 40-foot roadbed was awarded to H. W. Rohl Company on August 14th. Rough grading is in progress on one and one-half miles.

A contract for paving the Newhall alternate with Portland cement concrete, 30 feet wide, has been awarded to Jahn & Bressi. Grading of this section has just been completed by Le Tourneau & Lindberg. The new location is on greatly improved alignment and eliminates Saugus, Newhall and the Newhall tunnel from the Ridge Route. This section is 8.6 miles long.

LOS ANGELES-VENTURA COUNTIES

A contract for oil mix shoulders between Calabasas and Conejo Summit has been awarded to the Southwest Paving Company. It is expected that this contract will be finished in April.

MENDOCINO COUNTY

The contract for placing a 4-inch thickness of crushed gravel surfacing on portions of the Redwood Highway between a point 2 miles south of Arnold and the Sherwood-Laytonville road is progressing very satisfactorily through the contractors, Hemstreet and Bell.

Had not heavy rain storms and snow hampered the work, production would have no doubt been further advanced than at the present time.

MONO COUNTY

Between Mattly Ranch and Leevining, C. S. Miles is the contractor for the construction of 2.2 miles of standard graded roadbed 24 feet wide, with a 20-foot crushed rock base with a three-quarter-inch armor coat surface. On account of winter weather, the placing of the armor coat has been postponed until next June.

The work of remodeling blind curves, by widening on the Sherwin Hill, 20 miles north of Bishop is rapidly nearing completion.

Surveys and plans have been completed on proposed improvements between Sonora Junction and Coleville in northern Mono County.

This project traverses the canyon of the west branch of the Walker River, a popular recreational area for nature lovers from Nevada and northern California. A very considerable interest is manifested by the public in this improvement which plays an important part in interstate connections. Besides being the nucleus of extensive improvements to the south in Mono County this project is linked with contracts under way by the Bureau of Public Roads, Coleville to the California state line and on into Nevada. The state of Nevada has been exceedingly active in road improvements through the Carson Valley, via Carson City, Minden, Gardnerville and on to Mono County, California, which, together with the work described in the foregoing is providing ready and pleasurable access from the north to the open spaces "East of the High Sierras."

VENTURA COUNTY

A contract for second story paving with asphaltic concrete from Conejo Creek to Camarillo has been awarded to Griffith Company. It is expected that this work will be completed by next June.

YOLO COUNTY

The construction of Portland cement concrete pavement on line change at Mullen crossing is practically complete. The work is being done under contract by C. W. Wood of Stockton.

The state highway between Bretona and Dunnigan will be improved next season under contract by J. E. Johnston. The work will consist of placing bituminous surface on existing pavement and constructing rock borders.

YUBA COUNTY

Bituminous macadam surfacing and rock borders were constructed on that portion of the state highway between Dry Creek and Morrison's crossing under contract by J. E. Johnston.

GENERAL

Maintenance operations have been confined principally to slide removal, slide prevention and snow removal during the last month. Maintenance crews, however, have been able to keep the roads open for most of the time with but very little delay to the traveling public.

California leads the states in airports with 143. Texas next with 100, according to the Department of Commerce.

In a country newspaper appeared the following advertisement:

"The man who picked up my wallet in Fore street was recognized. He is requested to return it."

The next day this reply was published:

"The recognized man who picked up your wallet requests the loser to call at any time and collect it."

Record of Bids and Awards

HIGHWAY BID OPENINGS AND AWARDS

January 2 to 29, inclusive

IMPERIAL COUNTY—Myers Creek Bridge to 3 miles west of Coyote Wells, grading and paving with Portland cement concrete 2.9 miles. Dist. VIII, Rt. 12, Sec. A. Yglesios Bros., Inc., San Diego, \$162,180; V. R. Dennis Const. Co., San Diego, \$149,009; George Herz & Co., San Bernardino, \$138,127; Watson & Sutton, San Diego, \$135,826. Contract awarded to Basich Brothers, Los Angeles, \$121,148.90.

IMPERIAL COUNTY—Between El Centro and Holtville, 9 miles to be graded and paved with Portland cement concrete. Dist. VIII, Rt. 27, Sec. C. J. F. Knapp, Oakland, \$296,254; T. M. Morgan, Los Angeles, \$313,456; Basich Bros. Const. Co., Los Angeles, \$286,391; Jahn and Bressi Const. Co., Los Angeles, \$291,815; Wells and Bressler, Santa Ana, \$322,785; Sander Pearson, Santa Monica, \$285,506; Watson & Sutton, San Diego, \$317,013. Contract awarded to A. M. Peck Co., Los Angeles, \$264,955.35.

KERN COUNTY—Between the westerly boundary and Junction Pumping Station, grading and surfacing with bituminous macadam 15.5 miles. Dist. VI, Rt. 33, Sec. A. Hartman Construction Co., Bakersfield, \$312,698; J. E. Johnston, Stockton, \$281,452; Isbell Construction Co., Fresno, \$315,334; V. R. Dennis Construction, San Diego, \$311,228; Clyde W. Wood, Stockton, \$378,591; Lord & Bishop, Oroville, \$327,762; Jack Casson, Hayward, \$360,217; Skells & Graham, Roseville, \$311,271; M. J. Bevenda, Stockton, \$339,168; Gibbons & Reed Co., Burbank, \$340,540; Wells & Bressler, Santa Ana, \$338,746; C. R. Johnson, Portland, \$288,539; A. Teichert & Son, Sacramento, \$299,150. Contract awarded to Valley Paving & Construction, Visalia, \$264,655.25.

KERN COUNTY—Between San Emigdio Road and Main Valley road, 9.7 miles to be graded and surfaced with oil-treated crushed gravel or stone. Dist. VI, Rt. 57, Sec. C. J. E. Johnston, Stockton, \$161,275; A. Teichert and Son, Sacramento, \$141,189; S. J. Hales, Santa Ana, \$140,134; Tieslaus Bros., Berkeley, \$127,439; C. R. Johnson, Portland, \$131,764; Hartman Construction Co., Bakersfield, \$134,127; Isbell Construction, Fresno, \$153,964; G. W. Ellis, Los Angeles, \$130,943. Contract awarded to V. R. Denis Construction Company, San Diego, \$126,455.

LOS ANGELES COUNTY—At Liberty Grade about 5 miles west of Calabasas, 1.2 miles to be graded and paved with Portland cement concrete. Dist. VII, Rt. 2, Sec. C. McCray Company, Los Angeles, \$87,335; Jahn and Bressi Construction, Los Angeles, \$95,395; Gist & Bell, Arcadia, \$85,821; Schelling Co., Burbank, \$97,546; The Callahan Construction, Los Angeles, \$94,997; Sander Pearson, Santa Maria, \$75,725; Gibbons and Reed, Burbank, \$92,985; Bruce Bros., Inc., Huntington Beach, \$79,909; Basich Brothers Construction, Los Angeles, \$73,449. Contract awarded to Will F. Peck Co., Los Angeles, \$69,953.45.

LOS ANGELES COUNTY—Between 2½ and 4 miles north of La Canada, 1.5 miles to be graded (heavy excavations). Dist. VII, Rt. 61, Sec. A. Sharp & Fellows Contracting, Los Angeles, \$407,868; Geo. Pollock Co., Sacramento, \$350,987; W. H.

Hauser, Oakland, \$321,519; The Utah Construction Co., San Francisco, \$386,478; Gist & Bell, Arcadia, \$319,270; M. S. Ross, Los Angeles, \$290,653; J. G. Donoyan & Son, Los Angeles, \$331,975; Nevada Contracting Co., Fallon, Nevada, \$293,266; Jahn & Bressi Construction Co., Los Angeles, \$379,746; Macco Construction, Clear Water, \$376,840; H. W. Rohl Co., Los Angeles, \$275,177. Contract awarded to T. M. Morgan Paving Co., Los Angeles, \$272,790.50.

RIVERSIDE COUNTY—At Wineville subway, 0.5 of mile of approaches to be paved with Portland cement concrete. Dist. VIII, Rt. 19, Sec. A, George Herz & Co., San Bernardino, \$43,687. Contract awarded to Matich Bros., Elsinore, \$42,552.50.

SAN LUIS OBISPO COUNTY—Between Santa Maria River and Los Berros Creek, 7.2 miles to be graded and paved with Portland cement concrete. Dist. V, Rt. 2, Sec. F, McCray Co., Los Angeles, \$309,078; Matich Bros., Elsinore, \$325,020; T. M. Morgan Paving Co., Los Angeles, \$303,692; Sander Pearson, Santa Monica, \$325,908; Peninsula Paving Co., San Francisco, \$289,732; C. R. Johnson, Portland, \$319,431; Basich Bros. Construction, Los Angeles, \$292,861; Valley Paving Construction, Visalia, \$358,448; C. W. Wood, Stockton, \$288,371; A. J. Raisch, San Jose, \$312,011; V. R. Dennis Construction, San Diego, \$371,205; Cornwall Construction, Santa Barbara, \$293,599; M. J. Bevanda, Stockton, \$317,084; Jahn & Bressi Construction, Los Angeles, \$299,791. Contract awarded to J. F. Knapp, Oakland, \$272,648.05.

SAN MATEO COUNTY—San Mateo to Redwood City, 7.3 miles grading Bayshore Highway. Dist. IV, Rt. 68, Sec. C, MacDonald & Kahn, San Francisco, \$466,338; Gist & Bell, Arcadia, \$471,955; Marsh Brothers & Gardinier, Inc., San Francisco, \$504,462; H. W. Rohl Co., Los Angeles, \$411,194; Standard Dredging Co., Oakland, \$466,094; Guy F. Atkinson Co., San Francisco, \$514,388; Granfield, Farrar & Carlin, San Francisco, \$506,717; C. R. Johnson, Portland, \$525,202; George Pollock Co., Sacramento, \$466,812; The Utah Construction, San Francisco, \$502,138. Contract awarded to Frederickson & Watson and Frederickson Bros., Oakland, \$406,145.20.

SANTA BARBARA COUNTY—Between Zaca and Wigmore, 4 miles to be graded and paved with Portland cement concrete. Dist. V, Rt. 2, Sec. C, W. A. Dontanville, Salinas, \$184,147; Matich Bros., Elsinore, \$189,472; Central Construction Co., Oakland, \$220,309; McCray Company, Los Angeles, \$172,592; T. M. Morgan Paving Co., Los Angeles, \$164,154; Sander Pearson, Santa Monica, \$181,929; C. R. Johnson, Portland, \$172,664; J. F. Knapp, Oakland, \$157,292; M. J. Bevanda, Stockton, \$221,000; C. W. Wood, Stockton, \$170,650; A. J. Raisch, San Jose, \$184,082; Basich Bros. Construction Co., Los Angeles, \$165,470. Contract awarded to Cornwall Construction Company, Santa Barbara, \$153,239.50.

SANTA CLARA COUNTY—Between San Francisco Creek and San Antonio Ave., main Coast Route, grading and paving with asphaltic concrete, 4.4 miles. Dist. IV, Rt. 2, Sec. A, C. W. Wood, Stockton, \$286,660; N. M. Ball, Porterville, \$297,027; Peninsula Paving Co., San Francisco, \$280,001; A. J. Raisch, San Jose, \$281,764. Contract awarded to Hanrahan Company, San Francisco, \$264,926.95.

SISKIYOU COUNTY—Yreka to Klamath River, grading and surfacing with untreated crushed gravel or stone, 7 miles. Dist. II, Rt. 3, Sec. C, Guy F. Atkinson, San Francisco, \$583,445; Nevada Contracting Co., Fallon, Nevada, \$590,636; T. M. Morgan Paving Co., Gazelle, \$613,574; Barsh Bros. and Gardinier, Inc., San Francisco, \$600,275; H. E. Doering, Port-

land, \$616,129; C. R. Johnson, Portland, \$580,787; The Utah Const. Co., San Francisco, \$667,841; Ward Engineering Co., San Francisco, \$681,664; Kern & Kibbe, San Francisco, \$582,757; A. C. Greenwood, Portland, \$619,087. Contract awarded to Wren & Greenough, Portland, \$571,626.25.

SOLANO COUNTY—Through Dixon, realignment of main route, eliminating two dangerous grade crossings, grading and paving 0.7 of a mile with Portland cement concrete. Dist. X, Rt. 7, Sec. E, Frederickson and Watson, Oakland, \$30,606. Contract awarded to C. W. Wood, Stockton, \$27,974.80.

TULARE COUNTY—Between Pixley and Tipton, 8.6 miles to be graded and paved with asphalt concrete. Dist. VI, Rt. 4, Secs. A and B, Valley Paving and Construction, Visalia, \$244,175; A Teichert & Son, Inc., Sacramento, \$247,054; Hanrahan Company, San Francisco, \$285,480. Contract awarded to California Construction Co., San Francisco, \$240,109.60.

AWARD OF CONTRACTS DIVISION OF ARCHITECTURE January 2 to January 30, 1930

AGNEWS STATE HOSPITAL, for drilling water well, contract awarded to J. Fred Holthouse of Santa Clara; price \$8,150.

SAN DIEGO STATE TEACHERS COLLEGE, for general work, training school and power house; awarded to H. Mayson of Long Beach; price \$137,645. Another contract for heating, ventilating and plumbing work on the above, awarded to Thomas Haverty Company of Los Angeles; price \$20,433. A third contract for electrical work on the above awarded to Moore Electric Company of Los Angeles; price \$6,245. Contract for installation of new return tubular boilers, above college, awarded to R. G. Meyler Corporation of Los Angeles; price \$10,300.

SAN FRANCISCO STATE TEACHERS COLLEGE, for grading play field areas; awarded to Sibley Grading & Teaming Co., Ltd., San Francisco; price \$7,490.

PACIFIC COLONY, for construction of roads in and about grounds, awarded to Pearson & Dickerson of Riverside; price \$3,000.

DAM APPROVALS APPLICATIONS AND PLANS

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources, during the month of January, 1930.

LOS ANGELES COUNTY—Dry Canyon Dam No. 6-5. City of Los Angeles, Los Angeles, owner; earthfill, 54½ feet above streambed with a storage capacity of 657 acre-feet. Situated on Dry Canyon Creek in Sec. 35, T. 5 N., R. 16 W., S. B. M., for storage purposes for municipal use. Estimated cost \$127,000.

LOS ANGELES COUNTY—Fairmont Dam No. 6-8. City of Los Angeles, Los Angeles, owner; earthfill, 1112 feet above streambed with a storage capacity of 7487 acre-feet. Situated in Sec. 12, T. 7 N., R. 15 W., S. B. M., for storage purposes for municipal use. Estimated cost \$627,560.

LOS ANGELES COUNTY—Lower Franklin Dam No. 6-14. City of Los Angeles, Los Angeles, owner; earthfill, 96 feet above streambed with a storage

capacity of 1652 acre-feet. Situated in Sec. 12, T. 1 S., R. 15 W., S. B. M., for storage and diversion purposes for municipal use. Estimated cost \$238,136.

LOS ANGELES COUNTY—South Haiwee No. 6-24A. City of Los Angeles, Los Angeles, owner; earthfill, 81 feet above streambed with a storage capacity of 60,000 acre-feet. Situated in Sec. 2, T. 21 S., R. 37 E., M. D. M., for storage purposes for municipal use. Estimated cost \$355,000.

LOS ANGELES COUNTY—North Haiwee Dam No. 6-24B. City of Los Angeles, Los Angeles, owner; earthfill, 26 feet above streambed with a storage capacity of 60,000 acre-feet. Situated in Sec. 3, T. 20 S., R. 37 E., M. D. M., for storage purposes for municipal use. Estimated cost \$65,800.

LOS ANGELES COUNTY—Upper Franklin Dam No. 6-27. City of Los Angeles, Los Angeles, owner; earthfill, 50 feet above streambed with a storage capacity of 123 acre-feet. Situated in Sec. 36, T. 1 N., R. 15 W., S. B. M., for storage purposes for municipal use. Estimated cost \$28,647.

MENDOCINO COUNTY—Albion River No. 381. Albion Lumber Co., Albion, owner; timber and rock-fill, 9.5 feet above streambed with a storage capacity of 150 acre-feet.

MODOC COUNTY—Dannhauser Dam No. 161. Webber & Moffit, Alturas, owners; earth, 53 feet above streambed with a storage capacity of 350 acre-feet. Situated on ditch tributary to Yankee Jim Slough, in Sec. 8, T. 41 N., R. 13 E., M. D. M., for storage purposes for irrigation use.

MODOC COUNTY—Upper Pasture No. 161-2. Webber & Moffit, Alturas, owners; earth, 11 feet above streambed with a storage capacity of 250 acre-feet. Situated on Yankee Jim Slough, in Sec. 3, T. 42 N., R. 13 E., M. D. M., for storage purposes for irrigation use.

LASSEN COUNTY—Fleming No. 241. J. J. Fleming & Co., Wendel, Lassen Co., owners; earth and rock, 10 feet above streambed with a storage capacity of 79.8 acre-feet. Situated on unnamed creek tributary to Ash Creek in Sec. 6, T. 37 N., R. 11 E., M. D. M., for storage purposes for irrigation and domestic use.

SAN BENITO COUNTY—Pacheco Reservoir No. 652. San Benito Land & Water Co., Hollister, owner; earth, 20 feet above streambed with a storage capacity of 4500 acre-feet, tributary to San Benito and Tres Pinos creeks for storage purposes for irrigation use.

LOS ANGELES COUNTY—Highland Dam No. 6-12. City of Los Angeles, Los Angeles, owner; earthfill, with a storage capacity of 61.3 acre-feet.

LOS ANGELES COUNTY—Ascot Dam No. 6. City of Los Angeles, Los Angeles, owner; earth, 53 feet above streambed with a storage capacity of 219 acre-feet. Situated in T. 15 N., R. 13 W., S. B. M., for storage purposes for municipal use. Estimated cost \$102,497.

LOS ANGELES COUNTY—Pacoima Dam No. 32-8. Los Angeles County Flood Control Dist., Los Angeles, owner; arch, 340 feet, above streambed with a storage capacity of 11,925 acre-feet. Situated on Pacoima Creek tributary to Los Angeles River, in Sec. 19, T. 3 N., R. 14 W., M. D. M., for storage purposes for flood control use. Estimated cost \$2,514,770.

SAN MATEO COUNTY—Dumbarton Bridge No. 1 No. 616. Dumbarton Bridge Co., San Francisco, owner; earth, 18 feet above streambed. Situated on Ravenswood Slough, tributary to San Francisco Bay, in Sec. 24, T. 5 S., R. 3 W., M. D. M.

MODOC COUNTY—"G" (Bottle Cr.) No. 145. G. O. Transzettel, Alturas, owner; earth and rock, 8 feet above streambed. Situated in Secs. 27 and 28, T. 45 N., R. 10 E., M. D. M., for storage purposes for irrigation and stock use.

MODOC COUNTY—"C" (Antelope) No. 145-2. G. O. Transzettel, Alturas, owner; earth and rock, 20 feet above streambed. Situated in Sec. 13, T. 44 N., R. 10 E., M. D. M., for storage purposes for stock and irrigation use.

MODOC COUNTY—"M" No. 145-3. G. O. Transzettel, Alturas, owner; earth and rock, 10 feet above streambed. Situated in Sec. 19, T. 44 N., R. 9 E., M. D. M., for storage purposes for domestic and irrigation use.

MODOC COUNTY—"N" No. 145-4. G. O. Transzettel, Alturas, owner; earth and rock, 10 feet above streambed. Situated in Sec. 25, T. 25 N., R. 9 E., M. D. M., for storage purposes for domestic and irrigation use.

MODOC COUNTY—Fairchild (F) 145-5. G. O. Transzettel, Alturas, owner; earth and rock, 20 feet above streambed. Situated in Sec. 13, T. 43 N., R.

9 E., M. D. M., for storage purposes for domestic and irrigation use.

KERN COUNTY—Lake of the Woods Dam No. 733. J. D. and Florence Cuddy, Lebec, owners. Situated in Sec. 33, T. 9 N., R. 20 W., S. B. M.

LOS ANGELES COUNTY—Ivanhoe No. 6-13. City of Los Angeles, Los Angeles, owner; earth, 26 feet above streambed with a storage capacity of 147.5 acre-feet. Situated in Sec. 3, T. 1 S., R. 13 W., S. B. M., for storage purposes for municipal use.

LOS ANGELES COUNTY—Elysian Dam No. 6-6. City of Los Angeles, Los Angeles, owner; earth fill, 33 feet above streambed with a storage capacity of 32.1 acre-feet. Situated in T. 1 S., R. 13 W., S. B. M., for storage purposes for municipal use.

LOS ANGELES COUNTY—Encino No. 6-7. City of Los Angeles, Los Angeles, owner; earth, 99 feet above streambed with a storage capacity of 3229 acre-feet. Situated on Encino Creek tributary to Los Angeles River in T. 1 N., R. 15 W., S. B. M., for storage purposes for municipal use. Estimated cost \$341,075.

LASSEN COUNTY—Spoooner Dam No. 241-2. J. J. Fleming & Co., Wendel, owners; earth and rock, 11 feet above streambed with a storage capacity of 312.8 acre-feet. Situated on Unnamed Canyon tributary to Ash Creek in Sec. 30, T. 37 N., R. 12 E., M. D. M., for storage purposes for domestic and irrigation use.

YUBA COUNTY—Bullards Bar Dam No. 97. Pacific Gas & Electric Co., San Francisco, owner; arch, 175 feet above streambed with a storage capacity of 35,000 acre-feet. Situated on North Fork of Yuba River, tributary to Yuba River, in Sec. 24, T. 38 N., R. 8 E., M. D. M., for storage purposes for power, mining and debris use. Estimated cost \$821,900.

NEVADA COUNTY—Blue Lake Dam No. 97-12. Pacific Gas & Electric Co., San Francisco, owner; earth and rock, 19 feet above streambed with a storage capacity of 1123 acre-feet. Situated on branch of Rucker Creek tributary to So. Fork Yuba River in Sec. 9, T. 17 N., R. 12 E., M. D. M., for storage purposes for power use. Estimated cost \$6,834.

NEVADA AND PLACER COUNTIES—Drum Afterbay Dam No. 97-19. Pacific Gas & Electric Co., San Francisco, owner; arch, 7 feet above streambed with a storage capacity of 275 acre-feet. Situated on Bear River tributary to Feather River in Sec. 17, T. 16 N., R. 11 E., M. D. M., for regulation purposes for power use. Estimated cost \$199,455.

PLACER COUNTY—Drum Forebay Dam No. 97-20. Pacific Gas & Electric Co., San Francisco, owner; earth, 49 feet above streambed with a storage capacity of 44 acre-feet. Situated on Drum Canal in Sec. 16, T. 16 N., R. 14 E., M. D. M., for regulation purposes for power use. Estimated cost \$380,219.

NEVADA COUNTY—Fuller Lake Dam No. 97-21. Pacific Gas & Electric Co., San Francisco, owner; earth, 27 feet above streambed with a storage capacity of 1194 acre-feet. Situated on Jordan Creek tributary to South Yuba River in Sec. 17, T. 17 N., R. 12 E., M. D. M., for storage purposes for power use. Estimated cost \$8,893.

PLACER COUNTY—Kidd Lake Dam No. 97-25. Pacific Gas & Electric Co., San Francisco, owner; earth, 29.5 feet above streambed with a storage capacity of 149.2 acre-feet. Situated on unnamed creek tributary to South Fork Yuba River located in Sec. 29, T. 17 N., R. 14 E., M. D. M., for storage purposes for power use. Estimated cost \$49,010.

NEVADA COUNTY—Lake Fordyce Dam No. 97-28. Pacific Gas & Electric Co., San Francisco, owner; rock, 121 feet above streambed with a storage capacity of 46,662 acre-feet. Situated on Fordyce Creek, tributary to So. Fork Yuba River located in Sec. 34, T. 18 N., R. 13 E., M. D. M., for storage purposes for power use. Estimated cost \$1,870,390.

NEVADA COUNTY—Lake Spaulding Dam No. 97-29. Pacific Gas & Electric Co., San Francisco, owner; arch, 26 feet above streambed with a storage capacity of 74,488 acre-feet. Situated on South Yuba River tributary to Yuba River located in Sec. 20, T. 17 N., R. 12 E., M. D. M., for storage and diversion purposes for power use. Estimated cost \$2,353,676.

NEVADA COUNTY—Lower Feeley L. Dam No. 97-35. Pacific Gas & Electric Co., San Francisco, owner; earth, 10.8 feet above streambed with a storage capacity of 115 acre-feet. Situated on Branch of Fall Creek tributary to South Fork Yuba River in Sec. 29, T. 18 N., R. 12 E., M. D. M., for storage purposes for power use. Estimated cost \$1,075.

NEVADA COUNTY—Lower Lindsey Lake Dam No. 97-36. Pacific Gas & Electric Co., San Francisco, owner; earth, 8 feet above streambed with a storage

capacity of 252 acre-feet. Situated on Branch of Texas Creek tributary to South Fork of Yuba River in Sec. 20, T. 18 N., R. 12 E., M. D. M., for storage purposes for power use. Estimated cost \$2,193.

NEVADA COUNTY—Lower Rock Lake Dam No. 97-38. Pacific Gas & Electric Co., San Francisco, owner; earth and rock, 3½ feet above streambed with a storage capacity of 31 acre-feet. Situated on Branch of Texas Creek tributary to South Yuba River in Sec. 15, T. 18 N., R. 12 E., M. D. M., for storage purposes for power use. Estimated cost \$374.

NEVADA COUNTY—Meadow Lake Dam No. 97-40. Pacific Gas & Electric Co., San Francisco, owner; earthen, 30 feet above streambed with a storage capacity of 4700 acre-feet. Situated on a stream tributary to Fordyce Creek in Sec. 27, T. 18 N., R. 13 E., M. D. M., for storage purposes, for power use. Estimated cost \$110,305.

NEVADA COUNTY—Middle Lindsey Lake Dam No. 97-41. Pacific Gas & Electric Co., San Francisco, owner; earth, 6 feet above streambed with a storage capacity of 138 acre-feet. Situated on Branch of Texas Creek tributary to South Yuba River in Sec. 21, T. 18 N., R. 12 E., M. D. M., for storage purposes for power use. Estimated cost \$811.

NEVADA COUNTY—Rucker Lake Dam No. 97-44. Pacific Gas & Electric Co., San Francisco, owner; earth and rock, 14½ feet above streambed with a storage capacity of 552 acre-feet. Situated on Rucker Creek, tributary to South Fork Yuba River in Sec. 8, T. 17 N., R. 12 E., M. D. M., for storage purposes for power use. Estimated cost \$5,176.

NEVADA COUNTY—Upper Feeley Lake Dam No. 97-45. Pacific Gas & Electric Co., San Francisco, owner; earth, 16 feet above streambed with a storage capacity of 907 acre-feet. Situated on Branch of Fall Creek, tributary to South Fork Yuba River in Sec. 28, T. 18 N., R. 12 E., M. D. M., for storage purposes for power use. Estimated cost \$2,606.

NEVADA COUNTY—Upper Lindsey Lake Dam No. 97-46. Pacific Gas & Electric Co., San Francisco, owner; earth, 5.6 feet above streambed with a storage capacity of 20 acre-feet. Situated on Branch of Texas Creek tributary to South Yuba River in Sec. 21, T. 18 N., R. 12 E., M. D. M., for storage purposes for power use. Estimated cost \$150.

PLACER COUNTY—Upper Peak Lake Dam No. 97-47. Pacific Gas & Electric Co., San Francisco, owner; earth, 33 feet above streambed with a storage capacity of 1607 acre-feet. Situated on Unnamed Creek tributary to South Fork Yuba River in Sec. 32, T. 17 N., R. 14 E., M. D. M., for storage purposes for power use. Estimated cost \$26,530.

NEVADA COUNTY—Upper Rock Lake Dam No. 97-48. Pacific Gas & Electric Co., San Francisco, owner; earth, 13.5 feet above streambed with a storage capacity of 207 acre-feet. Situated on Unnamed Creek tributary to South Fork Yuba River in Sec. 15, T. 18 N., R. 12 E., M. D. M., for storage purposes for power use. Estimated cost \$2,224.

NEVADA COUNTY—White Rock Lake Dam No. 97-49. Pacific Gas & Electric Co., San Francisco, owner; earth, 10.5 feet above streambed with a storage capacity of 578 acre-feet. Situated on a Branch of North Creek tributary to Fordyce Creek, in Sec. 22, T. 18 N., R. 15 E., M. D. M., for storage purposes for power use. Estimated cost \$11,185.

CONTRA COSTA COUNTY—St. Mary's Dam No. 584. St. Mary's College, Oakland, owner; earth, 25 feet above streambed with a storage capacity of 400 acre-feet. Situated on Las Trompas Creek tributary to Walnut Creek in Sec. 17, T. 1 S., R. 2 W., M. D. M., for storage and diversion purposes for irrigation and recreational use. Estimated cost \$100,000.

SAN DIEGO COUNTY—Barrett Dam No. 8. City of San Diego, San Diego, owner; gravity arch, 161 feet above streambed with a storage capacity of 42,899 acre-feet situated on Cottonwood Creek tributary to Pita Juana River in Sec. 22, T. 17 S., R. 2 E., S. B. M., for storage purposes for municipal use. Estimated cost \$1,650,000.

SAN DIEGO COUNTY—Chollas Dam No. 8-2. City of San Diego, San Diego, owner; earth, 58 feet above streambed with a storage capacity of 278 acre-feet situated on Branch of Chollas Creek tributary to San Diego Bay in Sec. 35, T. 16 S., R. 2 W., S. B. M., for equalizing purposes for municipal use. Estimated cost \$31,000.

SAN DIEGO COUNTY—Lake Hodges Dam No. 8-3. City of San Diego, San Diego, owner; multiple arch, 115 feet above streambed with a storage capacity of 65,000 acre-feet. Situated on San Dieguito River tributary to Pacific Ocean in Sec. 18, T. 13 S., R. 2 W., S. B. M., for storage purposes for municipal use. Estimated cost \$500,000.

SAN DIEGO COUNTY—Lower Otay Dam No. 8-4. City of San Diego, San Diego, owner; gravity arch, 137.5 feet above streambed with a storage capacity of 49,126 acre-feet. Situated on Otay River tributary to San Diego Bay in Secs. 18 and 13, T. 13 S., R. 1 E., and 1 W., S. B. M., for storage purposes for municipal use. Estimated cost \$744,828.

SAN DIEGO COUNTY—San Dieguito Dam No. 8-6. City of San Diego, San Diego, owner; multiple arch, 50 feet above streambed with a storage capacity of 128 acre-feet. Situated on Branch of Escondido Creek tributary to Pacific Ocean, for equalizing purposes for municipal use. Estimated cost \$50,000.

SAN DIEGO COUNTY—Upper Otay No. 8-8. City of San Diego, San Diego, owner; arch, 72 feet above streambed with a storage capacity of 2793 acre-feet, situated on Proctor Valley Creek tributary to Otay River in Sec. 36, T. 17 S., R. 1 W., S. B. M., for storage purposes for municipal use. Estimated cost \$50,000.

LOS ANGELES COUNTY—Bellevue Dam No. 6-3. City of Los Angeles, Los Angeles, owner; earth, 44 feet above streambed with a storage capacity of 106.8 acre-feet situated in Sec. 18, T. 1 S., R. 13 W., S. B. M., for storage purposes for municipal use. Estimated cost \$77,135.69.

LOS ANGELES COUNTY—Buena Vista Dam No. 6-2. City of Los Angeles, Los Angeles, owner; earth, 21.5 feet above streambed with a storage capacity of 40 acre-feet situated in T. 1 S., R. 13 W., S. B. M., for municipal use.

LOS ANGELES COUNTY—Rowena Dam No. 6-18. City of Los Angeles, Los Angeles, owner; earth, 15 feet above streambed with a storage capacity of 94.22 acre-feet situated in Sec. 5, T. 1 S., R. 13 W., S. B. M., for storage purposes for municipal use. Estimated cost \$57,549.70.

LASSEN COUNTY—Goodrich Diversion Dam No. 237-2. Red River Lumber Co., Westwood, owner; earth, 6 feet above streambed with a storage capacity of 60 acre-feet situated on Hamilton Branch tributary to Feather River, in Sec. 33, T. 29 N., R. 9 E., M. D. M., for diversion purposes for irrigation and industrial use. Estimated cost \$11,000.

LASSEN COUNTY—Westwood Mill Pond No. 237-3. Red River Lumber Co., Westwood, owner; earth, 13.5 feet above streambed with a storage capacity of 488 acre-feet situated on Rogers Creek tributary to Feather River in Sec. 8, T. 28 N., R. 9 E., M. D. M., for storage purposes for logging use. Estimated cost \$35,000.

LASSEN COUNTY—Piute Creek Dam No. 237-4. Red River Lumber Co., Westwood, owner; earth, 48 feet above streambed with a storage capacity of 126 acre-feet situated on Piute Creek tributary to Susan River in Sec. 27, T. 30 N., R. 11 E., M. D. M. Estimated cost \$16,000.

MODOC COUNTY—Plum Canyon Dam No. 139. Mrs. Lester H. Porter and John Page, Adams, owners; earth, 14 feet above streambed with a storage capacity of 125 acre-feet situated on Plum Canyon tributary to Parker Creek in Sec. 32, T. 42 N., R. 13 E., M. D. M., for storage purposes for irrigation and stock use. Estimated cost \$600.

EL DORADO COUNTY—Patterson Dam No. 466. C. A. Patterson, Placerville, owner; earth and rock, 9 feet above streambed with a storage capacity of 10 acre-feet for storage purposes for irrigation use.

BUTTE COUNTY—Phillbrook Dam No. 97-8. Pacific Gas & Electric Co., San Francisco, owner; earth, 63 feet above streambed with a storage capacity of 4375 acre-feet situated on Phillbrook Creek tributary to West Branch of North Fork of Feather River in Sec. 13, T. 25 N., R. 4 E., M. D. M., for storage purposes for power use. Estimated cost \$266,240.

PLACER COUNTY—Christian Valley Dam No. 97-15. Pacific Gas & Electric Co., San Francisco, owner; rock, 28 feet above streambed with a storage capacity of 111 acre-feet situated on South Fork of Dry Creek tributary to Feather River in Sec. 26, T. 13 N., R. 8 E., M. D. M., for regulation purposes for power use. Estimated cost \$57,325.

PLACER COUNTY—Halsey Forebay No. 97-23. Pacific Gas & Electric Co., San Francisco, owner; earth, 20 feet above streambed with a storage capacity of 285 acre-feet situated on unnamed water course tributary to Dry Creek in Sec. 13, T. 13 N., R. 8 E., M. D. M., for regulation purposes for power use. Estimated cost \$168,860.

PLACER COUNTY—Rock Creek Dam No. 97-43. Pacific Gas & Electric Co., San Francisco, owner; multiple arch, 30 feet above streambed with a storage capacity of 550 acre-feet situated on Rock Creek tributary to Feather River in Sec. 28, T. 13 N., R. 8 E., M. D. M., for regulation purposes for power use. Estimated cost \$144,750.

ALPINE COUNTY—Lower Blue Lake No. 97-62. Pacific Gas & Electric Co., San Francisco, owner; crib, 43.3 feet above streambed with a storage capacity of 4130 acre-feet situated on Blue Creek tributary to North Fork Mokelumne River in Sec. 30, T. 9 N., R. 19 E., M. D. M., for storage purposes for power use. Estimated cost \$127,137.

ALPINE COUNTY—Meadow Lake No. 97-63. Pacific Gas & Electric Co., San Francisco, owner; rock, 69.5 feet above streambed with a storage capacity of 6110 acre-feet situated on Unnamed Stream tributary to North Fork Mokelumne River in Sec. 27, T. 9 N., R. 18 E., M. D. M., for storage purposes for power use. Estimated cost \$172,413.

ALPINE COUNTY—Twin Lakes No. 97-69. Pacific Gas & Electric Co., San Francisco, owner; earth, 17.3 feet above streambed with a storage capacity of 1425 acre-feet situated on Unnamed Stream tributary to North Fork Mokelumne River in Sec. 25, T. 9 N., R. 18 E., M. D. M., for storage purposes for power use. Estimated cost \$20,171.

ALPINE COUNTY—Upper Blue Lake Dam No. 97-70. Pacific Gas & Electric Co., San Francisco, owner; rock, 25.6 feet above streambed with a storage capacity of 7200 acre-feet situated on Blue Creek tributary to North Fork Mokelumne River in Sec. 18, T. 9 N., R. 19 E., M. D. M., for storage purposes for power use. Estimated cost \$41,124.

TUOLUMNE COUNTY—Herring Creek No. 97-71. Pacific Gas & Electric Co., San Francisco, owner; crib, 12 feet above streambed with a storage capacity of 100 acre-feet situated on Herring Creek tributary to South Fork Stanislaus River in Sec. 30, T. 5 N., R. 19 E., M. D. M., for storage purposes for power use. Estimated cost \$5,886.

SHASTA COUNTY—Pit No. 3 (Lake Britton) Dam No. 97-98. Pacific Gas & Electric Co., San Francisco, owner; gravity, 102 feet above streambed with a storage capacity of 32,200 acre-feet situated on Pit River tributary to Sacramento River in Sec. 30, T. 37 N., R. 3 E., M. D. M., for storage purposes for power use. Estimated cost \$1,450,905.

SHASTA COUNTY—Pit No. 1, Diversion Dam No. 97-99. Pacific Gas & Electric Co., San Francisco, owner; concrete, 10 feet above streambed situated on Fall River tributary to Pit River, in Sec. 25, T. 37 N., R. 4 E., M. D. M., for diversion purposes for power use. Estimated cost \$140,091.

SHASTA COUNTY—Pit No. 4, Dam 97-100. Pacific Gas & Electric Co., San Francisco, owner; gravity, 43 feet above streambed with a storage capacity of 2000 acre-feet situated on Pit River tributary to Sacramento River, in Sec. 8, T. 36 N., R. 2 E., M. D. M., for diversion purposes for power use. Estimated cost \$1,233,117.

MONO COUNTY—Forebay Dam No. 536-2. Mono Mining Co., Wellington, Nevada, owner; crib, 40 feet above streambed with a storage capacity of 30 acre-feet situated on Green Creek tributary to East Walker River in Sec. 4, T. 3 N., R. 25 E., M. D. M., for storage purposes for power use. Estimated cost \$18,287.

MONO COUNTY—East Lake Dam No. 536. Mono Mining Co., Wellington, Nevada, owner; rock crib, 15 feet above streambed with a storage capacity of 1087.3 acre-feet situated on Green Creek tributary to E. Walker River in Sec. 26, T. 3 N., R. 24 E., M. D. M., for storage purposes for power use. Estimated cost \$4,046.

MONO COUNTY—Green Lake Dam No. 536-3. Mono Mining Co., Wellington, Nevada, owner; crib, 12 feet above streambed with a storage capacity of 4,058 acre-feet situated on Green Creek tributary to East Walker River in Sec. 22, T. 3 N., R. 24 E., M. D. M., for storage purposes for power use. Estimated cost \$1,974.

ORANGE COUNTY—Yorba Dam No. 791. Anaheim Union Water Co., Anaheim, owner; earth, 50 feet above streambed with a storage capacity of 2000 acre-feet, situated in Sec. 27, T. 3 S., R. 9 W., S. B. M., for storage purposes for irrigation use. Estimated cost \$53,188.88.

MENDOCINO COUNTY—Morris Dam No. 92. Wilhits Water Co., Wilhits, owner; arch, 52.5 feet above streambed with a storage capacity of 835 acre-feet, situated on Jones Creek tributary to Bel River in Sec. 33, T. 17 N., R. 13 W., M. D. M., for storage purposes for domestic use. Estimated cost \$65,500.

LOS ANGELES COUNTY—Sierra Madre Dam No. 32-13. Los Angeles Co. Flood Control Dist., Los Angeles, owner; arch 65 feet above streambed with a storage capacity of 62.5 acre-feet. Situated on Little Santa Anita Creek tributary to Santa Anita Creek, in Sec. 16, T. 1 N., R. 11 W., S. B. M., for storage purposes for municipal use. Estimated cost \$70,000.

MODOC COUNTY—Roberts No. 1 Dam No. 157. H. M. Roberts, Lookout, owner; earth, 2 feet above streambed with a storage capacity of 933 acre-feet. Situated on Antelope drainage tributary to Pit River in Sec. 29, T. 40 N., R. 7 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$2,000.

MODOC COUNTY—Old Roberts Dam No. 157-2. H. M. Roberts, Lookout, owner; earth, 3 feet above streambed with a storage capacity of 3970 acre-feet. Tributary to Pit River in Sec. 11, T. 39 N., R. 7 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$4,000.

INYO COUNTY—Hillside Dam No. 100. Hillside Water Co., Riverside, owner; rock, 77 feet above streambed with a storage capacity of 14,000 acre-feet. Situated on South Fork of Bishop Creek tributary to Owens River in Sec. 15, T. 9 S., R. 31 E., M. D. M., for storage purposes for power and irrigation use. Estimated cost \$325,595.

INYO COUNTY—Reservoir No. 1 Sabrina Dam No. 101. Nevada-California Power Co., Riverside, owner; rock, 70 feet above streambed with a storage capacity of 7500 acre-feet. Situated on Middle Fork Bishop Creek tributary to Owens River in Sec. 31, T. 8 S., R. 31 E., M. D. M., for storage purposes for power and irrigation use. Estimated cost \$257,219.

INYO COUNTY—Bishop Cr. Intake No. 2 No. 101-2. Nevada-California Power Co., Riverside, owner; rock, 29 feet above streambed with a storage capacity of 115 acre-feet. Situated on Middle Fork of Bishop Creek tributary to Owens River in Sec. 16, T. 8 S., R. 31 E., M. D. M., for regulation purposes for power use. Estimated cost \$62,174.

INYO COUNTY—Bishop Cr. Intake No. 3 No. 101-3. Nevada-California Power Co., Riverside, owner; concrete, 16 feet above streambed with a storage capacity of 2.3 acre-feet. Situated on Bishop Creek tributary to Owens River in Sec. 9, T. 8 S., R. 31 E., M. D. M., for diversion purposes for power use. Estimated cost \$39,564.

INYO COUNTY—Bishop Cr. Intake No. 4 No. 101-4. Nevada-California Power Co., Riverside, owner; concrete, 23 feet above streambed with a storage capacity of 14½ acre-feet. Situated on Bishop Creek tributary to Owens River in Sec. 36, T. 7 S., R. 31 E., M. D. M., for diversion purposes for power use. Estimated cost \$51,840.

MONO COUNTY—Rush Creek Meadows Dam No. 101-5. Nevada-California Power Co., Riverside, owner; arch, 47 feet above streambed with a storage capacity of 490 acre-feet. Situated on Rush Creek tributary to Mono Lake in Sec. 14 T. 2 S., R. 25 E., M. D. M., for storage purposes for power and irrigation use. Estimated cost \$188,967.

MONO COUNTY—Lundy Lake Dam No. 101-6. Nevada-California Power Co., Riverside, owner; earth and rock, 40 feet above streambed with a storage capacity of 3320 acre-feet. Situated on Mill Creek tributary to Mono Lake in Sec. 16, T. 2 N., R. 25 E., M. D. M., for storage and diversion purposes for power and irrigation use. Estimated cost \$178,266.

MONO COUNTY—Bishop Creek Intake No. 5 No. 102. Southern Sierras Power Co., Riverside, owner; concrete, 19 feet above streambed with a storage capacity of 4 acre-feet. Situated on Bishop Creek tributary to Owens River in Sec. 19, T. 7 S., R. 32 E., M. D. M., for diversion purposes for power use. Estimated cost \$21,734.

MONO COUNTY—Gem Lake Dam No. 103. Cain Irrigation District, Riverside, owner; multiple arch, 72 feet above streambed with a storage capacity of 17,604 acre-feet. Situated on Rush Creek tributary to Mono Lake in Sec. 30, T. 2 S., R. 26 E., M. D. M., for storage purposes for power use. Estimated cost \$795,941.

MONO COUNTY—Agnew Lake Dam No. 103-2. Cain Irrigation Dist., Riverside, owner; multiple arch, 27 feet above streambed with a storage capacity of 851 acre-feet. Situated on Rush Creek tributary to Mono Lake in Sec. 20, T. 2 S., R. 26 E., M. D. M., for storage purposes for power use. Estimated cost \$39,400.

MONO COUNTY—Grant Lake Dam No. 103-3. Cain Irrigation District, Riverside, owner; rock, 20 feet above streambed with a storage capacity of 10,111 acre-feet. Situated on Rush Creek tributary to Mono Lake in Sec. 16, T. 1 S., R. 26 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$64,726.

MONO COUNTY—Saddlebag Dam No. 103-4. Cain Irrigation Dist., Riverside, owner; rock, 30 feet above streambed with a storage capacity of 11,138 acre-feet. Situated on Leavine Creek tributary to Mono Lake in Sec. 12, T. 1 N., R. 24 E., M. D. M., for storage purposes for power use.

poses for irrigation and power use. Estimated cost \$257,117.

MONO COUNTY—Tioga Lake Dam No. 103-5. Cain Irrigation Dist., Riverside, owner; rock, 11 feet above streambed with a storage capacity of 1386 acre-feet. Situated on Leevining Creek tributary to Mono Lake in Sec. 19, T. 1 N., R. 25 E., M. D. M., for storage purposes for irrigation and power use. Estimated cost \$51,092.

MONO COUNTY—Rhinedollar Lake Dam No. 102-6. Cain Irrigation Dist., Riverside, owner; rock, 12 feet above streambed with a storage capacity of 745 acre-feet. Situated on Leevining Creek tributary to Mono Lake in Sec. 20, T. 1 N., R. 25 E., M. D. M., for storage purposes for irrigation and power use. Estimated cost \$176,125.

LASSEN COUNTY—Buckhorn Dam No. 238. First Nat'l. Bank of Reno, Reno, Nevada, owner. Located in Sec. 32, T. 35 N., R. 17 E.

LASSEN COUNTY—Cariban Lake No. 234. J. A. Bennett, Chico, owner; earth, 12 feet above streambed. Situated on Cariban Lake tributary to Susan River in Sec. 34, T. 31 N., R. 7 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$1,000.

Applications for approval of plans and specifications for construction or enlargement of dams filed with the State Department of Public Works, Division of Water Resources, during the month of January, 1930.

EL DORADO COUNTY—Rock Creek Dam No. 465. Arthur E. Risor, Georgetown, owner; earth, 30 feet above streambed with a storage capacity of 34.2 acre-feet. Situated on Rock Creek tributary to South Fork American River in Sec. 34, T. 13 N., R. 1 E., M. D. M., for storage and diversion purposes for domestic, irrigation, mining and recreational use. Estimated cost \$2,000.

Applications for approval of plans and specifications for repair or alteration of dams filed with the State Department of Public Works, Division of Water Resources, during the month of January, 1930.

LOS ANGELES COUNTY—Chatsworth Dam No. 6-4A. City of Los Angeles, Los Angeles, owner; earth/lin. Situated on Chatsworth Foothills tributary to Los Angeles River.

LASSEN COUNTY—Spooners Dam No. 241-2. J. J. Fleming & Co., Wendel, owner; earth and rock. Situated on Unnamed Canyon tributary to Ash Creek in Sec. 30, T. 37 N., R. 12 E., M. D. M.

Plans and specifications for the construction or enlargement of dams approved by the State Department of Public Works, Division of Water Resources, during the month of January, 1930.

LOS ANGELES COUNTY—Hansen Dam No. 32-6. Los Angeles Co. Flood Control District, Los Angeles, owner; arch, 150 feet above streambed with a storage capacity of 1250 acre-feet. Situated on Big Thunja Creek tributary to Los Angeles River in Sec. 1, T. 2 N., R. 13 W., S. B. M., for flood control purposes for municipal use.

MODOC COUNTY—Pickering Pond Dam No. 144. Pickering Lumber Co., Alturas, owner; earth, 22 feet above streambed with a storage capacity of 500 acre-feet. Situated in Sec. 16, T. 42 N., R. 12 E., M. D. M., for storage purposes for logging use. Estimated cost \$22,194.29.

MENDOCINO COUNTY—Ridge-wood Dam No. 382. Charles S. Howard Co., San Francisco, owner; earth, 31 feet above streambed with a storage capacity of 334 acre-feet. Situated on Forsyth Creek tributary to Russian River in Sec. 18, T. 17 N., R. 13 W., M. D. M., for storage purposes for irrigation use. Estimated cost \$25,188.25.

SAN DIEGO COUNTY—Crouch Dam No. 839. Charles S. Crouch, San Diego, owner; earth, 40 feet above streambed with a storage capacity of 40.7 acre-feet. Situated on Unnamed Canyon tributary to Las Chollas Creek in Sec. 3, T. 17 S., R. 2 W., S. B. M., for storage purposes for domestic use. Estimated cost \$9,631.

MERCED COUNTY—Merced Falls Dam No. 95-10. San Joaquin Light & Power Co., Fresno, owner;

gravity, 34 feet above streambed with a storage capacity of 620 acre-feet. Situated on Merced River tributary to San Joaquin River in Sec. 4, T. 5 S., R. 15 E., M. D. M., for diversion purposes for power and logging use. Estimated cost of enlargement \$50,000.

Plans for the repair or alteration of dams approved by the State Department of Public Works, Division of Water Resources, during the month of January, 1930.

LOS ANGELES COUNTY—Chatsworth Dam No. 6-4A. City of Los Angeles, Los Angeles, owner. Earth blanket.

BUTTE COUNTY—Concow Dam No. 67. Thermaito Irrigation District and Table Mountain Irrigation District, Oroville, owner; arch. Situated on Concow Creek tributary to W. Branch Feather River in Sec. 16, T. 22 N., R. 4 E., M. D. M. Nature of repairs—lining area below spillway. Estimated cost \$3,600.

LASSEN COUNTY—Spooners Dam No. 241-2. J. J. Fleming & Co., Wendel, owner; earth and rock, situated on Unnamed Canyon tributary to Ash Creek in Sec. 30, T. 37 N., R. 12 E., M. D. M. Nature of alterations—new spillway.

WATER APPLICATIONS AND PERMITS

Applications for Permit to Appropriate Water Filed with the State Department of Public Works, Division of Water Resources, during January, 1930.

VENTURA COUNTY—Application No. 6521. George D. Hantgin, Peter K. Hantzis and Edward Rudolph Schroff, c/o Sheridan, Orr, Drapeau & Gardner, Attys., First National Bank Bldg., Ventura, Cal., for 1 c.f.s. from unnamed spring tributary to San Buenaventura River. To be diverted in Sec. 26, T. 5 N., R. 23 W., S. B. M. for irrigation and domestic purposes. Estimated cost \$2,500.

SAN JOAQUIN COUNTY—Application 6522. Linden Irrigation District, c/o A. L. Cowell, Bank of America Bldg., Stockton, Cal., for 100,000 acre-feet per annum from Calaveras River tributary to San Joaquin River. To be diverted in Sec. 5, T. 2 N., R. 9 E., M. D. M., for irrigation and domestic purposes.

LASSEN COUNTY—Application 6523. Antone Ayilla, Bieber, Cal., for 4200 acre-feet per annum from Juniper River tributary to Pit River. To be diverted in Sec. 3, T. 36 N., R. 8 E., M. D. M., for irrigation purposes. Estimated cost \$10,000.

HUMBOLDT COUNTY—Application 6524. F. A. Leach and Fred D. Smith, Fortuna, Cal., for 0.54 c.f.s. from Eel River tributary to Pacific Ocean. To be diverted in Sec. 24, T. 1 N., R. 1 E., H. M. for irrigation purposes. Estimated cost \$200.

RIVERSIDE COUNTY—Application 6525. F. Wm. Seggie, Star Route, Riverside, Cal., for 7100 g.p.d. from Butterfly Canyon Spring (underground water also to be developed) tributary to San Jacinto River. To be diverted in Sec. 31, T. 3 S., R. 1 W., S. B. M., for domestic and irrigation purposes. Estimated cost \$200.

SAN JOAQUIN COUNTY—Application 6526. Millard C. and Charles A. Johnson, Rt. 1, Box 162, Escalon, San Joaquin Co., Cal., for 2 c.f.s. from Lone Tree Creek tributary to San Joaquin River. To be diverted in Sec. 21, T. 1 S., R. 8 E., M. D. M., for agricultural purposes. Estimated cost \$2,000.

SUTTER COUNTY—Application 6527. T. J. Cummins Ranch Co., c/o Lucius R. Bates, Box 148, Sacramento, Cal., for 5.98 c.f.s. from Sacramento

River tributary to Suisun Bay. To be diverted in Sec. 21, T. 12 N., R. 1 E., M. D. M., for irrigation purposes. Estimated cost \$7,000.

MONO COUNTY—Application 6528. Newton M. Otis, 200 Juniper Bldg., Santa Monica, Cal., for 300 g.p.d. from unnamed spring tributary to Mammoth Creek and Owens River. To be diverted in Sec. 9, T. 4 S., R. 27 E., M. D. M., for domestic purposes. Estimated cost \$75.

PLACER COUNTY—Application 6529. Nevada Irrigation District, c/o Wm. Durbrow, Mgr., Grass Valley, Cal., for 10 c.f.s. from Auburn Ravine. To be diverted in Sec. 13, T. 12 N., R. 6 E., M. D. M.

SAN JOAQUIN COUNTY—Application 6530. Smith-Riddell Company, Inc., Lodi, Cal., for 11.8 c.f.s. from Upland Canal tributary to Sycamore Slough. To be diverted in Sec. 10, T. 3 N., R. 5 E., M. D. M. Estimated cost \$13,500.

HUMBOLDT COUNTY—Application 6531. Edgar Lee Wight, 435 Buchanan St., San Francisco, Cal., for 2 c.f.s. from Cinder Cap Spring tributary to Buluff Creek. To be diverted in Sec. 12, T. 10 N., R. 4 E., H. M., for power purposes. Estimated cost \$1,500.

INYO COUNTY—Application 6532. H. W. White, Independence, Cal., for 1 g.p.m. from unnamed spring. To be diverted in Sec. 10, T. 13 S., R. 34 E., M. D. M., for mining and domestic purposes. Estimated cost \$10.

SUTTER COUNTY—Application 6533. A. M. Donaboe by A. H. Lydon, Mgr. and Agent, c/o Lawrence Schilling, Yuba City, Cal., for 1 c.f.s. from Feather River tributary to Sacramento River. To be diverted in Sec. 14, T. 14 N., R. 3 E., M. D. M., for irrigation purposes. Estimated cost \$2,500.

SIERRA COUNTY—Application 6534. Washoe County Water Conservation Dist., c/o King & Malone, Engineers and Contractors, for 50,000 acre-feet per annum from Little Truckee River tributary to Truckee River. To be diverted in Sec. 4, T. 18 N., R. 17 E., M. D. M., for irrigation and domestic purposes.

LAKE COUNTY—Application 6535. Martin Judge, Jr. and Company, Crocker First National Bank, San Francisco, Cal., for 175,000 acre-feet per annum from North Fork of Cache Creek tributary to Cache Creek. To be diverted in Sec. 4, T. 14 N., R. 6 W., M. D. M., for irrigation purposes. Estimated cost \$1,000,000.

LAKE COUNTY—Application 6536. Martin Judge, Jr. and Company, Crocker First National Bank, San Francisco, Cal., for 175,000 acre-feet per annum from North Fork Cache Creek tributary to Cache Creek. To be diverted in Sec. 4, T. 14 N., R. 6 W., M. D. M., for industrial and domestic purposes. Estimated cost \$3,000,000.

MONO COUNTY—Application 6537. U. S. Inyo National Forest, Dept. of Agriculture, San Francisco, Cal., for 1000 g.p.d. from creek between Lake Mamie and Twin Lakes tributary to Mammoth Creek and Owens River. To be diverted in Sec. 9, T. 4 S., R. 27 E., M. D. M., for domestic purposes. Estimated cost \$152.

MONO COUNTY—Application 6538. U. S. Inyo National Forest, Dept. of Agriculture, San Francisco, Cal., for 8200 g.p.d. from Coldwater Creek tributary to Mammoth Creek and Owens River. To be diverted in Sec. 16, T. 4 S., R. 27 E., M. D. M., for domestic purposes. Estimated cost \$460.

SAN JOAQUIN COUNTY—Application 6539. H. R. Russell, 426 Hackberry St., Modesto, Cal., for 3 c.f.s. from drainage through natural depression and drainage of waste ditch of Oakdale Irrigation District tributary to Little John Creek. To be diverted

in Sec. 17, T. 1 S., R. 9 E., M. D. M., for irrigation purposes.

PLACER COUNTY—Application 6540. Mrs. Eva Harness and R. Langley, Loomis, Cal., for 0.26 c.f.s. from Secret Ravine tributary to Antelope Creek. To be diverted in Sec. 10, T. 11 N., R. 7 E., M. D. M. Estimated cost \$850.

TUOLUMNE COUNTY—Application 6541. Joseph Brown, Chinese Camp, Cal., for 0.025 c.f.s. from Smarts Gulch tributary to Woods Creek and Tuolumne River. To be diverted in Sec. 18, T. 1 S., R. 15 E., M. D. M. Estimated cost \$555.

PLACER AND NEVADA COUNTIES—Application 6542. Bear River Water and Power Co., c/o J. L. Rollins, Colfax, Cal., for 110,020 acre-feet per annum from Bear River and its tributaries tributary to Feather River. To be diverted in Sec. 22, T. 15 N., R. 9 E., M. D. M., for power purposes. Estimated cost \$2,500,000.

YUBA COUNTY—Application 6543. Wallace James Sanford, c/o Rich & Weis, Attyrs., Hart Bldg., Marysville, Cal., for 1 c.f.s. from Dry Creek tributary to Bear River. To be diverted in Sec. 34, T. 15 N., R. 6 E., M. D. M., for irrigation and stock watering purposes. Estimated cost \$3,500.

MENDOCINO COUNTY—Application 6544. Robert B. Finn, c/o Thos. W. Firby, 827 Mills Bldg., San Francisco, Cal., for 0.025 c.f.s. from unnamed creek tributary to Eel River. To be diverted in Sec. 21, T. 19 N., R. 12 W., M. D. M., for domestic purposes. Estimated cost \$450.

TUOLUMNE AND ALPINE COUNTIES—Application 6545. Emma Rose and Hobart Estates Co., operating as Utica Mining Co., c/o A. C. Wilson, 1508 Balfour Bldg., San Francisco, Cal., for 10,800 acre-feet per annum from Highland Creek tributary to N. Fork of Stanislaus River. To be diverted in Sec. 9, T. 6 N., R. 18 E., M. D. M., for power purposes.

YOLO COUNTY—Application 6546. Karl Brehme, 1202 Hobart Bldg., San Francisco, Cal., for 200 c.f.s. and 200,000 acre-feet per annum from Putah-Pope-Capell-Etiwera creeks tributary to Sacramento River. To be diverted in Sec. 25, T. 8 N., R. 2 W., M. D. M.

Permits to Appropriate Water, Issued by the Department of Public Works, Division of Water Resources, during January, 1930.

SAN DIEGO COUNTY—Permit 3421. Application 6255. Issued to Palomar Estates, Ltd., Long Beach, Cal., January 8, 1930, for 1.25 c.f.s. from Nigger Creek in Sec. 11, T. 10 S., R. 1 W., S. B. M., for domestic use. Estimated cost \$10,000.

SAN DIEGO COUNTY—Permit 3422. Application 6256. Issued to Palomar Estates, Ltd., Long Beach, January 8, 1930, for 3.62 c.f.s. from Pauma Creek in Sec. 3, T. 10 S., R. 1 W., S. B. M., for irrigation use on 917.5 acres. Estimated cost \$115,000.

SISKIYOU COUNTY—Permit 3423. Application 6427. Issued to Frank L. Cunningham, Happy Camp, Cal., January 9, 1930, for 3 c.f.s. from Oak Flat Creek in Sec. 32, T. 16 N., R. 7 E., H. M., for power purposes. Estimated cost \$5,000.

SIERRA COUNTY—Permit 3424. Application 6428. Issued to Marie E. Phelan, Sierra City, January 10, 1930, for 3 c.f.s. from Slug Canyon in Sec. 2, T. 19 N., R. 10 E., M. D. M., for mining use. Estimated cost \$1,000.

VENTURA COUNTY—Permit 3425. Application 6452. Issued to Reginaldo Ruiz, Ojai, Cal., January 13, 1930, for 300 gallons per day from Two Unnamed

Springs in Secs. 6 and 7, T. 6 N., R. 23 W., S. B. M., for domestic use. Estimated cost \$1,000.

LOS ANGELES COUNTY—Permit 3426, Application 6375. Issued to H. H. Townsend, Beverly Hills, Cal., January 14, 1930, for 0.001 c.f.s. from Upright Spring in Sec. 19, T. 6 N., R. 17 W., S. B. M., for irrigation use on 60 acres.

EL DORADO COUNTY—Permit 3427, Application 6244. Issued to H. L. Fowlar, Georgetown, Cal., January 17, 1930, for 3 c.f.s. from Little Otter Creek in Sec. 27, T. 13 N., R. 11 E., M. D. M., for mining use. Estimated cost \$1,000.

INYO COUNTY—Permit 3428, Application 6466. Issued to American Potash and Chemical Corp., Trona, Cal., January 17, 1930, for 0.0544 c.f.s. from Christmas Spring in Sec. 26, T. 24 S., R. 42 E., M. D. M., for industrial and domestic use. Estimated cost \$4,840.

DEL NORTE COUNTY—Permit 3429, Application 6126. Issued to Aller Placer Mines Takilma, Oregon, January 22, 1930, for 3 c.f.s. from East Fork of East Fork, Illinois River, in Sec. 34, T. 19 N., R. 5 E., H. M., for placer mining. Estimated cost \$6,000.

SISKIYOU COUNTY—Permit 3430, Application 6292. Issued to Longrey Mining & Milling Company, Goltville, Cal., January 22, 1930, for 0.75 c.f.s. from Longrey Creek in Sec. 22, T. 47 N., R. 8 W., M. D. M., for mining and domestic purposes. Estimated cost \$500.

MENDOCINO COUNTY—Permit 3431, Application 6464. Issued to Thomas S. Van Vleet, Turlock, Cal., January 25, 1930, for 0.45 c.f.s. from West Branch Russian River, in Sec. 32, T. 17 N., R. 12 W., M. D. M., for use for irrigation on 36.44 acres. Estimated cost \$1,000.

SAN JOAQUIN COUNTY—Permit 3432, Application 6379. Issued to Charley Jensen, Manteca, Cal., January 25, 1930, for 3.49 c.f.s. from unnamed channel in Sec. 6, T. 1 S., R. 9 E., M. D. M., for irrigation use on 279.3 acres. Estimated cost \$4,000.

HUMBOLDT COUNTY—Permit 3433, Application 6172. Issued to Trinity Loop Mining Co., San Francisco, Cal., January 27, 1930, for 20 c.f.s. from Cedar Creek in Sec. 9, T. 6 N., R. 6 E., H. M., for mining use. Estimated cost \$3,000.

TRINITY COUNTY—Permit 3434, Application 6192. Issued to Trinity Loop Mining Co., San Francisco, Cal., January 27, 1930, for 10 c.f.s. from Hawkins Creek, in Sec. 9, T. 6 N., R. 6 E., H. M., for mining use. Estimated cost \$10,000.

HUMBOLDT COUNTY—Permit 3435, Application 6208. Issued to Trinity Loop Mining Co., San Francisco, Cal., January 27, 1930, for 10 c.f.s. from Grove Prairie Creek in Sec. 9, T. 6 N., R. 6 E., H. M., for mining use. Estimated cost \$10,000.

HUMBOLDT COUNTY—Permit 3436, Application 6326. Issued to Trinity Loop Mining Co., San Francisco, Cal., January 27, 1930, for 15 c.f.s. from Horse Range Creek in Sec. 9, T. 6 N., R. 6 E., H. M., for mining use. Estimated cost \$8,000.

Policeman Judge, this man is arrested for gambling and being drunk and driving a car while soused.

Drunk—Your Honor, "Man's inhumanity to man makes countless thousands mourn." I'm not as debased as Swift, as profligate as Byron, as dissipated as Poe, or as debauched as—

Judge—That will do. Thirty days; and officer, take a list of those names and run them in; they're as bad as he is.

Snow Removal Service Commended

WESTWOOD AUTO CLUB

Westwood, California

February 6, 1930.

Mr. H. S. Comly, District Engineer,
State Division of Highways,
Redding, California.

Dear Mr. Comly:

It is with a feeling of pride, for the admirable engineering ability and energy that has been displayed in our district of the California Highway System, on the Snow Removal Program, that this letter is written.

We particularly refer to the Red Bluff-Susanville Highway. This highway has been kept open in such a manner as to make it possible to pass other cars at practically all points at all times with the least inconvenience and to maintain a speed that was very nearly summer schedule. This has been done consistently throughout all storm periods this winter and has afforded the people of northern California, Nevada and states further east to continue an uninterrupted exchange of traffic throughout this period and no doubt the majority of this travel has been towards the milder climate of California.

We appreciate fully that the clearing of this highway has been done with engineering precision, as to the proper and sufficient and adequate equipment, manned by men who could and did labor under the most trying and adverse conditions and happy to say it worked perfectly. Your Maintenance Engineer, Mr. E. J. Gribble is due credit for carrying your plans and program to a successful conclusion. This work has not been done without costs but we believe that the amount expended is commensurate with the good it has done and feel safe in saying that it has been a good investment for California and a great boon to the people.

The members of the Westwood Auto Club feel very grateful for your interest in this problem that has afforded them so much relief and pleasure through the long winter months that heretofore we have been denied motor travel.

With kindest personal regards to you from the club,

WESTWOOD AUTO CLUB,

(Signed) H. GARFIELD OATES.

Suburban Schoolmam: "Rastus, get a bucket of water."

Rastus: "I ain't agwine to do it."

Suburban Schoolmam: "Now, Rastus, you know that is not the way to say anything. Repeat this after me—

"I am not going to do it,

"Thou are not going to do it.

"He is not going to do it.

"We are not going to do it.

"You are not going to do it.

"They are not going to do it.

"Now, Rastus, what would you say?"

Rastus: "They ain't nobody agwine to do it."

Most of the funny columns have already called attention to the difference the lambs in Wall street have found between gambling and gambling.

Reducing the Hazard From Fires Starting Along State Highways

By T. H. DENNIS, Maintenance Engineer.

THE Division of Highways' Fire Hazard Reduction program was initiated early in 1928 by Mr. B. B. Meek, Director of the Department of Public Works. Prior to that time fire reduction along state highways was more or less incidental to the roadside grading.

T. H. DENNIS.

Initiation of the work was prompted by a keen appreciation of the potential menace that matured vegetation bordering the highways offered adjoining property, as well as the difficulty of fixing responsibility for roadside conflagrations caused by careless users of the roads.

During 1928 some 660 miles of highway roadside were cleared at a cost of \$37,850. The largest single operation consisted of clearing 29 miles of 80-foot right of way on the southernly portion of the Ridge Route.

The program this past year involved an expenditure of \$54,000 on 885 miles of roadside. The work extended along the Redwood Highway through Sonoma, Mendocino and Humboldt counties; the Pacific Highway, east and west of the Sacramento River to Redding; the Mother Lode Highway between Auburn and Sonora; the Mountain laterals, between Sacramento and Placerville, Clay and Jackson, Lodi and San Andreas; the All Year Highway, between Merced and Yosemite; as well as the Inland Coast laterals between Gilroy and Califa, San Lucas and Hanford, and Santa Maria and Maricopa. Hazards were also reduced along the coast and Inland Highways in San Luis Obispo, Santa Barbara, Ventura, Los Angeles, San Bernardino, and San Diego counties. This year's program now under way has been extended somewhat, and will involve the clearing of 1020 miles of roadway at a cost of \$76,750.

In the main this work has been confined to locations where the highways are bordered

by grain, grazing, or heavy brush areas. Various methods of eradication have been tried out. These included cultivation, mowing, spraying with oils and chemicals, and burning. Of these methods of control burning has been most effective, though considerable risk attends the work particularly when the adjacent fields are dry and inflammable. This risk has been overcome to a large extent by our present practice of spraying the roadsides early in the spring with 27°+ gravity Diesel oil.

The spraying last year was handled by five state-owned and four rented outfits. Each unit consisted of a 3½-ton truck, carrying a 1000-gallon tank. At the rear a platform supported a number 2 Trahern spiral gear centrifugal pump, powered by a 1½ h.p. engine. The oil was pumped through a ¾-inch hose, which supplied five orchard type sprays set in a 6-foot section of ¾-inch steel tubing. Oil was applied at a rate of from 1/10 to 1/6 gallon per square yard of surface treated.

The oil spray imparts a brownish-green color to the roadsides, and within a week's time the growth has withered and dried to the stage where it can be readily burned. This method, however, is too expensive for general application, as the cost per mile of treating a 9-foot area both sides of the roadway, exclusive of burning, is \$70 to \$115, respectively, for the 1/10 or 1/6 gallon application. This cost is based on Diesel oil at 4 cents per gallon, and its application at 2½ cents per gallon. Due to this high cost we limited the treatment last year to a 4½-foot area adjacent the fence lines, where the growth is heavy and particularly difficult to eradicate except by burning. This strip usually served as an effective fire break for the burning performed after the roadside growth was matured and dried up.

The progress was necessarily slow, as the spray was hand directed, and application thus limited to walking speed. The weight of the spray and hose imposed a considerable burden on the operator. During the past winter our Headquarters Equipment Department redesigned the spraying unit, resulting in greater progress and ease of application. This outfit consists of a trailer unit to be attached

MAR 31 1924

Weed spraying unit attached to 1000-pound truck.

to a tank truck. This trailer carries the pump unit, together with a telescopic outrigger arm, which supports a $\frac{1}{2}$ -inch rubber hose. The outlet end of the hose is attached to a 9-foot spray bar. The operator stands on a platform on the trailer and easily controls the position of the outrigger and raises or lowers the spray bar as required. A similar outrigger arrangement has been built for installation on the regular heavy oil spreader trailer units, and it is expected these units will give greater volume per day, because of the greater pump capacity. Our best progress in light hours with this unit is two 9-foot strips along 8 miles of roadway.

Portions of the work last year were contracted to carry out peak load, but the results were not entirely satisfactory. The contractor was interested mainly in the amount of oil spread, and made little effort to avoid spraying trees, shrubs, or even guard rails, which greatly increased the subsequent burning costs. We favor doing the work by contract, providing we can safeguard against such promiscuous spraying.

Burning costs have averaged between \$20 and \$30 per mile, depending on the amount of protective measures required. Considerable care is necessary in this phase of the work, as a slight change in wind might easily

blanket the highway with smoke, causing a grave hazard to traffic. To guard against this contingency, our men are instructed to control all traffic through the burning zone.

They are also instructed to secure the consent and aid of the owner before burning in front of his property. If this is refused, no burning is done, as we feel the work is primarily for the owner's benefit, and our men should not be obligated to assume his responsibility. In general, we do not expect to carry on this work after April 1.

This year we are carrying on extensive experiments with a nonpoisonous agent which is sprayed on the roadsides similar to the Diesel oil. The killing action is very similar to that of the oil, though it is claimed that burning is unnecessary, as the growth shrivels up and disappears. Claims are also made that after several yearly applications the ground becomes sterile and future growth is eliminated. Needless to say, we are very much interested

Spraying arm in working position.

in having this prove a success, as it eliminates burning, which greatly disfigures the roadsides.

The results of this work the past two years have been very encouraging, few if any, preventable fires starting along our highways. In this part of our work we have had the hearty cooperation of the Department of Natural Resources, Bureau of Forestry, also of several county organizations which had equipment available.

While this phase of hazard reduction is of particular interest to the grower and cattleman, there is yet another which presents a problem of state-wide interest. I refer to the protection of our state and national forests.

Early in 1924 a cooperative agreement was concluded with the U. S. Department of Agriculture, Forest Service, whereby the Division of Highways' employees were pledged to re-

A close-up view of the weed spraying unit.

Sending the Highway Patrol to School

By JAMES J. BORREE, Head of the Bureau of Schools and Education of California Highway Patrol.*

LEGISLATORS, police and traffic chiefs, and all others interested in the subject, have come to realize that any police or traffic force must be properly trained in its duties to meet modern requirements successfully.

To put a man in a uniform, pin a badge on him, give him a revolver and send him out

J. J. BORREE.

alone on a motorcycle to patrol the highways without preliminary training is fundamentally unsound. To train him adequately in his duties before he starts is practical and economical. Men can not serve efficiently, even though willingly, unless they know what they are doing and unless such knowledge has been fashioned into methods of work.

It is with this thought in mind that we have developed plans for the training schools for highway patrol officers, required by section 30 of the new motor vehicle act. The plan, as developed in its tentative stages, is twofold in scope:

1. Immediate establishment of schools in Los Angeles and Sacramento for two weeks of preliminary work to instruct new men to be added to the patrol at once. These new men are being added to carry out provisions of the act requiring the establishment of night patrols.

2. Later establishment of a permanent school at some convenient point where every officer in the patrol may ultimately undergo a three-months course of intensive training.

The course of instruction in the preliminary two-weeks schools will be curtailed of necessity because of lack of time. Its primary purpose will be to instruct the new men in the rudiments of patrol work so that they may not enter their new field altogether untrained. Later, the men getting this preliminary instruction will be required to finish their general traffic education in the general three-months training school. This, of course, can only be done gradually because of physical limitations and the necessity of leaving an adequate number of men on the highways at all times.

It is in this general three-months school that our major effort will be put. The tentative plan is to draw as many men as can be spared from each unit at one time to a central location, put them in charge of experienced instructors and under rigid discipline for the three-months period.

These men, or such as have passed successfully through this intensive training, will be returned to their squads and another contingent of men drawn and ordered to the school. It is not contemplated that the number of men in the school will exceed 60 at any one time.

In this manner it will be possible to train all the officers in the patrol in a period of about one year.

Inclusive of physical training and close order drill the work will require 402 hours of actual instruction. This, however, does not include night study periods.

The life at the schools will follow very closely the routine of barracks life in the regular army. First call will be at 6.30 a.m. with assembly 15 minutes later. There will be 30 minutes of physical drill and close order with breakfast at 7.30 o'clock.

* In this article J. J. Borree, head of the bureau of schools and education of the highway patrol, tells of plans being outlined for the highway patrol school for traffic officers. General Borree spent 27 years as an officer in the regular army, was eight years Adjutant General of California, now holds the rank of brigadier general in the regular army.

Classes will run from 8.30 to 11.30 a.m. and from 1 to 4 p.m.

There will be frequent study periods in the evenings from 7 to 9. Lights will be out at 10.30 p.m. and every man will be required to be in bed.

It will be seen from this daily schedule that the school will be a serious business with plenty of work and little time for play. Here is the outline of school courses:

Discipline, courtesy, physical drill and military close order, personal and official conduct, contact with public, 22 hours.

First aid, 25 hours; physical contact, 5 hours; target practice, 10 hours; motor care and equipment, 20 hours; court procedure, preserving and preparing evidence, arrests, prisoners, warrants, etc., 30 hours; geography, arithmetic and memory test, 10 hours.

Accidents, including evidence and investigations, preventative measures, safety studies, clearing highways, etc., 20 hours.

Administration, communications, reports, efficiency, 30 hours.

California Vehicle Act, brakes, lights, motor registrations, traffic violations, 158 hours.

The faculty of the school will include a commandant, a senior instructor, assistant senior instructor and five subordinate instructors. Attached to the staff will be a cook, a cook's assistant and three waiters and dishwashers.

In addition to the regular faculty, judges, district attorneys and others will lecture on court procedure and allied subjects at various times. The American Red Cross Society will give a 25-hour course in first aid without cost to the state while motorcycle and automotive agencies will detail experts to give instruction on care of equipment. Several members of the Highway Patrol Headquarters Staff will lecture on brakes, lights, weights, accidents and other subjects.

We feel reasonably certain, from the scope of the course of training, that every patrolman, after undergoing this three-months of instruction will be able to patrol the highways properly and intelligently, to enforce the Motor Vehicle Act and that such instruction will prove a large factor in making our highways safe to the traveling public.

It is our hope to teach the recruit the elements of professional courtesy and to teach every old officer that improvement of the service demands they not only maintain themselves in excellent physical condition but that they improve technique of their daily work constantly.

We hope to instill into the officers a sense

Where, How and What Of Accidents Along State Highways

A RECAPITULATION of accidents for the year October 1, 1928, to September 30, 1929, on the state highways of California brings out the following facts:

In 49.78 per cent, a collision between two cars was involved.

In 85.02 per cent, the driver's condition apparently normal.

In 81.36 per cent, passenger cars were involved.

38.07 per cent show no violation of road laws.

80.13 per cent occurred on straight roads.

56.93 per cent occurred at street intersections.

31.14 per cent involved pedestrians at crossings with no signals.

71.85 per cent involved pedestrians apparently in normal condition.

61.21 per cent occurred where the road surface was dry.

66.13 per cent occurred during clear weather.

49.69 per cent occurred in daylight.

Approximately 60 per cent of all accidents occur within the urban areas.

A Garden is a lovely thing, God wot.

Rose plot;

Fringed pool;

Ferned grot.

The veriest school of peace; and yet the fool
 Contends that God is naught!

—From Grayson's "Friendly Road."

of the dignity of their calling and the necessity of developing good will through courtesy. Strict discipline will be insisted upon because discipline produces courtesy, firmness and self respect.

Target practice will be given because firearms in the hands of the unskilled are almost as great a menace as in the hands of the criminally-minded. Instruction in jiu jitsu and physical contact will train our officers to cope with the criminal and first aid will teach them to give succor to victims of accidents.

The course of physical instruction will be such as to encourage the officers to continue it after leaving the school on the general theory that men enjoy life to a fuller degree when they feel fit.

Winter Traffic Count on State Highways

THE winter traffic count on state highways was taken January 12 and 13.

This count has been made on the Sunday and Monday nearest the middle of January and of July for the past six years. The check is made between the hours of 6 a.m. and 10 p.m. each day. For purposes of analysis the record is kept separate by hours. Vehicles are segregated under the following classifications: Passenger cars, light trucks, heavy trucks, trailers, buses and horse-drawn vehicles. Traffic was recorded at 921 separate stations during this count.

Traffic, as a whole, was much lighter than during the count of January, 1929. This is accounted for by the snow storm which occurred during the week end. Many miles of roads were covered with snow and only necessary through traffic was on the roads. During Sunday those who enjoyed snow sports were able to indulge their fun much nearer home than usual. Past records led us to expect a 9 per cent gain in traffic over that of the previous year. The actual figures, as compared with the 1929 count, indicate the effect of weather conditions.

	For Sunday per cent		For Monday per cent	
	Gain	Loss	Gain	Loss
Main north and south routes	21.9		2.6	
Laterals between inland and coast routes	5.3		11.3	
Interstate connections	17.4		1.0	
Recreational	44.7		5.3	
Average all routes	36.2		14.5	

As there are more motor vehicles registered now than one year ago, the reduction in business to those catering to the traveling public through decrease in traffic by over one-third, represents a large sum even for a single day.

The gain and loss in traffic, expressed as a percentage of the January, 1929, count for all State highway routes, is as follows:

Rt. No.	Description	Sunday gain per cent	Sunday loss per cent	Monday gain per cent	Monday loss per cent
1	Sausalito-Oregon Line	3.9		23.0	
2	San Francisco-San Diego		32.0	6.5

How California Cares for the Blind

By P. T. POAGE, Assistant Architect.

THE CARE of the blind may be divided into three general classes, Educational, Industrial and Benevolent. The State of California has long recognized that proper education of the blind youth and training and employment of the adult blind in useful industrial occupations very largely reduces

the need for benevolence. In line with this policy it maintains two major institutions, the California School for the Blind in Berkeley and the Industrial Home for the Adult Blind in Oakland. During 1929 a beginning was made toward establishing in Los Angeles a second industrial institution

P. T. POAGE.

to serve the southern part of the state.

CALIFORNIA SCHOOL FOR THE BLIND

The California School for the Blind is maintained under the State Department of Education as an integral part of the state's educational system. Its history may be said to date back to 1860 with the organization in San Francisco of the "Society for the Instruction and Maintenance of the Deaf and Blind," which induced the state to erect a building for carrying out the purposes of the society at Fifteenth and Mission streets.

The Deaf, Dumb and Blind Asylum, as it became known, rapidly grew beyond the possibilities of the site and on the recommendations of a legislative committee a new site was selected in Berkeley and the cornerstone of a new building was laid there in 1867. A severe earthquake on October 21, 1868, caused serious damage to the building and loss to the contractor.

On January 17, 1875, fire totally destroyed the building and in the same year reconstruction commenced. That the new buildings which are still used by the School for the Deaf were then considered to be of the best construction, is indicated by a description by Mr. Warring Wilkinson, principal of the Asylum at the time:

"The construction of the buildings is of the most substantial character. Nothing has been sacrificed to show, but every regard has been paid to comfort, safety and durability. A massive, concrete sub-foundation of Portland cement underlies all the walls. The foundations are of stone, granite water table, and superstructure of plain brick, with granite sills, galvanized iron cornice, and slate roof. The partition walls throughout are of brick, interlaced and bonded strongly with iron. All the staircases are of stone, and a spiral stone staircase, at the extreme end of the sleeping apartments, renders it impossible for the children to be cut off should fire, by any chance, obtain possession of the middle portion. The exterior walls are lined, and the interior are built with hollow brick, and plastered without the use of lath or furring, so that there is no wooden communication between the different stories. The basement floor is laid three inches thick, with artificial stone. With all these precautions, it is difficult to see how fire can obtain lodgment, and, if it does, the loss will be confined to a single building, the distance between the different 'homes' being ninety feet."

The stigma of the name "Asylum" was removed in 1905 and the school became known as the California Institution for the Deaf and Blind. A still greater forward step was made in 1921 when the legislature divided the institution into two separate schools, the California School for the Deaf and the California School for the Blind.

With the separation, the School for the Blind was given a portion of the grounds on which have been built new buildings specially planned for the needs of the blind. With the assistance of Dr. R. S. French, able principal of the school, the Division of Architecture has planned and constructed the buildings which make possible the physical separation until it is now practically completed, and the standard of the school has been steadily raised to the point where the students are no longer considered as unfortunate wards of the state but as students in a part of the public school system which differs from the common schools only in the special methods of instruction required.

It is interesting to note the progress in institutional planning as illustrated by following the construction of this institution from its early days. First we have the congregate type of plan, of the original building in San Francisco and of the first development in Berkeley, in which all functions of the institution were provided for under one roof without due regard for their separation.

Then after the fire of 1875 we see the advancement to the cottage plan whereby living accommodations are furnished in dormitories entirely separated from administration and educational activities.

The last step, exemplified by the present school, has been the elimination, to a large degree, of the old institutional feeling by a further development of the cottage plan, keeping the dormitory buildings small and dividing the students into small groups within the buildings. Institutional feeding in one large dining room has also been eliminated.

The first unit of the new school was a dormitory for girls, for which funds were appropriated by the 1923 legislature. This building contains living quarters for approxi-

structed to provide a kindergarten room and rooms for vocational training such as basketry, weaving, piano tuning, general shop work, etc.

The complete separation of the blind from the deaf was permitted in 1929 with the completion of the boys' dormitory which is similar in general theory of plan to the girls' dormitory mentioned above. This building is somewhat rambling in plan, adapting itself freely to a hillside site and planned to permit entrance at ground level to both the first and second floors. Segregation is made in groups according to ages, with separate play rooms, and a common dining room with complete kitchen adjoining. Communication between the different floors is by means of ramps rather than stairs. This is a feature not pro-

BOYS' DORMITORY, CALIFORNIA SCHOOL FOR THE BLIND.

mately fifty girls, divided into groups of three or four, with a separate sleeping room for each group.

A large living room with a fireplace at the far end provides ample recreation space for the entire group. A completely equipped kitchen serves the dual purpose of feeding and of providing a practical laboratory for instruction in cooking as a part of the school curriculum. Classrooms are included in the building for instruction in sewing and other domestic arts.

In 1926, the second unit, the school building, was completed. In it are included general classrooms; special rooms for music, science and commercial work; the school library, the administration offices, and an auditorium equipped with a pipe organ. During the coming year an addition will be con-

vided in the other buildings, but considered very desirable.

The buildings are of fire-resistive construction, the walls and floors being of concrete and the roofs of clay tile. Free interpretations of Spanish and Italian motives, adapted to suit the requirements of modern planning, have given pleasing variation to the different units, still maintaining a complete harmony of the whole.

INDUSTRIAL HOME FOR THE ADULT BLIND

The state had long made provision for numerous classes of its unfortunate or defective citizens before attention was directed to the needs of the adult blind. Mining and other industries requiring the use of high explosives contributed largely to the number of adult blind until they became quite numerous and

demanded admission to the Asylum in Berkeley. The trustees of the Asylum resisted and their contention that it was established for scholastic and not industrial purposes was sustained by the courts.

Adult Blind to be managed by the trustees of the deaf, dumb and blind asylum. A site of five acres at Thirty-sixth street and Telegraph avenue, Oakland, containing an 18-room house and two barns was leased with an option to buy, and a two-story shop was erected.

The dissimilarity of the problem of educating the blind youth and that of training, industrially, the adult was soon apparent and in 1887 the Home was established as an entirely independent institution. In the same year, money was appropriated for the purchase of the site and for the construction of a three-story wood frame dormitory, and a residence for the superintendent.

In 1909-1910 the State Engineering Department, forerunner of the Department of Public Works, took its first major part in the development of the institution in planning and building the first permanent building, containing dormitories for women, general kitchen and dining rooms, and the administrative offices. This and the men's dormitory which followed in 1914 were of fire-resistive construction providing needed safety for this type of inmate. These buildings followed the so-called "Mission" style so popular at the time.

No further permanent construction was undertaken until 1922-1923 when a dormitory

(Continued on page 34.)

Not to be discouraged so easily, the champions of the cause sought legislative action and in 1885 the legislature authorized the establishment of the Industrial Home for the

The two panels shown on this page are part of the wall decorations at the new Industrial Home for the Blind.

Standard Highway Specifications Revised

A REVISED edition of the Standard Specifications for highway and bridge construction is now being distributed among contractors, materialmen, and others interested in state highway work.

The 1930 specifications apply to work advertised on and after March 12, 1930. In line with the present custom, a proposal form will be issued for each job advertised, which will contain special provisions supplementing and amending the Standard Specifications to apply to each particular job.

For the convenience of contractors and engineers who are familiar with the 1929 edition, changes appearing in the revised edition dated January, 1930, are outlined below. This summary is necessarily brief, and for complete information reference is made to the full text.

Section 2, article (d), Proposal Forms has been rewritten in line with our present practice of registering proposal forms furnished to prospective bidders.

Section 2, article (k), Competency of Bidders has been rewritten in line with our present practice requiring prequalification before bidding on state highway work and requiring that proposals shall be accompanied by a statement setting forth a plan for prosecution of the work and a list of the machinery, plant, and other equipment available for use on the proposed work.

Section 3, article (f), Failure to Execute Contract has been revised to provide that the time allowed to execute the Contract and furnish the bonds start from the date the bidder receives notice that the contract has been awarded in lieu of the former provision starting with the date of award.

Section 5, a new article, lettered (j) has been added relative to plant and equipment, requiring that the contractor shall provide adequate and suitable equipment for the work and shall discontinue the use of unsuitable equipment and unsatisfactory plants.

Section 6, article (b), Source of Supply and Quality of Materials: A new paragraph has been added covering local materials when sources are designated in the special provisions. This is similar to the section relative to local materials, formerly included in the special provisions, and provides that when all of the acceptable material at designated sources has been exhausted, the State will reimburse the contractor for the cost of moving his plant to a new source of supply, and will make an adjustment for the difference in length of haul involved.

Section 6, article (d) Special Methods of Test: In the test for hardness and toughness of crushed rock and gravel a requirement has been inserted for loss in the Los Angeles Rattler after 100 revolutions as well as the loss after 500 revolutions.

Section 7, article (c) Patents has been rewritten to require that the contractor assume all costs arising from the use of patented materials, processes, etc.

Section 7, article (g) Preservation of Property: A new paragraph has been inserted, requiring that the contractor shall be liable for any damage by his employees or agents to duly authorized road signs located within the right of way.

The section on Clearing and Grubbing has been revised to permit stumps and large roots which are to be buried 3 feet or more under a fill to remain in place providing that such stumps are cut flush with the existing ground.

In the section on Earthwork the provision of article (e) that the State pay for grading construction roads has been eliminated, and the contractor is required to grade such construction roads as may be necessary at his own expense.

In that portion of the section on earthwork relating to excavation for structures a new paragraph has been added to article (p), Backfill, prohibiting the puddling of backfill in cases where the foundation material is such that it will soften when saturated, and in the case of high abutments or retaining walls where puddling might develop hydrostatic pressure behind the walls.

In the section on subgrade, the article covering subgrade for paving on existing rock or gravel surfacing has been omitted, also the article covering subgrade for second story concrete pavement has been omitted since the former specification will not apply with the newly adopted design using a cushion course for second story concrete.

The section on sand cushion has been entirely rewritten and entitled "Cushion Course." This section provides for the use of sand, gravel, or broken stone up to one inch in size, and calls for material with a cementing value of 50 pounds per square inch, or permits material with a low cementing value to be bound with heavy fuel oil.

In the section on Untreated Crushed Gravel or Stone Surfacing the cementing value has been increased from 80 pounds to 100 pounds. A new article (g) has been added to provide for stockpiling material for future maintenance at the rate of 100 tons per mile. Under the article "Measurement" provision is made that binder material actually entering into or becoming a part of the surfacing shall be included in the pay quantities.

In the section on Oil Treated Crushed Gravel or Stone Surfacing a paragraph has been included under article (d) stipulating that the amount of moisture in the aggregate at the time of mixing shall not exceed 3 per cent. Article (e), Placing, has been rewritten to require that material after spreading shall be bladed into windrows and respread to the required grade and cross-section, also, that should the mixture after spreading show the moisture content in excess of 3 per cent, the moisture content shall be reduced by reworking and allowing the material to dry before final spreading.

In the section on Crusher Run Base the grading requirements have been revised to specify a 20 per cent range for material passing and retained on a 3-mesh sieve, and to specify a limit for the quantity of 200-mesh material. Article (e), Rolling, has been rewritten to specify the number of rollers required in terms of amount of crusher run base laid per day. A new paragraph has been added to article (g),

Measurement, providing that the binder material actually entering into the work shall be included in the pay quantities, and the statement in article (c) that all binder material shall be furnished by and at the expense of the Contractor shall be eliminated.

In the section on Side Forms, article (b) relating to timber side forms has been rewritten to eliminate the use of white fir, and to specify Douglas fir, common, joist and plank grade. Also, side forms are required to be at least 4 inches deep except where placed on existing pavements. The supporting stakes are specified to be of adequate length to support the forms, but in no case less than 8 inches long. In article (c), the length of supporting stake for metal side forms is the same as specified for timber side forms. Article (e), Removing has been revised to provide that after completion of waterbound macadam or bituminous macadam surface timber side forms shall be removed. The former provision is retained that side forms shall be left in place on completion of asphalt concrete surface.

In the section on Waterbound Macadam Base, article (d), Rolling has been rewritten to specify the number of rollers required in terms of the quantity of macadam laid per day.

A new section has been added entitled "Bituminous Surface Treatment." This section will be No. 21, and sets forth the specifications for the so-called armor coat work.

In the section on Bituminous Macadam Surface a requirement has been inserted in article (b) for loss in the Los Angeles Rattler test after 100 revolutions. A new paragraph has also been added requiring that material shall be clean and free from dust and shall be washed if necessary to insure perfectly clean aggregate. Article (d), Rolling has been rewritten to specify the number of rollers required in terms of the quantity of macadam laid per day. Article (f), Placing has been expanded to require that distributors apply a uniform spread of oil, and specify methods to assure a uniform distribution of oil at the junction of two applications. Also, pneumatic tires are specified for oil distributors. In article (g), the amount of bituminous binder for the first application has been increased to include a range of from one-quarter to one gallon per square yard. This article has also been rewritten to require rolling before covering the first application of oil with key rock, and that the key rock be spread by means of a blade or drag. Before the second application of bituminous binder, areas containing excessively fine material are to be removed and replaced with clean key rock.

The five sections on asphalt concrete have been combined in one section to be No. 23 in the new edition. Some changes have been made in the gradings for the various mixtures specified, but otherwise these specifications remain essentially the same.

In the section on Portland Cement Concrete Pavement, article (d), the allowance for low subgrade has been changed to provide for paying for additional thickness of pavement at the contract price up to an increase of 3.16 inch over the authorized cross-section. In article (f), Placing, the requirement that the roadway opposite the side under construction shall be kept clear and open to public traffic has been omitted. Article (g), Superelevation has been omitted as superfluous. Article (h) will become (g), and requires that all longitudinal and transverse joints, both contact joints and weakened plane joints, be poured with asphalt by the Contractor. The article on expansion joints has been rewritten and elaborated upon as to the equipment required and method of placing expansion joints. A clause has been inserted in the article on tamping requiring a sufficient number of finishing machines to provide one machine for each

300 cubic yards of concrete laid in 10-foot widths per 8-hour day. The article on impervious membrane curing has been rewritten and expanded. In the article on Protecting Concrete Pavement, the size of specimens for flexure test has been decreased to 6 inches by 6 inches in section, also, the Contractor is required to furnish the labor to break the test specimens, while the state will furnish the moulds and testing machines.

The section on Second Story Concrete Pavement has been eliminated, as with the new design recently adopted, calling for a cushion course, there is essentially no difference between second story pavement and pavement laid on new subgrade.

The section on Steel Structures has been entirely rewritten and expanded.

In the section on Timber Structures a new article has been added requiring fire barrels and buckets be furnished and installed at the Contractor's expense.

In the section on Reinforcement a new article has been added, requiring that steel lists be submitted to the Engineer for approval. The article on placing permits the use of the wire of either 14 or 16 gauge. The minimum clear distance between parallel bars is specified as 2 inches, and the minimum embedment is specified as 1½ inches, except for stirrups, with the provision that the embedment shall be increased where concrete is exposed to the direct action of salt water.

A new Section 34 has been added, covering construction of arched masonry parapet.

The section on Corrugated Metal Pipe Culverts has been entirely rewritten, and includes the 5-clause specification adopted as standard by the American Association of State Highway Officials.

The section on Concrete Curbs and Gutters has been completely rewritten.

The section on Guard Rails permits timber posts to be either of redwood or cedar, and the length is reduced to 5 feet 4 inches so as to permit cutting 3 posts from a 16-foot stick. The requirement for notching timber posts to receive the rails has been eliminated.

The sections relating to paint and painting have been rewritten and consolidated into two sections. One section covers specifications for materials and paint formulae for various purposes, and the other section covers the application.

The section on Slope Paving provides a 4-inch mortar coat, where, due to steep slopes, the concrete is placed so dry that it will not flush under tamping.

A new section, to be No. 62, has been included on the design of steel highway bridges.

"Did you manage to give the cop the slip?"

"No, he gave me one."—*Erchange*.

The statistician who claims that the automobile industry has not yet reached the saturation point ought to ride in a rumble seat during a rain.—*Life*.

A colored man and his sweetheart, followed by three pickaninnies, applied to the clerk of a Southern court-house for a license to wed.

The clerk eyed the assemblage doubtfully.

"Whose children are these?" he asked.

"Dey our'n," was the ready response from the man.

The clerk was scandalized, being new at his post. "You ought to be ashamed of yourselves, waiting to get married till you have a family half grown—"

"Jedge, you'll have to excuse dat," interrupted the "bride," sweetly. "De roads out our way is so bad!"

Grade Crossing Warning

By JOSEPH G. HUNTER, Transportation Engineer,
California Railroad Commission.

THE recent accident on a grade crossing near Ceres in which four persons were instantly killed by a train striking an automobile, stresses the need of constant vigilance by all drivers of vehicles, especially those persons who are in the habit of passing over a familiar crossing frequently.

The driver of the vehicle that was struck by the train near Ceres was accustomed to pass over this crossing four times a day. He resided about two blocks from the crossing, and apparently was thoroughly familiar with the frequency of train operation over it.

The need of constant vigilance by the drivers of vehicles, and the danger of allowing familiarity with the crossing to dull one's sense of caution on approaching it, has also been strikingly emphasized recently by crossing fatalities involving members of the same family, and the same crossing, but in different accidents.

The fact that the grade crossing must continue as an unavoidable evil indefinitely is apparent from a study of the data on grade crossings in California. There are 14,638 grade crossings in the state, of which 12,311 are over main line tracks. It would cost upwards of \$1,000,000,000 to eliminate all of these potential hazards to traffic. To construct grade crossing separations on the major highway crossings alone, would cost approximately \$500,000,000. Of these crossings, more than 2600 are provided with some form of special protection, such as gates, human flagmen, police officers and automatic signals (wigwags).

The Railroad Commission, through its Transportation Division, is continually engaged in surveying the more hazardous crossings with the view to recommending the installation of additional crossing protection. Where the installation of wigwags or other warning devices is considered warranted, suggestion is made informally to the railroad companies that these signals be installed. If not agreed to voluntarily by the carriers, formal proceedings to compel their installation may be instituted. A considerable number of wigwag applications are now pending before the various carriers throughout the state, upon such recommendation.

It has cost the railroads more than \$3,000,000 to install the crossing warnings now in

MOVABLE MAIL BOX STAND IS DESIGNED

A movable mail box stand has been constructed by Superintendent Carl Nelson, and Foreman F. E. Smith of Merced, in District Six and is being used to replace the present stands in that vicinity.

The advantage of this type of stand is that it is easily removed from the shoulder to permit shoulder or road-side grading. The stand is of sufficient weight to stand in place and for removing is tipped and rolled on its base.

The material used in construction is salvaged or that which is of no further value for use for which it was originally intended.

The base consists of a Ford tire rim picked up along the road. A piece of old 2-inch water pipe is used for the riser, one end of which is punched with holes and wire strung through. This is set in the center of the rim and the space filled with concrete. The platform for the box is a piece of 6- by 6-inch guard rail post, the length of which is governed by the number of boxes it is to carry. For one or two boxes it is cut 18 inches long and a 6-inch bevel cut on each end. A hole is bored the size of the pipe and the block slipped on the box or boxes, being fastened either crosswise or lengthwise as the case may be. The stand is given a coat of white paint and presents a very neat appearance. Two accompanying pictures show single and double construction. The third shows their mobility.

Beautification of Bayshore Highway.

The following letter has been received from Mrs. H. B. Sprague, chairman of the Civic Committee of the Burlingame Woman's Club of Burlingame:

120 Primrose Road, Burlingame,
February 17, 1930.

Mr. T. H. Dennis,
Sacramento.

Dear Mr. Dennis:

I want to thank you for sending to our club the two very splendid and interesting young engineers from your staff.

They gave us excellent talks on the work planned and doing on the Bayshore and their pleasant personalities impressed us most favorably.

We were delighted to be given the landscape plan for the boulevard and appreciate the favor immensely. I hope we can use the plan to good purpose in these meetings.

Very truly yours,

HANNAH C. SPRAGUE.

(Mrs. H. B.)

lined the fundamentals of landscape design as including unity, variety, character, propriety, and finish. He began at the San Mateo County line and gave a resume of the planting plan from there to Third avenue, San Mateo. The plan calls for a definite reason for each tree or shrub and it brings in the native trees and shrubs as much as feasible forming informal naturalistic groupings. Vistas will be created toward the bay and a windbreak planted in the windy sections with the idea in view of not cutting off the view of the hills. Something of the cost and maintenance of the work was outlined by the speaker with the entire cost estimated at \$26,109.

Courtesy Wins Letter of Commendation.

This letter comes from Ben Brown, Inland Division Plant Manager of the Pacific Telephone and Telegraph Company.

Sacramento, February 21, 1930.

Mr. R. B. Meek,
Director of Public Works,
State of California,
Sacramento, California.

Dear Mr. Meek:

I wish to express my appreciation of the help and cooperation given us by one of your highway foremen, Mr. E. M. Shelton at Mt. Shasta City on the afternoon of February 12, 1930.

Our truck driver and one man had a load of poles on a trailer and towed by an F. W. D. truck. The poles were being hauled from Dunsuir for delivery at Weed.

At Mt. Shasta City, in order to detach the load temporarily, the driver pulled off the pavement. Upon leaving the pavement two wheels of the truck dropped into the soft ground, burying themselves to the axle. After considerable effort on the part of our men, they were unable to move the truck. Mr. Shelton drove up and kindly offered the services of his tractor which was stored at Shasta City.

The offer was accepted and our truck was on its way within one-half hour.

This act is only one of many your employees have done during the reconstruction of our pole line in the Sacramento River Canyon and between Dunsuir and Yreka.

An act of this kind only proves to us that our efforts to create a cooperative spirit among our employees

Newspaper Article Tells of Plan.

This from the San Mateo *Times*:

That the general interest in the beautification of the Bayshore Highway is due in considerable extent to the work of the women's clubs and of their policy of encouraging tree planting was the point brought out yesterday when J. G. Standley, assistant maintenance engineer of the State Highway Commission, spoke before the Burlingame Women's clubs. The speaker outlined the general method of the Commission in granting permits to plant trees and taking care of them for one year before they revert to the care of the state. Recently the state employed a landscape engineer to coordinate the planting system.

Plans for beautifying the Bayshore Highway were outlined by H. Dana Bowers, State Arboriculturist. He believes that beautifying the highway should be dignified and well planned and increased from year to year, always bearing in mind that the trees form one of the community's greatest assets. Bowers out-

have borne fruit. For the continuance of this spirit, I am,

Yours truly,

BEN BROWN,
Division Plant Manager.

Sullivan Versed In Desert Lore.

The San Bernardino *Telegram* publishes the following article:

E. Q. Sullivan, district engineer of the California Highway Commission, who has made an exhaustive study of the desert, claims that markings indicate that once upon a time, a series of immense lakes flooded the entire desert district.

"Outlines of the beach lines of these lakes may be seen easily in the district near Yuma. There was, at one time, a series of lakes between Victorville and Baker. Scientists who have made investigations of these conditions claim that they are preglacial lakes," Mr. Sullivan stated.

"The largest lake, according to the shore outline, extended from Yermo to Baker, a point 30 miles east of Yermo, and 150 miles from San Bernardino. The State Highway crosses this shore line near Baker."

Mr. Sullivan has photographs of carving and writings found on rocks and in caves in the eastern part of San Bernardino County. There are three types of carving found, two of which, no doubt, were made by Indians.

The third is of a deeper nature and indicates long existence. This third type also appears to be of a more intellectual nature, scientists claim.

* * * * *

Code For Motorists Is Suggested.

The following editorial appeared in the *Stockton Record*:

California's Highway Patrol, provided by the Young administration to protect motorists and reduce traffic deaths, has been provided snappy uniforms and spick and span white motorcycles and automobiles. Bert B. Meek, Director of Public Works, has also given the highway patrolmen a code of ethics. The ideal traffic officer must live up to the following formula, according to Meek:

He must be patient, even where impatience would seemingly be justified.

He must be courteous, even to those who may not be courteous to him.

He must be kindly without sacrifice of firmness.

He must be both a teacher and an officer, his attitude instructive toward those who desire to be instructed.

His control must be courteous but immediate and certain toward those who refuse instruction.

The Meek rules put a heavy tax on the frailties of human nature. To be patient where the circumstances do not justify it and to be courteous when others are "nasty" calls for an officer little short of a combined diplomat and a saint. To keep him in such a frame of mind, the motorist must meet him half way. The car operator will have to have a little code of his own based on the safety campaign instructions of the past few weeks. It might read as follows:

The motorist must observe boulevard stops and not try to slide through.

He must not attempt to pass a standing street car except at a safety zone and then at a speed not over

ten miles an hour. He must slow down in passing schoolhouses.

He must not attempt to pass other cars on a curve.

In case of doubt at a street intersection, he had better yield the right of way, lose a couple of seconds and escape trouble.

If an officer corrects him, he must take the instruction in the spirit that it is given and not try to show himself a "chesty" American citizen.

* * * * *

Employee Wins Commendation.

The following letter of commendation comes from the California State Automobile Association:

Mr. T. H. Dennis, Maintenance Engineer,
State of California Highway Commission,
Sacramento, California.

Dear Mr. Dennis:

During the month of December, one of our highway foremen by the name of Jack Haney apprehended and reported a man by the name of Virgil Brown, who destroyed at least two of our standard reflector signals and the consequence was that said Virgil Brown was fined \$50, in addition to being compelled to pay for the two reflector signals he admitted having destroyed. He was also given a 90-day jail sentence, which was suspended.

I have discussed this matter with our General Manager and several of our directors, who wish me to express to you their appreciation of this splendid service. It is really too bad that those destroying so many of our signs apparently do it in such a way that they are not apprehended. Although we are paying Mr. Haney our usual reward, I am sure that he did not consider this phase when he was attempting to defend our highway signals.

I thought you would be interested in knowing of this case.

Yours very truly,

J. W. JOHNSON,
Chief Engineer.

More Commendations For Snow Removal.

Below is the text of a letter received by District Engineer Comly, from the Intermountain Sportsmen's Association at Burney.

Burney Branch of the
INTERMOUNTAIN SPORTSMEN'S
ASSOCIATION

Burney, California,
February 15, 1930.

Mr. H. S. Comly,
c/o California State Highway Commission,
Redding, California.

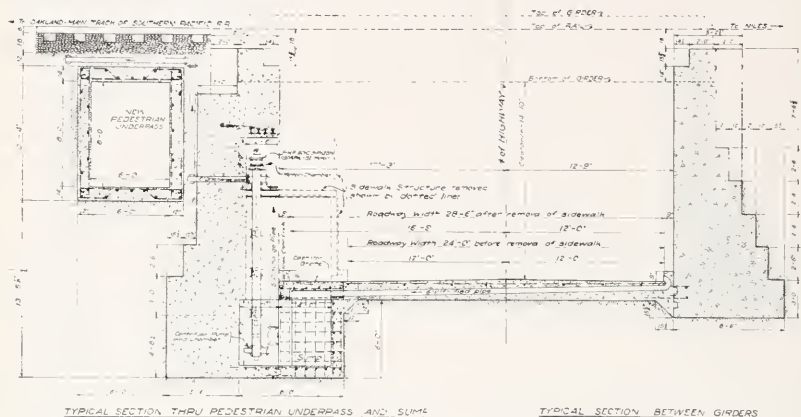

Dear Sir:

At a meeting of our association on February 14, a resolution was made that we express our appreciation for the good work done by the maintenance men of your district, and the Highway Commission, in keeping the roads open during the recent snow storms.

Sincerely,

(Signed) D. M. DESMOND, Secretary.

Rebuilding An Underpass Under Traffic

A unique improvement was obtained at the undergrade structure of the Southern Pacific Railroad in Niles. For some time past this structure has served traffic, the roadway width being but 24 feet. In view of the reconstruction work in which we are providing a 30-foot width of pavement on high standards, permitting of the highest speed permissible, has brought about an acute situation in which fast moving traffic, moving toward the underpass in three-way lanes, could not negotiate the underpass; therefore, the department deemed it advisable to remove the 5-foot sidewalk area in order to take advantage of the additional area which allows the roadway width to be increased from 24 feet to 28 feet 6 inches, without disturbing the abutments supporting the Southern Pacific overhead girder.

Pedestrian traffic is being taken care of through the construction of an 8-foot by 6-foot pedestrian underpass installed under the railroad tracks immediately behind the massive concrete abutment and within the highway right of way. The material benefit derived from this reconstructed underpass is of inestimable value, yet the approximate cost of the alteration was only \$8,500. While the full width of 28½ feet is not sufficient to provide ample room for three-way traffic, yet it is wide enough to avert serious accidents which may have occurred in a structure of narrower width. All traffic on this important highway is being carried along the work without any detours, although there is a highly adequate one available for through traffic. The work is attracting widespread attention.

GRADE CROSSING WARNING

(Continued from page 11.)

operation, while the yearly maintenance cost of this equipment is \$1,000,000.

In regard to the responsibility of drivers of vehicles in grade crossing accidents, attention is called to the fact that both the California and the United States Supreme Courts have held in opinions that it is the duty of the driver of vehicles on the highway to make

sure that no train is approaching before crossing over railroad tracks. If necessary, the court held, the driver of the vehicle on the highway should get out and look up and down the track to assure himself that the way is clear for safe passage.

It should be remembered also that the California Motor Vehicle Act prohibits drivers of vehicles from attempting to drive over a grade crossing when the warning signals are in motion.

SAN JOAQUIN VALLEY WATER INVESTIGATION

Surveys for the location of main supply canals have been continued throughout the month. The survey of the canal from the Kings River to Kern County (130 miles) has been completed. Mapping of this line is about 50 per cent completed.

A topographic survey at the mouth of the Kern River Canal has been initiated. It is planned to locate a canal at the mouth of Kern Canyon so as to serve agricultural areas now without a water supply south and east of Bakersfield with Kern River water. An exchange would be made with Kings River water at the crossing of the Kern River supplied through the Kings River-Kern County Canal.

A reconnaissance has been made of the possibility of diverting water from San Joaquin River at Temperance Flat Reservoir into the Kings River at elevation 445, the present intake elevation of Kings River-Kern County Canal location. If this is practical it would eliminate an exchange of water at Kings River; San Joaquin water being delivered directly to the areas of deficiency in Tulare and other counties. Only extended and exhaustive studies can determine the efficiency of this method compared with the plan which would effect an exchange at the Kings River.

A transverse and cross section survey has been made of Snodgrass Slough, which has been completed, and surveys are now being extended down the South Fork of the Mokelumne River. The purpose of this survey is to collect and compile data so as to permit an estimate to be made of the cost and feasibility of transporting water across the delta from the Sacramento to the San Joaquin River, placing it in a more advantageous position for pumping up the San Joaquin River.

A paper location has been made of a purely gravity canal from the American River to Kern County. Cost estimates are only partially complete. No field surveys are contemplated in connection with this location; however, the terrain will be examined in the field for guidance in the preparation of cost estimates for this line.

LAND CLASSIFICATION AND CROP SURVEY

Land classification has been completed for the entire valley and results have been mapped and were submitted to the San Joaquin Valley Water Committee on February 14th for review.

Field work has been completed for the crop survey for the entire valley and the data are now being compiled in the office.

GROUND WATER INVESTIGATION AND WELL RECORDS

The collection of all data on wells in the San Joaquin Valley has been completed, including the

season of 1929. Mapping and analyses of these data are going forward in the office with a view of determining the consumptive use of water in the San Joaquin Valley. It is also planned to prepare maps delineating the depth to ground water and the ground water elevations for the year 1929.

WATER SUPPLY AND YIELD STUDIES

Reservoir studies for the maximum possible yield for irrigation purposes have been completed for the Kern, Tule, Kaweah and Kings rivers. Those for the San Joaquin River are also nearing completion.

ENGINEERING ADVISORY COMMITTEE

A meeting of the Engineering Advisory Committee was held in Sacramento on January 31, 1930. All members were present except Mr. Herrmann. Water supply estimates were reviewed and a program of ground water investigation was approved. Unit prices to be used in the preparation and cost of physical works were discussed and those pertaining to the main supply canals were adopted.

SACRAMENTO VALLEY INVESTIGATION

Estimates of the monthly run-off, after deducting ultimate upstream diversions, are being made on the five main stream systems of the valley for the 40-year period 1889 to 1929. Estimates of the full natural flow of all the streams tributary to the Sacramento Valley for the same 40-year period have been completed and submitted to the Engineering Advisory Committee for review.

RESERVOIR SITES

Data have been gathered and a field inspection made on all possible foothill reservoir sites on all the minor as well as the major streams entering the Sacramento Valley. These data are now being compiled in the office with a view of making surveys, if necessary, and estimates on the more feasible ones.

LAND CLASSIFICATION AND CROP SURVEY

Classification of lands in Sacramento Valley has been completed on about 5,000,000 acres and a crop survey on about 4,000,000 acres. The areas of lands and crops are being tabulated by counties, irrigation districts, reclamation districts, water districts and companies. A map showing the land classification of the valley floor is completed and will be extended to also include the foothill areas. A map showing the general location of crops is also being prepared.

WATER REQUIREMENTS OF IRRIGABLE LANDS

Additional data have been gathered on the present use of water for different crops and a preliminary

office report on this subject has been prepared. Data are being gathered on the locations and extent of riparian lands along the Sacramento River.

ENGINEERING ADVISORY COMMITTEE

The Engineering Advisory Committee on Sacramento Valley investigations has been appointed and held one meeting in San Francisco on February 5, 1930. The members of the committee are: J. D. Galloway, F. C. Herrmann, Walter L. Huber, J. B. Lippincott and Fred H. Tibbets. A program outlining the investigation was presented to the committee for their review and comment. Matters concerning water supply, land classification and location of reservoirs were discussed.

SALINITY INVESTIGATION

The work on salinity investigations during the past month has been chiefly confined to office studies and investigations. An intensive study is being made of the vast amount of data taken during the past season to determine the relation between stream flow and salinity and the variation of salinity with tidal action. The basic data have been compiled, including stream flow, salinity and tidal data, and intensive work is now under way on the analytical studies of these data.

Field work during the past month has included the maintenance of 26 regular salinity observation stations and 8 drainage salinity stations and the operation and maintenance of automatic tide gages. Four additional automatic tide gages were installed early in the month, including three in South San Francisco Bay at Hunters Point, San Mateo Bridge and Dumbarton Bridge, and one at Point Richmond.

SALT WATER BARRIER INVESTIGATION

During the past month negotiations were continued with the U. S. Army Engineers on a program of cooperative work covering certain phases of the salt water barrier investigation. These negotiations have culminated in an agreement by the U. S. Army Engineers to undertake the following studies as outlined in the December progress report:

Relation of the Barrier to Navigation.

Relation of Barrier to Tidal Action.

Relation of Barrier to Movement of Silt and Water Borne Debris.

General Review of the Design and Construction of the Barrier with Particular Regard to the Minimum Requirements of Lockage and Flood Gate Features.

This work will be conducted by the First District Army Engineers in San Francisco. It is expected that the Second District Army Engineers at Sacramento will undertake studies on the relation of the barrier to the Sacramento and San Joaquin River Flood Control Project.

On February 1st the initial conference of the Consulting Committee appointed for the salt water barrier investigation was held in San Francisco. The members of the Consulting Committee present were: Charles D. Marx, Charles T. Leeds, A. Kempkey, Thomas H. Means and George A. Elliott.

The program as outlined for the investigation and the detailed questionnaires prepared for obtaining data were reviewed by the committee and recommendations made as to changes or additions.

Questionnaires covering the industrial, reclamation and agricultural industries are now being finally

revised, and it is expected that work will be started in the near future on an intensive survey of the industries and the reclamation and irrigation developments.

The Fish and Game Commission has started cooperative studies on the fishing industry and its relation to the proposed barrier.

SOUTHERN CALIFORNIA INVESTIGATIONS

On all investigations in the west coastal plain and in southern California work has continued during the month in a routine manner. Surveys for installation of diversion works and spreading works in the Santa Ana Canyon have been completed in the field.

PIT RIVER INVESTIGATIONS

Investigation work on the Pit River has continued throughout the month and progress report for the year 1928-1929 on the Pit River investigation is practically complete.

GENERAL

The investigations being conducted in the Napa Valley, Napa County, Ventura County and Santa Clara County comprising a study of the water resources of these areas have been actively carried on during the present month under the plans and procedure outlined in our Progress Report No. 22 dated January 23, 1930.

IRRIGATION DISTRICTS

During the month visits of inspection were made to the Bard Irrigation District in Imperial County, the Vista Irrigation District in San Diego County, the Oroville-Wyandotte and Table Mountain Irrigation districts in Butte County, the Cordua Irrigation District in Yuba County and the Glenn-Colusa Irrigation District in Glenn County.

The sufficiency of the petitions for the formation of the proposed Rio Seco Irrigation District comprising 8000 acres and the proposed Richvale Irrigation District comprising 19,000 acres in Butte County, were acted upon favorably by the Board of Supervisors of Butte County, and reports of sufficiency filed with the State Engineer. An investigation of the proposed Rio Seco Irrigation District has been made by this office and a report on the district is now in course of preparation.

Conferences have been held with proponents of the proposed Dixon Irrigation District comprising 5000 acres, situated in Solano County, and with officials of the Clear Lake Water Company, from which the district proposes to purchase water.

The State Engineer, on the 19th of February, attended a meeting at Yuba City and explained the procedure necessary for the organization of an irrigation district under the California Irrigation District Act, to landowners of the "Peach Bowl" area in Sutter County. This is a highly developed area which has been dependent upon ground water for its irrigation and, because of the inadequacy of this supply, the

organization of an irrigation district is contemplated for the purpose of securing an outside water supply.

Conferences have been held with officials of the West Stanislaus Irrigation District in Stanislaus County, and the Oroville-Wyandotte Irrigation District in Butte County, for the purpose of discussing proposed construction plans and developments contemplated by these districts.

Questionnaires have been mailed to all irrigation districts in the state requesting information regarding their principal activities in 1929 for the purpose of keeping up to date the statistical data presented in Bulletin No. 21 of this division.

The State Engineer held a hearing at Hanford on February 4 on a petition for the exclusion of certain lands from the Tulare Lake Basin Water Storage District located in Kings County.

CALIFORNIA BOND CERTIFICATION COMMISSION

The California Bond Certification Commission approved the sale of \$108,000 par value of bonds of the second division of the second issue of bonds of the Nevada Irrigation District for construction work necessary in the development of the project.

FEDERAL POWER COMMISSION LICENSE FEE MATTERS

Some eighteen months ago the State Engineer called into question the allocation which was being made of Federal Power Commission license fees. It appeared that the individual states were not receiving the full allocation to which they were entitled out of fees collected annually from licensees of the Federal Power Commission. The matter was first taken up with the local office of the Federal Power Commission and later with the Washington office. The subject was brought up for discussion at the first annual conference of Western State Engineers held at Salt Lake City in October, 1928, and again at the second annual conference held at Reno in December, 1929, thereby enlisting the support of that organization. On February 3, 1930, the Comptroller General of the United States upheld the original contention of this office. This will make available to the several states, and particularly to California, an increased allocation by the federal government out of license fees collected annually from licensees of the Federal Power Commission. If the interpretation is made retroactive some \$81,000 in back fees will become payable to California. The present annual payments will be increased from some \$6,700 to more than \$25,000, and the payments due when the hydro-electric possibilities of California are fully developed will be increased several hundred thousand dollars per year, according to present estimates. This money goes into the General Fund of the State of California.

In addition to this phase of the matter it was discovered during the course of the study upon the subject that the allocation payable to the Reclamation Fund of the United States was also short. This allocation amounts to 33 1/3 per cent more than the allocation to all of the states combined. The allocation for the fiscal year ending June 30, 1929, is increased from \$17,176.49 to approximately \$45,000.

DAMS

Applications received for approval of dams built prior to August 14, 1929: 172 applications were received for existing dams making a total of 500.

As noted in last month's report, owners are still slow in filing applications for their dams. February 14th was the limiting date set by law for filing and this office is now preparing to notify the delinquent owners that they have not filed in accordance with the law. If they still do not file within thirty days from receipt of this notice they are guilty of a misdemeanor under the provisions of Section 17, Chapter 706. There are still about 260 dams for which applications have not been filed.

Application for construction has been received as follows:

Dam	County	Owner	Estimated cost
Rock Creek	El Dorado	Arthur E. Risor	\$2,000

Applications for repairs or alterations have been received as follows:

Dam	County	Owner
Burbank No. 4	Los Angeles	City of Burbank
Dennison	Ventura	Dennison Ranch Company
Behedere	Marin	Marin Municipal Utility District

Plans approved for construction or enlargement:

Dam	County	Owner	Estimated cost
Pickering Pond*	Modoc	Pickering Lumber Co.	\$22,194.29
Ridgewood*	Mendocino	Chas. S. Howard Co.	9,631.00
Crouch*	San Diego	Chas. S. Crouch	25,188.25
Merced Falls*	Merced	San Joaquin Light & Power Co.	50,000.00
Burbank No. 5*	Los Angeles	City of Burbank	34,750.00
Everly*	Modoc	Irving C. Everly	1,500.00
Sunset Canyon*	Los Angeles	L. A. County Flood Control District	22,660.00
Moccasin Creek*	Tuolumne	City of San Francisco	600,000.00
Silver Lake**	Amador	Pac. Gas & Elec. Co.	16,000.00

*Construction

**Enlargement.

Plans approved for repairs or alterations:

Dam	County	Owner
Concow	Butte	Thermalito and Table Mountain Irrigation Districts
Spooner	Lassen	J. J. Fleming & Co.
Yorba	Orange	Anaheim Union Water Co.

Inspection of dams under construction, enlargement or repair:

Sixteen dams are under construction, enlargement or repair in the state at present, as follows:

Dam	County
613 Bear Gulch***	San Mateo
12 Calaveras*	Calaveras
6-4 Chatsworth***	Los Angeles
47 Concow***	Butte
5-2 Glendale*	Los Angeles
32-6 Hansen*	Los Angeles
31-2 Juncal*	Santa Barbara
6-15 Lower San Fernando**	Los Angeles
97-73 Lyons*	Tuolumne
841-2 Mary Joe*	San Diego
95-10 Merced Falls**	Merced
97-66 Salt Springs*	Calaveras
104-18 Shaver Lake***	Fresno
778 Wrigley*	Los Angeles
791 Yorba***	Yuba

*Construction

**Enlargement.

***Repairs.

Inspections on Various Existing Dams are now being made with a view to their early approval. With this in mind, three new inspectors have been employed, bringing the total of field men to seven, each covering an allotted territory.

Rainfall and Run-off Studies. Steps are being taken to make a study of rainfall intensities over limited areas together with the corresponding run-off. This will help determine the required spillway capacity of dams to carry peak flows. Areas are being selected in different parts of the state which are typical of the various conditions existing. Automatic recording rain and stream gages will be established in these areas for the purpose of obtaining the run-off of maximum rainfall during short periods. These studies are being conducted for this office by the Water Resources Investigation staff.

FLOOD CONTROL AND RECLAMATION

During the period from January 16 to February 15, inclusive, an average of 130 employees have been engaged upon this work, exclusive of contractor's employees.

MAINTENANCE OF SACRAMENTO AND SAN JOAQUIN DRAINAGE DISTRICT

Project maintenance work on the Sutter By-pass system has been mostly routine, including operation of the drainage pumps for short periods. There have been no heavy storms nor high water.

Several small jobs of protective work have been carried out in the Tisdale By-pass and on the upper Sutter By-pass. These consist of brush and tree mats secured with screw anchors. Some replanting of the willow protection along the east levee has been accomplished. A thorough check has indicated that only 5 per cent of the total willow planting must be replaced. The balance of the trees show fairly vigorous life, but at least along 50 per cent of the length of the planting the growth progress is disappointing.

Some work has been done in leveling and improving the appearance of the grounds around pumping plants No. 1 and No. 2.

The dragline excavator operated by the Dutton Dredge Company has been engaged during the entire month in cleaning out the Wadsworth Canal and the East Intercepting Canal. Upon completion of this work, it will reconstruct one-half mile of the West Intercepting Canal and then proceed with cleaning of the ditches in the pumping plant No. 3 system. This machine is operating very satisfactorily.

FLOOD CONTROL PROJECT MAINTENANCE, BANK PROTECTION

Most of the small jobs of bank protection work under way have been completed and have been previously reported as under way.

Seven tree retards in the Feather River at Nicolaus included in the contract with the Pacific Coast Construction Company have been completed, and by arrangement with Sutter County an additional three retards will be constructed at once. On the Sacramento River near Knights Landing in Reclamation District No. 730 the Pacific Coast Construction Company has completed three retards out of the eight covered by contract, and rapid progress is being made on the completion of the others.

The work of constructing the barrier across Hefner Slough, at Robinson Bend on the Feather River has

been completed. A number of snags were removed from the channel of the river opposite this work and some clearing of willows on bars has been done. Also the old channel across the bar has been cleared out. All of this work has been done with the attempt to rectify the flow of the current along this bend.

Under contract, Leonard T. Isham of Rio Vista is constructing a bulkhead of redwood timber 850 feet long in the Sacramento River one mile below Isleton.

Tentative arrangements have been made for construction of two retards on the right bank of the Sacramento River about three miles below Princeton, in cooperation with Reclamation District No. 2047. The estimated cost of this work is \$6,000.

SACRAMENTO FLOOD CONTROL PROJECT

An average of 81 men have been employed on clearing in the Sutter and Butte Slough By-passes during the past month. The camps in the lower Sutter By-pass were discontinued. All of the work now under way is being carried on in the upper Sutter By-pass and Butte Slough By-pass with the exception of that being done by A. Mitchell, who has a contract to clear an acreage in the lower Sutter By-pass. Fifty-seven thousand dollars has been spent in by-pass clearing since October 1, 1929.

A large part of the work of clearing in the last two months has been with crews employed directly by this division and under adverse conditions at times on account of the weather. However, the work has been carried on almost continuously because it furnished work for many of the local residents in Sutter County who were very much in need of it.

Five contracts are under way for clearing timber in the Feather River overflow channel above Marysville, and this work is approximately 60 per cent complete.

Reports have been prepared on several applications for the Reclamation Board and a number of orders respecting applications have been written. Some work has been done in connection with securing rights of way for various levee construction projects under way in charge of the California Debris Commission, which are paid for in part by state funds. This includes incidental construction in connection with the West Intercepting Canal rights of way.

RUSSIAN RIVER JETTY

No work is now under way except the placing of quarry rock along the jetty. This is being continued with a crew of seven men, which is sufficient to operate the shovel at the quarry and the delivery of the rock by the industrial railway.

It is expected that the continuation of the jetty out into the sea for a distance of 300 feet will be commenced about April 1, and arrangements are being made to place the necessary materials on the ground.

FLOOD MEASUREMENTS AND GAGES

Some clearing of brush has been done at several of the water metering stations, and during the period all of the automatic water stage recorder stations have been supervised and kept in operation.

A new automatic water stage recording station has been installed in the Yolo By-pass at Lisbon. This is a standard U. S. G. S. (McGlashan station), consisting of a well and recorder house of 36-inch diameter corrugated pipe. A Stevens Type "A" recorder is installed.

Staff gages have been installed on the Cosumnes River at the state highway, at each of the openings in the new highway embankment. During the period stream flow measurements have been made at the following stations: Bear River at Wheatland; Sacramento River at I street bridge.

Policy Relative To Brake Testing Is Announced

The following statement relative to brake-testing stations has been issued by Eugene W. Biscailuz, superintendent of the California Highway Patrol:

It has come to our attention that a misunderstanding has occurred regarding the authorization of brake-testing stations in the State of California.

Misleading statements have been given a certain amount of publicity which we deem it only fair to correct. Section 111½ of the California Vehicle Act, 1929, provides as follows:

(a) The chief of the division of motor vehicles is authorized to designate, furnish instructions to, and to supervise official stations for adjusting headlamps, and auxiliary driving lamps to conform with the provisions of this act.

(b) The chief of the division of motor vehicles is authorized to designate, furnish instructions to, and to supervise official stations for adjusting brakes to conform with the provisions of this act.

(c) The establishment of official headlight adjusting stations or brake-testing stations shall mean the designation of any place which shall comply with the requirements of a test station as determined by the chief of the division of motor vehicles. When headlamps or auxiliary driving lamps have been adjusted or brakes tested in conformity with the instructions issued by the chief of the division of motor vehicles, a certificate of adjustment shall be issued to the owner or operator of the motor vehicle, on a form prescribed by the chief of the division, and showing date of issue, registration number of the motor vehicle, owner's name, make of vehicle, and official designation of the adjusting station.

(d) If the chief of the division of motor vehicles finds that the business of any official adjusting or testing station is being poorly or badly conducted, he may revoke the designation of such station.

Shortly after February 1st, inspectors of the California Highway Patrol began inspections of all stations which had made applications for designations as official brake-testing stations.

The Division of Motor Vehicles is not recommending, suggesting or prohibiting any type of brake adjusting or testing machine or equipment in the official stations.

In appointing official brake-testing stations, the Division will consider the reputation of the applicant as a business house, the ability of the men employed to do the adjusting, the location of the garage, shop or service station, the demand for official stations in that community and other qualifications, rather than the fact that a station has or has not a particular type of brake-testing machine.

In other words, the use of any brake-testing device alone, is no guaranty that such station will be designated as an official station as many other factors will be considered, nor will there be any exclusive territory given to any particular station in any locality. Every effort will be made to designate stations that have a reputation for fairness, honesty and efficiency, and to refuse stations to those who do not have a clear record.

MOTOR VEHICLE DIVISION REPORTS

FRANK G. SNOOK, Chief

Inspector J. J. Borree returned from an eastern trip taken in the interest of highway patrol schools. His reports submitted are very interesting, and no doubt will prove of great benefit to us in conducting the activities of the California Highway Patrol. During Mr. Borree's trip he studied the various methods of registration in other states, and feels that we in California have as complete a system as any he saw.

While in Pennsylvania, New York and Massachusetts, Mr. Borree visited many patrol stations and made contact with a large number of the patrolmen through the courtesy of the highway patrol superintendents.

In New York and Massachusetts the highways are patrolled by state police who have police duties as well as safeguarding the highways. This dual responsibility is not working to the entire satisfaction of these states. While police matters are properly taken care of the patrolling of highways is not cared for in a consistent and efficient manner.

A similar situation existed in Pennsylvania, but in order to secure efficiency two distinctive enforcement agencies were formed, placing all police work on the Pennsylvania State Police and highway patrolling on the Pennsylvania Highway Patrol.

CHAUFFEURS' LICENSES

Despite the fact that the new motor vehicle act, automatically relieved a large number of persons in California from paying chauffeurs' license fees, a sharp increase in the number of chauffeurs for 1929 is reported.

Records for the year show a total of 146,732 registered as chauffeurs, a gain of 9734. The fee up to the time the new law became effective August 14th was \$2. The new law reduced the fee to \$1 a year and redefined the term chauffeur as being any "person who drives a motor vehicle for another on the public highways and receives compensation therefor."

This automatically took thousands of persons out of the classification of chauffeurs, relieving them of payment of the fee.

In its announcement the division called attention to the fact that all chauffeurs' licenses issued any time during 1929 expired on December 31st and that renewal of such licenses is required.

The chauffeur's last year's card must accompany his fee of \$1 and application. If he has lost his last year's card he must apply for a duplicate.

Under the California law, applicants must be over 18, in good physical condition and must submit to a special test if the application is an original one. A chauffeur's license is not required to operate implements of husbandry such as farm machinery, tractors, etc., over the highways temporarily.

It is unlawful to employ any person to act as chauffeur unless he has been licensed.

"Bill Jones was a good sport, and lucky, too. He might have been rich if he'd chosen some other form of gambling."

"What was his favorite sport?"

"Beating the fast express to the grade crossing. And he won nineteen times straight before the locomotive tied him."

Highway Awards Made in February

IMPROVEMENTS MADE POSSIBLE BY CONTRACTS

Alternate to the Ridge Route

Of widespread interest to the state as a whole was the awarding of a contract for construction on the first unit of the "Alternate to the Ridge Route" from Castaic School to Canton Creek, in Los Angeles County, distance of 7.1 miles to be graded 38 feet wide. This award was made to H. E. Doering & Van der Hellen & Pierson of Berkeley for a contract price of \$537,629.50. This newly adopted route will eliminate the long and tortuous adverse grades of the Old Ridge Route, on the road between southern California and the two great valleys of the central and northern portions of the state. It follows the canyon to the west of the present road, connecting with it at Tejon Pass. The new route is to be in keeping with the modern standards of alignment and gradient and will greatly facilitate traffic over this heavily traveled highway.

Mojave-Owens Valley Route

The last remaining unimproved section of the road between Mojave and the Owens Valley will be brought up to a high standard of grade and alignment through the award of a contract for grading and surfacing with oil-treated crushed gravel 15 miles in Kern County between Cinco and 7 miles north of Ricardo. This contract was awarded to George Herz & Company of San Bernardino for a contract price of \$242,768.80. The roadbed is to be graded 36 feet wide and surfacing to be 20 feet consisting of crusher run base on oil-treated crushed gravel. Traffic will be afforded some 200 miles of improved highway through Kern and Inyo counties to the recreational areas of Sierra Nevada, with the hazards of desert travel minimized and distance and time materially decreased. The present improvement runs through weird and scenic Red Rock Canyon which is a favorite winter recreation spot for many people from southern California cities. Much attention has been given to the desert drainage problems on this new project and the use of dikes and dykes will protect the road from damage by cloudbursts.

Pacific Highway

A reinforced concrete bridge located 5.5 miles north of Yreka on the Pacific Highway in Siskiyou County will be erected by Jacobs & Pattiani of Oakland, who were awarded the contract for \$71,548. This bridge will consist of one 200-foot open spandrel arch span and three 40-foot girder approach spans, with a clear roadway width of 24 feet. This project is a unit of the realignment and reconstruction of the portion of the Pacific Highway from Yreka to the Klamath River. This structure spans a deep gulch, obviating the use of an extremely heavy fill at this point.

Angels Camp-Markleeville Route

Beerman & White of Stockton were awarded a contract for \$67,965 to produce and stockpile screenings for bituminous surface treatment and surface with untreated crushed gravel or stone 15.5 miles between Murphy's and the Big Trees. This project was constructed by the Bureau of Public Roads, and is a portion of the mountain road from Angel's Camp to

Markleeville. When completed the public will be afforded a safe and smooth road to the popular resorts of this district for both summer and winter sports.

COMPLETION OF CONTRACTS

Redwood Highway

A contract in Del Norte County for placing perforated metal pipe underdrains between Elk Valley and 1½ miles south of Smith River, for about 1½ miles, at an approximate cost of \$16,700 has been satisfactorily completed and accepted. Smith Brothers of Eureka were the contractors.

Pacific Highway

Contract for constructing a graded roadbed and placing a Portland cement concrete pavement between Shasta River and Gazelle in Siskiyou County, for a distance of 7.7 miles, at an approximate cost of \$324,500, has been satisfactorily completed and accepted. T. M. Morgan Paving Company of Los Angeles were the contractors.

Another contract on the Pacific Highway for constructing a Portland cement concrete pavement at Mullen Crossing, between Woodland and the Davis Wye, Yolo County, distance of but 0.2 of a mile, approximate cost \$6,500, has also been accepted. C. W. Wood of Stockton was the contractor.

Victory Highway

C. H. Gildersleeve of Felton was the contractor who recently completed a contract for constructing a bridge across Coon Creek near Ewing in Placer County, at an approximate cost of \$9,280.

Tahoe-Ukiah Route

Contract for constructing a graded roadbed and placing an untreated crushed stone surfacing between Lucerne and Clear Lake Oaks, distance of 10.6 miles, at an approximate cost of \$299,300, has been satisfactorily completed and accepted. Von der Hellen, Pierson & Logan of Medford, Oregon, were the contractors.

Stockton-Santa Cruz Route

In San Joaquin County a contract for constructing a graded roadbed and placing a Portland cement concrete pavement between Santa and the San Joaquin River bridge, distance of about 3.1 miles, at an approximate cost of \$148,500, has been satisfactorily completed and accepted. C. W. Wood of Stockton was the contractor.

Another contract in the same county for constructing two bridges near French Camp at an approximate cost of \$23,600, has been satisfactorily completed and accepted. M. B. McGowan of San Francisco was the contractor.

Valley Route

Griffith-Hunter, Inc., of Sacramento were contractors who recently completed the construction of

bridges across the Cosumnes River and overflow channels near McConnell's Station, on the Sacramento-Stockton portion of the Valley Route, at an approximate cost of \$130,200, which has been satisfactorily accepted.

In Los Angeles County on this same route a contract for constructing a graded roadbed from Tunnel Station to Santa Clara River, for a distance of 8.6 miles, at an approximate cost of \$439,100, has been satisfactorily completed and accepted. R. G. Le Tourneau and O. A. Lindberg of Stockton were the contractors.

Coast Route

A contract for constructing an overhead crossing and grading and surfacing the approaches with bituminous macadam near Sargent, in Santa Clara County, at an approximate cost of \$85,600, has been satisfactorily completed and accepted. Barrett & Hilp of San Francisco were the contractors.

In Ventura County on this same route, a contract for constructing a graded roadbed and placing asphalt concrete pavement between Conejo Creek and Camarillo, for a distance of 2.3 miles, at an approximate cost of \$39,800, has been satisfactorily accepted. Griffith Company of Los Angeles was the contractor.

In Orange County on the above route, a contract for cleaning and painting the Santa Ana River bridge, approximate cost of \$2,467, has been satisfactorily completed and accepted. The Los Angeles Sand Blasting Company of Los Angeles was the contractor.

Mojave-Barstow Route

The Allied Contractors, Inc., of Omaha, were contractors who recently completed construction of graded roadbed and oil-treated crushed stone surfacing between 4 miles west of Hector and 8 miles west of Argos, 14 miles in San Bernardino County and at an approximate cost of \$191,300.

Mojave-Owens Valley Route

A contract for constructing a graded roadbed and placing oil-treated crushed gravel or stone surfacing between 7 miles north of Ricardo and Freeman, in Kern County, for a distance of 10.2 miles, at an approximate cost of \$105,400, has been satisfactorily completed and accepted. G. W. Ellis of Glendale was the contractor.

San Bernardino-Nevada State Line Near Jean

Gist & Bell of Alameda recently completed a contract for constructing a graded roadbed between Alray and Summit, San Bernardino County, for a distance of 3.8 miles, at an approximate cost of \$135,200.

Clermont-Riverside Lateral

Contract for constructing bridges across San Antonio Creek and Collins Dip in San Bernardino County, at an approximate cost of \$35,900, has been satisfactorily completed and accepted. W. J. Nethery & Son of Riverside were the contractors.

ALBERTA'S gravel road mileage will mount to about 1000 miles at the end of the year if last year's program is continued at the same rate.

DETROIT—Completion of the mile and a quarter vehicular tunnel to Windsor will be celebrated this fall. The great tube will cost about \$25,000,000.

CHICAGO—The new plan for the Austin-Kinzie superhighway leading into the city from the west side will allow for a traffic of 80,000 vehicles daily.

Traffic Views of Public Asked in Traffic Survey

ELEVEN western states, including California, in cooperation with the U. S.

Bureau of Public Roads are now ascertaining facts with regard to highway use on routes within their borders. The public is well aware that modern highway programs are based upon knowledge of transport conditions and is doing its share in assisting state and federal officials to secure the basic facts.

The success of the traffic survey now under way is to a large extent dependent upon the replies of motorists to questions upon cards now being distributed at more than 850 points. These replies are numbered in hundreds of thousands and, despite the fact that no postage is needed to return the card a large number of those mailing them have shown their interest to the extent of attaching full postage. Some, apparently feeling that more information might be desired, have taken the trouble to write lengthy and careful letters to accompany the cards.

It is undoubtedly true that no inquiry covering such a mass of the public, could fail to elicit some replies in which the American characteristic of humor is displayed. In reply to the question—"How many passengers, including driver?" one reply stated "two, some bedding, two grips and a dog." Some are not in a humorous frame of mind, as shown by the remarks "Two punctures in good tires," while others request specific improvement in their own localities. The majority, again in characteristic American fashion, furnish the full information as requested.

The replies to the cards are being supplemented by full reports from the traffic survey personnel. The combined information will be of prime importance in the solution of many of the problems of highway administration. The determination of the actual use of the various highways—the number of persons as well as the number of each type of motor vehicle traveling over each route—is the first objective. Intelligent relocation of routes, where necessary, is made possible upon the basis of the reported information. Design of highways, particularly upon heavy trucking routes, is affected by the traffic reports. The distribution of expenditures for maintenance, particularly for snow removal, and the advisability of its extension, are vitally affected by

(Continued on page 24.)

THE BALLAD OF THE BACK SEAT DRIVER

From the Oakland Tribune.

I

'Twas at a crowded crossing—
Crowds hastened to the spot
Whence came a cry of anguish
And one loud pistol shot.
Inside an automobile
There lay a woman dead;
Beside it stood the driver
Who with emotion said:

Chorus

"I am the lady's husband;
Long years have we been wed.
I loved her very dearly
And shot her through the head.
I p'raps should not have killed her—
It is not right to slay—
But with these back-seat drivers
It is the only way!"

II

As crowds then swarmed about him
He knelt beside his wife
And said: "My sweet you forced me
To turn and take your life;
You gave too many orders
On each and ev'ry ride."
Then, summoning a copper,
He very softly cried:

Chorus

III
They took him to the housegown
And threw him in a cell,
"If you'd kept still," he muttered
"You'd be alive and well.
You'd always give directions
To stop or turn or go"—
Then calling to the sergeant
He cried: "I'd have you know":

Chorus

IV

All night he lay and muttered:
"I'm very sorry, dear,
But, sweet, you drove me nutty
By shouting in my ear.
When I would take a north road
You'd say: 'The right road's south'"
Then to a chief detective
These words came from his mouth:

Chorus

V

To the court he soon was taken,
Where, mopping up a tear,
He sobbed: "She drove me to it
By orders from the rear.
In most confusing traffic
She'd bellow what to do,
And as I told the others
I also say to you":

Chorus

VI

"She'd tell me when to light up
And when to blow your horn,
And shriek 'Your brakes are burning
I know the bands are worn!"
She'd call me down for coasting
And criticize the way
I'd turn around in traffic—
And so, dear judge, I say:

Chorus

VII

"On week-day or on Sunday
She'd tell me where to go,
And bawl me out for speeding
And squawk if I went slow.
She'd criticize the routes that
I'd pick to reach the shore;
She never kept her mouth shut—
And as I said before":

Chorus

VIII

The judge and jury listened,
Then rose and set him free.
"Your act was justified," they
Said, "we do agree.
We know how much you suffered,
How tortured was your mind
Each time you took her driving,
And this is what we find:

Chorus

"You were the lady's husband!
Long years ago you wed.
You loved her very dearly,
And shot her through the head.
You p'raps should not have killed her
It is not right to slay—
But with these back-seat drivers
It is the only way."

EARTHENWARE

Boasting of our wealth and virtues rare,
What are we but bits of earthenware?
Fashioned by the one Great Master Hand,
Each one marked by that Great Maker's brand,
Some of us are fashioned tall and fair,
Vases for the mansion, Dresden Ware;
Some of us as ornaments are prized;
Some of us are useful—yet despised;
Some of us are "big pots" lined with gold,
Some of us are "mugs" and bought and sold;
Some of us are "broke"—ah, that's a fact;
Some of us are not "broke," only "cracked."
Some of us are fashioned fine and true,
With every ray of sunshine gleaming through;
Some of us are coarse and chipped and stained—
Yet fragrant with the balm of love contained,
Earthenware, just earthenware, vessels of clay,
just earthenware;
All of us made by the one Great Potter;
Some of us as white as porcelain, some as brown
as terra cotta;
Earthenware, just earthenware, that the Master
will repair
When we go to the clay that we came from,
some day—
Broken earthenware.—George Wood.

Santa Ana River Report Now Ready For Distribution

Bulletin 19 of the Division of Water Resources, entitled "Santa Ana Investigation," and dealing with flood control and conservation problems in the Santa Ana River Basin, has been received from the State Printer and is available for distribution.

The report is the result of an intensive investigation that was first undertaken in 1925 at the request of Orange, Riverside and San Bernardino counties whose citizens realized the importance of their perplexing water problems and requested the State of California to assist them in finding a remedy. This resulted in the passing of a state appropriation of \$25,000 to be expended during the fiscal period 1925-1927, on the condition that the three counties concerned provide an equal sum toward the work. The required cooperation was obtained, and the State Engineer was instructed to carry out the study in conjunction with an advisory committee of engineers appointed by the counties.

The principal source of water for these counties is the Santa Ana River and its tributaries whose total annual water crop has been estimated in excess of four hundred thousand acre-feet. This water occurs largely in the form of torrential floods during the winter, followed by extremely low stages in summer when it is most required. The winter floods frequently occur in such volume that great damage is caused in their rush toward the sea.

The legislature of 1927 appropriated an additional sum of \$40,000 for continuing the survey and publishing a report, provided that interested parties contribute an equal amount for such purpose. Final work of assembling the data gathered during the investigation was actively taken up in October, 1927. This latter phase of the investigation and the report were under the supervisory charge of Harold Conkling.

This bulletin contains a complete study and suggested solutions for flood control on the watershed of Santa Ana River. It embraces a detailed compilation of statistical information, a description with cost estimates of fifty possible unit structures and illustrative combinations of works for consideration of public bodies in carrying out the program.

The report indicates that flood control may be successfully achieved and that its extent

March 1st Report On Snow Survey Data is Issued

THE following progress report of the snow survey and precipitation data covering the period to March 1, 1930, has been issued by the Division of Water Resources:

Using the data from precipitation stations, a comparison of conditions to March 1st with normal shows, in general, that the precipitation in the northern stream basins from Upper Sacramento to Yuba is from normal to 10 per cent below normal with the exception of Feather Basin which shows about 10 per cent above normal. In the central basins from the American to the Merced, the precipitation ranges from about 15 per cent to 35 per cent below normal, and in the southern basins from the Upper San Joaquin to the Kern, the precipitation to March 1st is entirely below normal and ranges from about 35 per cent to 45 per cent below.

As stated in the February bulletin, there are only a few snow courses where surveys have been made over a period of years so that comparison with the results of previous years and reference to normals can be made. In the Tahoe Basin recent surveys at Marlette Lake show a water content of 61 per cent of the entire seasonal normal (October to May) as compared to 38 per cent up to the time of the February report. In the Yuba Basin, courses at Summit and Lake Fordyce show a water content of 52 per cent of the entire seasonal normal and in the Mokelumne Basin the crest course at Blue Lakes shows a water content of 54 per cent of the entire seasonal normal.

This is the second bulletin covering snow survey and precipitation data. As stated at the issue of the first bulletin in February, this is the first season that comprehensive snow surveys have been undertaken by the state and pursuant to an act and appropriation of the last legislature, one hundred and fifty "snow course" locations have been made throughout the Sierra. All of these courses will be surveyed about the first of April to furnish the data upon which the estimates of the April-July stream flow may be made. In each major stream basin, however, certain "key" courses have been selected at which the surveys are made at approximately monthly intervals from June to May. Prior to the main surveys about April 1st therefore, these monthly bulletins are issued to present the results of the key course surveys and to give also the data on the seasonal precipitation to date as reported from the stations of the U. S. Weather Bureau, state and private agencies located in the mountainous portions of the stream basins.

is largely dependent on the amount which public bodies eventually decide to appropriate for this purpose. Work is still being continued by the state on certain phases of a conservation and flood control program, notably spreading works on the debris cones. These are in process of being mapped in detail both by aeroplanes and topographic surveys in order to prepare the way for detail plans.

CALIFORNIA HIGHWAYS AND PUBLIC WORKS

Official journal of the Division of Highways of the Department of Public Works, State of California; published for the information of the members of the department and the citizens of California.

Editors of newspapers and others are privileged to use matter contained herein. Cuts will be gladly loaned upon request.

Address communications to California Highways and Public Works, P. O. Box 1103, Sacramento, California.

Vol. 8 MARCH, 1930 No. 3

ASK ME ANOTHER

A contractor reports the receipt of the following letter from an indignant citizen who lived nearby:

"Why is it that your steam shovel has to ding and dong and fizz and spit and bang and hiss and pant and grate and grind and puff and chug and hoot and toot and whistle and wheeze and jar and jerk and howl and snarl and groan and thump and boom and smash and jolt and screech and snort and slam and throb and roar and rattle and yell and smoke and smell and shriek and fume and crash all day long?"

This would seem to be a rather difficult question to answer offhand.—*Iowa Engineer.*

TRAFFIC VIEWS OF PUBLIC ASKED IN TRAFFIC SURVEY

(Continued from page 21.)

traffic conditions. The development of a program of improvement, and the setting up of a highway expenditure budget in accordance with present and expected future traffic demands, are based upon knowledge of transport conditions.

The cooperative traffic survey will result in information secured under uniform conditions in eleven states, will make possible comparisons of conditions on interstate routes in adjoining states, and should facilitate agreements between states for the improvement of interstate connections. The important routes throughout a territory comprising over 40 per cent of the area of the United States, may be selected upon the basis of traffic facts. Not only interstate, but international, cooperative highway improvement will be made easier as a result of the securing of such primary information with regard to highway transport.

MICHIGAN—Surfacing improvements of all sorts on state highways totaled 656 miles for the 1929 season.

REDUCING THE HAZARD FROM FIRES STARTING ALONG STATE HIGHWAYS

(Continued from page 2.)

port and handle all fires adjacent our highways within national forests, pending their relief by the proper forest official with adequate forces. In the case of fires for which our employees were not responsible the agreement provided for reimbursement of the state at the going fire fighting rates for labor and equipment.

A similar agreement affecting areas adjacent to state highways within the state forests was also concluded this year between the Division of Highways and the Department of Natural Resources, Bureau of Forestry, on request of State Forester M. B. Pratt.

These two agreements we are assured are very beneficial, as assistance is provided at the most critical period.

In addition to this cooperation, we have during the past two years been carrying on an active clean-up program within our rights of way through forested areas. To date this work has been undertaken on the Alturas, Susanville and Trinity laterals, the Placerville-Lake Tahoe, Auburn, Big Oak Flat, Kit Carson, Ebbetts Pass, Sonora Pass, Pacific, Redwood and Downieville highways. You will appreciate, I am sure, that this work must of necessity spread out over a period of years, due to the extensive territory involved. The importance of this work has been recognized, and special provisions concerning clearing have been written in all construction contracts within forest areas.

When courage fails and faith burns low
And men are timid grown,
Hold fast thy loyalty and know
That Truth still moveth on.
Who follow her, though men deride
In her strength shall be strong,
Shall see their shame become their pride,
And share her triumph-song!

—Hosmer.

A lawyer received the following letter from a client:

"Dear Sir: My boy got struck by an automobile, number 6B-4872. If the owner is rich, sue him at once. The boy wasn't bruised any, but on your notifying me that you have brought suit, I will hit him in two or three places with a hammer.—*Missouri Pacific Magazine.*

NEW ENGLAND—The traffic capacity of the famous old Boston Post Road from New York to Boston was doubled when this highway was widened from two to four traffic lanes.

READ THEM AND WEEP

On the air last Monday night Wade H. Ellis of the American Bar Association's crime commission declared that crime costs the United States \$13,000,000,000 a year.

Speaking in Paris on July 11, 1928, Homer Folks said that illness costs the United States \$15,000,000,000 a year.

Insect pests, we were informed by the Agriculture Department on May 7, cost the United States \$2,000,000,000 a year.

Preventable accidents, said the National Safety Council on October 3, 1928, cost the United States \$5,000,000,000 a year.

Bad weather, a crop insurance expert recently estimated, costs the United States \$2,620,000,000 a year.

The smoke nuisance, according to figures issued by the Merchants Association on May 20, 1928, costs the United States \$2,040,000,000 a year.

Rats, declared the Federal Public Health Service on February 2, cost the United States \$364,000,000 a year.

It is terrible enough to know that every year this country loses the price of a couple of wars. If the estimators are given free hand we shall be broke in a few years.—New York Sun.

HOW CALIFORNIA CARES FOR THE BLIND

(Continued from page 8.)

for employees, a women's industrial shop, and a building containing a central power plant, an assembly hall, and a lounge room for inmates were constructed.

Expansion of industrial training opportunities was aided in 1928 by the addition of a second story to the women's industrial shop, providing adequate facilities for basketry, weaving, rug making and other activities of a similar nature.

Since the founding of the Industrial Home, broom making has been the chief industry and has been carried on in wooden buildings, where the dust nuisance and lack of proper heating and ventilation has been a serious drawback. Also, of recent years the broom factory has been badly overcrowded. The need of remedying this situation was recognized by the present administration and an appropriation was made by the 1929 legislature for a new building, bids for which have already been received by the Division of Architecture, and it is expected that construction will proceed rapidly.

The new broom factory will be of concrete construction with tile roof, and is planned as a modern factory building with large areas of glass, adequate heating and ventilation and special exhaust ventilation at points where dust is created so that it may be removed and not permitted to create a nuisance. A mezzanine floor with hydro-electric elevator service furnishes ample space for storage of a large stock of finished brooms.

Another important addition to the permanent buildings is the sales and office building now under construction. This will provide an adequate salesroom with show windows for display of articles manufactured by the blind, which has not been possible heretofore. The building will also contain the administration office and public reception room. A unique and appropriate detail on this building is a frieze of sandblasted redwood depicting in conventionalized form the different manufactures carried on by the blind, with other panels showing "Homer the Blind Poet" and "Louis Braille, Teacher of the Blind."

NEW YORK—The new markers introduced on state highways have black raised letters on a white, octagonal background and small button reflectors within the letters make the signs highly visible at night.

State Highway Progress Reports

ALAMEDA COUNTY

An important section in the state highway system between Hayward and Niles of the Oakland-San Jose road is fast nearing completion. Construction work during the winter period has been somewhat retarded, due to inclement weather, the contractor's forces being busily engaged as conditions would permit.

The Portland cement concrete shoulder and pavement sections have been completed and opened to traffic. All structures have been completed including the widening of the undergrade crossing of the Southern Pacific Railroad at Niles.

All asphaltic concrete work between Niles Underpass and Hayward has been practically completed, there still remaining a small section of asphaltic concrete surfacing from the Niles Underpass south to Alameda Creek bridge through the town of Niles. This latter work will materially improve the situation in Niles, in that the surface will be smooth and of adequate width to handle through traffic through the town. The contractors are now busily engaged in widening the roadbed shoulders and finishing.

ALPINE COUNTY

The surfacing on the State Highway between Markleeville and Woodfords was completed in December, in time to give the residents of Markleeville a much improved highway during the stormy weather. This stretch of road has been very hard to negotiate in past years due to lack of surfacing.

AMADOR COUNTY

The highway between Jackson and Pine Grove has been gravelled in the worst sections, so that for the first time this stretch of road is passable throughout the stormy winter season.

BUTTE COUNTY

Excellent progress is being made by Convict Camp 17, under Superintendent Rawson, in the construction of the 7-mile section of graded highway from the Feather River crossing to a point opposite Bloomer. It is expected that the grading of this section will be completed about the middle of the summer.

Grading and surfacing of the highway from Oroville to the Feather River crossing, Ariss-Knapp Company, contractors, is rapidly nearing completion. It is expected that all work on this job will be done by the middle of March, and this portion of the Feather River Highway will be available for local traffic at that time. Meanwhile, it is expected that the bridge across the Feather River, adjoining this contract, with the convict construction on the opposite side, will be

completed during the summer, and this will make the lower 12 miles of the Feather River Highway available for traffic, as far as Bloomer.

CALAVERAS COUNTY

Bids were opened February 19 for surfacing with crushed rock the road from Murphy to Big Trees, and on February 26 for grading and rock surfacing between 1½ miles north and 1½ miles south of Calaveritas Creek. This is on the Mother Lode Highway between San Andreas and Angels.

In spite of the heavy snow storms during January the road from Angels Camp to Big Trees was kept open to traffic at all times by the maintenance forces, equipped with snow plows.

FRESNO COUNTY

Convict Camp located near Hume in Fresno County, on the Kings River Road, has been able to continue operations even though handicapped by bad weather conditions. Snow fell to a maximum depth of about 4 inches at the highest elevation and temperature dropped to 6 degrees below zero. By continued efforts, the road leading through General Grant Park to Pinehurst was kept clear to sufficient extent that a truck made triweekly trips for mail and supplies. About 8 miles of road has been under construction since July of last year and of this mileage, 5 miles has been practically completed.

KERN COUNTY

On Route 57, between Maricopa and Route 4, two contracts have been awarded. For the portion twelve miles east of Maricopa, George W. Ellis, assignee, is preparing to place an oil-treated surface on the newly graded and rock-based highway. From San Emigdio road to Route 4, the V. R. Dennis Construction Company was successful bidder and is preparing to begin operations of grading, placing of rock base and oil-treated surface. The completion of these contracts will afford practically paved route from main Route 4 to Maricopa and adjacent oil fields.

On Route 33, Valley Paving and Construction Company have started operations on their contract which calls for grading and surfacing with a crushed rock base and 2 inches of bituminous macadam top 15.5 miles, from the west line of Kern County east of Shandon to Junction pumping station.

On Route 33, east of Lost Hills, the Hartman Construction Company is laying crusher run base and bituminous macadam top on a 2-mile line change which will eliminate two right angle turns.

Under day labor authorization, widening of roadway is under way between Democrat Springs and Weldon. This will include the construction of a 60-foot timber bridge over Clear Creek near Hobo Hot Springs.

During the middle of January the heaviest snowfall for a number of years occurred, which resulted in some inconvenience to travel over the Ridge Route. A number of successive snowfalls occurred, reaching a maximum depth of about 2 inches on pavement and maintenance forces concentrated all efforts in an endeavor to keep the road open for travel.

KINGS COUNTY

An improvement contributing greatly to the safety of motor traffic has been recently completed between Lemoore and a point 10 miles westerly on Route 10 between Hanford and Coalinga. This work involves sanding of earth shoulders, thereby eliminating the danger of vehicles which leave the pavement, especially during wet weather. The natural soil conditions in this vicinity are such that they become dangerous when wet and the sand surfacing is equivalent to widening the safe width of roadway which can be used.

LASSEN COUNTY

Work has been completed by Hein Brothers and Chittenden on their contract for resurfacing the highway from Brockman Crossing to Buntingvale, a distance of about 10 miles. This reinforcing of the old gravel surface will make it possible to place an armor coat asphaltic surfacing during the coming summer months, which will effect a considerable improvement for the heavy traffic which uses this highway on the road to Reno.

The work of reinforcing the 7-mile section of the highway from Buntingvale to Milford by state forces was completed in January, which, like the above mentioned section, will make it possible to place a high type of asphaltic surface during the coming summer season.

LOS ANGELES COUNTY

The contract for a line change immediately north of the Newhall tunnel has been awarded to McCray Company. Good progress is being made on this work. It is expected that this contract will be completed next June.

The first contract on the La Canada-Mt. Wilson Highway for grading 2.6 miles of 40-foot roadbed was awarded to H. W. Rohl Company on August 14th. Rough grading is in progress on one and one-half miles. It is expected that this contract will be completed by next July.

A contract for paving the Newhall Alternate with Portland cement concrete, 30 feet wide, has been awarded to Jahn & Bressi. Grading of this section has just been completed by Le Tourneau & Lindberg. The new location is on greatly improved alignment and eliminates Sangus, Newhall and the Newhall tunnel from the Ridge Route. This section is 8.6 miles long. Paving will probably be completed by next August.

A contract for grading and paving a line change near Liberty School, 4 miles west of Calabases, was awarded to the Will F. Peck Company, January 18, 1930. This line change eliminates several bad curves and improves the grade. It is expected that this contract will be completed next August.

LOS ANGELES AND VENTURA COUNTIES

A contract for oil mix shoulders between Calabases and Conejo Summit has been awarded to the Southwest Paving Company. It is expected that this contract will be finished in April.

MADERA COUNTY

Paving work on both contracts between Berenda and North County Line on Route 4 in Madera County have been completed by the Valley Paving and Construction Company for the south 4½ miles and A. Treichert and Son, Inc., for the mileage from Califa to North Boundary. The last mentioned contract is 20-foot asphaltic concrete and the southerly work consisted of 20-foot Portland cement concrete. Separating the two projects is the Califa Subway under contract to Otto Parlier. This work is also practically complete with the exception of placing supporting steel and track changes being done by the Southern Pacific. As soon as this is completed and the shoo-fly track removed, the subway will be opened to traffic.

MARIN COUNTY

Contractors Granfield, Farrar & Carlin have practically completed the grading of the 4.4 miles section of new highway from San Rafael to Alto. This route is an important link in the proposed reconstruction work between San Rafael and Sausalito, which ultimately will reduce the distance between these cities approximately 4 miles. The work is not as yet in a completed stage, due to the fact that before traffic can make use of it three major structures which are now under construction must be complete before through traffic can be put over the road. These structures are:

- (1) Overhead structure of the Northwestern Pacific Railroad Company at California Park near San Rafael.
- (2) A moveable span structure across Corte Madera Creek at Greenbrae.
- (3) An overhead crossing of the Northwestern Pacific Railroad at Detour about one-half mile south of Greenbrae.

All three structures are well under way and there yet remains the work of advertising a contract for surfacing the graded roadway which will be undertaken at an early date. The surfacing of this road and the completion of the bridges should be brought about by July 1, 1930, in ample time to open this important link in the Redwood Highway to the heavy summer traffic.

Marin and Sonoma counties, in fact all the population north of the bay are vitally interested in the activities of the Highway Commission in this area, in view of which they anticipate many pleasant trips to the San Francisco Bay over the reconstructed highways, which will reduce by many miles the distance between Santa Rosa and San Francisco and likewise reduce the running time considerably. These, together with the fact that the new road will obviate the many hazards on the existing Corte Madera grade has left a very favorable impression with the populace of the northern counties.

These same contractors have under construction, also, 1.8 miles of reconstruction from San Rafael to Gallinas Creek, immediately north of the city. The major work under their contract consists of very

heavy grading, nearly all of which has been completed in ample time to permit of settlement during the heavy winter rains. We anticipate that by spring the entire roadway will be sufficiently settled to permit of the placing of Portland cement concrete and bituminous macadam pavements, all of which will be completed by early summer. This road, however, will not be available for use of traffic until an overhead structure is completed across the Northwestern Pacific Railroad at Forbes Station. This structure is now advertised for bids and upon receipt of same, a contract will be awarded at an early date.

Traffic during the interim is being handled along the present state highway between the terminals which is somewhat circuitous although serves as an adequate detour. The completion of this contract will offer to the traveling public a widened and reconstructed highway on high standards from San Rafael to Ignacio, the junction of the two state highways leading from Santa Rosa and the Napa Valley.

MARIN AND SONOMA COUNTIES

The Hanrahan Company of San Francisco have a large contract under way from a point one mile south of Petaluma to Ignacio. Work has been under way during a greater part of the winter period although this contract lies over a considerable marshy area adjacent to San Pablo Bay. It has not been practical to pursue construction to the full extent permissible; however, there are a number of minor line changes where the reconstructed work is on new right of way and at these locations the contractor has made continuous progress during the winter months, the work here, involving heavy grading, having kept the contractor's forces busy.

Concrete and pipe structures have been installed, leaving the entire contractor's organization available for the placing of hard pavement surface. The placing of Portland cement concrete second story pavement has commenced and a small portion has been placed from about one mile north of the Sonoma County line to the northerly terminus of the contract near Petaluma. Weather conditions permitting, we are expecting the contractor to expedite the completion of Portland cement concrete pavement and the construction of a small amount of bituminous macadam pavement on line changes in order to have this important link available for traffic as soon as possible.

A new concrete bridge is now being completed across San Antonio Creek on the county line between Marin and Sonoma counties. A new concrete bridge was recently completed and accepted across the channel of Novato Creek, south of the town of Novato. These two structures complete all major drainage work in the contract. The total length of work involved is 11.8 miles.

MARIPOSA COUNTY

During the period from January 6 to 14, a total of 63 inches of snow fell at intervals on State Highway Route 18. The maintenance crew, by persistent work, were able to keep the route open to travel and very little delay and inconvenience was caused to traffic. Heavy week-end traffic to Yosemite of motorists who desired to see snow conditions and participate in winter sports, suffered but slight inconvenience due to the snowfall and the fact that the maintenance

crews worked continuously following each snowfall to keep the road open.

Favorable comment on the work done by maintenance crews in keeping this road open to traffic was received from Col. Thompson, Superintendent of Yosemite National Park, and from various other interested parties.

MENDOCINO COUNTY

Contractor W. C. Colley has completed all work on the McDonald-to-the-Sea highway. The contract required the construction of three timber bridges across Flynn Creek, North Fork of the Navarro River and at Indian Creek, together with approaches and the grading of a line change to obviate two existing structures, the total length of work being 1.8 miles.

The completion of this improvement has removed some of the more hazardous sections on this important road and this section of Mendocino County is realizing the benefit of a new highway constructed to high standards. The Highway Department also contemplates awarding a contract to do considerable further work in eliminating dangerous stream crossings and straightening out heavy grades at a number of important places. It is hoped that this work will be under way by early summer and be completed before the fall rains.

MERCED COUNTY

Under day labor, three bridges, spanning irrigation canals in Merced County on Route 4, have been widened, thereby removing potential hazards to traffic. Various accidents have occurred in the past due to the rather restricted road width. The widening should be a very material factor in avoiding future accidents. West of Los Banos, where soil conditions are particularly bad in wet weather, gravel shoulders have been placed, thereby increasing the safe width of traveled way.

MODOC COUNTY

The connection with the highway from the main street of Alturas eastward to the Cedarville highway was under construction during the past month, and will be completed in the spring, thereby eliminating two bad right-angle turns for eastern traffic.

NAPA COUNTY

The contract of Fredrickson & Watson Construction Company and Fredrickson Bros. has been accepted. This contract covered the reconstruction of a portion of the existing state highway from Greenwood Corners to the Napa County line, the old 15-foot concrete pavement being widened with macadam shoulders and the entire reconstructed width of 20 feet being surfaced with bituminous macadam. The completion of this road is of material assistance in handling the heavy traffic between the Sacramento Valley and the bay district, in that it is the last link in this section to be widened to a standard width of 20 feet.

ORANGE COUNTY

A contract for paving one-half width between Santa Ana and Anaheim was awarded on June 11th to Griffith Company. This section is 4.9 miles long. The paving work was done in cooperation with Orange County, the state paying for a strip of pavement 28 feet by 7 inches and the county paying for a like amount. All work is now completed on this project.

A contract for widening the roadbed between Sunset Beach and Newport the entire width of the 90- to 100-foot right of way, and the placing of an additional 10-foot strip of Portland cement concrete has been awarded to the Macco Construction Company. When this work is completed the pavement will be 30 feet wide for the entire distance. It is expected that this work will be completed by next December.

A small contract for replacing temporary surfacing with Portland cement concrete, 30 feet wide, between Dana Point and Serra has just been completed. Matich Bros. were the contractors on this work.

PLUMAS COUNTY

Work is just starting on the grading and surfacing of the 3-mile gap in the highway southwest of Chester, and it is expected that this section, including the main street through the town of Chester, will be completed before the peak of the summer traffic sets in. The completion of this gap, together with the 4-mile section which is now under construction in Lassen County, just east of Westwood, will complete an improved highway from a point 12 miles east of Red Bluff to Susanville.

Excellent progress is being made by the convict camp under Superintendent Stout, at Paxton. Almost 7 miles of the 10-mile section which is being constructed by this camp have been practically completed, extending from the county road 2 miles west of Keddie to a point about opposite Twain. The completion of this section will furnish the people of Virginia, Twain and Paxton with direct communication with the outside world.

SACRAMENTO COUNTY

The grading and surfacing contract between Arno and McConnell on the main highway between Sacramento and Stockton was completed some time ago. Traffic, however, was kept on the detour until February 10, due to the bridge contract not being completed.

SAN DIEGO COUNTY

A contract for grading the Rose Canyon road between Balboa avenue and Torrey Pines road was awarded on August 13th to the R. E. Hazard Contracting Company. This section is 5.4 miles long and is to be a 16-foot graded roadbed. It is expected that this contract will be completed next summer.

The contract for grading a roadbed 36 feet wide and placing of Portland cement concrete pavement 20 feet by 7 inches has just been completed between Pine Valley and Kitchen Creek on the San Diego-El Centro Highway. Basich Brothers were the contractors.

A contract for 4.5 miles of 38-foot graded roadbed between La Posta Creek and Miller Creek on the San Diego-El Centro Highway was awarded on May 27th to the Nevada Contracting Company. It is expected that this contract will be completed next June.

A contract for grading 3.9 miles of 36-foot roadbed from Kitchen Creek to La Posta and paving with 20-foot by 7 inches Portland cement concrete was awarded on June 25th to Basich Bros. About 3 miles of rough grading is completed, and grading is now in progress on about one mile. It is expected that paving will start shortly. This section is on the San Diego-El Centro Highway.

SAN JOAQUIN COUNTY

Contractor C. W. Wood completed his job of grading and cement concrete paving between Banta and the San Joaquin River on February 14. This eliminates the most hazardous section of this important road.

On March 12 bids will be opened for paving with cement concrete the road from Cherokee Station to Harney Lane. This stretch of nearly eight miles is known as Cherokee Lane and is the main Valley road between Stockton and Sacramento. Nearly 100 separate owners were dealt with in securing the rights of way, and considering the type of property and improvements, I feel that our Right of Way Department, headed by A. M. Nash, has made a fine showing on speed and economy.

SAN MATEO COUNTY

A new unit in the important Bayshore Highway is now under way, a contract having recently been awarded to Fredrickson & Watson Construction Company and Fredrickson Bros. covering that portion from Fifth street, San Mateo, to Redwood City, a length of approximately 7.3 miles. A major length of this section lies across the salt marshes along the westerly side of San Francisco Bay. In addition to the installation of drainage structures, this contract is somewhat unique in that a major portion of the northerly part is to be constructed of hard material obtained from the borrow pit in Belmont Terrace. This borrow pit, being centrally located, will furnish some 450,000 yards of excavation for the roadbed section. A high elevation is being maintained to provide a roadway above the high tides of the intervening sloughs.

From Belmont Terrace, south toward Redwood City, a greater portion of the work consists of dredger fill embankment. This portion offers adequate facilities for this type of construction and in view of the desire of the adjacent owners in reclaiming portions of their lands through suction dredge methods, work will be combined in filling the highway area and a portion of the adjacent property.

Great interest in the Peninsula is being centered in this contract of the Bayshore Highway, in that the completion will provide an additional highway, as at the present time but one through highway exists between San Mateo and Redwood City. The congestion on this one link has been serious on Sundays and holidays, evidenced by the bunching up of traffic during peak hours immediately south of the city of San Mateo. A recent traffic count at this point revealed an excess of 29,000 cars during a 16-hour period. Once this condition is relieved by the opening of the new unit of the Bayshore Highway, traffic will have

two completed state highways between San Francisco and Santa Clara points along the bay, not including the Skyline boulevard which lies along the crest of the hills some distance to the west.

SANTA CLARA COUNTY

Contractor N. M. Ball has completed all paving in the reconstruction of a portion of the Peninsula Highway from Santa Clara to Sunnyvale. The contract was recently completed and accepted by the Director of Public Works. The work consisted chiefly of widening and resurfacing the existing pavement by constructing a 10-foot Portland cement concrete shoulder on the westerly side of the old pavement and placing a 4-inch minimum thickness of asphaltic concrete on the old pavement, providing a 30-foot width of pavement throughout the length of the contract.

A line change of considerable importance was constructed from Sunnyvale to Butchers Corner in a direct line. This change eliminates two dangerous curves in the old road which are now entirely eliminated from the reconstruction work.

A contract has recently been awarded to the Hanrahan Company of San Francisco for reconstructing that portion of the Peninsula Highway from San Francisco Creek Bridge in Palo Alto to San Antonio avenue (Los Altos Junction). This reconstruction work lies in a very heavily populated portion of Santa Clara County. There are some line changes of considerable importance which have required the moving of buildings.

The construction work consists chiefly of widening the concrete bridge across San Francisco Creek on the county line between San Mateo and Santa Clara counties, and the placing of a Portland cement concrete shoulder and resurfacing the old pavement with asphaltic concrete. The reconstructed roadway from San Francisco Creek to the south limits of Mayfield is to be 40 feet wide. From the south line of Mayfield to Los Altos Junction the pavement will be 30 feet wide. On line changes involving new construction the pavement will consist of 30-foot width Portland cement concrete. A small exception in the contract will eliminate the business district in Mayfield.

SHASTA COUNTY

Work started on the construction of six timber bridges on Route 28, between Montgomery Creek and Burney, in January, and construction of the approaches to these bridges will be under way during the coming month. The completion of these bridges will eliminate several old structures which have been an inconvenience, if not an actual menace to traffic for some years.

During the recent heavy snow storms in the northern section of the state, particularly heavy snow removal was necessary between Redding and Burney, on the Alturas lateral, and on the Pacific Highway through the Sacramento Canyon. Snow to a depth of 5 feet on the former route and 4 feet on the latter was handled effectively by the maintenance forces under superintendents Macanlay and Tremper, and the roads were kept open at all times.

SISKIYOU COUNTY

The concrete paved highway from the Shasta River

to Gazelle, at the southerly end of the Shasta Valley, for a distance of 8 miles, was completed early in February, and the improvement effects a great convenience to traffic, particularly through the winter months. An excellent job of paving was secured by the T. M. Morgan Company, under the supervision of resident engineer Baker, in spite of the very trying conditions of freezing and wet weather which existed during the latter portion of the work.

Work started early in February on the heavy piece of construction between Yreka and the Klamath River. Wren and Greenough, contractors. It is expected that the exceptionally heavy grading on this contract will be well under way in the next month or so, since the contractor plans to install seven or eight power shovels on the work. Work to date has consisted of the construction of a detour on the opposite side of the river, for a distance of over a mile on the lower portion of the canyon, on which to carry traffic during the construction of the highway on the heavy slopes on the opposite side of the river. Three of five bridges which are physically part of this project, although under different contracts, have either been completed, are under construction, or are advertised for contract.

Many minor improvements which have been made to the road on the lower Klamath River during the past season or two have effected a great convenience for the traffic using that road, and winter traffic particularly has been greatly benefited. Numerous stretches which have been graveled have kept the traffic out of the mud, and the many places which have been widened and drained have made it possible to carry traffic this winter with greater ease than in any preceding winter, in spite of the fact that unusual snow conditions made the season particularly difficult.

SOLANO COUNTY

On February 1, the contract for grading and paving with cement concrete the line change through Dixon was awarded to C. W. Wood. This will eliminate two grade crossings with the main line of the S. P. R. R. where some fatal accidents have occurred in the past.

In order to make the asphaltic concrete pavement safer for traffic during wet weather maintenance forces have kept the pavement sanded during wet weather which has materially lessened the accidents on this slippery pavement. Two honing machines are busily engaged planing the slippery pavement to remove excess asphalt and provide a nonskid surface, which will be much safer for traffic.

TEHAMA COUNTY

With the construction of the bridge across Cottonwood Creek, at the Tehama-Shasta County line, which is nearing completion, and with the construction of the subway and connections north and south from this bridge, which it is expected will be let to contract during the next couple of months, one of the worst situations on the Pacific Highway will have been eliminated.

Through the efforts of superintendents Gribble and Stump, the Red Bluff-Susanville Highway was kept open during the heavy and protracted snow storm in the month of January. This opening was made possible by the completion of the improved highway from Morgan Springs to Chester last fall. An exceptionally severe test of equipment and men engaged upon this

work was made by the heavy snowfall, and neither were found wanting.

Work is well under way on the resurfacing of portions of the 30-mile section of the highway from Paynes Creek to Morgan Springs. A. F. Giddings, contractor, these portions constituting about two-thirds of the entire length. This resurfacing will strengthen the existing base sufficiently to permit of a higher type of oiled treatment later.

TRINITY COUNTY

Excellent progress is being made by Conviet Camp 12, on the grading of the highway over the Buckhorn Summit, between Redding and Weaverville. All of the grading has been completed along Grass Valley Creek, to a point within 1.5 miles of the county line, and work is now being concentrated on the easterly side of the divide, with the object of completing the connection on that side, which will open the 5-mile section of highway to the foot of the mountain for traffic, possibly by August.

Considerable improvement has been effected in the narrow road between Burnt Ranch and Salyer during the past two months, by the widening of several narrow places on the precipitous bluffs along that section.

TULARE COUNTY

Valley Paving and Construction Company has resumed paving operations between Earlimart and Delano, after ceasing work during the greater part of January due to bad weather conditions.

A contract has been awarded to California Construction Company for widening and resurfacing 45-foot pavement between Pixley and Tipton Railroad Crossing, a distance of 8.6 miles. Contractor is now moving in equipment and preparing to start operations.

TUOLUMNE COUNTY

The surfacing job under contract to the Adams Co., between near Shaw's Flat and the Sonora-Columbia road has been delayed by winter storms. It is progressing fairly well now that the weather has improved.

VENTURA COUNTY

A contract for second story paving with asphaltic concrete from Conejo Creek to Camarillo has just been completed by Griffith Company.

Sandy (to his daughter): Young McPherson has asked me for your hand, and I have consented.

Daughter: You dear old dad!

Sandy: So never mind going to the dentist's now to have that tooth pulled—wait until you are married.—*Passing Show.*

MISSOURI—A new \$1,000,000 highway, 20 feet wide, extending west from St. Louis through St. Louis County is being constructed on a right of way of 100 feet.

Record of Bids and Awards

HIGHWAY BIDS AND AWARDS

For Month of February

CALAVERAS COUNTY—Between Murphy's and Big Trees, 15.5 miles to be surfaced with untreated crushed gravel or stone. Dist. X, Rt. 24, Sec. E. M. J. Bevanda, Stockton, \$76,616; Hemstreet & Bell, Marysville, \$69,040; Chas. Harlowe, Jr., Oakland, \$67,964; W. H. Hauser, Oakland, \$72,080. Contract awarded to Beerman & White, Stockton, \$67,956.

KERN COUNTY—Between Cinco and 7 miles north of Ricardo, 15 miles to be graded and surfaced with oil-treated crushed gravel or stone. Dist. IX, Rt. 23, Secs. C and D. Kennedy-Bayles Const. Co., Oakland, \$287,366; J. P. Holland, Inc., San Francisco, \$272,074; Hemstreet & Bell, Marysville, \$277,005; G. W. Ellis, Los Angeles, \$263,815; Hall-Johnson Company, Alhambra, \$333,385; Hartman Const. Co., Bakersfield, \$322,612; Isbell Construction Co., Fresno, \$297,488; Mutual Income Properties, Inc., Los Angeles, \$249,805; Arris-Knapp Co., Oakland, \$331,970. Contract awarded to George Herz & Co., San Bernardino, \$242,768.80.

LOS ANGELES COUNTY—Alternate to Ridge Route, between Castaic School and Canton Creek, 7.1 miles to be graded. Dist. VII, Rt. 4, Sec. G. Sander Pearson, Santa Monica, \$674,660; Kern & Kilbe, San Francisco, \$830,310; J. G. Donovan & Son, Los Angeles, \$653,792; T. M. Morgan Paving Co., Los Angeles, \$622,503; Isbell Construction, Fresno, \$794,156; McCray Co. & Martter & Beck, Los Angeles, \$717,044; J. F. Shea Co., San Francisco, \$710,063; Guy F. Atkinson Co., San Francisco, \$648,374; Gist & Bell, Arcadia, \$684,457; Hamman Co., San Francisco, \$722,677; The Utah Construction Co., San Francisco, \$638,771; H. W. Rohl Co., Los Angeles, \$540,264; Fisher, Ross, MacDonald and Kahn, Inc., Azusa, \$811,212; Geo. Pollock, Sacramento, \$599,529; R. G. Le Tourneau, Stockton, \$577,725. Contract awarded to H. E. Doering & Von Der Hellen & Pierson, Berkeley, \$537,629.50.

LOS ANGELES AND VENTURA COUNTIES—Between one mile east of Los Angeles-Ventura County line and the top of Conejo Grade, super-elevating curves. Dist. VII, Rt. 2, Secs. C, A and B. Contract awarded to Griffith Company of Los Angeles, \$2,800,225.

SISKIYOU COUNTY—Reinforced concrete bridge about 5.5 miles north of Yreka, consisting of one 200-foot open spandrel arch span and three 40-foot girder approach spans. Dist. II, Rt. 3, Sec. C. M. B. McGowan, San Francisco, \$74,988; Lord & Bishop, Oroville, \$81,688; Guy F. Atkinson Co., San Francisco, \$81,894; Skeels & Graham, Roseville, \$76,857; Ward Engineering Co., San Francisco, \$81,386; Fred J. Maurer & Son, Inc., Eureka, \$74,985; H. E. Doering, Portland, Oregon, \$71,990. Contract awarded to Jacobs & Pattiani, Oakland, \$71,548.

"Say," said the prospect, who was being given a demonstration in a used car, "what makes it jerk so when you first put it in gear?"

"Ah," the suave salesman explained, "that proves it to be a real car—it's anxious to start."—*American Legion Monthly.*

AWARD OF CONTRACTS DIVISION OF ARCHITECTURE

For the Month of February

SONOMA STATE HOME, for constructing assistant physician's residence. Contract awarded to G. Magnuson & Company of San Bruno; price, \$7,300.

NAPA STATE HOSPITAL, for constructing assistant physician's residence. Contract awarded to G. Magnuson & Company of San Bruno; price, \$7,345.

SAN FRANCISCO STATE BUILDING, for general work on additional wings. Contract awarded to Vogt & Davidson, Inc., San Francisco; price, \$206,643. Contract for electrical work on above; contract awarded to Porter Electric Company of San Francisco; price \$10,600. Contract for heating and plumbing work on above; contract awarded to Scott Company of San Francisco; price, \$16,184.

WATER APPLICATIONS AND PERMITS

Applications for Permit to Appropriate Water Filed with the State Department of Public Works, Division of Water Resources, during February, 1930.

MOXO COUNTY—Application 6547. Gladys Koebig, 2404 8th avenue, Los Angeles, for 200 gallons per day from small unnamed stream tributary to Mammoth Creek and Owens River to be diverted in Sec. 17, T. 4 S., R. 27 E., M. D. M., for domestic purposes. Estimated cost \$90.

LOS ANGELES COUNTY—Application 6548. Isaac Wiskerson, Palmdale, for 0.025 c.f.s. from Granite Springs tributary to Wiskerson Canyon of Amorgosa Creek drainage to be diverted in Sec. 24, T. 6 N., R. 14 W., S. B. M., for domestic and irrigation purposes. Estimated cost \$400.

EL DORADO COUNTY—Application 6549. L. T. Butts, Placerville, for 0.25 c.f.s. from Emigrant Ravine Creek tributary to Hangtown Creek to be diverted in Sec. 5, T. 10 N., R. 11 E., M. D. M., for irrigation and domestic purposes. Estimated cost \$500.

PLUMAS COUNTY—Application 6550. Quincy Lumber Company, Inc., Quincy, for 50,000 gallons per day from February 15th to December 15th of each season from Buckhawk Creek tributary to Spanish Creek, Indian Creek, North Fork Feather River to be diverted in Sec. 33, T. 25 N., R. 9 E., M. D. M., for industrial purposes. Estimated cost \$500.

PLUMAS COUNTY—Application 6551. Quincy Lumber Company, Inc., Quincy, for 1.56 c.f.s. from Middle Fork of the Feather River tributary to Feather River to be diverted in Sec. 15, T. 23 N., R. 11 E., M. D. M., for industrial purposes. Estimated cost \$1,500.

PLUMAS COUNTY—Application 6552. Quincy Lumber Company, Inc., Quincy, for 50,000 gallons per day from West Branch Peoria Creek tributary to Middle Fork of Feather River to be diverted in Sec. 19, T. 23 N., R. 11 E., M. D. M., for industrial purposes. Estimated cost \$250.

PLUMAS COUNTY—Application 6553. Quincy Lumber Company, Inc., Quincy, for 50,000 gallons per day from unnamed spring tributary to Bear Canyon, Indian Creek, North Fork Feather River to be diverted in Sec. 20, T. 25 N., R. 9 E., M. D. M., for industrial and domestic purposes. Estimated cost \$250.

PLUMAS COUNTY—Application 6554. Quincy Lumber Company, Inc., Quincy, for 50,000 gallons per day from unnamed spring tributary to Bear Canyon, Indian Creek, North Fork Feather River to be diverted in Sec. 20, T. 25 N., R. 9 E., M. D. M., for industrial and domestic purposes. Estimated cost \$250.

MONTEREY COUNTY—Application 6555. Sidney W. Fish, c/o Agnew & Boeckel, Federal Reserve Bank Bldg., San Francisco, for 0.5 c.f.s. from Palo Corona and tributaries tributary to San Jose Creek to be diverted in Sec. 5, T. 17 S., R. 1 E., M. D. M., for irrigation and domestic purposes.

EL DORADO COUNTY—Application 6556. Arthur E. Rasor, c/o A. J. Harder, 518 Ochsnor Bldg., Sacramento, for 60 acre feet per annum from Rock Creek tributary to South Fork American River to be diverted in Sec. 34, T. 13 N., R. 11 E., M. D. M., for mining purposes.

EL DORADO COUNTY—Application 6557. Arthur E. Rasor, c/o A. J. Harder, 518 Ochsnor Bldg., Sacramento, for 60 acre feet per annum from Rock Creek tributary to South Fork American River to be diverted in Sec. 34, T. 13 N., R. 11 E., M. D. M., for irrigation purposes on 10 acres.

EL DORADO COUNTY—Application 6558. Arthur E. Rasor, c/o A. J. Harder, 518 Ochsnor Bldg., Sacramento, for 60 acre feet per annum from Rock Creek tributary to South Fork American River to be diverted in Sec. 34, T. 13 N., R. 11 E., M. D. M., for recreational and domestic purposes.

NEVADA COUNTY—Application 6559. F. C. Foote, Grass Valley, for 3 c.f.s. from China Flat Ravine tributary to South Yuba to be diverted in Sec. 18, T. 17 N., R. 9 E., M. D. M., for mining purposes. Estimated cost \$1,850.

HUMBOLDT AND TRINITY COUNTIES—Application 6560. Trinity Loop Mining Company, c/o Charles D. Wehr, Atty., Court House, Oakland, for 150 c.f.s. from (1) Horse Range Creek, 30 c.f.s.; (2) Unnamed Creek tributary to Horse Range Creek, 10 c.f.s.; (3) Grove Prairie Creek, 20 c.f.s.; (4) Cedar Creek, 40 c.f.s.; (5) Unnamed Creek No. 3 tributary to Cedar Creek, 2 c.f.s.; (7) Unnamed Creek No. 5 tributary to Cedar Creek, 5 c.f.s.; (8) Unnamed Creek No. 6 tributary to Cedar Creek, 6 c.f.s.; (9) Hawkins Creek, 35 c.f.s. tributary to Trinity River to be diverted in Secs. 8, 17, 18, 19, T. 7 N., R. 7 E., M. D. M., Secs. 26, 35, T. 7 N., R. 6 E., M. D. M., and Secs. 9, T. 6 N., R. 6 E., M. D. M., for mining purposes.

NEVADA COUNTY—Application 6561. Metal products Holding Corporation, 1329 Russ Bldg., San Francisco, for 3 c.f.s. from Phoenix Lake at Old Man Mountain tributary to South Yuba to be diverted in Sec. 4, T. 17 N., R. 13 E., M. D. M., for mining purposes.

GLENN COUNTY—Application 6562. Wm. F. Linton, Orland, for 0.081 c.f.s. from unnamed stream tributary to Walker Creek to be diverted in Sec. 8, T. 21 N., R. 3 W., M. D. M., for irrigation and domestic purposes on 540 acres. Estimated cost \$400.

NEVADA COUNTY—Application 6563. U. S. Dept. of Agriculture, Tahoe National Forest, Nevada City, for 3.14 miner's inches from unnamed springs tributary to North Fork Yuba River to be diverted in Sec. 1, T. 20 N., R. 12 E., M. D. M., for domestic and recreational purposes. Estimated cost \$100.

TRINITY COUNTY—Application 6564. A. J. Norcott and W. H. Badley, Burnt Ranch, Trinity County, for 150 acre feet from November 1st to May 1st of each season from unnamed spring tributary to Trinity River to be diverted in Sec. 34, T. 6 N., R. 6 E., H. B. & M., for mining purposes. Estimated cost \$500.

LOS ANGELES COUNTY—Application 6565. L. A. Sharp, Palmdale, for 0.025 c.f.s. from January 1st to December 31st of each season, from Deer Spring tributary to Armagosa Creek to be diverted in Sec. 14, T. 6 N., R. 14 W., S. B. E. & M., for domestic and irrigation purposes. Estimated cost \$425.

SAN BERNARDINO COUNTY—Application 6566. Christian Baumann, Phelan, for 0.035 c.f.s. from April 1st to November 1st from 4 unnamed springs tributary to no stream to be diverted in Sec. 31, T. 4 N., R. 7 W., S. B. E. & M., for domestic and recreational purposes. Estimated cost \$250.

DEL NORTE COUNTY—Application 6567. Frank Symms, Crescent City, for 0.01 c.f.s. from unnamed spring tributary to Smith River to be diverted in Sec. 30, T. 17 N., R. 2 E., H. B. & M., for domestic purposes. Estimated cost \$200.

LAKE COUNTY—Application 6568. Martin Judge and Company, Crocker First Nat'l Bank Bldg., San Francisco, for 250 c.f.s. and 175,000 acre feet per annum from North Fork Cache Creek tributary to Cache Creek to be diverted in Sec. 4, T. 14 N., R. 6 W., M. D. M., for industrial and domestic purposes. Estimated cost \$3,000,000.

LAKE COUNTY—Application 6569. Martin Judge, Jr., Crocker First Nat'l Bank Bldg., San Francisco, for 175,000 acre feet per annum from North Fork of Cache Creek tributary to Cache Creek to be diverted in Sec. 4, T. 14 N., R. 6 W., M. D. M., for irrigation purposes. Estimated cost \$1,000,000.

MONTEREY COUNTY—Application 6570. Warren Gorrell, c/o Agnew & Boeckel, Attys., 604 Federal Reserve Bank Bldg., San Francisco, for 7 c.f.s. and 80 acre-feet per annum from (1) West Fork of Lime

Kiln Creek, (2) South Fork Big Creek and (3) North Fork of Big Creek to be diverted in (1) Sec. 3, T. 22 S., R. 4 E., M. D. M., (2) Sec. 29, T. 21 S., R. 4 E., M. D. M., (3) Sec. 12, T. 21 S., R. 4 E., M. D. M., for irrigation purposes. Estimated cost \$500,000.

SAN BERNARDINO COUNTY—Application 6571. Fred James Machoves, Victorville, for 1.00 c.f.s. from unnamed spring tributary to Grape Vine Canyon to be diverted in Sec. 35, T. 4 N., R. 2 W., S. B. & M., for domestic and irrigation purposes on 80 acres. Estimated cost \$2,500.

SAN BERNARDINO COUNTY—Application 6572. H. O. Webber, et al., Box 4, Lamanda Park Station, Pasadena, for 0.375 c.f.s. from waste and seepage water from irrigated lands tributary to Santa Ana River to be diverted in Sec. 5, T. 2 S., R. 4 W., S. B. & M., for irrigation purposes.

SAN BERNARDINO COUNTY—Application 6573. Mayville Ranch, Highgrove, for 0.37 c.f.s. from waste and seepage water from irrigated land tributary to Santa Ana River to be diverted in Sec. 6, T. 2 S., R. 4 W., S. B. & M., for irrigation purposes on 30 acres.

STANISLAUS COUNTY—Application 6574. J. M. deSouza, Rt. 3, Box 944, Modesto, for 10 c.f.s. from Toulumne River tributary to San Joaquin River to be diverted in Sec. 12, T. 4 S., R. 7 E., M. D. M., for irrigation purposes. Estimated cost \$1,500.

SAN DIEGO COUNTY—Application 6575. George W. Clemson, c/o Scarborough & Bowen, Suite 1225 Washington Bldg., Los Angeles, for 1239 acre-feet per annum from San Marcos Creek tributary to Pacific Ocean to be diverted in Sec. 20, T. 12 S., R. 3 W., S. B. & M., for irrigation and domestic purposes on 890 acres. Estimated cost \$10,000 (not including cost of dam).

AMADOR COUNTY—Application 6576. E. T. Earnest, c/o Olin & Raab, 517 E. Market St., Stockton, for 1.25 c.f.s. from Mokelumne River tributary to San Joaquin to be diverted in Sec. 4, T. 4 N., R. 9 E., M. D. M., for irrigation purposes, 100 acres. Estimated cost \$4,000.

SUTTER COUNTY—Application 6577. M. J. Newkom and H. E. Newkom, Yuba City, for 3 c.f.s. from Feather River tributary to Sacramento River to be diverted in Sec. 35, T. 15 N., R. 3 E., M. D. M., for irrigation purposes. Estimated cost \$16,570.

Permits to Appropriate Water Issued by the Department of Public Works, Division of Water Resources, during the month of February, 1930.

SUTTER COUNTY—Permit 3437, Application 6450. Issued to Mrs. Annie Kirkup, Knights Landing, February 15, 1930, for 9.18 c.f.s. from Sacramento River in Sec. 23, T. 13 N., R. 1 E., M. D. M., for irrigation on 34,427 acres. Estimated cost \$5,000.

SUTTER COUNTY—Permit 3438, Application 6451. Issued to James R. Young, Crandmore, February 15, 1930, for 1.94 c.f.s. from Sacramento River, in Sec. 14, T. 13 N., R. 1 E., M. D. M., for irrigation on 154.96 acres. Estimated cost \$5,000.

VENTURA COUNTY—Permit 3439, Application 6399. Issued to Senior Canyon Mutual Water Company, Inc., Ojai, February 24, 1930, for 1 c.f.s. from Senior Canyon, San Antonio Creek, Ventura River, in Sec. 21, T. 5 N., R. 22 W., S. B. & M., for use for irrigation and domestic purposes on 150 acres. Estimated cost \$65,000.

SUTTER COUNTY—Permit 3440, Application 6418. Issued to Rowena B. Coulter, Grimes, February 24, 1930, for 12.5 c.f.s. from Sacramento River, in Sec. 13, T. 11 N., R. 2 E., M. D. M., for irrigation purposes on 65.63 acres. Estimated cost \$8,000.

DEL NORTE COUNTY—Permit 3441, Application 6441. Issued to Department of Public Works, Division of Highways, Sacramento, February 24, 1930, for 0.017 c.f.s. from unnamed spring in Sec. 29, T. 17 N., R. 2 E., H. M., for domestic purposes. Estimated cost \$850.

DAM APPLICATIONS

APPROVALS

AND PLANS

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources, during the month of February, 1930.

SONOMA COUNTY—Lake Ralphine Reservoir Dam No. 422. Santa Rosa Water Works, Santa Rosa,

owner; earthen, 30 feet above streambed with a storage capacity of 830 acre-feet. Situated on no stream tributary to Santa Rosa and Los Alamos Creek in T. 7 N., R. 7 W., M. D. B. and M., for storage purposes for domestic and industrial use. Estimated cost \$25,000.

LOS ANGELES COUNTY—San Pedro Dam No. 6-20. City of Los Angeles, Los Angeles, owner; earthen, 21.2 feet above streambed with a storage capacity of 26 acre-feet. Situated in T. 5 S., R. 14 W., S. B. M., for storage purposes for municipal use. Estimated cost not given.

LOS ANGELES COUNTY—Silver Lake Dam No. 6-23. City of Los Angeles, Los Angeles, owner; earthen, 12 feet above streambed with a storage capacity of 2162 acre-feet. Situated in Sec. 8, T. 1 S., R. 13 W., S. B. M., for storage purposes for municipal use. Estimated cost \$142,364.

CONTRA COSTA COUNTY—Port Costa Dam No. 581-2. California Water Service Company, San Francisco, owner; earthen, 38 feet above streambed with a storage capacity of 39 acre-feet. Situated on an unnamed creek in Sec. 3, T. 2 N., R. 3 W., M. D. M., for storage purposes for domestic and industrial use. Estimated cost \$13,700.

SONOMA COUNTY—Lawler Reservoir Dam No. 581-3. California Water Service Company, San Francisco, owner; earthen, 22 feet above streambed with a storage capacity of 190 acre-feet. Situated on North Creek tributary to Adobe Creek in Sec. 12, T. 5 N., R. 7 W., M. D. M., for storage purposes for domestic and municipal use. Estimated cost \$46,000.

SONOMA COUNTY—Oak Hill Reservoir Dam No. 581-4. California Water Service Company, San Francisco, owner; earthen, 12 feet above streambed with a storage capacity of 6.62 acre-feet. Situated in Sec. 32, T. 5 N., R. 7 W., M. D. M., for storage purposes for domestic use. Estimated cost \$22,400.

SHASTA COUNTY—Redding Reservoir Dam No. 581-5. California Water Service Company, San Francisco, owner; earthen, 24 feet above streambed with a storage capacity of 10.13 acre-feet. Situated on an unnamed ravine in Sec. 34, T. 32 N., R. 5 W., M. D. M., for storage purposes for domestic use. Estimated cost \$8,500.

EL DORADO COUNTY—Pino Grande Dam No. 467. Michigan-California Lumber Company, Camino, owner; timber, 18 feet above streambed with a storage capacity of 14 acre-feet. Situated on Shoshone Creek tributary to South Fork of American River in Sec. 22, T. 12 N., R. 12 E., M. D. M., for storage purposes for logging use. Estimated cost \$14,000.

VENTURA COUNTY—Dennison Dam No. 761. Dennison Ranch Company, Ojai, owner; buttress, 29 feet above streambed with a storage capacity of 60 acre-feet. Situated on Lions Canyon Creek tributary to San Antonio Creek in Sec. 8, T. 4 N., R. 22 W., S. B. & M., for storage purposes for irrigation. Estimated cost \$8,000.

SAN BERNARDINO COUNTY—Bear Valley Dam No. 803. Bear Valley Mutual Water Company, Redlands, owner; multiple arch, 65.83 feet above streambed with a storage capacity of 72,400 acre-feet. Situated on Bear Creek tributary to Santa Ana River in Sec. 22, T. 2 N., R. 1 W., S. B. & M., for storage purposes for irrigation and recreation use. Estimated cost \$136,389.

LOS ANGELES COUNTY—Porter Estate Dam No. 775. E. C. Porter Estate, a corporation, San Francisco, owner; earthen, 50 feet above streambed. Situated in Sec. 9, T. 2 N., R. 16 W., S. B. & M., for storage purposes for irrigation use.

MODOC COUNTY—J. L. Porter Dam No. 162. Pearl F. Porter, Alturas, owner; earth and rock fill, 20 feet above streambed with a storage capacity of 200 acre-feet. Situated on a small ditch tributary to Parker Creek in Sec. 12, T. 42 N., R. 13 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$2,000.

INYO COUNTY—North Lake Dam No. 101-7. Nevada-California Power Company, Riverside, owner; earthen, 11 feet above streambed with a storage capacity of 85 acre-feet. Situated on North Fork of Bishop Creek tributary to Bishop Creek in Sec. 30, T. 8 S., R. 31 E., M. D. M., for storage purposes for power and irrigation use.

SAN DIEGO COUNTY—Upper Four Ess Dam No. 842. Albert E. Smith, Escondido, owner; concrete, 34 feet above streambed with a storage capacity of 200 acre-feet. Situated on an unnamed creek tributary to San Diequito River for storage purposes for irrigation use. Estimated cost \$25,000.

SAN DIEGO COUNTY—Lower Four Ess Dam No. 841-2. Albert E. Smith, Escondido, owner; concrete, 21 feet above streambed with a storage capacity of 100

acre-feet. Situated on an unnamed creek tributary to San Miguel River for storage purposes for irrigation use. Estimated cost \$7,000.

MODOC COUNTY—Williams Dam No. 149. J. Sheldon Potter, 315 Montgomery St., San Francisco, owner; rockfill, 4 feet above streambed with a storage capacity of 1495.5 acre-feet. Situated on no stream in Sec. 29, T. 43 N., R. 9 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$500.

MODOC COUNTY—Duncan Dam No. 149-2. J. Sheldon Potter, 315 Montgomery St., San Francisco, owner; earthfill 14 feet above streambed with a storage capacity of 2575 acre-feet. Situated on no stream in Sec. 33, T. 43 N., R. 9 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$6,200.

MODOC COUNTY—Jack's Swamp Dam No. 149-3. J. Sheldon Potter, 315 Montgomery St., San Francisco, owner; rockfill, 6 feet above streambed with a storage capacity of 150 acre-feet. Situated on no stream in Sec. 28, T. 43 N., R. 10 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$750.

MODOC COUNTY—Nelson Spring Dam No. 137. J. D. Flournoy Company, Likely, owner; earthfill, 118 feet above streambed with a storage capacity of 60 acre-feet. Situated on Nelson Spring tributary to Romero Gulch in Sec. 33, T. 40 N., R. 13 E., M. D. M., for storage purposes for irrigation use.

LASSEN COUNTY—Antelope Dam No. 242. Pierre Ducasse, Termo, owner; earthfill, 20 feet above streambed. Situated on Madeline Plains tributary to Antelope Creek in Sec. 3, T. 34 N., R. 13 E., M. D. M. Estimated cost \$12,000.

KERN COUNTY—Buena Vista Dam No. 732. Miller & Lux and Kern County Land Company, Bakersfield, owner; earthfill, 15 feet above streambed with a storage capacity of 205,000 acre-feet. Situated on Buena Vista Slough tributary to Kern River in Sec. 18, T. 31 S., R. 26 E., M. D. M., for storage purposes for irrigation use.

YUBA COUNTY—Depot Hill Dam No. 333. F. J. Joubert, Comptonville, owner; arch, 63 feet above streambed. Situated on Willow Creek tributary to North Fork of Yuba River in T. 19 N., R. 8 E., M. D. M., for storage purposes for debris use. Estimated cost \$22,000.

SAN JOAQUIN COUNTY—Woodbridge Diversion Dam No. 71. Woodbridge Irrigation District, Woodbridge, owner; gravity, 23.5 feet above streambed with a storage capacity of 2463.5 acre-feet. Situated on Mokelumne River tributary to San Joaquin River in Sec. 35, T. 4 N., R. 6 E., M. D. M., for diversion purposes for irrigation use. Estimated cost \$40,549.67.

PLUMAS COUNTY—Hydraulic King Dam No. 278. G. W. Fagg, Meadow Valley, owner; arch, 30 feet above streambed with a storage capacity of 15 acre-feet. Situated on Willow Creek tributary to Middle Fork Feather River in Sec. 14, T. 23 N., R. 7 E., M. D. M., for storage purposes for debris use. Estimated cost \$5,700.

YUBA COUNTY—Colgate Head Dam No. 97-2. Pacific Gas & Electric Company, San Francisco, owner; arch, 41 feet above streambed. Situated on North Fork of Yuba River tributary to Yuba River in Sec. 25, T. 18 N., R. 7 E., M. D. M., for diversion purposes for power use. Estimated cost \$65,000.

BUTTE COUNTY—Butte Creek Head Dam No. 97-4. Pacific Gas & Electric Company, San Francisco, owner; arch, 45 feet above streambed. Situated on Butte Creek tributary to Sacramento River in Sec. 36, T. 25 N., R. 3 E., M. D. M., for diversion purposes for power use. Estimated cost \$13,100.

BUTTE COUNTY—Hendricks Head Dam No. 97-6. Pacific Gas & Electric Company, San Francisco, owner; arch, 152 feet above streambed. Situated on West Branch of North Fork of Feather River tributary to Feather River in Sec. 16, T. 24 N., R. 4 E., M. D. M., for diversion purposes for power use. Estimated cost \$15,500.

NEVADA AND PLACER COUNTIES—Bear River Head Dam No. 97-11. Pacific Gas & Electric Company, San Francisco, owner; gravity, 18 feet above streambed. Situated on Bear River tributary to Yuba River in Sec. 22, T. 15 N., R. 9 E., M. D. M., for diversion purposes for power use. Estimated cost \$50,500.

PLACER COUNTY—Kelly Lake Dam No. 97-24. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 17 feet above streambed with a storage capacity of 360 acre-feet. Situated on Six-mile Valley tributary to North Fork of American River in Sec. 25, T. 17 N., R. 12 E., M. D. M., for storage purposes for irrigation and domestic use. Estimated cost \$3,000.

PLACER COUNTY—Lake Alta Dam No. 97-26. Pacific Gas & Electric Company, San Francisco,

owner; earthfill, 16.3 and 11.5 feet above streambed with a storage capacity of 270 acre-feet. Situated on an unnamed creek tributary to Bear River in Sec. 35, T. 16 N., R. 10 E., M. D. M., for regulation purposes for irrigation and domestic use. Estimated cost \$32,267.

PLACER COUNTY—Lake Arthur Dam No. 97-27. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 31 feet above streambed with a storage capacity of 94 acre-feet. Situated on South Fork of Dry Creek tributary to Yuba River in Sec. 19, T. 13 N., R. 9 E., M. D. M., for regulation purposes for irrigation and domestic use. Estimated cost \$38,738.

PLACER COUNTY—Lake Theodore Dam No. 97-31. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 31 feet above streambed with a storage capacity of 344.3 acre-feet. Situated on South Fork of Dry Creek tributary to Yuba River in Sec. 18, T. 15 N., R. 10 E., M. D. M., for storage purposes for irrigation and domestic use. Estimated cost \$38,872.

PLACER COUNTY—Wise Forebay Dam No. 97-50. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 16 feet above streambed with a storage capacity of 41.3 acre-feet. Situated on no stream in Sec. 4, T. 12 N., R. 8 E., M. D. M., for regulation purposes for power use. Estimated cost \$133,898.

TUOLUMNE COUNTY—Main Strawberry Dam No. 97-74. Pacific Gas & Electric Company, San Francisco, owner; rockfill, 132 feet above streambed with a storage capacity of 17,900 acre-feet. Situated on South Fork of Soledad River tributary to Crocker-Huffman River in Sec. 15, T. 4 N., R. 18 E., M. D. M., for storage purposes for power use. Estimated cost \$985,000.

SHASTA COUNTY—Manzanita Lake Dam No. 97-95. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 13 feet above streambed with a storage capacity of 500 acre-feet. Situated on Manzanita Creek tributary to North Battle Creek in Sec. 18, T. 31 N., R. 4 E., M. D. M., for storage purposes for power use. Estimated cost \$3,719.

BUTTE COUNTY—Pound Valley Dam No. 97-9. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 22 feet above streambed with a storage capacity of 1285 acre-feet. Situated on West Branch of North Fork of Feather River tributary to Feather River in Sec. 30, T. 26 N., R. 5 E., M. D. M., for storage purposes for power use. Estimated cost \$35,576.

LASSEN COUNTY—Coyote Flat Dam No. 233. C. W. Clarke Company, San Francisco, owner; earthfill, 36 feet above streambed with a storage capacity of 506 acre-feet. Situated on Coyote Creek tributary to Horse Creek in Sec. 31, T. 36 N., R. 9 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$27,469.84.

LOS ANGELES COUNTY—Devils Gate Dam No. 32-3. Los Angeles County Flood Control District, Los Angeles, owner; arch, 84 feet above streambed with a storage capacity of 7650 acre-feet. Situated on Arroyo Seco tributary to Los Angeles River in Sec. 7, T. 1 N., R. 12 S., B. M., for storage purposes for flood control use. Estimated cost \$455,350.

NAPA COUNTY—St. Helena Upper Dam No. 16. Town of St. Helena, St. Helena, owner; earthfill, 30 feet above streambed with a storage capacity of 30 acre-feet. Situated on York Creek tributary to Napa River in Sec. 27, T. 8 N., R. 6 W., M. D. M., for diversion and storage purposes for municipal use.

NAPA COUNTY—St. Helena Lower Reservoir No. 16-2. Town of St. Helena, St. Helena, owner; earthfill, 32 feet above streambed with a storage capacity of 123 acre-feet. Situated on York Creek tributary to Napa River located on Rancho Carne Hunoma for storage purposes for municipal use.

MODOC COUNTY—Hackmore Flat Dam No. 123. C. P. and J. L. Haskins, Merrill, owner; earthfill, 11 feet above streambed with a storage capacity of 552 acre-feet. Situated on hole in the Rock Canyon for storage purposes for stock-watering use.

MODOC COUNTY—Kelley A Dam No. 152-A. John Kelley and Gus Meckfessel, Alturas, owner; earthfill, 7.7 feet above streambed with a storage capacity of 1428 acre-feet. Situated on Canyon Creek and Pit River in Sec. 6, T. 41 N., R. 11 E., M. D. M., for storage purposes for irrigation use.

MODOC COUNTY—Kelley B Dam No. 152-B. John Kelley and Gus Meckfessel, Alturas, owner; earthfill, 8.5 feet above streambed with a storage capacity of 1428 acre-feet. Situated on Canyon Creek and Pit River for storage purposes for irrigation use.

MODOC COUNTY—Kelley C Dam No. 152-C. John Kelley and Gus Meckfessel, Alturas, owner; earthfill, 3.7 feet above streambed with a storage capacity of 1428 acre-feet. Situated on Canyon Creek and Pit

River in Sec. 7, T. 41 N., R. 11 E., M. D. M., for storage purposes for irrigation use.

ORANGE COUNTY—Modjeska Reservoir Dam No. 792. Modjeska Ranch Company, Crestline, owner; arch, 28.5 feet above streambed with a storage capacity of 23 acre-feet. Situated on Harding Creek tributary to Santiago Creek in Sec. 28, T. 5 S., R. 7 W., S. B. M., for storage purposes for domestic and irrigation use.

LOS ANGELES COUNTY—Burbank No. 4 Dam No. 4-4. City of Burbank, Burbank, owner; earthfill, 20 feet above streambed with a storage capacity of 21,177 acre-feet. Situated in Sec. 1, T. 1 N., R. 14 W., S. B. M., for storage purposes for municipal use. Estimated cost \$91,357.

BUTTE COUNTY—Lake Wyandotte Dam No. 63. Oroville-Wyandotte Irrigation District, Oroville, owner; earthfill, 41 feet above streambed with a storage capacity of 1300 acre-feet. Situated on North Honcut Creek tributary to Feather River in Sec. 16, T. 19 N., R. 5 E., for storage purposes for irrigation use. Estimated cost \$61,000.

BUTTE COUNTY—Lost Creek Dam No. 63-2. Oroville-Wyandotte Irrigation District, Oroville, owner; earthfill, 12 feet above streambed with a storage capacity of 6200 acre-feet. Situated on Lost Creek tributary to South Fork of Feather River in Sec. 24, T. 20 N., R. 5 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$191,300.

PLACER COUNTY—Millers Defeat Dam No. 322. Miller's Defeat Mining Company, Bolinas, owner; located in Sec. 28, T. 15 R. 13 E., M. D. M., for storage purposes for mining use.

MARIN COUNTY—Belvedere Dam No. 33-4. Marin Municipal Water District, San Rafael, owner; earthfill, 23 feet above streambed with a storage capacity of 23 acre-feet. Situated on a gulch tributary to San Francisco Bay for regulation purposes for domestic use. Estimated cost \$35,000.

MARIN COUNTY—Cascade Dam No. 33-5. Marin Municipal Water District, San Rafael, owner; buttress, 25 feet above streambed with a storage capacity of 5 acre-feet. Situated on Mill Creek tributary to San Francisco Bay for storage purposes for domestic use. Estimated cost \$16,000.

INYO COUNTY—Longley Reservoir Dam No. 100-2. Hillsdale Water Company, Riverside, owner; earth and rockfill, 20 feet above streambed with a storage capacity of 155 acre-feet. Situated on Ogden Creek tributary to Owens River in Sec. 2, T. 8 S., R. 30 E., M. D. M., for storage purposes for irrigation use.

AMADOR COUNTY—Elephant Mine Dam No. 474. J. W. Preston, Jr., San Francisco, owner; earthfill, 32 feet above streambed with a storage capacity of 6 acre-feet. Situated on Indian Flat tributary to Sutter Creek in Sec. 23, T. 7 N., R. 12 E., M. D. M., for storage purposes for mining use.

ALAMEDA COUNTY—Calaveras Dam No. 10. Spring Valley Water Company, San Francisco, owner; earthfill, 185 feet above streambed with a storage capacity of 100,000 acre-feet. Situated on Calaveras Creek tributary to Alameda Creek in Sec. 13, T. 5 S., R. 1 E., for storage purposes for domestic use. Estimated cost \$3,888,125.53.

SAN FRANCISCO COUNTY—College Hill Dam No. 10-2. Spring Valley Water Company, San Francisco, owner; earthfill, 16 feet above streambed with a storage capacity of 41.5 acre-feet. Situated on no stream for distributing purposes for domestic use.

SAN MATEO COUNTY—Lower Crystal Springs Dam No. 10-6. Spring Valley Water Company, San Francisco, owner; concrete, 131 feet above streambed with a storage capacity of 54,000 acre-feet. Situated on San Mateo Creek in Sec. 1, T. 5 S., R. 5 W., M. D. M., for storage purposes for domestic use.

ALAMEDA COUNTY—Niles Dam No. 10-7. Spring Valley Water Company, San Francisco, owner; earthfill, 16 feet above streambed with a storage capacity of 15 acre-feet. Situated on no stream in Sec. 15, T. 4 S., R. 1 W., M. D. M., for regulation purposes for domestic use. Estimated cost \$73,500.

SAN MATEO COUNTY—Pilarcitos Dam No. 10-8. Spring Valley Water Company, San Francisco, owner; earthfill, 74.25 feet above streambed with a storage capacity of 3100 acre-feet. Situated on Pilarcitos Creek in Sec. 33, T. 4 S., R. 5 W., M. D. M., for storage purposes for domestic use.

SAN MATEO COUNTY—San Andreas Dam No. 10-10. Spring Valley Water Company, San Francisco, owner; earthfill, 90 feet above streambed with a storage capacity of 18,500 acre-feet. Situated on San Andreas Creek tributary to San Mateo Creek in Sec. 16, T. 4 S., R. 5 W., M. D. M., for storage purposes for domestic use.

SAN MATEO COUNTY—San Mateo Creek No. 1 Dam No. 10-11. Spring Valley Water Company, San Francisco, owner; earthfill, 13 feet above streambed. Situated on San Mateo Creek in Sec. 28, T. 4 S., R. 5 W., M. D. M., for diversion purposes for domestic use.

SAN MATEO COUNTY—San Mateo Creek No. 2 Dam No. 10-12. Spring Valley Water Company, San Francisco, owner; arch, 24.5 feet above streambed. Situated on San Mateo Creek in Sec. 33, T. 4 S., R. 5 W., M. D. M., for diversion purposes for domestic use.

SAN FRANCISCO COUNTY—Stanford Heights Dam No. 10-13. Spring Valley Water Company, San Francisco, owner; earthfill, 20 feet high with a storage capacity of 34 acre-feet. Situated on no stream for regulation purposes for domestic use. Estimated cost \$125,000.

SAN MATEO COUNTY—Stone Dam No. 10-14. Spring Valley Water Company, San Francisco, owner; arch, 22 feet above streambed. Situated on Pilarcitos Creek in Sec. 3, T. 5 S., R. 5 W., M. D. M., for diversion purposes for domestic use.

SAN FRANCISCO COUNTY—University Mound Dam No. 10-15. Spring Valley Water Company, San Francisco, owner; earthfill, 26 feet high with a storage capacity of 132 acre-feet. Situated on no stream for regulation purposes for domestic use.

SAN MATEO COUNTY—Upper Crystal Springs Dam No. 10-16. Spring Valley Water Company, San Francisco, owner; earthfill, 55 feet above streambed with a storage capacity of 3,500 acre-feet. Situated on Laguna Creek tributary to San Mateo Creek in Sec. 12, T. 5 S., R. 5 W., M. D. M., for storage purposes for domestic use.

ALAMEDA COUNTY—Sunol Dam No. 10-17. Spring Valley Water Company, San Francisco, owner; gravity, 1 foot above streambed. Situated on Alameda Creek in Sec. 7, T. 4 S., R. 1 E., M. D. M., for diversion purposes for domestic use.

LOS ANGELES COUNTY—Stone Canyon Dam No. 6-25. City of Los Angeles, Los Angeles, owner; earthfill, 154 feet above streambed with a storage capacity of 7960 acre-feet. Situated on Stone Canyon in T. 1 S., R. 15 W., S. B. M., for storage purposes for municipal use. Estimated cost \$613,727.

LOS ANGELES COUNTY—Sawtelle Pressure Break Dam No. 6-21. City of Los Angeles, Los Angeles, owner; earthfill, 401 feet above streambed with a storage capacity of 109.98 acre-feet. Located in T. 1 S., R. 15 W., S. B. M., for regulation purposes for municipal use. Estimated cost \$63,156.

PLUMAS COUNTY—Little Grizzly Dam No. 272. Wm. and E. J. Currier, Milpitas, owners; rockfill, 23 feet above streambed. Situated on Little Grizzly Creek tributary to Indian Creek and Feather River for storage purposes for debris use.

SACRAMENTO AND PLACER COUNTIES—Baldwin Dam No. 324-2. North Fork Ditch Company, Sacramento, owner; earthfill, 37 feet above streambed with a storage capacity of 305.4 acre-feet. Situated on unnamed creek tributary to Linda Creek in Sec. 14, T. 10 N., R. 1 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$53,214.95.

SAN MATEO COUNTY—Millbrae No. 1 Dam No. 618. Mills Estate, Inc., San Francisco, owner; earthfill, 36 feet above streambed with a storage capacity of 22.54 acre-feet. Situated on an unnamed creek for storage and diversion purposes for irrigation use.

SAN MATEO COUNTY—Millbrae No. 2 Dam No. 618-2. Mills Estate, Inc., San Francisco, owner; earthfill, 33 feet above streambed. Situated on an unnamed creek for storage and diversion purposes for irrigation use.

SAN MATEO COUNTY—Millbrae No. 3 Dam No. 618-3. Mills Estate, Inc., San Francisco, owner; earthfill, 37 feet above streambed with a storage capacity of 27.55 acre-feet. Situated on an unnamed creek for storage and diversion purposes for irrigation use. Estimated cost \$19,453.

PLUMAS COUNTY—Silver Lake Dam No. 274. Spanish Peak Lumber Company, San Francisco, owner; earth and rockfill, 15.0 feet above streambed with a storage capacity of 650 acre-feet. Situated on Silver Creek tributary to Spanish Creek in Sec. 1, T. 24 N., R. 7 E., M. D. M., for storage purposes for logging use. Estimated cost \$2,000.

MODOC COUNTY—Boles Meadow Dam No. 145-6. G. O. Tranzetta, Alturas, owner; rockfill, 10 feet above streambed. Situated on Boles Meadow tributary to Triangle Ranch in Sec. 15, T. 45 N., R. 9 E., M. D. M., for storage purposes for irrigation use.

FRESNO COUNTY—Ten Mile Dam No. 692. Sanger Lumber Company, Sanger, owner; multiple arch, 48 feet above streambed with a storage capacity of 1410 acre-feet. Situated on Ten Mile Creek tributary to

Kings River in Sec. 14, T. 13 S., R. 28 E., M. D. M., for storage purposes for logging use. Estimated cost \$90,000.

NAPA COUNTY—Veterans' Home Storage Dam No. 1-14. State of California Veterans' Home, Veterans' Home, Napa County, owner; earthenfill, 43 feet above streambed with a storage capacity of 39 acre-feet. Situated on Overholt Creek tributary to Napa River for storage purposes for fire protection and irrigation use.

RIVERSIDE COUNTY—Railroad Canyon Dam No. 318. Temescal Water Company, Corona, owner; earthenfill, 70 feet above streambed with a storage capacity of 12,000 acre-feet. Situated on San Jacinto tributary to Lake Elsinore and Santa Ana River in Sec. 2, T. 6 S., R. 4 W., S. B. M., for storage purposes for irrigation use. Estimated cost, \$268,500.

RIVERSIDE COUNTY—Lee Lake Dam No. 818-2. Temescal Water Company, Corona, owner; earthenfill, 20 feet above streambed with a storage capacity of 1600 acre-feet. Situated on Temescal Creek tributary to Santa Ana River in Sec. 7, T. 5 S., R. 15 W., S. B. M., for storage purposes for irrigation use. Estimated cost \$26,778.62.

TUOLUMNE COUNTY—Standard Log Pond Dam No. 144-2. Pickering Lumber Company, Standard, owner; gravity, 20 feet above streambed with a storage capacity of 71 acre-feet. Situated on North Fork of Curtis Creek tributary to Curtis Creek in Sec. 3, T. 1 N., R. 15 E., M. D. M., for storage purposes for logging use. Estimated cost \$82,000.

TUOLUMNE COUNTY—Tuolumne Log Pond Dam No. 144-3. Pickering Lumber Company, Standard, owner; gravity, 20 feet above streambed with a storage capacity of 120 acre-feet. Situated on Turnback Creek tributary to Tuolumne River in Sec. 8, T. 1 N., R. 16 E., M. D. M., for storage purposes for log pond use. Estimated cost \$102,000.

NEVADA COUNTY—Lake Angela Dam No. 311. Central Pacific Railway Company, San Francisco, owner; earth and concrete, 6 feet above streambed with a storage capacity of 135 acre-feet. Situated on a small stream tributary to South Yuba River, in Sec. 17, T. 17 N., R. 15 E., M. D. M., for storage and diversion purposes for locomotive and domestic use.

NEVADA COUNTY—Crystal Lake Dam No. 311-2. Central Pacific Railway Company, San Francisco, owner; gravity, 9.5 feet above streambed with a storage capacity of 200 acre-feet. Situated on a small creek tributary to South Fork Yuba River in Sec. 24, T. 17 N., R. 12 E., M. D. M., for storage and diversion purposes for locomotive and domestic use. Estimated cost \$14,660.

PLACER COUNTY—Lake Mary Dam No. 311-3. Central Pacific Railway Company, San Francisco, owner; earthenfill, 9 feet above streambed with a storage capacity of 172 acre-feet. Situated on a small stream tributary to South Yuba River in Sec. 20, T. 17 N., R. 15 E., M. D. M., for storage and diversion purposes for locomotive and domestic use. Estimated cost \$22,353.

PLACER COUNTY—Putts Lake, West Dam No. 311-4. Central Pacific Railway Company, San Francisco, owner; earthenfill, 12 feet above streambed with a storage capacity of 249 acre-feet. Situated on Blue Canyon Creek tributary to North Fork of North Fork of American River in Sec. 36, T. 17 N., R. 11 E., M. D. M., for storage and diversion purposes for locomotive and domestic use. Estimated cost \$12,569.

PLACER COUNTY—Putts Lake East Dam No. 311-5. Central Pacific Railway Company of San Francisco, owner; earthenfill, 4 feet above streambed with a storage capacity of 249 acre-feet. Situated on Blue Canon Creek tributary to North Fork of North Fork of American River in Sec. 36, T. 17 N., R. 11 E., M. D. M., for storage and diversion purposes for locomotive and domestic use. Estimated cost \$3,360.

PLACER COUNTY—Campbells Lake Upper Dam No. 311-6. Central Pacific Railway Company, San Francisco, owner; masonry, 11 feet above streambed with a storage capacity of 96.7 acre-feet. Situated on a stream tributary to South Fork of Yuba River in Sec. 30, T. 17 N., R. 13 E., M. D. M., for storage and diversion purposes for locomotive and domestic use.

PLACER COUNTY—Campbells Lake Lower Dam No. 311-7. Central Pacific Railway Company, San Francisco, owner; gravity, 12 feet above streambed with a storage capacity of 19.15 acre-feet. Situated on a small creek tributary to South Fork of Yuba River in Sec. 30, T. 17 N., R. 13 E., M. D. M., for storage and diversion purposes for locomotive and domestic use. Estimated cost \$34,350.

PLACER AND EL DORADO COUNTIES—Diversión Dam No. 324. North Fork Ditch Company, Sacramento, owner; gravity, 16 feet above streambed. Situated on North Fork American River tributary to

American River in Sec. 23, T. 12 N., R. 8 E., M. D. M., for diversion purposes for irrigation use. Estimated cost \$75,000.

SACRAMENTO AND PLACER COUNTIES—Hinkle Dam No. 324-3. North Fork Ditch Company, Sacramento, owner; earthenfill, 14.6 feet above streambed with a storage capacity of 47 acre-feet. Situated on North Fork Canal in Sec. 24, T. 10 N., R. 7 E., for regulation purposes for irrigation use. Estimated cost \$4,500.

MODOC COUNTY—Big Sage Dam No. 55. Hot Spring Valley Irrigation District, Alturas, for storage purposes for irrigation use.

LOS ANGELES COUNTY—Sawtelle Pressure Break Dam No. 6-21. City of Los Angeles, Los Angeles, owner; earthenfill, 22 feet high with a storage capacity of 109.88 acre-feet. Situated on no stream in T. 1 S., R. 15 W., S. B. M., for regulation purposes for municipal use. Estimated cost \$63,156.

LOS ANGELES COUNTY—Stone Canyon Dam No. 6-25. City of Los Angeles, Los Angeles, owner; earthenfill, 154 feet above streambed with a storage capacity of 109.88 acre-feet. Situated on Stone Canyon, T. 1 S., R. 15 W., S. B. M., for storage purposes for municipal use. Estimated cost \$613,727.

LOS ANGELES COUNTY—Maclay Dam No. 6-9. City of Los Angeles, Los Angeles, owner; earth reservoir, 15.14 feet high with a storage capacity of 18.75 acre-feet. Situated on no stream in Sec. 23, T. 3 N., R. 15 W., S. B. M., for storage purposes for municipal use. Estimated cost \$22,800.

TUOLUMNE COUNTY—Early Intake Dam No. 9. City and County of San Francisco, San Francisco, owner; arch, 41 feet above streambed with a storage capacity of 115 acre-feet. Situated on Tuolumne River tributary to San Joaquin River in Sec. 11, T. 1 S., R. 18 E., M. D. M., for diversion purposes for domestic and power use. Estimated cost \$500,000.

TUOLUMNE COUNTY—Eleanor Dam No. 9-2. City and County of San Francisco, San Francisco, owner; arch, 57 feet above streambed with a storage capacity of 27,800 acre-feet. Situated on Eleanor Creek tributary to Cherry Creek and Tuolumne River in Sec. 2, T. 1 N., R. 15 E., M. D. M., for storage purposes for municipal and power use. Estimated cost \$320,000.

TUOLUMNE COUNTY—O'Shaughnessy Dam No. 9-5. City and County of San Francisco, San Francisco, owner; arched gravity, 220 feet above streambed with a storage capacity of 266,000 acre-feet. Situated on Tuolumne River tributary to San Joaquin River in Sec. 16, T. 1 N., R. 20 E., M. D. M., for storage purposes for municipal and power use. Estimated cost \$7,000,000.

TUOLUMNE COUNTY—Priest Dam No. 9-6. City and County of San Francisco, San Francisco, owner; arch and earthenfill, 140 feet above streambed with a storage capacity of 2350 acre-feet. Situated on Rattlesnake Creek tributary to Moccasin Creek and Tuolumne River in Sec. 31, T. 1 S., R. 16 E., M. D. M., for diversion purposes for municipal power use. Estimated cost \$1,000,000.

LOS ANGELES COUNTY—Girard Dam No. 6-10. City of Los Angeles, Los Angeles, owner; earthenfill, 28.2 feet high with a storage capacity of 40.8 acre-feet. Situated on no stream in Sec. 24, T. 1 N., R. 17 W., S. B. M., for storage purposes for municipal use. Estimated cost \$40,830.

LOS ANGELES COUNTY—Solano Dam No. 6-22. City of Los Angeles, Los Angeles, owner; earthenfill, 19.42 feet high with a storage capacity of 16.53 acre-feet. Situated on no stream in T. 1 S., R. 13 W., S. B. M., for storage purposes for municipal use.

MODOC COUNTY—Essex Dam No. 121-2. S. X. Ranch, Alturas, owner; earthenfill, 37 feet above streambed with a storage capacity of 2000 acre-feet. Situated on no stream in T. 43 N., R. 17 E., M. D. M., for storage purposes for irrigation use.

NEVADA COUNTY—Neece and West Dam No. 308. You Bet Mining Company, Denver, Colorado, owner; log type. Situated on Birdseye Canyon in Sec. 31, T. 16 N., R. 10 E., for storage purposes for debris use.

NEVADA COUNTY—Nevada Dam No. 308-2. You Bet Mining Company, Denver, Colorado, owner; log type. Situated on Greenhorn Creek tributary to Bear River in Sec. 2, T. 15 N., R. 9 E., for storage purposes for debris use.

NEVADA COUNTY—Chalk Bluff Dam No. 308-3. You Bet Mining Company, Denver, Colorado, owner; earthenfill, with a storage capacity of 42 acre-feet. Situated on no stream tributary to Missouri Canyon in Sec. 31, T. 6 N., R. 10 E., M. D. M.

NEVADA COUNTY—Wallopa Dam No. 308-4. You Bet Mining Company, Denver, Colorado, owner. Situated on North Fork American River tributary to

ated on no stream tributary to Birdseye Canyon in Sec. 6, T. 15 N., R. 10 E., M. D. M., for storage purposes for mining use.

SIERRA COUNTY—Upper Sardine Lake Dam No. 294-3. E. A. and J. O. Hayes, San Jose, owner; rock fill, 23 feet above streambed. Situated on outlet to Sardine Lake tributary to North Fork of Yuba River in Sec. 9, T. 20 N., R. 12 E., M. D. M., for storage purposes for power use.

FRESNO COUNTY—Bear Creek Diversion Dam No. 104. Southern California Edison Company, Los Angeles, owner; arch, 45 feet above streambed with a storage capacity of 103 acre-feet. Situated on Big Creek tributary to San Joaquin River in Sec. 12, T. 7 E., R. 27 E., M. D. M., for diversion purposes for power use.

KERN COUNTY—Diversion Dam No. 1 No. 104-2. Southern California Edison Company, Los Angeles, owner; gravity, 28 feet above streambed. Situated on Kern River in Sec. 5, T. 28 S., R. 31 E., M. D. M., for diversion purposes for power use.

TULARE COUNTY—Diversion Dam No. 3 No. 104-3. Southern California Edison Company, Los Angeles, owner; gravity, 17 feet above streambed with a storage capacity of 49 acre-feet. Situated on Kern River in Sec. 12, T. 25 S., R. 32 E., M. D. M., for diversion purposes for power use.

FRESNO COUNTY—Big Creek Diversion Dam No. 4 No. 104-4. Southern California Edison Company, Los Angeles, owner; arch, 63 feet above streambed with a storage capacity of 100 acre-feet. Situated on Big Creek tributary to San Joaquin River in Sec. 28, T. 8 S., R. 25 E., M. D. M., for diversion purposes for power use.

FRESNO COUNTY—Big Creek Diversion No. 5 Dam No. 104-5. Southern California Edison Company, Los Angeles, owner; arch, 44 feet above streambed with a storage capacity of 42 acre-feet. Situated on Big Creek tributary to San Joaquin River in Sec. 26, T. 8 S., R. 24 E., M. D. M., for diversion purposes for power use.

FRESNO AND MADERA COUNTIES—Big Creek Dam No. 6 No. 104-6. Southern California Edison Company, Los Angeles, owner; arch, 130 feet above streambed with a storage capacity of 992 acre-feet. Situated on San Joaquin River in Sec. 27, T. 8 S., R. 24 E., M. D. M., for diversion purposes for power use.

TULARE COUNTY—Eagle Lake Dam No. 104-7. Southern California Edison Company, Los Angeles, owner; gravity, 14 feet above streambed with a storage capacity of 209 acre-feet. Situated on East Fork tributary to Kaweah River in Sec. 28, T. 17 S., R. 31 E., M. D. M., for storage purposes for power use.

KERN COUNTY—Headwork and Embankment Dam No. 104-8. Southern California Edison Company, Los Angeles, owner; earthen, 11.5 feet above streambed with a storage capacity of 92 acre-feet. Situated on Kern River in Sec. 33, T. 25 S., R. 33 E., M. D. M., for storage purposes for power use.

FRESNO COUNTY—Florence Lake Dam No. 104-9. Southern California Edison Company, Los Angeles, owner; multiple arch, 149 feet above streambed with a storage capacity of 64,406 acre-feet. Situated on South Fork of San Joaquin River tributary to San Joaquin River in Sec. 36, T. 7 S., R. 27 E., M. D. M., for storage and diversion purposes for power use.

FRESNO COUNTY—Huntington Lake Reservoir Dam No. 1 No. 104-10A. Southern California Edison Company, Los Angeles, owner; gravity arch, 155 feet above streambed. Situated on Big Creek tributary to San Joaquin River in Sec. 14, T. 8 S., R. 22 E., M. D. M., for storage and diversion purposes for power use.

FRESNO COUNTY—Huntington Lake No. 2 Dam No. 104-10B. Southern California Edison Company, Los Angeles, owner; arch gravity, 89½ feet above streambed with a storage capacity of 88,834 acre-feet. Situated on Big Creek tributary to San Joaquin River in Sec. 15, T. 8 S., R. 25 E., M. D. M., for storage and diversion purposes for power use.

FRESNO COUNTY—Huntington Lake No. 3A Dam No. 104-10C. Southern California Edison Company, Los Angeles, owner; gravity, 7 feet above streambed with a storage capacity of 88,834 acre-feet. Situated on Big Creek tributary to San Joaquin River in Sec. 22, T. 8 S., R. 25 E., M. D. M., for storage and diversion purposes for power use.

FRESNO COUNTY—Huntington Lake Reservoir No. 3 No. 104-10D. Southern California Edison Company, Los Angeles, owner; gravity arch, 84 feet above streambed with a storage capacity of 88,834 acre-feet. Situated on Big Creek tributary to San Joaquin River

in Sec. 22, T. 8 S., R. 25, for storage and diversion purposes for power use.

TULARE COUNTY—Lady Franklin Lake Dam No. 104-11. Southern California Edison Company, Los Angeles, owner; buttress, 20 feet above streambed with a storage capacity of 167 acre-feet. Situated on East Fork tributary to Kaweah in Sec. 25, T. 17 S., R. 31 E., M. D. M., for storage purposes for power use.

FRESNO COUNTY—Mono Creek Diversion Dam No. 104-12. Southern California Edison Company, Los Angeles, owner; arch, 40 feet above streambed with a storage capacity of 45 acre-feet. Situated on Mono Creek tributary to San Joaquin River in Sec. 35, T. 6 S., R. 27 E., M. D. M., for diversion purposes for power use.

TULARE COUNTY—North Fork of Tule River Diversion Dam No. 104-13. Southern California Edison Company, Los Angeles, owner; gravity, 12 feet above streambed. Situated on North Fork of Middle Fork tributary to Tule River in Sec. 27, T. 20 S., R. 30 E., M. D. M., for diversion purposes for power use.

SAN BERNARDINO COUNTY—Petty Regulation Reservoir for Mill Creek No. 3 Dam No. 104-14. Southern California Edison Company, Los Angeles, owner; earthen, 64 feet above streambed. Situated on conduit of Mill Creek tributary to Santa Ana River in Sec. 17, T. 1 S., R. 1 W., S. B. M., for regulation purposes for power use.

SAN BERNARDINO COUNTY—Santa Ana Power House No. 1 Dam No. 104-16. Southern California Edison Company, Los Angeles, owner; gravity, 20 feet above streambed with a storage capacity of 4 acre-feet. Situated on conduit tributary to Santa Ana River in Sec. 19, T. 1 N., R. 1 W., S. B. M., for storage purposes for power use.

SAN BERNARDINO COUNTY—Santa Ana River Diversion Dam No. 104-17. Southern California Edison Company, Los Angeles, owner; gravity, 13 feet above streambed. Situated on Santa Ana River in Sec. 19, T. 1 N., R. 1 W., S. B. M., for diversion purposes for power use.

FRESNO COUNTY—Shaver Lake Dam No. 104-18. Southern California Edison Company, Los Angeles, owner; concrete gravity, 170 feet above streambed with a storage capacity of 135,283 acre-feet. Situated on Stevenson Creek tributary to San Joaquin River in Sec. 12, T. 9 S., R. 24 E., M. D. M., for storage and diversion purposes for power use.

TULARE COUNTY—Silver Lake Dam No. 104-19. Southern California Edison Company, Los Angeles, owner; buttress, 18 feet above streambed with a storage capacity of 162 acre-feet. Situated on East Fork tributary to Kaweah River in Sec. 24, T. 17 S., R. 31 E., M. D. M., for storage purposes for power use.

TULARE COUNTY—Upper Monarch Lake Dam No. 104-20. Southern California Edison Company, Los Angeles, owner; buttress, 21½ feet above streambed with a storage capacity of 31 acre-feet. Situated on East Fork tributary to Kaweah River in Sec. 13, T. 17 S., R. 31 E., M. D. M., for storage purposes for power use.

TULARE COUNTY—Kaweah No. 2 Dam No. 104-21. Southern California Edison Company, Los Angeles, owner; rockfill, 26 feet above streambed with a storage capacity of 11 acre-feet. Situated on conduit to Kaweah tributary to Kaweah River in Sec. 3, T. 17 S., R. 29 E., M. D. M., for regulation purposes for power use.

FRESNO COUNTY—Stevenson Creek Test Dam No. 691. Committee on Arch Dam Investigation, Los Angeles, owner; arch, 60 feet above streambed with a storage capacity of 3.4 acre-feet. Situated on Stevenson Creek tributary to San Joaquin River in Sec. 11, T. 9 S., R. 24 E., M. D. M., for experimental purposes.

SAN DIEGO COUNTY—Main Sweetwater Dam No. 840-A. Sweetwater Corporation, San Francisco, owner; arch, 90 feet above streambed with a storage capacity of 30,393 acre-feet. Situated on Sweetwater River in Rancho de la Nacion for storage purposes for domestic, irrigation, industrial and municipal uses. Estimated cost \$605,000.

SAN DIEGO COUNTY—Sweetwater South Dike Dam No. 840-B. Sweetwater Water Corporation, San Francisco, owner; earthen, 32 feet above streambed with a storage capacity of 30,393 acre-feet. Situated on no stream, tributary to Sweetwater River in Sec. 20, T. 17 S., R. 1 W., S. B. M., for storage purposes for domestic, irrigation, industrial and municipal uses. Estimated cost \$47,000.

SAN DIEGO COUNTY—Sweetwater Stilling Pool Dam No. 840-2. Sweetwater Water Corporation, San Francisco, owner; buttress, 16 feet above streambed. Situated on Sweetwater River in Rancho de la Nacion

for storage purposes for stilling pool use. Estimated cost \$13,600.

INYO COUNTY—Big Pine Dam No. 6-11. City of Los Angeles, Los Angeles, owner; rock crib, with a storage capacity of 1071 acre-feet. Situated on Big Pine Creek tributary to Owens River in Sec. 33, T. 9 S., R. 32 E., M. D. M., for storage purposes for power and irrigation use.

LOS ANGELES COUNTY—Drinkwater Dam No. 6-16. City of Los Angeles, Los Angeles, owner; earthfill, 65 feet above streambed with a storage capacity of 92.5 acre-feet. Situated on Drinkwater Canyon tributary to San Francisco Creek in Sec. 11, T. 5 N., R. 16 W., S. 13 M., for storage purposes for power and municipal use. Estimated cost \$120,000.

ALPINE COUNTY—Silver Valley Dam No. 99. Emma Rose and Hobart Estate Company, San Francisco, owners; earthfill, 45 feet above streambed with a storage capacity of 4600 acre-feet. Situated on North Fork tributary to Stanislaus River in Sec. 9, T. 7 N., R. 18 E., M. D. M., for storage purposes for power, domestic and irrigation use. Estimated cost \$106,767.

CALAVERAS COUNTY—Hunter Dam No. 99-2. Emma Rose and Hobart Estate Company, San Francisco, owners; arch, 50 feet above streambed with a storage capacity of 200 acre-feet. Situated on Mill Creek tributary to Stanislaus River in Sec. 18, T. 4 N., R. 15 E., M. D. M., for storage and diversion purposes for domestic, irrigation and power uses. Estimated cost, \$38,000.

CALAVERAS COUNTY—Ross Dam No. 99-3. Emma Rose and Hobart Estate Company, San Francisco, owners; arch, 26 feet above streambed with a storage capacity of 85 acre-feet. Situated on San Domingo Creek tributary to Calaveras River in Sec. 14, T. 3 N., R. 13 E., M. D. M., for storage and diversion purposes for power, irrigation and domestic use. Estimated cost \$51,195.

TUOLUMNE COUNTY—Union Dam No. 99-5. Emma Rose and Hobart Estate Company, San Francisco, owners; earthfill, 32 feet above streambed with a storage capacity of 2000 acre-feet. Situated on North Fork tributary to Stanislaus River in Sec. 28, T. 7 N., R. 18 E., M. D. M., for storage purposes for domestic, irrigation and power uses.

ALPINE COUNTY—Utica Dam No. 99-6. Emma Rose and Hobart Estate Company, San Francisco, owners; rockfill, 52 feet above streambed with a storage capacity of 2400 acre-feet. Situated on North Fork tributary to Stanislaus River in Sec. 21, T. 7 N., R. 18 E., M. D. M., for storage purposes for domestic, irrigation and power uses. Estimated cost \$54,275.

SAN MATEO COUNTY—Filoli Dam No. 617. Filoli Estate, San Mateo, owner; earthfill, 30 feet above streambed with a storage capacity of 1.3 acre-feet. Situated on branch of Laguna Creek tributary to San Mateo Creek in Sec. 30, T. 5 S., R. 4 W., M. D. M., for storage purposes for domestic and irrigation use.

BUTTE COUNTY—De Sable Forebay Dam No. 97-5. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 49½ feet high with a storage capacity of 280 acre-feet. Situated on Butte Creek canal in Sec. 11, T. 23 N., R. 3 E., M. D. M., for regulation purposes for power use. Estimated cost \$163,355.

BUTTE COUNTY—Kunkle Dam No. 97-7. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 44 feet above streambed with a storage capacity of 252½ acre-feet. Situated on Kunkle Creek tributary to West Branch of North Fork of Feather River in Sec. 24, T. 2 N., R. 1 E., M. D. M., for regulation purposes for power use. Estimated cost \$81,110.

NEVADA COUNTY—Culvertson Dam No. 97-17. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 14 feet above streambed with a storage capacity of 1079 acre-feet. Situated on branch of Texas Creek tributary to South Yuba River in Sec. 15, T. 18 N., R. 12 E., M. D. M., for storage purposes for power use. Estimated cost \$3,580.

PLACER COUNTY—Lake Valley Dam No. 97-32. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 58 feet above streambed with a storage capacity of 127 acre-feet. Situated on branch of North Fork of American River tributary to American River in Sec. 35, T. 17 N., R. 12 E., M. D. M., for storage purposes for power and irrigation use. Estimated cost \$203,648.

NEVADA COUNTY—Lake Van Norden Dam No. 97-33. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 25 feet above streambed with a storage capacity of 5874 acre-feet. Situated on South Yuba River tributary to Yuba River in Sec. 23, T. 17 N., R. 14 E., M. D. M., for storage purposes for power use. Estimated cost \$78,161.

NEVADA COUNTY—Lost River Dam No. 97-34. Pacific Gas & Electric Company, San Francisco, owner; rock crib, 11 feet above streambed with a storage capacity of 250 acre-feet. Situated on unnamed creek tributary to Fordyce Creek and South Yuba River in Sec. 2, T. 17 N., R. 13 E., M. D. M., for storage purposes for power use. Estimated cost \$600.

PLACER COUNTY—Lower Peak Dam No. 97-37. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 20 feet above streambed with a storage capacity of 45 acre-feet. Situated on unnamed stream tributary to South Yuba River in Sec. 30, T. 17 N., R. 14 E., M. D. M., for storage purposes for power use. Estimated cost \$12,672.

EL DORADO COUNTY—Echo Lake Dam No. 97-52. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 5 feet above streambed with a storage capacity of 1900 acre-feet. Situated on branch of Upper Truckee River tributary to Lake Tahoe in Sec. 1, T. 11 N., R. 17 E., M. D. M., for storage purposes for power use. Estimated cost \$10,000.

EL DORADO COUNTY—Medley Lakes Dam No. 97-57. Pacific Gas & Electric Company, San Francisco, owner; masonry, 11 feet above streambed with a storage capacity of 3350 acre-feet. Situated on tributary of South Fork of American River tributary to American River in Sec. 30, T. 12 N., R. 17 E., M. D. M., for storage purposes for power use. Estimated cost \$35,000.

AMADOR COUNTY—Amador Dam No. 97-60. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 14 feet above streambed with a storage capacity of 8.1 acre-feet. Situated on no stream in Sec. 6, T. 6 N., R. 11 E., M. D. M., for regulation purposes for mining, irrigation and domestic use. Estimated cost \$2,400.

AMADOR COUNTY—Tabeaud Dam No. 97-67. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 112 feet above streambed with a storage capacity of 1158 acre-feet. Situated on tributary of Jackson Creek tributary to Dry Creek in Sec. 28, T. 6 N., R. 12 E., M. D. M., for storage purposes for power use. Estimated cost \$219,951.

TUOLUMNE COUNTY—Sand Bar Dam No. 97-81. Pacific Gas & Electric Company, San Francisco, owner; rock crib, 26 feet above streambed with a storage capacity of 100 acre-feet. Situated on North Fork of Stanislaus River tributary to Stanislaus River in Sec. 24, T. 4 N., R. 16 E., M. D. M., for storage and diversion purposes for power use. Estimated cost \$52,700.

TUOLUMNE COUNTY—Upper Strawberry Dam No. 97-84. Pacific Gas & Electric Company, San Francisco, owner; crib, 28 feet above streambed with a storage capacity of 1180 acre-feet. Situated on South Fork Stanislaus River tributary to Stanislaus River in Sec. 14, T. 1 N., R. 18 E., M. D. M., for storage purposes for power and irrigation use. Estimated cost \$31,430.

SHASTA COUNTY—Baldwin Dam No. 97-85. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 19 feet above streambed with a storage capacity of 100 acre-feet. Situated on no stream in Sec. 33, T. 31 N., R. 1 E., M. D. M., for regulation purposes for power use. Estimated cost \$11,650.

SHASTA COUNTY—Buckhorn Dam No. 97-86. Pacific Gas & Electric Company, San Francisco, owner; earth and rock fill, 12 feet above streambed with a storage capacity of 400 acre-feet. Situated on tributary of North Cow Creek tributary to Sacramento River in Sec. 19, T. 33 N., R. 2 E., M. D. M., for storage purposes for power use. Estimated cost \$300.

SHASTA COUNTY—Lake Nora Dam No. 97-93. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 10 feet high with a storage capacity of 14.9 acre-feet. Situated on no stream in Sec. 4, T. 30 N., R. 1 E., M. D. M., for regulation purposes for power use. Estimated cost \$10,100.

SIERRA COUNTY—Upper Sardine Lake Dam No. 294-3. E. A. and J. O. Hayes, San Jose, owners; rockfill, 25 feet above streambed. Situated on outlet of Sardine Lake tributary to North Fork Yuba River in Sec. 9, T. 20 N., R. 12 E., M. D. M., for storage purposes for mining use.

MODOC COUNTY—Ess Ex Dam No. 121-2. S. X. Ranch Company, Alturas, owner; earthfill, 37 feet high with a storage capacity of 2000 acre-feet. Situated on no stream in T. 43 N., R. 17 E., M. D. M., for storage purposes for irrigation use.

NAPA COUNTY—Villa Del Rey Dam No. 412. J. G. Eccleston, St. Helena, owner; earthfill, 35 feet high with a storage capacity of 30 acre-feet. Situated on no creek for storage purposes for irrigation use.

SAN FRANCISCO COUNTY—Lombard St. Reservoir Dam No. 10-5. Spring Valley Water Company,

San Francisco, owner; earthfill, 17.5 feet high with a storage capacity of 8.3 acre-feet. Situated on no stream for distributing purposes for domestic use.

AMADOR COUNTY—Kennedy Dam No. 477. Kennedy Mining & Milling Company, San Francisco, owner; multiple arch, 50 feet above streambed with a storage capacity of 8 acre-feet. Situated on a ravine for storage purposes for debris use. Estimated cost \$74,294.25.

SAN MATEO COUNTY—Emerald Lake No. 1 Dam No. 612. Emerald Lake Country Club, Redwood City, owner; earth and rockfill, 41 feet above streambed with a storage capacity of 45 acre-feet. Situated on no stream for storage purposes for recreational use.

SAN MATEO COUNTY—Emerald Lake No. 2 Dam No. 612-2. Leonard & Holt, San Francisco, owners; earthfill, 21½ feet above streambed with a storage capacity of 42 acre-feet. Situated on no stream, for storage purposes for recreational use. Estimated cost \$8,500.

ALPINE COUNTY—Scott Lake Dam No. 511. Dressler, Settelmeyer & Neddernrip, Minden, Nevada, owners; earthfill, 23.5 feet above streambed with a storage capacity of 600 acre-feet. Situated on Scott Creek tributary to West Carson River in Sec. 2, T. 10 N., R. 18 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$7,500.

ALPINE COUNTY—Red Lake Dam No. 511-3. Dressler, Settelmeyer & Neddernrip, Minden, Nevada, owners; earthfill, 22 feet above streambed with a storage capacity of 900 acre-feet. Situated on Red Lake Creek tributary to West Carson River in Sec. 23, T. 10 N., R. 18 E., M. D. M., for storage purposes for irrigational use. Estimated cost \$14,000.

EL DORADO COUNTY—Fallen Leaf Dam No. 461. Anita M. Baldwin, Los Angeles, owner; gravity, 2 feet above streambed with a storage capacity of 1700 acre-feet. Situated on Taylor Creek tributary to Lake Tahoe in Sec. 1, T. 12 N., R. 17 E., M. D. M., for storage and diversion purposes for power, domestic and recreational uses. Estimated cost \$4,500.

LOS ANGELES COUNTY—Harold Dam No. 57-2. Palmdale Irrigation District, Palmdale, owner; earthfill, 35 feet above streambed with a storage capacity of 7424 acre-feet. Located in Sec. 3, T. 5 N., R. 12 W., S. B. M., for storage purposes for irrigation and domestic use. Estimated cost \$75,000.

LOS ANGELES COUNTY—Girard Dam No. 6-10. City of Los Angeles, Los Angeles, owner; earth rear, 28.2 feet high with a storage capacity of 40.5 acre-feet. Situated on no stream in Sec. 24, T. 1 N., R. 17 W., S. B. M., for storage purposes for municipal use. Estimated cost \$40,830.

LOS ANGELES COUNTY—Chatsworth No. 2 Dam No. 6-4A. City of Los Angeles, Los Angeles, owner; earthfill, 27 feet above streambed with a storage capacity of 7400 acre-feet. Situated on no stream tributary to Los Angeles River in Ex Mission de San Fernando for storage purposes for municipal use. Estimated cost \$202,200.

LOS ANGELES COUNTY—Chatsworth No. 3 Dam No. 6-4C. City of Los Angeles, Los Angeles, owner; earthfill, 37 feet above streambed with a storage capacity of 7400 acre-feet. Situated on canyon tributary to Los Angeles River in Ex Mission de San Fernando for storage purposes for municipal use. Estimated cost \$126,500.

ROUTE COUNTY—Sutter-Butte Diversion Dam No. 343. Sutter-Butte Canal Company, Gridley, owner; crib, 9 feet above streambed with a storage capacity of over 10 acre-feet. Situated on Feather River tributary to Sacramento River in Sec. 23, T. 19 N., R. 3 E., M. D. M., for diversion purposes for irrigation use.

CONTRA COSTA COUNTY—Antioch Dam No. 3. Town of Antioch, Antioch, owner; earthfill, 48 feet above streambed with a storage capacity of 520 acre-feet. Situated on an unnamed creek tributary to San Joaquin River in Sec. 36, T. 2 N., R. 1 E., M. D. M., for storage purposes for municipal use. Estimated cost \$12,500.

MADERA COUNTY—South Fork Dam No. 95-13. San Joaquin Light and Power Corporation, Fresno, owner; gravity, 20 feet above streambed with a storage capacity of 18 acre-feet. Situated on South Fork of North Fork of San Joaquin River tributary to San Joaquin River in Sec. 19, T. 8 S., R. 23 E., M. D. M., for storage purposes for power use.

FRESNO COUNTY—Bald Afterbay Dam No. 95-2. San Joaquin Light and Power Corporation, Fresno, owner; arch, 71 feet above streambed with a storage capacity of 125 acre-feet. Situated on North Fork of Kings River tributary to Kings River in Sec. 12, T. 12 S., R. 26 E., M. D. M., for storage purposes for afterbay pond use. Estimated cost, \$250,000.

MADERA COUNTY—Crane Valley Dam No. 95-3. San Joaquin Light and Power Company, Fresno, owner; earth and rock fill, 130 feet above streambed with a storage capacity of 45,000 acre-feet. Situated on North Fork of San Joaquin River tributary to San Joaquin River in Sec. 25, T. 7 S., R. 22 E., for storage purposes for power use. Estimated cost, \$1,450,000.

MADERA COUNTY—No. 1 Forebay Dam No. 95-4. San Joaquin Light and Power Corporation, Fresno, owner; earthfill, with a storage capacity of 50 acre-feet. Situated on No. 1 ditch in Sec. 7, T. 9 S., R. 23 E., M. D. M., for regulation purposes for power use.

MADERA COUNTY—No. 2 Forebay Dam No. 95-5. San Joaquin Light and Power Corporation, Fresno, owner; arch, 27 feet above streambed with a storage capacity of 11 acre-feet. Situated on No. 2 ditch in Sec. 30, T. 8 S., R. 23 E., M. D. M., for regulation purposes for power use.

MADERA COUNTY—No. 3 Forebay Dam No. 95-6. San Joaquin Light and Power Corporation, Fresno, owner; earthfill, 30 feet above streambed with a storage capacity of 20 acre-feet. Situated on ditch in Sec. 11, T. 8 S., R. 22 E., M. D. M., for regulation purposes for power use.

KERN COUNTY—Kern Canyon Diversion No. 95-7. San Joaquin Light and Power Corporation, Fresno, owner; gravity, 16 feet above streambed with a storage capacity of 27 acre-feet. Situated on Kern River in Sec. 29, T. 28 S., R. 30 E., M. D. M., for diversion purposes for power use. Estimated cost \$69,000.

FRESNO AND MADERA COUNTIES—Kerckhoff Diversion Dam No. 95-8. San Joaquin Light and Power Corporation, Fresno, owner; arch, 97 feet above streambed with a storage capacity of 4200 acre-feet. Situated on San Joaquin River in Sec. 24, T. 9 S., R. 22 E., M. D. M., for diversion purposes for power use. Estimated cost \$812,500.

MARIPOSA COUNTY—Mountain King Diversion Dam No. 95-11. San Joaquin Light and Power Corporation, Fresno, owner; gravity, 5.0 feet above streambed with a storage capacity of 14 acre-feet. Situated on Merced River tributary to San Joaquin River in Sec. 1, T. 4 S., R. 17 E., M. D. M., for diversion purposes for power use.

MADERA COUNTY—Manzanita Lake Dam No. 95-12. San Joaquin Light and Power Corporation, Fresno, owner; arch, 28 feet above streambed with a storage capacity of 200 acre-feet. Situated on North Fork of North Fork of San Joaquin River tributary to San Joaquin River in Sec. 12, T. 8 S., R. 22 E., M. D. M., for storage purposes for power use.

FRESNO COUNTY—Bald Diversion Dam No. 95. San Joaquin Light and Power Corporation, Fresno, owner; arch, 65 feet above streambed with a storage capacity of 185 acre-feet. Situated on North Fork Kings River tributary to Kings River in Sec. 3, T. 12 S., R. 27 E., for diversion purposes for power use. Estimated cost \$158,100.

SANTA BARBARA COUNTY—Gibraltar Dam No. 11. City of Santa Barbara, Santa Barbara, owner; arch, 140 feet above streambed with a storage capacity of 13,746 acre-feet. Situated on Santa Ynez River in Sec. 11, T. 5 N., R. 27 W., S. B. M., for storage and diversion purposes for municipal use. Estimated cost \$800,000.

SANTA BARBARA COUNTY—Sheffield Reservoir Dam No. 11-2. City of Santa Barbara, Santa Barbara, owner; earthfill, 15 feet above streambed with a storage capacity of 30 acre-feet. Situated on branch of Sycamore Creek for storage purposes for municipal use. Estimated cost \$60,000.

YUBA COUNTY—Lake Francis Dam No. 97-3. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 65 feet above streambed with a storage capacity of 2410 acre-feet. Situated on Dobbins Creek tributary to Yuba River in Sec. 5, T. 17 N., R. 7 E., M. D. M., for storage purposes for power use. Estimated cost \$182,950.

PLACER COUNTY—Alta Forebay Dam No. 97-10. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 9 feet high with a storage capacity of 65 acre-feet. Situated on no stream in Sec. 36, T. 16 N., R. 11 E., M. D. M., for regulating purposes for power use. Estimated cost \$4,760.

PLACER COUNTY—Bonnie Nook Dam No. 97-13. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 18½ feet high with a storage capacity of 29 acre-feet. Located in Sec. 36, T. 16 N., R. 10 E., M. D. M., for regulating purposes for irrigation use. Estimated cost \$11,693.

PLACER COUNTY—Caperton Dam No. 97-14. Pacific Gas & Electric Company, San Francisco, owner; earthfill, 17½ feet high with a storage capacity of 10.8 acre-feet. Situated on no stream in Sec. 29, T. 12 N.,

R. 7 E., M. D. M., for regulation purposes for mining and irrigation use. Estimated cost \$8,134.

PLACER COUNTY—Clover Valley Dam No. 97-16. Pacific Gas & Electric Company, San Francisco, owner; earthenfill, 7 feet above streambed with a storage capacity of 29 acre-feet. Situated on branch of Antelope Creek tributary to Sacramento River in Sec. 28, T. 12 N., R. 7 E., M. D. M., for regulation purposes for irrigation use. Estimated cost \$12,136.

NEVADA COUNTY—Deer Creek Forebay Dam No. 97-18. Pacific Gas & Electric Company, San Francisco, owner; earthenfill, 11½ feet high with a storage capacity of 26½ acre-feet. Situated on no stream in Sec. 35, T. 17 N., R. 10 E., M. D. M., for regulation purposes for power use. Estimated cost \$21,000.

NEVADA AND PLACER COUNTIES—Gold Hill Head Dam No. 97-22. Pacific Gas & Electric Company, San Francisco, owner; gravity, 25 feet above streambed. Situated on Bear River tributary to Yuba River in Sec. 2, T. 13 N., R. 8 E., M. D. M., for diversion purposes for irrigation use. Estimated cost \$16,110.

NEVADA COUNTY—Lake Sterling Dam No. 97-30. Pacific Gas & Electric Company, San Francisco, owner; rockfill, 20 feet above streambed with a storage capacity of 164½ acre-feet. Situated on Sterling Creek tributary to Fordyce Creek in Sec. 10, T. 17 N., R. 13 E., M. D. M., for storage purposes for power use. Estimated cost \$10,000.

PLACER COUNTY—Mammoth Reservoir Dam No. 97-39. Pacific Gas & Electric Company, San Francisco, owner; earthenfill, 17 feet high with a storage capacity of 115 acre-feet. Situated on no stream in Sec. 7, T. 11 N., R. 8 E., M. D. M., for regulation purposes for irrigation use. Estimated cost \$15,326.

PLACER COUNTY—Orr Creek No. 97-42. Pacific Gas & Electric Company, San Francisco, owner; rubble, 22½ feet above streambed with a storage capacity of 27½ acre-feet. Situated on Orr Creek tributary to Dry Creek in Sec. 18, T. 13 N., R. 8 E., M. D. M., for regulation purposes for irrigation use. Estimated cost \$8,442.

EL DORADO COUNTY—American River Head Dam No. 97-51. Pacific Gas & Electric Company, San Francisco, owner; crib, 25 feet above streambed. Situated on South Fork of American River tributary to Sacramento River in Sec. 24, T. 11 N., R. 11 E., M. D. M., for diversion purposes for power use. Estimated cost \$32,000.

EL DORADO COUNTY—El Dorado Forebay Dam No. 97-53. Pacific Gas & Electric Company, San Francisco, owner; earthenfill, 82 feet above streambed with a storage capacity of 400 acre-feet. Situated on Long Canyon tributary to South Fork of American River in Sec. 25, T. 11 N., R. 12 E., M. D. M., for regulation purposes for power use. Estimated cost \$719,500.

EL DORADO COUNTY—El Dorado Head Dam No. 97-54. Pacific Gas & Electric Company, San Francisco, owner; rockfill, 10 feet above streambed. Situated on South Fork of American River tributary to Sacramento River in Sec. 29, T. 11 N., R. 15 E., M. D. M., for diversion purposes for power use. Estimated cost \$36,500.

EL DORADO COUNTY—Finnon Dam No. 97-55. Pacific Gas & Electric Company, San Francisco, owner; earthenfill, 50 feet above streambed with a storage capacity of 600 acre-feet. Situated on Jay Bird Creek tributary to South Fork of American River in Sec. 16, T. 11 N., R. 11 E., M. D. M., for storage purposes for power use. Estimated cost \$113,900.

SACRAMENTO COUNTY—Folsom Dam No. 97-56. Pacific Gas & Electric Company, San Francisco, owner; gravity, 68 feet above streambed. Situated on American River tributary to Sacramento River in Sec. 24, T. 10 N., R. 7 E., M. D. M., for diversion purposes for power use. Estimated cost \$596,379.

ALPINE COUNTY—Twin Lakes Dam No. 97-59. Pacific Gas & Electric Company, San Francisco, owner; earthenfill, 7½ feet above streambed with a storage capacity of 21,250 acre-feet. Situated on branch of Silver Fork tributary to American River in Sec. 18, T. 19 N., R. 13 E., M. D. M., for storage purposes for power use. Estimated cost \$1,089,750.

AMADOR COUNTY—Bear River Dam No. 97-61. Pacific Gas & Electric Company, San Francisco, owner; rockfill, 75 feet above streambed with a storage capacity of 6712 acre-feet. Situated on Bear River tributary to North Fork of Mokelumne River in Sec. 9, T. 8 N., R. 16 E., M. D. M., for storage purposes for power use. Estimated cost \$250,000.

AMADOR COUNTY—New York Reservoir Dam No. 97-64. Pacific Gas & Electric Company, San Francisco, owner; earthenfill, 17 feet above streambed with a storage capacity of 49 acre-feet. Situated on tributary

to Jackson Creek tributary to Dry Creek in Sec. 1, T. 6 N., R. 11 E., M. D. M., for regulation purposes for domestic and irrigation use. Estimated cost \$9,063.

AMADOR COUNTY—Petty Forebay Dam No. 97-65. Pacific Gas & Electric Company, San Francisco, owner; earthenfill, 8 feet high with a storage capacity of 12.4 acre-feet. Situated on no stream in Sec. 28, T. 6 N., R. 12 E., M. D. M., for regulation purposes for power use. Estimated cost \$48,000.

AMADOR COUNTY—Tanner Reservoir Dam No. 97-68. Pacific Gas & Electric Company, San Francisco, owner; earthenfill, 7½ feet above streambed with a storage capacity of 12.3 acre-feet. Situated on no stream in Sec. 8, T. 6 N., R. 11 E., M. D. M., for regulation purposes for domestic and mining use. Estimated cost \$9,238.

TUOLUMNE COUNTY—Kincaid Reservoir Dam No. 97-72. Sierra & San Francisco Power Company, San Francisco, owner; earthenfill, 15 feet above streambed with a storage capacity of 75 acre-feet. Situated on a small stream tributary to Curtis Creek in Sec. 9, T. 1 N., R. 15 E., M. D. M., for regulation purposes for irrigation use. Estimated cost \$5,613.

TUOLUMNE COUNTY—Matelot Dam No. 97-75. Sierra & San Francisco Power Company, San Francisco, owner; earthenfill, 13 feet high with a storage capacity of 12 acre-feet. Situated on no stream in Sec. 1, T. 2 N., R. 14 E., M. D. M., for regulation purposes for irrigation use. Estimated cost \$6,428.

TUOLUMNE COUNTY—Montezuma Dam No. 97-76. Sierra & San Francisco Power Company, San Francisco, owner; earthenfill, 9 feet high with a storage capacity of 11½ acre-feet. Situated on no stream in Sec. 30, T. 1 N., R. 14 E., M. D. M., for regulation purposes for irrigation use. Estimated cost \$3,150.

TUOLUMNE COUNTY—O'Neill Dam No. 97-77. Sierra & San Francisco Power Company, San Francisco, owner; earthenfill, 5 feet high with a storage capacity of 12 acre-feet. Situated on no stream in Sec. 4, T. 1 N., R. 14 E., M. D. M., for regulation purposes for irrigation use. Estimated cost \$3,629.

TUOLUMNE COUNTY—Phoenix Dam No. 97-78. Pacific Gas & Electric Company, San Francisco, owner; earth and masonry, 30½ feet above streambed with a storage capacity of 12½ acre-feet. Situated on Sullivan Creek tributary to Woods Creek in Sec. 28, T. 2 N., R. 15 E., M. D. M., for regulation purposes for irrigation and domestic use. Estimated cost \$36,490.

TUOLUMNE COUNTY—Racetrack Reservoir No. 97-79. Sierra & San Francisco Power Company, San Francisco, owner; earthenfill, 6 feet high with a storage capacity of 6 acre-feet. Situated on no stream in Sec. 26, T. 2 N., R. 14 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$825.

TUOLUMNE COUNTY—Relief Dam No. 97-80. Sierra & San Francisco Power Company, San Francisco, owner; rockfill, 130 feet above streambed with a storage capacity of 15,122 acre-feet. Situated on Relief Creek tributary to Middle Fork Stanislaus River in Sec. 13, T. 5 N., R. 20 E., M. D. M., for storage purposes for power use. Estimated cost \$850,402.

TUOLUMNE COUNTY—San Diego Reservoir No. 97-82. Sierra & San Francisco Power Company, San Francisco, owner; earthenfill, 28.5 feet high with a storage capacity of 40 acre-feet. Situated on no stream in Sec. 13, T. 5 N., R. 20 E., M. D. M., for regulation purposes for irrigation use. Estimated cost \$4,980.

TUOLUMNE COUNTY—Stanislaus Forebay Dam No. 97-83. Sierra & San Francisco Power Company, San Francisco, owner; earthenfill, 54 feet high with a storage capacity of 301 acre-feet. Situated on no stream in Sec. 5, T. 3 N., R. 15 E., M. D. M., for regulation purposes for power use. Estimated cost \$114,800.

SHASTA COUNTY—Coleman Forebay Dam No. 97-87. Pacific Gas & Electric Company, San Francisco, owner; earth and rockfill, 17 feet high with a storage capacity of 73 acre-feet. Situated on no stream in Sec. 32, T. 30 N., R. 2 W., M. D. M., for regulation purposes for power use. Estimated cost \$54,874.

SHASTA COUNTY—Cow Creek Forebay Dam No. 97-88. Pacific Gas & Electric Company, San Francisco, owner; earth fill, 14 feet high with a storage capacity of 5.3 acre-feet. Situated on no stream in Sec. 32, T. 32 N., R. 1 W., M. D. M., for regulation purposes for power use. Estimated cost \$7,550.

SHASTA AND TEHAMA COUNTIES—Eagle Canyon Diversion Dam No. 97-89. Pacific Gas & Electric Company, San Francisco, owner; gravity, 11 feet above streambed. Situated on North Battle Creek tributary to Battle Creek in Sec. 25, T. 30 N., R. 1 W., M. D. M., for diversion purposes for power use. Estimated cost \$4,000.

TEHAMA COUNTY—Inskip Head Dam No. 97-90. Pacific Gas & Electric Company, San Francisco, owner; gravity, 32 feet above streambed. Situated on South Battle Creek tributary to Battle Creek in Sec. 5, T. 24 N., R. 1 E., M. D. M., for diversion purposes for power use. Estimated cost \$12,327.

SHASTA COUNTY—Kilrac Forebay Dam No. 97-91. Pacific Gas & Electric Company, San Francisco, owner; earthen, 10 feet high with a storage capacity of 30.4 acre-feet. Situated on no stream in Sec. 33, T. 33 N., R. 1 E., M. D. M., for regulation purposes for power use.

SHASTA COUNTY—Lake Grace Dam No. 97-92. Pacific Gas & Electric Company, San Francisco, owner; earthen, 12 feet high with a storage capacity of 25.1 acre-feet. Situated on no stream in Sec. 4, T. 30 N., R. 1 E., M. D. M., for regulation purposes for power use. Estimated cost \$15,136.

SHASTA COUNTY—Macumber Dam No. 97-94. Pacific Gas & Electric Company, San Francisco, owner; combination, 20 feet above streambed with a storage capacity of 1213 acre-feet. Situated on North Battle Creek tributary to Battle Creek in Sec. 15, T. 31 N., R. 2 E., M. D. M., for storage purposes for power use. Estimated cost \$28,132.

SHASTA COUNTY—North Battle Creek Reservoir Dam No. 97-96. Pacific Gas & Electric Company, owner; gravity, 52 feet above streambed with a storage capacity of 2534 acre-feet. Situated on North Battle Creek tributary to Battle Creek in Sec. 20, T. 32 N., R. 3 E., M. D. M., for storage purposes for power use. Estimated cost \$153,115.

SHASTA COUNTY—Hat Creek No. 1 Forebay Dam No. 97-97. Mt. Shasta Power Corporation, San Francisco, owner; earthen, 12 feet above streambed with a storage capacity of 6434 acre-feet. Situated on Hat Creek Canal in Sec. 32, T. 36 N., R. 4 E., M. D. M., for regulation purposes for power use. Estimated cost \$88,052.

LAKE COUNTY—Scott Dam No. 97-101. Snow Mountain Water & Power Company, San Francisco, owner; gravity, 120 feet above streambed with a storage capacity of 73,163 acre-feet. Situated on South Eel River tributary to Eel River in Sec. 14, T. 18 N., R. 10 W., M. D. M., for storage purposes for power use.

MENDOCINO COUNTY—Van Arsdale Dam No. 97-102. Snow Mountain Water & Power Company, San Francisco, owner; earthen, 12 feet above streambed with a storage capacity of 700 acre-feet. Situated on South Eel River tributary to Eel River in Sec. 20, T. 18 N., R. 11 W., M. D. M., for storage and diversion purposes for power use.

LOS ANGELES COUNTY—Big Dalton Dam No. 32. Los Angeles County Flood Control District, Los Angeles, owner; arched gravity, 70 feet above streambed with a storage capacity of 1290 acre-feet. Situated on Big Dalton Creek tributary to Walnut Creek in Sec. 15, T. 1 N., R. 9 W., S. B. M., for storage purposes for flood control use. Estimated cost \$911,600.

LOS ANGELES COUNTY—Live Oak Dam No. 32-7. Los Angeles County Flood Control District, Los Angeles, owner; arched gravity, 10 feet above streambed with a storage capacity of 300 acre-feet. Situated on Live Oak Creek tributary to San Jose Creek in Sec. 32, T. 1 N., R. 8 W., S. B. M., for storage purposes for flood control use. Estimated cost \$173,254.

LOS ANGELES COUNTY—Puddingstone Dam No. 32-9. Los Angeles County Flood Control District, Los Angeles, owner; earthen, 135 feet above streambed with a storage capacity of 17,398 acre-feet. Situated on Walnut Creek tributary to San Gabriel River in Sec. 15, T. 1 S., R. 9 W., S. B. M., for storage purposes for flood control use. Estimated cost \$930,000.

LOS ANGELES COUNTY—San Dimas Dam No. 32-10. Los Angeles County Flood Control District, Los Angeles, owner; arched gravity, 10 feet above streambed with a storage capacity of 1810 acre-feet. Situated on San Dimas Creek tributary to Walnut Creek in Sec. 24, T. 1 N., R. 9 W., S. B. M., for storage purposes for flood control. Estimated cost \$564,620.

LOS ANGELES COUNTY—Thompson Creek Dam No. 32-15. Los Angeles County Flood Control District, Los Angeles, owner; earthen, 58 feet above streambed with a storage capacity of 877 acre-feet. Situated on Thompson Creek tributary to San Jose Creek in Sec. 27, T. 1 N., R. 8 W., S. B. M., for storage purposes for flood control use. Estimated cost \$241,645.

LOS ANGELES COUNTY—Puddingstone Diversion Dam No. 32-16. Los Angeles County Flood Control District, Los Angeles, owner; earthen, 23 feet above streambed with a storage capacity of 148 acre-feet. Situated on San Dimas Creek tributary to Walnut Creek in Sec. 36, T. 1 N., R. 9 W., S. B. M., for

diversion purposes for flood control use. Estimated cost \$185,443.28.

SAN BERNARDINO COUNTY—Lake Arrowhead Dam No. 805. Arrowhead Lake Company, Lake Arrowhead, owner; earthen, 170 feet above streambed with a storage capacity of 47,000 acre-feet. Situated on Little Bear Creek tributary to Deep Creek in Sec. 14, T. 2 N., R. 3 W., S. B. M., for storage purposes for irrigation, domestic, power and recreation use.

AMADOR COUNTY—Henderson Dam No. 1-10. Preston School of Industry, Waterman, owner; earthen, 433 feet above streambed with a storage capacity of 500 acre-feet. Situated on Mule Creek tributary to Mokelumne River in Sec. 9, T. 6 N., R. 10 E., M. D. M., for storage purposes for power and irrigation use. Estimated cost \$50,000.

AMADOR COUNTY—Henderson Forebay Dam No. 1-11. Preston School of Industry, Waterman, owner; earthen, 33 feet above streambed with a storage capacity of 30 acre-feet. Situated on Sutter Creek in Sec. 18, T. 6 N., R. 10 E., M. D. M., for storage purposes for power and irrigation use.

RIVERSIDE COUNTY—El Casco Dam No. 145-7. G. O. Trauzettal, El Casco, owner; earthen, 16 feet above streambed with a storage capacity of 15 acre-feet. Located in Sec. 20, T. 2 S., R. 2 W., S. E. M., for storage purposes for irrigation use.

SANTA BARBARA COUNTY—Buell Dam No. 34. Montecito County Water District, Santa Barbara, owner; earthen, 90 feet above streambed with a storage capacity of 172 acre-feet. Situated on a small gulch tributary to Toro Canyon Creek in Sec. 11, T. 4 N., R. 26 W., S. B. M., for storage purposes for municipal use. Estimated cost \$133,950.

MENDOCINO COUNTY—Mendocino Middle Dam No. 1-3. Mendocino State Hospital, Talmage, owner; gravity and rock, 27 feet above streambed with a storage capacity of 30 acre-feet. Situated on South Mill Creek tributary to Russian River in Sec. 25, T. 15 N., for storage and diversion purposes for irrigation use. Estimated cost \$9,500.

MENDOCINO COUNTY—Mendocino Upper Dam No. 1-4. Mendocino State Hospital, Talmage, owner; gravity, 39 feet above streambed with a storage capacity of 65 acre-feet. Situated on South Mill Creek tributary to Russian River in Sec. 25, T. 15 N., M. D. M., for storage and diversion purposes for irrigation use. Estimated cost \$56,400.

PLUMAS COUNTY—Bucks Diversion Dam No. 94. Feather River Power Company, San Francisco, owner; arch, 86 feet above streambed with a storage capacity of 5843 acre-feet. Situated on Bucks Creek tributary to North Fork of Feather River in Sec. 29, T. 24 N., R. 7 E., M. D. M., for diversion and storage purposes for power and irrigation use. Estimated cost \$746,079.

PLUMAS COUNTY—Bucks Storage Dam No. 94-2. Feather River Power Company, San Francisco, owner; rockfill, 109 feet above streambed with a storage capacity of 101,926 acre-feet. Situated on Bucks Creek tributary to North Fork Feather River in Sec. 33, T. 24 N., R. 7 E., M. D. M., for storage purposes for power and irrigation use. Estimated cost \$2,359,492.

PLUMAS COUNTY—Grizzly Forebay Dam No. 94-3. Feather River Power Company, San Francisco, owner; arch, 79 feet above streambed with a storage capacity of 11,192 acre-feet. Situated on Grizzly Creek tributary to North Fork of Feather River in Sec. 24, T. 24 N., R. 6 E., M. D. M., for storage and diversion purposes for power and irrigation use. Estimated cost \$651,910.

PLUMAS COUNTY—Lower Three Lakes Dam No. 94-4. Feather River Power Company, San Francisco, owner; rockfill, 24.3 feet above streambed with a storage capacity of 513 acre-feet. Situated on Milk Ranch Creek tributary to North Fork of Feather River in Sec. 5, T. 24 N., R. 7 E., M. D. M., for storage purposes for power and irrigation use. Estimated cost \$86,339.

PLUMAS COUNTY—Butt Valley Dam No. 93. Great Western Power Company, San Francisco, owner; earthen, 42 feet above streambed with a storage capacity of 45,768 acre-feet. Situated on Butt Creek tributary to North Fork of Feather River in Sec. 13, T. 26 N., R. 7 E., M. D. M., for storage and diversion purposes for power and irrigation use. Estimated cost \$288,000.

BUTTE COUNTY—Intake Dam No. 93-2. Great Western Power Company, San Francisco, owner; gravity, 45 feet above streambed with a storage capacity of 600 acre-feet. Situated on North Fork of Feather River tributary to Sacramento River in Sec. 36, T. 22 N., R. 4 E., M. D. M., for diversion and storage purposes for power use. Estimated cost \$775,000.

PLUMAS COUNTY—Big Meadows Dam No. 93-3. Great Western Power Company, San Francisco, owner; earthfill. Situated on North Fork of Feather River tributary to Feather River in Sec. 28, T. 27 N., R. 8 E., M. D. M.,

LOS ANGELES COUNTY—Chatsworth No. 2 Dam No. 6-4A. City of Los Angeles, Los Angeles, owner; earthfill, 28 feet above streambed with a storage capacity of 1400 acre-feet. Situated in Chatsworth Hills tributary to Los Angeles, located in Ex Mission de San Fernando for storage purposes for municipal use. Estimated cost \$202,200.

LOS ANGELES COUNTY—Chatsworth No. 3 Dam No. 6-4C. City of Los Angeles, Los Angeles, owner; earthfill, 37 feet above streambed with a storage capacity of 7400 acre-feet. Situated in Chatsworth Hills tributary to Los Angeles River located in Ex Mission de San Fernando for storage purposes for municipal use. Estimated cost \$126,500.

YUBA COUNTY—Los Verjels Dam No. 334. Los Verjels Land & Water Company, Sacramento, owner; multiple arch, 50 feet above streambed with a storage capacity of 7500 acre-feet. Situated on Dry Creek tributary to Yuba River in Sec. 34, T. 18 N., R. 6 E., M. D. M., for storage purposes for irrigation use.

SAN FRANCISCO COUNTY—Lombard St. Reservoir Dam No. 10-5. Spring Valley Water Company, San Francisco, owner; earth embankment, 17.5 feet high with a storage capacity of 8.3 acre-feet. Situated on no stream for distribution purposes for domestic use.

RIVERSIDE COUNTY—Mocking Bird Dam No. 814. Gage Canal Company, Riverside, owner; earthfill, 60 feet above streambed with a storage capacity of 232 acre-feet. Situated on Mocking Bird canyon in Sec. 20, T. 3 S., R. 5 W., S. B. M., for storage purposes for irrigation use. Estimated cost \$100,000.

SONOMA COUNTY—Industrial Farm for Women Dam No. 1. Industrial Farm for Women, State of California, Sonoma, owner; arch, 32.5 feet above streambed with a storage capacity of 7.7 acre-feet. Situated on Johnson Creek tributary to Sonoma Creek in Sec. 4, T. 5 N., R. 5 W., M. D. M., for storage purposes for irrigation use. Estimated cost \$24,920.

SONOMA COUNTY—Fern Lake-South Dam No. 1-12A. Sonoma State Home, Ukiah, owner; earthfill, 34 feet above streambed with a storage capacity of 185 acre-feet. Situated on Hill Creek tributary to Sonoma Creek, Sec. 21, T. 6 N., R. 6 W., M. D. M., for storage purposes for irrigation and fire protection use.

EL DORADO COUNTY—American Reservoir Dam No. 462. Diamond Ridge Water Company, Diamond Springs, owner; earthfill, 22 feet above streambed with a storage capacity of 1200 acre-feet. Situated on no stream in Sec. 31, T. 10 N., R. 9 E., M. D. M., for storage purposes for stock watering use. Estimated cost \$14,500.

PLUMAS COUNTY—Quincy Log Pond Dam No. 281. Quincy Lumber Co., Inc., Quincy, owner; earthfill, 8 feet above streambed. Situated on an unnamed drainage tributary to Spanish Creek in Sec. 14, T. 24 N., R. 9 E., M. D. M., for storage purposes for logging use. Estimated cost \$7,000.

SISKIYOU COUNTY—Montague City Reservoir Dam No. 60-2. Montague Water Conservation District, Montague, owner; earthfill, 17 feet above streambed with a storage capacity of 5 acre-feet. Situated on a ravine tributary to Little Shasta River in Sec. 23, T. 5 N., R. 6 W., M. D. M., for storage purposes for municipal use. Estimated cost \$4,984.

NEVADA COUNTY—Bowman North Rockfill Dam No. 61-2A. Nevada Irrigation District, Grass Valley, owner; rockfill, 63 feet above streambed with a storage capacity of 67,000 acre-feet. Situated on Canyon Creek tributary to South Yuba River in Sec. 5, T. 13 N., R. 12 E., M. D. M., for storage purposes for irrigation and other uses. Estimated cost \$680,000.

NEVADA COUNTY—Bowman South Arch Dam No. 61-2B. Nevada Irrigation District, Grass Valley, owner; arch, 108 feet above streambed with a storage capacity of 67,000 acre-feet. Situated on Canyon Creek tributary to South Yuba River in Sec. 8, T. 13 N., R. 12 E., M. D. M., for storage purposes for irrigation and other uses. Estimated cost \$245,000.

NEVADA COUNTY—Sawmill Lake Dam No. 61-10. Nevada Irrigation District, Grass Valley, owner; rockfill, 45 feet above streambed with a storage capacity of 2000 acre-feet. Situated on Canyon Creek tributary to South Yuba River in Sec. 11, T. 18 N., R. 12 E., M. D. M., for storage purposes for irrigation and other uses.

RIVERSIDE COUNTY—Lake Hemet Dam No. 817-A. Lake Hemet Water Company, Hemet, owner; arched gravity, 135 feet above streambed with a

storage capacity of 14,000 acre-feet. Situated on South Fork tributary to San Jacinto River in Sec. 7, T. 6 S., R. 3 E., S. B. M., for storage purposes for irrigation use. Estimated cost \$213,000.

RIVERSIDE COUNTY—Little Lake Dam No. 817-2. Lake Hemet Water Company, Hemet, owner; earthfill, 14 feet above streambed with a storage capacity of 90 acre-feet. Located in Sec. 19, T. 5 S., R. 1 E., S. B. M., for storage purposes for irrigation use. Estimated cost \$3,300.

RIVERSIDE COUNTY—Lake Hemet Spillway Dam No. 811-B. Lake Hemet Water Company, Hemet, owner; arch, 14 feet above streambed with a storage capacity of 12,930 acre-feet. Situated on no stream, tributary to San Jacinto River in Sec. 7, T. 6 S., R. 3 E., S. B. M., for storage purposes for irrigation use. Estimated cost \$23,600.

SIERRA COUNTY—Upper Salmon Dam No. 294. E. A. & J. O. Hayes, San Jose, owners; rockfill, 10 feet above streambed with a storage capacity of 400 acre-feet. Situated on Salmon Lake outlet tributary to North Fork of Yuba River in Sec. 29, T. 21 N., R. 12 E., M. D. M., for storage purposes for power use.

SIERRA COUNTY—Lower Salmon Lake Dam No. 294-2. E. A. & J. O. Hayes, San Jose, owners; rock and earthfill, 12 feet above streambed with a storage capacity of 6000 acre-feet. Situated on outlet Lower Salmon Lake tributary to North Fork of Yuba River in Sec. 28, T. 21 N., R. 12 E., M. D. M., for storage purposes for power use.

NEVADA COUNTY—Deer Creek Diversion Dam No. 61-3. Nevada Irrigation District, Grass Valley, owner; 86 feet above streambed with a storage capacity of 1400 acre-feet. Situated on Deer Creek tributary to Yuba River in Sec. 10, T. 16 N., R. 9 E., M. D. M., for diversion purposes for irrigation and other uses.

NEVADA COUNTY—Faucherie Dam No. 61-5. Nevada Irrigation District, Grass Valley, owner; timber, 23 feet above streambed with a storage capacity of 2000 acre-feet. Situated on Canyon Creek tributary to South Yuba River in Sec. 13, T. 18 N., R. 12 E., M. D. M., for storage purposes for irrigation use.

NEVADA COUNTY—French Lake Dam No. 61-6. Nevada Irrigation District, Grass Valley, owner; rockfill, 56 feet above streambed with a storage capacity of 12,500 acre-feet. Situated on Canyon Creek tributary to South Yuba River in Sec. 17, T. 18 N., R. 13 E., M. D. M., for storage purposes for irrigation and other uses.

SIERRA AND NEVADA COUNTIES—Milton Diversion Dam No. 61-7. Nevada Irrigation District, Grass Valley, owner; arch, 27 feet above streambed. Situated on Middle Fork tributary to Yuba River in Sec. 12, T. 18 N., R. 12 E., M. D. M., for diversion purposes for irrigation and other uses. Estimated cost \$26,000.

PLACER AND NEVADA COUNTIES—Van Geisen Diversion Dam No. 61-9. Nevada Irrigation District, Grass Valley, owner; arch, 75 feet above streambed with a storage capacity of 5000 acre-feet. Situated on Bear River tributary to Yuba River in Sec. 2, T. 13 N., R. 8 E., M. D. M., for diversion and storage purposes for irrigation and other uses.

SISKIYOU COUNTY—Hart Dam No. 181. E. C. and Kate C. Hart, Montague, owners; earthfill, 10 feet above streambed with a storage capacity of 100 acre-feet. Situated on Martin Creek tributary to Little Shasta Creek in Sec. 19, T. 45 N., R. 4 W., M. D. M., for storage purposes for irrigation use.

AMADOR COUNTY—Silver Lake Dam No. 97-58. Pacific Gas & Electric Company, San Francisco, owner; rock crib, 22 feet above streambed with a storage capacity of 5360 acre-feet. Situated on an unnamed stream tributary to Silver Fork of American River in Sec. 32, T. 10 N., R. 17 E., M. D. M., for storage purposes for power use. Estimated cost \$18,074.

CONTRA COSTA COUNTY—Port Costa Brick Works Dam No. 585. Port Costa Brick Works, Port Costa, owner; earthfill, 28 feet above streambed with a storage capacity of 20 acre-feet. Situated on a ravine for storage purposes for industrial use. Estimated cost \$10,000.

LOS ANGELES COUNTY—San Gabriel Diversion Dam No. 104-15. Southern California Edison Company, Los Angeles, owner. Situated on San Gabriel River in Sec. 31, T. 2 N., R. 9 W., S. B. M., for diversion purposes for power use.

SAN DIEGO COUNTY—O'Neill Dam No. 831. Rancho Santa Margarita, Inc., Oceanside, owner; earthfill, 8 feet high with a storage capacity of 1390 acre-feet. Situated on no stream tributary to Santa Margarita River in Sec. 8, T. 10 S., R. 4 W., S. B. M., for storage purposes for irrigation and domestic use.

SANTA CLARA COUNTY—Searsville Dam No. 614. Leland Stanford Jr., University, Stanford University,

owner; arched gravity, 63 feet above streambed with a storage capacity of 952 acre-feet. Situated on Corte Madera Creek tributary to Searsville Creek in Sec. 18, T. 6 S., R. 3 W., M. D. M., for storage purposes for irrigation use.

SONOMA COUNTY—Fern Lake-South Dam No. 1-13B. Sonoma State Home, Eldridge, owner; earthenfill, 20 feet above streambed with a storage capacity of 135 acre-feet. Situated on Hill Creek tributary to Sonoma Creek in Sec. 21, T. 6 N., R. 6 W., M. D. M., for storage purposes for irrigation and fire protection use.

SISKIYOU COUNTY—Taimsiea Dam No. 185. Minnie A. Taimsiea, Montague, owner; earthenfill, 4 feet above streambed for storage purposes for irrigation use. Estimated cost \$750.

NAPA COUNTY—Lake Camille Dam No. 1-5. Napa State Hospital, Imola, owner; earthenfill, 25 feet above streambed with a storage capacity of 61 acre-feet. Situated on Tulocay Creek tributary to Napa River in T. 5 N., R. 4 W., M. D. M., for storage purposes for irrigation use.

NAPA COUNTY—Lake Marie Dam No. 1-6. Napa State Hospital, Imola, owner; earthenfill, 45 feet above streambed with a storage capacity of 376 acre-feet. Situated on Tulocay Creek tributary to Napa River in Sec. 19, T. 5 N., R. 3 W., M. D. M., for storage purposes for domestic and irrigation use.

NAPA COUNTY—Napa Middle Reservoir No. 2 Dam No. 1-8. Napa State Hospital, Imola, owner; earthenfill, 20 feet high with a storage capacity of 46 acre-feet. Situated on Tulocay Creek tributary to Napa River in T. 5 N., R. 4 W., M. D. M., for storage purposes for irrigation use.

NAPA COUNTY—Fire Dam. Napa State Hospital, Imola, owner; sump with a storage capacity of 7.7 acre-feet. Situated on no stream for storage purposes for fire protection.

Applications for approval of plans and specifications for construction or enlargement of dams filed with the State Department of Public Works, Division of Water Resources, during the month of February, 1930.

SANTA CLARA COUNTY—Felt Lake Dam No. 614-2. Leland Stanford Jr. University, Stanford University, owner; earthenfill, 60 feet above streambed with a storage capacity of 966 acre-feet. Situated on a small draw tributary to Los Banos Creek in Sec. 22, T. 6 S., R. 3 W., M. D. M., for storage purposes for irrigation and domestic use. Estimated cost \$78,962 after August 14, 1929. Fees paid \$789.62.

LOS ANGELES COUNTY—Chatsworth Dam No. 6-4. City of Los Angeles, Los Angeles, owner; earthenfill, with a storage capacity of 42,600 acre-feet. Situated on an unnamed water course tributary to Los Angeles River located in Ex Mission de San Fernando for storage purposes for municipal use. Estimated cost \$3,894,065. Fees paid \$8,394.06.

Applications for approval of plans and specifications for repair or alteration of dams filed with the State Department of Public Works, Division of Water Resources, during the month of February, 1930.

LOS ANGELES COUNTY—Burbank No. 4 Dam No. 4-4. City of Burbank, Burbank, owner; earthenfill. Located in Sec. 1, T. 1 N., R. 14 W., S. B. M.

VENTURA COUNTY—Dennison Dam No. 761. Dennison Ranch Co., Ojai, owner; buttress. Situated on Lion Canyon Creek tributary to San Antonio Creek and Ventura River in Sec. 9, T. 4 N., R. 22 W., S. B. M. Nature of repairs, guniting earth wing.

MARIN COUNTY—Belvedere Dam No. 33-4. Marin Municipal Water District, San Rafael, owner; earthenfill, nature of work; installing outlet pipe.

Plans and specifications for the construction or enlargement of dams approved by the State Department of Public Works, Division of Water Resources, during the month of February, 1930.

MODOC COUNTY—Everly Dam No. 125. Irving C. Everly, Davis Creek, owner; earthenfill, 10 feet above streambed with a storage capacity of 1700 acre-feet. Situated on Bean Flat tributary to Long Branch and Goose Lake in Sec. 26, T. 47 N., R. 12 E., M. D. M., for storage purposes for irrigation use. Estimated cost of enlargement \$1,500.

LOS ANGELES COUNTY—Sunset Canyon Dam No. 32-14. Los Angeles County Flood Control District, Los Angeles, owner; arch, 28 feet above streambed with a storage capacity of 9.1 acre-feet. Situated on Sunset Canyon tributary to Los Angeles River in Sec.

6, T. 1 N., R. 13 W., S. B. M., for storage purposes for debris use. Estimated cost \$22,660.

TUOLUMNE COUNTY—Moccasin Creek Dam No. 9-4. City and County of San Francisco, San Francisco, owner; rock and earthenfill, 62 feet above streambed with a storage capacity of 525 acre-feet. Situated on Moccasin Creek tributary to Tuolumne River in Sec. 34, T. 1 S., R. 15 E., M. D. M., for regulation purposes for municipal and power use. Estimated cost \$600,000.

AMADOR COUNTY—Silver Lake Dam No. 97-58. Pacific Gas & Electric Company, San Francisco, owner; crib, 30 feet above streambed with a storage capacity of 12,000 acre-feet. Situated on Silver Creek tributary to South Fork of American River in Sec. 32, T. 10 N., R. 17 E., M. D. M., for storage purposes for power use. Estimated cost \$16,000 total cost, \$8,840 after August 14, 1929.

SANTA BARBARA COUNTY—Juncal Main Dam No. 34-2A. Montecito County Water District, Santa Barbara, owner; arch, 134 feet above streambed with a storage capacity of 7000 acre-feet. Situated on Santa Ynez River in Sec. 28, T. 5 N., R. 25 W., S. B. M., for diversion and storage purposes for municipal, domestic and irrigation uses. Estimated cost \$288,862.82, total.

AMADOR AND CALAVERAS COUNTIES—Salt Springs Dam No. 97-66. Pacific Gas & Electric Company, San Francisco, owner; rockfill, 285 feet above streambed with a storage capacity of 130,000 acre-feet. Situated on North Fork tributary to Mokelumne River in Sec. 33, T. 8 N., R. 16 E., M. D. M., for storage purposes for power use. Estimated cost \$6,930,000, total.

TUOLUMNE COUNTY—Lyons Dam No. 97-73. Sierra & San Francisco Power Company, San Francisco, owner; arch, 95 feet above streambed with a storage capacity of 5500 acre-feet. Situated on South Fork tributary to Stanislaus River in Sec. 24, T. 3 N., R. 16 E., M. D. M., for storage purposes for power use. Estimated cost \$287,000, total.

MONTEREY COUNTY—Peach Tree Dam No. 641. Fort Klamath Meadows Company, Hollister, owner; earthenfill, 16 feet above streambed with a storage capacity of 16 acre-feet. Situated on Peach Tree Creek tributary to San Lorenzo River in San Lorenzo Ranch for storage purposes for domestic and irrigation use. Estimated cost \$800.

LOS ANGELES COUNTY—Wrigley Reservoir No. 2 Dam No. 778-B. Santa Catalina Island Company, Avalon, owner; earthenfill, 10 feet above streambed with a storage capacity of 70 acre-feet. Situated on Grand Canyon tributary to Pacific Ocean in Sec. 32, T. 9 S., R. 14 W., S. B. M., for storage purposes for municipal and domestic use. Estimated cost \$5,500.

LOS ANGELES COUNTY—Wrigley Reservoir No. 1 Dam No. 778-A. Santa Catalina Island Company, Avalon, owner; earthenfill, 40 feet above streambed with a storage capacity of 70 acre-feet. Situated on Grand Canyon Creek tributary to Pacific Ocean in Sec. 32, T. 9 S., R. 14 W., S. B. M., for storage purposes for municipal and domestic use. Estimated cost \$14,650.

Plans for the repair or alteration of dams approved by the State Department of Public Works, Division of Water Resources, during the month of February, 1930.

ORANGE COUNTY—Yorba Dam No. 791. Anaheim Union Water Company, Anaheim, owner; earthenfill. Situated on no stream in Sec. 34, T. 3 N., R. 9 W., S. B. M. Nature of repairs—oiling face.

LOS ANGELES COUNTY—Burbank No. 4 Dam No. 4-4. City of Burbank, Burbank, owner; earthenfill reservoir. Located in Sec. 1, T. 1 N., R. 14 W., S. B. M.

MARIN COUNTY—Belvedere Dam No. 33-4. Marin Municipal Utility District, San Rafael, owner; earthenfill. Nature of repairs—installing new outlet pipe.

Herodotus tells of a road built 4000 B. C. It was in Egypt and reached half way across the African continent. It required 10,000 men working ten years to build a single mile of it. The stone for the Pyramids was hauled over this road.

NEVADA—Reconstruction and oiling of 54 miles of Victory Highway, 52 miles of Lincoln Highway and 21 miles of Arrowhead Trail are on the program for 1930.

New Designs in Highway Construction As Compared with Older Standards

By C. H. PURCELL, State Highway Engineer.

THE STANDARDS of highway location and design have, during the past three years, shown a remarkable nation-wide improvement. The engineers of the California Division of Highways are making every effort to keep their locations in line with modern practice and to insure that the service furnished will be immediate as well as permanent.

Several of the more important recent improvements in California state highway design practice are described briefly in the following paragraphs:

PERMANENT LOCATION

New roads and most major improvements of existing roads are located as nearly as can possibly be foreseen on permanent alignment and grade, which will not require future alteration or correction with consequent loss of a portion of the initial investment; and which, at the same time, is readily adapted to normal growth by widening as required by increasing traffic. In some few cases, new roads or improvements of existing roads are located and designed purposely for temporary rather than for ultimate service, but in such cases consideration is given the ultimate requirement with a view to realizing the maximum salvage value from the temporary road, when the ultimate construction is undertaken.

CURVATURE STANDARDS

Curvature on main trunk highways, in all except the most rugged country, is now usually designed to handle safely, vehicles operating at the maximum speed permitted by law. Even in the mountainous regions, 300 feet is regarded as the minimum acceptable curve radius. A properly designed curve of this radius will allow safely a speed of about 40 miles per hour. On a few secondary roads in unusually difficult country, carrying mainly recreational traffic, 200-foot radius curves are used sparingly to keep grading costs within reason.

These curvature standards present a striking contrast to the standards of a few years ago, when 100-foot radius curves were common on trunk roads and 35 miles per hour

The recently completed 30-foot Portland cement concrete pavement on a 46-foot roadbed between Ben Ali and Sylvan School in Sacramento County.

was considered maximum high speed. It may be stated without exaggeration that our primary trunk roads are being constructed or reconstructed in some cases on curvature standards which are comparable to the curvature standards of main line railroads in adjacent or similar locations.

CURVE SUPERELEVATION

Superelevation standards have been revised during the past year to accommodate higher speeds. The superelevation as applied to new projects is designed to make practically all curves within the range of Division of Highway engineering practice safe for speeds of 40 miles per hour or faster.

CURVE WIDENING

During the past year widening of all curves of 500 feet radius or shorter has been made standard practice. This provides greater clearance between cars passing on curves, increases sight distance around curves, and is so designed that the transition between un-

widened straight road and widened curves produces the effect of tapered ends to the curves, aiding greatly in the ease and comfort with which a curve is entered or left, especially at high speeds.

GRADE IMPROVEMENTS

The present tendency is toward the use of 5 per cent maximum grades, especially in the higher altitudes, in response to the popular demand for fast high gear roads. Six per cent grades are losing favor even on secondary roads, especially where the maximum grade is sustained for a considerable distance. Seven per cent grades are used only in exceptional cases, usually to avoid great loss of distance.

The old practice of rolling grades heavily to reduce cut and fill costs is practically obsolete. On all new work effort is made to secure straight, even grades as an aid to safety, visibility and appearance. In many cases, especially on side hill mountain and canyon locations, skillful engineering can secure the straight grades for no greater cost than the objectionable rolling grades.

Numerous technical refinements have been made in the detail design and coordination of grades, vertical curves, and horizontal curves, all tending toward greater safety and more pleasing appearance, usually without increased cost.

VISIBILITY ON SUMMITS

Current design requires that at summits on straight roads, objects five feet above the road surface shall be mutually visible to each other for a distance not less than 600 feet. The tendency is to increase this minimum sight distance requirement to 800 feet on important roads. Until quite recently 300 or 400 feet of sight distance was considered ample in California. This vertical sight distance is modified on curves, but is so designed as to be always greater than the horizontal sight allowed by the curve regardless of future widening.

ROADBED WIDTHS

Pavement widths of 16 feet or less are obsolete. A very few 18-foot temporary surfaces (usually gravel or crushed rock) are being constructed on certain secondary roads in mountainous country when traffic is light. A minimum 20-foot pavement width and a minimum 10-foot traffic lane width have been adopted recently for all permanent and for most temporary or stage pavements.

Shoulder width standards have increased rapidly until the 8-foot parking shoulder on each side of the surfacing is now standard practice on the average trunk road in contrast to the usual two- or three-foot shoulders of several years ago.

RIGHT OF WAY WIDTHS

Until recently most state highway rights of way were from 40 to 60 feet wide. Current California state practice, adopted within the last two years, requires a minimum right of way of 80 to 100 feet, depending on the importance and position of the road. In built up or suburban districts, definite set back lines for property improvements are usually obtained in connection with right of way agreements, to accommodate future highway growth without excessive expense due to moving buildings, etc. In National Forest lands, arrangements have been made with the Forest Service whereby leases and building permits issued for use of forest lands are restricted by set back lines at least 100 feet from the center line of state highways.

UTILIZATION OF RIGHT OF WAY

Considerable effort has been made recently to design typical standard roadway cross sections for various types of roads in order to secure a more efficient use of the right of way. For use on important roads in easy valley locations, a so-called "turnpike" section has been developed which consists essentially of a normal roadbed with wide, gentle side slopes extending to side ditches placed near the right of way lines. The side slopes are so designed that they will fit ultimate widening of the pavement, and at the same time will provide the most efficient distribution of all cut and fill material for both current and ultimate construction. Deep side borrow ditches are avoided, and the slopes are designed so that future improvement will be a continuation of the initial work rather than an alteration.

Provision for roadside trees, sidewalk space, curbs, public utilities equipment, building lines, etc., is included in the typical section designs which have been applied successfully to recent construction.

PAVEMENT CONSTRUCTION IMPROVEMENT

The last few years have seen a notable improvement in the strength, durability, and riding qualities of state highway pavements. Concrete pavements have been not only thickened but are now designed scientifically with reinforcement, variable section, etc., in a manner similar to that in which any other

Redwood Park Adorns State Highway

‘ ‘ ‘ ‘ ‘ ‘ ‘

GIANT redwoods and spectacular seacoast scenery are uniquely combined in the splendid new Del Norte Coast State Park, nearly 3000 acres in extent, and costing more than \$400,000, now preserved for the people of California and the nation by the California State Park Commission and the Save-the-Redwoods League.

Those who have traveled California's Redwood Highway where it winds above Pacific Ocean south of Crescent City, will remember this stand of giant redwoods. Its beauty is enhanced by the fact that in addition to the five miles of highway through the forest, the project includes more than seven miles of ocean frontage, the highway at times taking its course close to 1000 feet above the seacoast, with many thrilling vistas of the Pacific. This is considered one of the most spectacular drives in the world.

Officials of the California Highway Commission, the State Park Commission and the Save-the-Redwoods League are congratulating themselves upon the fact that here is one of California's outstanding scenic areas which through its status as a state park will forever be protected from defacement. No trees or undergrowth are to be destroyed; no unworthy construction or development, no "hot dog stands" or bill boards to mar the landscape picture. The beauty and tranquillity of the redwood forest, the matchless vistas of the Pacific, will in this area be kept unspoiled for all time. Not the least important feature of this park is the glorious display of rhododendrons and other wild flowers which in late May and June are at their finest.

The plan of preserving this Del Norte Coast Park, in its present confines had its nucleus in the Graves Grove, 289 acres, presented to

New State Redwood Park in Del Norte County.

the League in 1925 by Mr. George F. Schwars of New York, in honor of Colonel Henry Solon Graves, Dean of the Yale University School of Forestry and former U. S. Forester. Lands controlling highway approaches to the grove to the north and south were later acquired and presented to the League by Mr. George O. Knapp of Santa Barbara.

Other contributors toward the establishment of groves in the Del Norte Coast area include J. D. Grant of San Francisco, Madison Grant of New York, and Mrs. Samuel Boardman, Mrs. Philip Van Horne Lansdale and Mrs. Stella M. Leviston, all three of San Francisco. A sum of money toward the completion of the project was allocated from the funds in the League treasury. The state's share, derived from the sale of state park bonds, was \$199,000.

A scenic trail, two and a half miles long, from the highway down through these various "zones" to the coast, has been laid out under the direction of Mr. Emerson Knight. Other trails penetrating this forest fastness will, it is expected, be built in the future.

In his report, Mr. Knight says of the first three zones: "The wild, rugged character of the coast, where the sea has for ages been eating its way into the cliffs, where storms crash and waters churn about the fallen giant boulders; the deep-cut creek bottoms and the vast, silent spaces in the redwood forest, richly inhabited by rhododendrons, huckleberry, salal, ferns and lilies, render this area remarkable for park purposes, in its variety and beauty."

Of the Redwood Highway zone, Mr. Knight goes on to say: "The course of this famous thoroughfare through the park area is one of a beautiful serpentine character and about six miles in length. It ranges from about 200 feet elevation at the southern gateway to about 1000 feet, where the panorama of the coast looking northward toward the foam-fringed curve of beach from which comes the name 'Crescent City,' is suddenly encountered as a dramatic surprise, on emerging from the forest."

In referring to the scenic old county road, Mr. Knight continues: "This charming relic of earlier travel is in general quite well secluded and separated from the Redwood Highway by the first ridge parallel to the sea. While the new highway swings along the contours below the crest on the west side, the old county road lies nearer the ridge, winding mostly along the east side, protected from the wind. A considerable portion of that which

(Continued on page 21.)

TWO VIEWS OF STATE ROADS IN THE BUILDING

The contractor's equipment and force at work about one-half mile north of Eagle Falls, for the grading of a portion of state highway between Bay View Rest and one mile north of Eagle Falls, a portion of the Truckee-Meyers National Forest Highway.

Sacked concrete riprap protecting embankment of newly constructed 24-foot graded roadbed in Lake County, a portion of the Ukiah-Tahoe state highway.

ARCHITECT NAMED FOR LOS ANGELES STATE BUILDING

John C. Austin of Los Angeles has been selected as the architect of the Los Angeles State Building for the construction and furnishing of which \$1,250,000 has been provided by a bond issue. The site for the building has been accepted and preliminary sketches are now being made. As soon as these are approved working drawings will be started and completed so as to get construction under way at the earliest possible moment.

SALES TALK

Wife—The garage man says that our car must be thoroughly overhauled.

Husband (wearily)—You win. Go down and pick out your new car.

Floodlighting the State Capitol

By WALTER M. CALLAHAN, Electrical Engineer, Division of Architecture.

TO ENDEAVOR to describe the theoretical principles involved and their relation to the physical conditions which exist, in the design of a floodlighting system one would not only present an elaborate compilation of facts and figures, but would, in all

WALTER M. CALLAHAN.

probability, unduly tax the patience of the reader.

The floodlighting of the upper portion of the State Capitol Building has been in nightly operation for over a year. The comments of the general public are indeed gratifying to those of the state organization who set forth their efforts to attain the resultant effect which tends to emphasize the dignity which the building implies.

While considering this particular project, it is well for us in a general way, to turn our thoughts to the progress being made in floodlighting as regards its usefulness to industry and also its adaptation to the spectacular and aesthetic applications.

Modern floodlighting is gradually contributing a high standard of utility in the commercial field as well as a profound appreciation of the beauty and architectural design of our public buildings and civic centers.

From a utilitarian standpoint, floodlighting

has materially increased production in our industrial plants by virtue of the fact that more efficient working conditions are afforded in that an equally distributed intensity of illumination is provided. The installation of floodlights to illuminate an extremely large area permits the mounting of the units at concentrated points, quite often isolated, thereby eliminating the obstructions caused by poles or standards, which are necessary in the case of direct unit lighting. In this particular class of service we have the lighting of railroad yards, wharves and docks, building construction, grading and excavating projects, carnivals and expositions, athletic fields, airports and many other applications too numerous to mention.

DEVELOPMENT OF WORLD WAR

The development of floodlighting and its attendant equipment during the World War period was phenomenal. To successfully cope with acts of espionage, it was vitally necessary that immediate precautions be taken for the protection of industrial plants and building structures being utilized for the manufacturing of munitions or provisions for use in our national defense. This relatively new phase of production was inaugurated in an amazingly short period of time and carried on with a maximum degree of efficiency. The contribution of floodlighting in assisting this stimulated production so successfully, has been generally conceded by private and public officials engaged in this work. Since the war, this type of protection has been rapidly expanding in the continual effort to combat the vast number of the enemies of society at large.

MODERN APPLICATIONS

Penal institutions as well as insane and narcotic hospitals, are finding a solution of their lighting problems in the use of floodlights as a precautionary measure. The Division of Architecture has very recently completed the installation of an extensive floodlighting system at the State Narcotic Hospital at Spadra, California. The lighting units are arranged to thoroughly illuminate the area surrounded by a galvanized iron wire screen fence, and at the same time are so situated that no offensive glare is evident. The light-

ing units are mounted on the roofs of low buildings in such a position that their beam is directed toward the fence as well as illuminating the ground area. In the event of the prowler walking in the illuminated area or approaching the fence, a very distinct shadow is cast on the fence thereby very definitely attracting the attention of the institution attendants. An exceedingly high candlepower directional beam searchlight is mounted on top of the main building which can ascertain the moving object within the radius of three-quarters of a mile.

AIRPORTS AND AIR LANES

The most recent application and probably the greatest field open for expansion of floodlighting, is in line with the development of airports and air lanes for night flying. Commercial aviation, to be successful, is solely dependent on adequately marked routes and well illuminated landing fields.

It is logical to believe that any article or type of equipment being manufactured in the class of mass production and at the same time being constantly improved to meet the demands of exacting requirements, will quickly develop into a product of distinctive merit.

IN THE FIELD OF ARTISTRY

In addition to the foregoing described utilitarian purposes, the artistic application of floodlighting presents an unlimited field for the illuminating engineer. By a comprehensive study of the architecture, together with a correct design based on the fundamental principles of floodlighting, the conception of the architect can be lifted from nightly obscurity and portrayed on a dark and oftentimes starry background, thereby perpetuating a thought so carefully conceived.

Unfortunately, at times, the error of too brilliant or intense illumination is discernible. The shadows which tend to emphasize the mass and proportions of the structures are obliterated and at the same time, shadows which are distasteful are accentuated by the intense illumination. To attain the desired results which will idealize the original purpose, quite often necessitates a wide deviation from the so-called hard and fast rules of the technical engineer. Any attempt toward standardization of procedure in design on work of this kind, is irrational, as all structures are basically different; therefore, the success of the finished product is dependent solely upon the analytical mind of the engineer and his ability to incorporate his findings in the actual installation.

Our national, state and city governments are constantly authorizing the floodlighting of their respective civic centers. These edifices all possess architectural detail of exquisite beauty and are the manifestation of the political and community prestige. By removing them from their veil of darkness and clothing them with a robe of white light, an educational value is derived which can not be considered an unwarranted expense.

LIGHTING THE STATE CAPITOL

Keeping abreast with the national trend, the State of California included the floodlighting of the upper portion of the State Capitol in its program of construction and development.

The Division of Architecture of the State Department of Public Works completely designed the entire installation and prepared all plans and specifications governing the installation. This point is, no doubt, of particular interest for the reason that the design of floodlighting installations of major importance is in practically all instances made by engineers of lighting equipment companies specializing in this field. This project alone is indicative of a diversified field of research and development carried on by the Division of Architecture.

This particular design was rather difficult in that only three sides were available for the installation of floodlighting equipment; however, after careful study, the locating of the equipment at the correct angles enabled the engineer to obtain results which have proved satisfactory.

Main floodlighting of the dome is provided from banks of 22 General Electric Type L-24, 1000-watt projectors and 28 General Electric Type L-9, 500-watt projectors mounted on low platforms around the edge of the main roof of the Capitol.

To relieve the sharp shadows caused by the two balcony railings around the dome, a series of relief lights is employed. There are mounted on the inside of the upper balcony railing, 48 200-watt Type C lamps enclosed in Crouse-Hinds vaporproof fittings. Twenty-four of the same type of lamps and fittings are installed around the inside of the lower balcony. Not only do these lamps eliminate the shadows on the dome caused by the floodlights and railings but they also raise the railings in relief to provide a most pleasing effect.

An architectural feature of the dome is the two rows of long narrow windows separated by thin columns that surround the dome at two different elevations. A striking color

San Juan Grade Decision is Announced

A DECISION of the much debated question of the position of the San Juan grade in the state highway system was reached by the California Highway Commission at a meeting held on March 20th in San Francisco.

The plan as adopted by the California Highway Commission provides that the San Juan grade will be eliminated as a part of the Coast Highway but will be retained in the state highway system as a part of the Hollister lateral.

The decision of the Commission ratified a plan presented to that body by B. B. Meek, Director of the Department of Public Works. The plan was fully approved in a written opinion given by Attorney General U. S. Webb. The four salient points in the plan as voted by the California Highway Commission today are as follows:

1. Authorization to proceed at once to make the necessary surveys, plans and estimates of cost to relocate the "Coast Highway" westerly of the present San Juan grade, and make provision for starting the construction thereof in the next budget.
2. Authorization to retain and maintain the present San Juan grade as a part of the state highway system to constitute an extension of the present Hollister county seat lateral, such extension to run from San Juan Bautista over the grade to a new connection with the projected, relocated "Coast Highway" at a point south of the present grade.
3. Authorization to relinquish the short unit now in the "Coast Highway," between San Juan Bautista and the point where the new relocation would depart from the present road north of San Juan Bautista, to the county of San Benito, this unit to be maintained by the county, until such later date, as the legislature may by statutory enactment reincorporate it in the state highway system.
4. Recommendation to the next legislature that the foregoing treatment of the San Juan grade situation be recognized by appropriate legislation.

Facts relative to the San Juan grade, upon which the Commission based its decision, were cited by Director Meek as follows:

The present San Juan grade can not, within reasonable engineering possibility and within the limits of justifiable expenditure of public funds, be made to meet the traffic and safety requirements of the main north and south trunk line of the state highway. In other words, it has passed the peak of its adaptability and usefulness for such major trunk line uses.

The relocation will vastly improve grades and curves, increasing, of course, the carrying

Attorney General U. S. WEBB.

capacity of the road and adding to the safety and expedition of travel and transportation.

The highest point on the present road is 1015 feet; the highest point on the new road will be 550 feet. The length of adverse grades will be cut in half. The minimum radius curve on the present road is 100 feet; on the relocation 1000 feet. Total number of curves on the old road is 113; on the new line 38. The minimum sight distance on the present road, 75 feet; on the relocation, 600 feet.

The relocation will afford opportunity for construction at low cost of a safe, convenient road adapted to indefinite expansion as traffic requires, and capable of handling traffic safely at any reasonable speed fixed by law.

The present San Juan grade, with minor improvements and proper maintenance, in our judgment, will be suitable to be retained as a link in the Hollister county seat lateral.

Despite the heavy duty taken off the grade by the relocated unit, there will continue to be much travel on the grade, but an amount within its capacity.

The present grade will doubtless continue to serve a large share of travel to the old mission town of San Juan Bautista, Hollister and the Pacheco Pass cut-off, but should be sufficient to handle that for an indefinite period of time.

In brief, the San Juan grade with all the present commercial and tourist travel thereon,

State of California

Legal Department

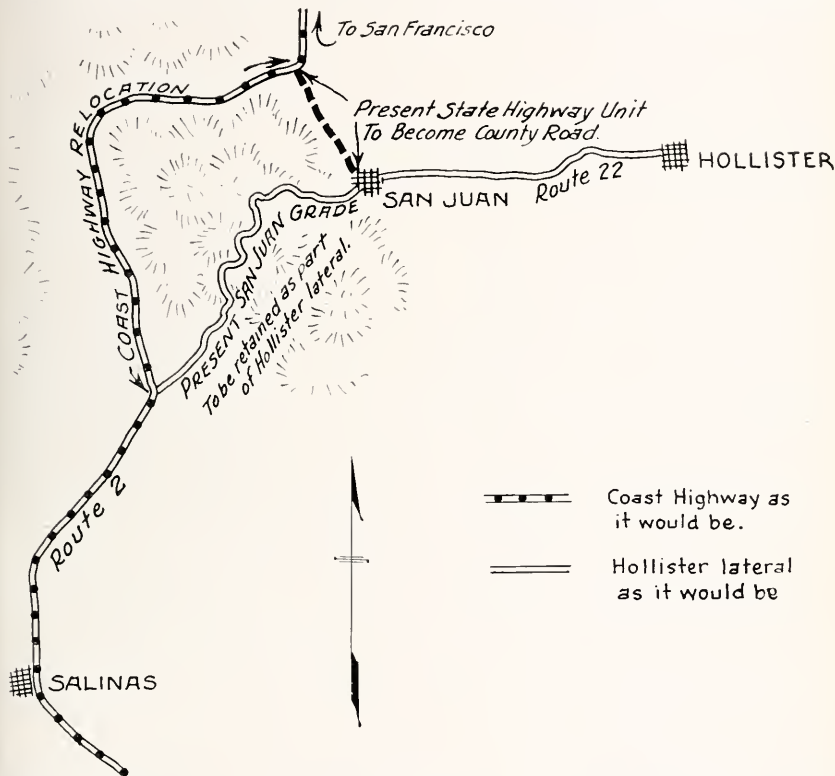

U. S. Webb,
Attorney General.

San Francisco, March 19, 1930.

Hon. B. B. Meek,
Director, Department of Public Works,
Sacramento, California.

Dear Sir:

On March 14, 1930, you addressed this office on the subject of "Relocation of Coast Highway at San Juan Grade." As stated by you this proposed relocation has been the subject of a number of conferences

is now overstressed to the danger point, but, with the abnormal traffic taken from it by the alternate route, it should, with minor improvements and maintenance, suffice for the lighter traffic.

OPINION OF ATTORNEY GENERAL

The opinion of Attorney General U. S. Webb on this subject is as follows:

between this office and "members of the California Highway Commission, Mr. C. H. Purcell, State Highway Engineer, Mr. C. C. Carleton, Chief of our Division of Contracts and Rights of Way, and the writer."

It is true that I have been made familiar with the proposed changes in routing through these various discussions and through, as you state, "inspection and examination of maps, reports of the Commission's engineers, and a report on legal aspects of the situation submitted by Mr. Carleton," all of which were furnished me some months ago and were examined

(Continued on page 26.)

Run-off Predictions Are Made Based On Data Obtained from Snow Surveys

IN THE period from late March to early April snow surveys have been completed at practically all of the 150 snow courses throughout the major stream basins of the Sierra. This constitutes the main survey as in general, this is the period when normally the major storms have occurred and melting of the snow has barely commenced. The survey data at this time therefore may be taken as indicative of the April-July run-off with later modification of estimates in accordance with subsequent storms, temperature and conditions.

The results may be summarized as follows:

For the western slope of the Sierra the data up to April 1st from the precipitation station shows an approximately uniform decrease in the precipitation expressed in percentage of normal, from 90 to 100 per cent for the upper Sacramento and Feather basins in the north to little better than 60 per cent for the upper San Joaquin, Kings and Kern basins in the south. Because the greater number of snow courses are newly established few normals are available to permit percentages of normal water content being given.

Where the survey records are of sufficient length that forecasts have been possible the average water content of the snow in per cent of normal is as follows: South Yuba River areas, 70 per cent; Tahoe basin, 60 per cent; Truckee basin, exclusive of Tahoe, 60 per cent; Carson basin, 59 per cent; West Walker basin, 60 per cent; and East Walker basin, 58 per cent. The estimates for the eastern slope basins have been made by the Forecast Committee of the Nevada Cooperative Surveys through the cooperation between California and Nevada.

Although the measurement of such snow as occurs in the higher ranges of southern California basins would probably not furnish as reliable data for water supply forecasts as in the Sierra the measurement of total precipitation, including snowfall, at representative stations in the higher areas should give data upon which forecasts of value might be based. It is planned that the surveys are to include these southern basins and the data for precipitation stations now existent (very few for the

higher areas) and to be established will be published in bulletins. For the present season a general estimate of the precipitation to April 1st in per cent of normal as given by the Los Angeles office of the U. S. Weather Bureau for the Santa Ana, San Gabriel and Los Angeles River basins is 74 per cent. At Mt. Wilson, the only weather bureau station in the high mountain area of these basins, the precipitation to April 1st in per cent of normal is reported as 58 per cent.

Based upon past experience the precipitation, October to March, inclusive, in Sacramento and San Joaquin basins would indicate seasonal run-off (October-September) in per cent of normal as follows:

Sacramento River at Red Bluff.....	74 per cent
Sacramento River at Sacramento.....	73 per cent
San Joaquin River near Vernalis.....	48 per cent
Combined Sacramento and San Joaquin flow to the Delta.....	69 per cent

With these seasonal run-off percentages minimum river flows to be expected are 3300 second-feet at Red Bluff, 2000 second-feet at Colusa, 2500 second-feet at Sacramento and minimum combined Sacramento and San Joaquin flow to the delta, 3300 second-feet. These estimates assume a rice area approximately 130 per cent of that of 1929 (preliminary estimates).

With percentages and minimum flows as given, past experience would indicate corresponding maximum salinity in the late summer at points in the delta as follows: (Parts of chlorine per 100,000) O. & A. Ferry 650, Collinsville 500, Antioch 400, Emmaton 150, Jersey 125, Rio Vista 40 and Central Landing 10.

OTHER FORECASTS

The following forecasts are made for those few basins or partial basin areas where the snow surveys have been conducted according to the standard methods adopted for a sufficient number of years to make it possible to forecast.

YUBA RIVER BASIN

Area tributary to South Fork at Laags Crossing (Lake Spaulding):

Normal water content for area (using snow survey data weighted accord-

ing to elevation from Lake Spaulding, Cisco, Furnace Flat, Lake Fordyce, Soda Springs, Meadow Lake, Red Mountain, Sawmill Flat, Lake Sterling, Summit and Webber Peak snow courses) -----	41.98 inches
1930 Mean water content for area (weighted) -----	28.98 inches
1930 Mean water content in per cent of normal -----	69.03 per cent
Normal April-July natural run-off of South Fork at Langs Crossing -----	251,000 acre-feet
Estimated 1930 April-July natural run-off 251,000 x .6903 -----	173,000 acre-feet

Area tributary to Bowman Lake:	
Normal water content for area (using snow survey data weighted according to elevation from Bowman Lake, Findley Peak, English Mountain, Meadow Lake and Webber Peak snow courses) -----	35.32 inches
1930 Mean water content for area (weighted) -----	25.56 inches
1930 Mean water content in per cent of normal -----	72.37 per cent
Normal April-July run-off for combined Jackson and Canyon creeks and Middle Yuba at Milton (above Milton-Bowman Tunnel diversion) -----	107,000 acre-feet
Estimated 1930 April-July run-off 107,000 x .7237 -----	77,500 acre-feet
Normal April-July run-off for Jackson and Canyon creeks -----	45,600 acre-feet
Estimated April-July run-off for these two creeks 45,600 x .7237 -----	33,000 acre-feet

TRUCKEE RIVER BASIN (Exclusive of Tahoe)

Weighted per cent of normal for 1930 snow surveys in zones above and below 7000 feet with weight of two for west portion of watershed and one for east portion -----	59.5 per cent
Normal April-July run-off of Truckee River at Iceland (exclusive of Tahoe) -----	325,745 acre-feet
Estimated 1930 April-July run-off:	
Probable—175,000 acre-feet or 53.7 per cent of normal.	
Possible minimum—160,000 acre-feet or 49.1 per cent of normal.	

TAHOE BASIN

Weighted per cent of normal for 1930 snow surveys in same manner as for Truckee Basin exclusive of Tahoe -----	59.5 per cent
Normal net or actual April-July rise of Lake Tahoe assuming outlet gates closed -----	1.68 feet
Estimated 1930 April-July rise 1.68 x .595 -----	1.00 feet
Elevation of lake April first -----	6223.68 feet
1930 probable maximum elevation -----	6224.70 feet
1930 possible maximum elevation in case of very deficient April-July rainfall -----	6224.50 feet

CARSON BASIN

Weighted per cent of normal for 1930 snow surveys using zones above and below 7000 feet and considering only the area tributary to West

Carson at Woodfords, to East Carson at Hangman's bridge and to Markleeville Creek at Markleeville -----	59.0 per cent
Normal April-July run-off of Carson River at Clifton -----	230,100 acre-feet
Estimated 1930 April-July run-off:	
Probable—110,000 acre-feet or 47.8 per cent of normal.	
Possible minimum—95,000 acre-feet or 41.2 per cent of normal.	

WALKER BASIN

West Walker:	
Weighted per cent of normal for 1930 snow surveys by zones -----	60.0 per cent
Normal April-July run-off of West Walker at Coleville -----	191,180 acre-feet
Estimated 1930 April-July run-off:	
Probable—101,000 acre-feet or 52.6 per cent of normal.	
Possible minimum—95,000 acre-feet or 49.6 per cent normal.	
East Walker:	
Weighted per cent of normal for 1930 snow surveys -----	58.5 per cent
Normal April-July run-off of East Walker at Bridgeport Dam -----	70,380 acre-feet
Estimated 1930 April-July run-off:	
Probable—41,000 acre-feet or 44.1 per cent of normal.	
Possible minimum—25,000 acre-feet or 35.5 per cent of normal.	

It should be noted in the foregoing that the forecasts for the basins on the eastern Sierra slope have been compiled by the Nevada Forecast Committee through the cooperation between California and Nevada. In those eastern slope basins the Nevada Cooperative Snow Surveys have been in progress for many years.

Plea To Preserve "Old Plank Road."

The following is from the Calexico *Chronicle*:

A plea for the preservation of the old plank road—or what remains of it—which spanned the rolling sand dunes east of Imperial Valley before the paving was installed, is made in a recent issue of the *Arizona Sentinel*.

The *Sentinel* writer recalls some of the obstacles which confronted the state engineers when they undertook to replace the planking with cement. One group of experts declared that if the grade was low the blow sand would cover the highway. Another group insisted that if the road was high the wind would blow the sand from under it.

The State Highway Department solved the problem by placing an engineer on the location for a period of observation. The present highway is the result—and its success has vindicated the judgment of those who made the final decision.

Here is the *Sentinel* writer's comment:

"The old plank road, which for years was the only highway crossing the sand hills, connecting Yuma with Imperial Valley, is being carted away by vandals. Since the coming of the hard surfaced pavement, the old plank road has not been used; neither has it been forgotten.

"Stretched for miles paralleling the highway it is always an interesting sight, not only to the tourists, but to those who have made the tedious trip across its many boards, bound together with iron strips. It is true that the planks are buried in many places, but the manner in which they yet shift with the sands and withstand the ravages of time and elements cause one to marvel at the ingenuity of the men responsible for the building of such a highway."

At the time the old plank was built, years ago, it was thought impossible to construct a hard surfaced road over the sand hills. In later years engineers conceived the plan of hard surfacing and then oiling the sides of the road to keep the sand from shifting. It has proven a huge success and has been acclaimed one of the greatest engineering feats of the age.

Nevertheless, we do not believe that the old plank road should be torn apart and carted away. If we have been informed correctly the road was built by public subscription and really belongs to those who contributed to the fund. No one should have the right to the boards and we sincerely trust that the California State Highway Department will see fit to stop further removal of the old road.

The name of the "old plank road" is famous throughout the country. Tourists come this way just to see how we traveled across the sand hills years ago. It is really an interesting sight and should be left just where it is, or until the sands cover it over. It is not in the way and is on no ones property. Let's try and stop further despoilation of one of the southwest's most famous and interesting marks.

* * * * *

Destruction Of State Property Punished.

A group of Fresno boys have learned that state property, including highway appurtenances, can not be destroyed with impunity.

Recently, three of the light fixtures on the bridge across the San Joaquin River at Herndon on the Fresno-Madera County line on route 4, were found to be broken. These lights in addition to being ornamental are very definitely considered as safety devices. By cooperation of District Attorney DeVore of Fresno, and of Captain W. L. McCarthy of the Highway Patrol, the boys who were guilty of breaking the lights, were apprehended and their legal guardians were advised that owing to the youth of the miscreants he would not prosecute if the damage done was fully repaired. This was done at a cost of \$33.26 covering the replacement of three lamp units.

* * * * *

Mining Claim For Road Purposes.

The following article is clipped from the *Stockton Record*:

Division Engineer R. E. Pierce of the Highway Commission is a mine owner in Calaveras County He filed a claim on a prospect near Avers, which he had located the previous week.

The new property is known as the Mountain Misery Quartz Mine, and is near the Big Trees, within easy reach of the highway. The Mountain Misery is the first claim to be located in the Avers section in several years.

Pierce located the claim for the State of California and state money will be used to develop it, which puts California in the mining business. Coincidentally, it was located for the granite deposit which it contains and not for the gold content of the rock. The granite will be crushed and used to resurface the Murphys-Big Trees Road. The ledge was on government land and open to location. It afforded the easiest way to secure a large deposit of rock for the state.

* * * * *

Creek Moved To Make Room For Highway.

This from the San Jose *Mercury Herald*:

The State Highway Department has changed the course of one of Santa Clara Valley's creeks by half a mile, the supervisors were informed by the California Department of Public Works yesterday.

Calabasas Creek, which formerly ran beside the state highway for a considerable distance between Santa Clara and Sunnyvale along that stretch once protected by a white fence, has been moved a distance of half a mile from the road to join Campbell Creek.

The new ditch, four feet wide at the bottom, 12 at the top and three feet deep, was dug by crews under N. M. Ball, who won the contract with a bid of \$6,975 a year ago.

The old channel of the creek has been filled in and is now being used for the base of the widened state highway just north of Santa Clara.

* * * * *

Monster Steel Piece In Underpass Crossing.

The San Bernardino *Sun* publishes the following article:

With the setting in place of a 101-ton steel girder, one of the largest single pieces of steel used in any railway bridge in America, the underpass being constructed jointly by the Union Pacific Railway and the State Highway Commission at Wineville is nearing completion.

The project, which will eliminate a grade crossing on the highway between Riverside and Ontario, will cost more than \$100,000 and includes the building of a quarter of a mile of new highway under the rail crossing.

The girder used in the construction of the railway over the highway was transported from Gary, Ind., on three flatcars.

Measuring 112 feet, 6 inches, in length, and 12 feet high, the girder is also one of the longest in the country. It is the main support of the railroad overhead crossing and eliminates the grade crossing at this point. When it arrived on its "tri-flatcar special" two giant cranes were hooked to it and steel workers, under the supervision of R. L. Adamson, chief engineer of the Union Pacific, had a virtual picnic placing it in position.

The Highway Commission and Pacific Electric Railway will construct an \$80,000 underpass at the point where the interurban line crosses the Foothill boulevard at Muscat. Work on this project will begin next week.

Second Garage Mechanic—An old timer?

First Garage Mechanic—No, a new carburetor.

HIGHWAY FACTS

From the 1929 Highways Handbook

New Jersey established the first State Highway Department in 1891.

New York State was the first to license motor vehicles, beginning in 1901, and collecting \$954 that year.

There are 6,579,826 miles of highways in the world, of which 3,000,000 are in the United States. This compares with 764,238 miles of steam railways in the world.

Governmental studies indicate that it costs an average automobile approximately 2.06 cents more per mile to drive on an earth road than on a hard-surfaced road.

The first important road in the United States was the old York Road between New York and Philadelphia, established by the colonies in 1711. The first company incorporated to build and operate a toll road was the Philadelphia and Lancaster Turnpike Company. It was incorporated in Pennsylvania in 1792 and had a road from Philadelphia to Lancaster, a distance of 62 miles. This was later taken over by the state in the public interest.

Federal road building for other than military purposes began with the "National Pike" or "Cumberland Road," said to have been the original conception of General Washington. On March 28, 1806, President Jefferson signed the bill appropriating \$30,000 for a preliminary survey, and actual work was begun not long after.

The predecessor of the present U. S. Bureau of Public Roads was the Office of Road Inquiry, established in the Department of Agriculture by the Act of March 3, 1893. The name was changed to Office of Public Roads in 1901.

The first Federal Aid Road Act as now administered was passed in 1916, carrying an appropriation of \$75,000,000 to be expended in five years.

Prior to the building of the railroads, freight was moved by road in conestoga wagons. In 1819 one of these regular services dispatched two conestoga wagons daily from Philadelphia to Pittsburgh, making the trip in 12 days and charging \$120 a ton.

There are approximately 20,000 grade crossings on the entire Federal Aid Highway system of 187,753 miles as of December 31, 1928. On the 76,000 miles of the system improved with Federal Aid from 1916 to 1928, nearly 4300 have been eliminated.

Approximately 627,000 miles, or more than one-fifth of the 3,000,000 miles of highways in the United States, are surfaced in varying degree.

Annual expenditures for rural highway construction and maintenance amount to about \$1,500,000,000. Another \$500,000,000 is spent by the cities for street facilities.

More than 50,000 miles of new highways are built annually.

Automobile drivers today average more than 2 per car; in other words, there are twice as many drivers as cars.

The longest paved motor road in the world is said to be U. S. Route 40, from Wilmington, Delaware, to St. Mary's, Kansas, a distance of 1254 miles.

The highest motor road in the United States is on Pike's Peak in Colorado, 14,109 feet above sea level.

The shortest and narrowest paved motor road in existence is believed to be the road on Smith's Island, one of the little islands in the lower Chesapeake Bay near Crisfield, Maryland. It is less than a mile long and just wide enough to permit the passage of one motor car at a time.

It's All in the Life of a Traffic Officer

EPISODES FROM OFFICIAL REPORTS OF CALIFORNIA HIGHWAY PATROL

INSPECTOR M. F. BROWN reports that he met L. M. Epps, wife and child of Tacoma, Washington, stalled on the Redwood Highway near Garberville. Epps was having gas line trouble and had lost all of his gasoline. The Inspector repaired the trouble, gave him two gallons of gasoline from his own tank and sent him to Garberville where permanent repairs on the car were made. Mr. Epps writes to the Department thanking it for the attention given him by Inspector Brown.

SERVICE ON "DAY OFF"

C. E. Burrows of Los Angeles writes as follows: "Occasionally things occur that compel a man to speak up. Because this has happened to me I am taking this opportunity of advising you that Captain J. E. Payton of the Division of Motor Vehicles at Santa Cruz, gave the writer and one of his employees considerable service on the captain's day off. This service was given in such a gentlemanly and wholehearted manner that I believe that you should be advised of the occurrence."

STOPPED CONTRABAND CHINESE

The following letter is from Walter E. Carr, District Director, Immigration Service, U. S. Department of Labor, with headquarters at Los Angeles: "On February 26th near Santa Barbara your highway patrol officer, Mr. Johnson, apprehended a Chrysler automobile in which two white men were smuggling four contraband Chinese aliens into the interior of the United States. Your patrol, through Patrol Officer Johnson, greatly assisted this service and its border patrol in this case, and we desire at this time to extend to you our heartiest thanks for this cooperation."

AUTOIST AT FAULT: SAYS SO

Paul F. Byrne of Palo Alto writes as follows: "I should like to express my sincere appreciation for the courtesy and efficiency of one of your highway patrolmen. Although I was entirely at fault the gentlemanly conduct of this officer in performing his duty should not be overlooked. To the best of my memory his number was 92. Service of this type is

appreciated by the public and will no doubt lead to safer traffic conditions." (Badge No. 92 is assigned to Patrolman H. Zierdt of Calaveras County).

HELPED '49 CELEBRATION

E. R. Gardner writes from Marysville as follows: "I wish to compliment you on the splendid service rendered the Trails of '49 Committee during our celebration in Marysville and Yuba City by your traffic officers. The committee on motion pictures in particular are desirous of commending to you the work of officers Brown, Lanme, Marvin, Curson, Bissett, Babb, White, Boatsman and Norwood under the direction of Inspector F. S. Quinn. The courteous cooperation extended our committee by each of these officers greatly facilitated the motion picture work and we wish you to know it is appreciated."

BAYSHORE HIGHWAY NOT RACE TRACK

A. J. Scampini of San Francisco addressed the following letter to the Division of Motor Vehicles: "The other day the writer was, without knowing it, proceeding at a good rate of speed when Officer Perussina overtook him and in a very gentlemanly, but firm manner, warned him that the Bayshore Highway was not intended for a race track and to be more careful of his speed. I wish to commend the officer both for his courtesy and his efficiency."

GAVE CLUE TO ROBBERY

Ivan D. Christie, border checker at Clam Beach Checking Station, Arcata, is commended for furnishing information to the sheriff's office through which it was possible for the sheriff to arrest a felon within 36 hours after a robbery was committed.

AIDED IN CAPTURING BANK ROBBERS

A. S. McCurdy, undersheriff of Marin County, writes as follows: "We wish to thank you for the excellent support that was given this office recently by your officers in the apprehension of the criminals that held up the Fairfax branch of the Bank of Italy."

For obvious reasons the signature to the following letter is omitted.

No doubt you are in receipt of many complaints from time to time, from people who feel that they have a grievance against the men who work under you. I find this true in my work and also find that the average person will not go out of their way, to say a word of praise.

It may be an unusual procedure for me to thank an officer of the law for causing my arrest but such is the purpose of this letter. Last Sunday, I took a friend of mine for an automobile ride to Tia Juana. We arrived quite early in the morning. Our primary object being, to see the races. I don't know how much whiskey, etc., that I consumed but I missed the races. I had all the confidence in the world that I was able to drive, so started to cross the line for the American side. We were stopped by Officer Harold Waite. Mr. Waite gave me every opportunity to prove to him that I was capable of driving, before he took the car from me, put me on a San Diego stage, with a ticket charging me with being drunk. At no time was there any rough talk or actions. I was shown nothing but kindness, courtesy and fairness. More perhaps than I might have shown, had our positions been changed. Mr. Waite did me a favor and perhaps saved me from serious bodily injury or injury to others. I desire that you thank him for me. I consider him a friend and hope to meet him again under different circumstances. Men of the type of Mr. Waite are a credit to the work they do and I believe should be told that they are appreciated by a few who like myself, slip back once in awhile. I feel since coming in contact with him that I have better protection while driving and I am sure that you will want him to know these things. Let him know that although his job may be an unpleasant one at times, he is doing good and making the world a better place to live in. Let me again say that I appreciate the service, you and your men are giving to the State of California

Highway Patrol Wins Editorial Praise.

The following editorial is from the *Chico Record*:

The address of H. R. Youngblood, assistant chief of the California Highway Patrol, delivered before the Rotary Club Tuesday, was highly expressive of the changed attitude relative to the enforcement of traffic regulations.

Somehow it has always seemed that only the most hard-boiled were considered as officers for enforcement of the traffic regulations. In the minds of the general public discourtesy and rough language were synonymous with traffic police. "As tough as a motor cop" was a popular comparison.

Of course there always have been exceptions. There always have been discreet, intelligent, courteous motor or traffic police. But usually they were so mixed with the majority of the opposite kind as to lose recognition.

Mr. Youngblood in explaining the operation of the new set-up in traffic regulation—in motor control—stressed the fact that discourtesy was no longer considered by its executive officers as a necessary component of efficiency.

The efforts of the department under whose authority the motor control operates to build up a personnel of intelligence, courtesy and tact, is sound, and will meet with the approval of the public.

States to Spend More For Highways in 1930

COOPERATING with President Hoover in his plea to enlarge all construction programs as much as is practicable to ameliorate the unemployment situation, the states and their counties will spend in their road building program for 1930 at least \$250,000,000 more than they spent in 1929.

Reports received from state highway departments and compiled by the Bureau of Public Roads, U. S. Department of Agriculture, show that state and local authorities plan to spend \$1,601,167,455 for highway improvement in 1930.

The planned expenditure by state highway departments for construction and maintenance of state highways is \$937,500,455; the balance, \$663,667,000, will be spent, according to the estimates, on local roads and bridges. The state highway officials of 45 states estimate the total length of roads to be improved by them in 1930 as 32,532 miles, an increase of 3126 miles over the estimate in the 1929 programs. Three states failed to report contemplated mileages for 1930.

The highway departments of all states will control the maintenance of 281,393 miles of highways this year, an increase of 32,381 over the mileage under state maintenance in 1929. Gradually, the states are taking over into their systems for maintenance the more important county and local roads of the country.

The states of greatest population and industrialization in which unemployment, naturally, is greatest, show the highest contemplated expenditures. The Middle Atlantic states, comprising New York, New Jersey and Pennsylvania, plan to spend \$374,835,310 on improvement of state and local roads; the east north central states of Ohio, Indiana, Illinois, Michigan and Wisconsin plan to spend \$303,696,000.

The west north central states, including Minnesota, Iowa, Missouri, North Dakota, South Dakota, Nebraska and Kansas rank third in their contemplated expenditure of \$236,461,727, and the south Atlantic states of Delaware, Maryland, Virginia, West Virginia, North Carolina, South Carolina, Georgia and Florida, with an expenditure of \$182,872,418 rank fourth; the west south central states of Arkansas, Louisiana, Oklahoma and Texas rank fifth with an expenditure of \$154,100,000; and the Pacific states comprising Washington, Oregon and California rank sixth with an expenditure of \$121,590,000.

HOOVER-YOUNG WATER RESOURCES COMMISSION

The third meeting of the joint Hoover-Young Water Commission convened at the Hotel Oakland in Oakland, March 11th.

The State Engineer announced the appointment of Professors Frank Adams and David Weeks, University of California, College of Agriculture, by the Division of Water Resources to conduct a survey of land values in the San Joaquin Valley to determine the amount of financing farm lands can absorb in the proposed water diversion to the San Joaquin Valley. These reports are to be prepared and submitted to the Hoover-Young Commission.

Lt. Col. Thos. M. Robins, federal member of the joint commission, announced the detail of men to work on the salt water barrier project investigation to ascertain the probable effect of the barrier construction on navigation, flood control and silting.

Assemblyman Bradford S. Crittenden, chairman of the State Legislative Committee read a report on the activities of that body of the last three years. A number of requests from various interests were received and filed for future consideration before the Commission.

The State Engineer informed the members of the Commission present of the results of his meeting with Dr. Elwood Mead, Chief of the U. S. Reclamation Service, in Denver. Dr. Mead conveyed his assurance to the Commission that the U. S. Reclamation Service would place every facility at its disposal to cooperate with the state and federal agencies to assist California in formulating a water conservation program along economic and sound engineering lines. Mr. Walker R. Young and Mr. C. A. Bissell of the U. S. Reclamation Service have been assigned to the work on the water resources investigation by Dr. Mead and are already at work, having arrived in Sacramento on March 20th.

The following persons were present at the meeting:

United States Members:

Lieutenant Colonel Thos. M. Robins,
E. W. Kramer, Representing F. E. Bonner,
R. J. Coffey, Representing Elwood Mead.

Ex officio:

Wm. J. Carr,
B. B. Meek.

State Members:

B. A. Etcheverry,
Wm. Durbrow,
Alfred Harrell,
W. B. Mathews,
Warren Olney,

Edward Hyatt, Secretary of the Commission,
Absent—Frank E. Weymouth.

Legislative Water Committee:

Assemblyman B. S. Crittenden,
Assemblyman Robert P. Easley,
Senator H. C. Nelson,
Senator Ralph Swing,
Assemblyman Van Bernard,
Absent—Frank W. Mixer.

WATER RESOURCES STUDY

SAN JOAQUIN VALLEY INVESTIGATION

Main Supply Canal Surveys—Surveys of canal line from mouth of canyon on the Kern River to serve areas south and east of Bakersfield were initiated and completed during the past month.

Land Classification and Crop Survey—The land classification maps and reports were submitted to the San Joaquin Valley Water Committee on February 14th for review and were returned to this office on March 14th. Only minor changes and comments were made on the land classification by the counties interested. The classification as submitted was substantially agreed to by the committee.

Ground Water Studies—Analysis of ground water data has been continued throughout the month.

Water Supply and Yield Studies—Reservoir studies on the San Joaquin River in connection with supply canal from San Joaquin to Kern River have been continued for different combinations of canal capacities and reservoir capacities for the purpose of determining the most economical combination.

Seepage Investigation—A field study has been initiated along the lower San Joaquin River for the purpose of determining, if possible, the seepage which might result when and if a pumping system were installed and operated.

SACRAMENTO VALLEY INVESTIGATION

Water Supply—Estimates of monthly run-off of the five main stream systems of the Sacramento Basin, Sacramento, Feather, Yuba, Bear and American rivers, as would be impaired by ultimate upstream use and available at the edge of the valley floor, is practically completed.

Land Classification—Crop Survey—6,200,000 acres of land in the Sacramento Valley and adjacent foothills have been classified and the crops thereon ascertained. The areas of lands and crops have been tabulated by counties, irrigation districts and reclamation districts. All this information has been submitted to the U. S. Engineers.

Engineering Advisory Committee—Field trip was made on March 4-7 inclusive, by the Engineering Advisory Committee on the Sacramento Valley Investigation, consisting of Messrs. Etcheverry, Galloway, Herrmann, Huber, Tibbetts and Dr. Londerback of the University of California. The State Engineer and A. D. Edmonston, G. W. Hawley, T. B. Waddell and Chester Marliave of the water resources staff accompanied the Advisory Committee on this trip. The Fairview dam site on the Trinity River was viewed together with the conduit line and power layouts extending from the Trinity River to the Sacramento River above Redding. Kennett dam site and the Iron Canyon dam site on the Sacramento River were also examined and examination of the core borings of the Iron Canyon dam site stored at Orland was made. Classifications of lands from Sacramento to Red Bluff were checked.

A trip of engineers and representatives of the federal departments cooperating with the Division of Water Resources in investigating the state-wide plan was made during the period March 20-22 inclusive, under the guidance of the State Engineer, for the purpose of viewing the watersheds and reservoir sites on the American, Feather, Yuba and Bear rivers. The personnel of this trip was as follows:

Colonel T. M. Robins, representing U. S. War Department.

Mr. E. W. Kramer, representing Federal Power Commission.

Walker R. Young, U. S. Reclamation Bureau.

J. D. Galloway, Walter Huber, F. C. Herrmann, F. H. Tibbetts, consulting engineers.

J. E. Lippincott, consulting engineer.

C. A. Bissell, United States Reclamation Bureau, Washington, D. C.

T. B. Waddell, Division of Water Resources.

George W. Hawley, Deputy in Charge of Dams, Division of Water Resources.

Edward Hyatt, State Engineer.

Salinity Investigations.

The work on Salinity Investigations during the past month has been largely confined to office studies. Intensive studies and analyses are being made of the large mass of data collected during 1929. Substantial progress has been made on these studies which are designed to obtain the relation between salinity and stream flow and tidal action.

Field work has included the maintenance of automatic tide gages and the collection of salinity samples at 26 observation stations which are being maintained throughout the year. In addition, 8 new salinity observation stations were established about March 1st in the channels of Napa River, Sonoma and Petaluma creeks within the marshland area north of San Pablo Bay.

The United States Geological Survey in cooperation with this office, has completed a precise line of levels extending from Tracy at the upper end of the San Joaquin Delta, westerly and along the bay shore for the purpose of tying all tide gages to a common datum.

Salt Water Barrier Investigation.

The Salt Water Barrier Investigation is now well under way. Under a cooperative agreement with the United States Army Engineers, work has been started under Major Ropes of the First District on several important phases of the investigation, including navigation, tidal action, silt and debris movement, flood control and design features of the barrier structure. Cooperative work is also under way with the Fish and Game Commission on the fishing industry, the Department of Public Health on sewage pollution and indus-

trial use and the Division of Highways on the possible use of the barrier as a highway crossing.

Work has been started in the field on the survey of industrial and agricultural developments within the area affected by the barrier. The data and information is being gathered on carefully prepared questionnaires by representatives from this office.

Pit River Investigation.

The routine field work of the Pit River Investigation was continued throughout the month. Installations were made for determining the rate of run-off on two typical drainage areas in the "Devils Garden" district. The progress report covering the year ending September 30, 1929, was completed.

Special Investigations.

Report on the water supply of Bouquet Canyon near Saugus in southern California and an additional investigation of an alternate site at the mouth of Castaic Creek also near Saugus, for a possible prison site has been completed during the present month.

General.

The investigations being conducted in the Napa and Santa Clara valleys, in Ventura County, and on the Mojave and Santa Ana Rivers in southern California comprising studies of the water resources of these areas, have been actively carried on during the present month under the plans and procedure outlined for the conduct of this work and reported upon in our progress report submitted for January, 1930.

SNOW SURVEYS

Data to March 1st indicated that in the Tahoe Basin at Marlette Lake, the surveys show a water content of 61 per cent of the entire seasonal normal (October to May) as compared to 38 per cent up to the time of the February report. In the Yuba Basin, surveys at Summit and Lake Fordyce show a water content of 52 per cent of the entire seasonal normal and in the Mokelumne Basin the survey of the crest course at Blue Lakes shows a water content of 54 per cent of the entire seasonal normal.

Precipitation data obtained showed the following results when a comparison of the conditions to March 1st with normal were made. The northern stream basins from Upper Sacramento to Yuba, was from normal to 10 per cent below normal with the exception of Feather Basin which was 10 per cent above normal. In the central basins from the American to the Merced, precipitation ranges from about 15 per cent to 35 per cent below normal. In the southern basins from the Upper San Joaquin to the Kern, precipitation is all below normal with departures of from 35 per cent to 45 per cent below.

IRRIGATION, WATER STORAGE DISTRICTS

During the month construction work in progress in the El Dorado, Oroville-Wyandotte and Thermalito Irrigation districts was inspected and a conference was held with the officers of the El Dorado Irrigation District relative to the work being carried on by them with funds derived from the sale of bonds.

Conference between the State Railroad Commission, the Clear Lake Water Company and proponents of the Dixon Irrigation District was attended by a representative of this Division. The conference was held

for the purpose of attempting to clarify the situation with respect to an adequate water supply for the Dixon Irrigation District, an area of 5500 acres situated in northern Solano County. As a result of our studies and this conference the State Engineer has recommended against the formation of the district at this time, owing to the lack of evidence of an adequate water supply being available for this area.

Investigations are in progress in the matter of the petitions for the organization and formation of the Rio Seco and Richvale Irrigation districts. These districts include 8000 and 19,700 acres, respectively, of rice land situated in Butte County, and are now being served by the Sutter-Butte Canal Company.

The compilation of irrigation district financial data and studies has been continued through the present month. These studies are for the purpose of keeping up to date the statistical data presented in Bulletin No. 21 of this Division.

Upon recommendation of the State Engineer, the California Bond Certification Commission has approved and issued its orders covering requests made by the following irrigation districts:

For Sale of Bonds at Private Sale—

Oroville-Wyandotte Irrigation District	\$36,000 00
West Stanislaus Irrigation District	50,000 00

Approval of Expenditures for Construction and Developmental Work—

Buena Vista Water Storage District	\$942,731 11
Thermalito Irrigation District	2,591 54
Oroville-Wyandotte Irrigation District	25,181 24
West Stanislaus Irrigation District	40,000 00
Woodbridge Irrigation District	9,182 67
Vista Irrigation District	123,167 26

Total approved \$1,142,767 82

Agreement between the Coreoran Irrigation District and F. W. Cornwell for the purpose of developing additional ground water supplies within the district was approved by the Commission.

FLOOD CONTROL AND RECLAMATION

MAINTENANCE OF SACRAMENTO AND SAN JOAQUIN DRAINAGE DISTRICT

Maintenance work on the flood control project has been mostly routine during this period. The Sutter County by-passes have been mostly filled with water during this period, but nothing worthy of note has occurred. It has been necessary to operate the drainage pumping plants almost continuously.

The Dutton Dredge Company's dragline excavator has completed cleaning the East Intercepting Canal and is now engaged in cleaning and enlarging the West Intercepting Canal to the point where it connects with the new diverting canal being constructed by the California Debris Commission.

The dragline machine operated by Robert P. Easley has been transferred to the Sutter By-pass, where it has been engaged for a short time in trimming portions of the east levee and widening the crown so that the roadway may be made safe. It will proceed to clean the intercepting canals of the Pump No. 1 and Pump No. 2 systems.

FLOOD CONTROL PROJECT MAINTENANCE, BANK PROTECTION

Three additional tree and steel retards are being

constructed on the right bank of the Feather River near Nicolaus, in cooperation with the county of Sutter. This work is being done by the Pacific Coast Construction Company under contract, the three retards being in addition to the seven recently completed.

Eight current retards are being constructed by the Pacific Coast Construction Company on the right bank of the Sacramento River below Knights Landing in cooperation with Reclamation District No. 730, at the Huston, Russell and Inglin ranches. This work is approximately 50 per cent complete.

The construction of the redwood timber bulkhead 850 feet long in the Sacramento River near Isleton has been completed by Leonard T. Isham, contractor, of Rio Vista. The replacement of the washed levee section with sand fill and its protection with revetment will be undertaken as soon as the river has reached its early summer low stage.

Arrangements have been made with Brannan Island Reclamation District No. 2067 for cooperative bank protection work on the left bank of the Sacramento River opposite Rio Vista. This work will consist of depositing rubble rock, maximum size 10 inches, along the bank for a distance of approximately 3000 feet. The estimated cost of this work is \$4,650.

SACRAMENTO FLOOD CONTROL PROJECT

Little progress has been made during the past period in by-pass construction clearing on account of the weather. The by-pass areas have been covered with water a good portion of the time. An additional sum of \$23,500 has been made available for by-pass clearing construction out of the "Joint navigation and flood control project fund," construction budget, by transferring to this fund sums set aside in the program for other work, which could not be accomplished in this fiscal year.

The work being done under five contracts for clearing timber in the Feather River overflow channel above Marysville is approximately 75 per cent complete.

The construction of the West Intercepting Canal by the California Debris Commission has been completed. This office has performed the incidental work necessary in connection with right of way agreements.

The surveys of the timber areas in the Butte Slough, Sutter and Tisdale by-passes, cleared and to be cleared, have been interrupted by the bad weather and overflow water, but will be resumed as soon as conditions permit.

RUSSIAN RIVER JETTY

During this period, repairs have been made to the gas shovel and some rock has been placed along the jetty. A crew of seven men has been maintained. Work will commence about April 10th on driving piles for the extension of the jetty from its present end at the water line into deep water.

An automatic recording tide gage has been set in the lagoon at Jenner, several bench marks have been set and levels run, and a current meter measurement of the discharge through the channel in the bar was made, in preparation for a study to determine the plans for the completion of the work.

FLOOD MEASUREMENTS AND GAGES

There have been several light storms during this period, but none which resulted in flood stages which would justify putting into operation the complete program of flood measurements prepared. Discharge measurements were made at the following points: Tisdale Weir, American River at Coloma, Rattlesnake Bridge and Fair Oaks and Sacramento River at the "I" street bridge.

DAMS

Applications received for dams built prior to August 14, 1929.—One hundred thirty-nine applications were received for existing dams bringing the total of such applications to 570. There are still about 110 dams for which applications have not been received. Of this number there are about 50 dams, applications for which are expected within a few days. The remaining dams consist of those about which there is some doubt as to their status, or whose owners have not been reached. Every effort is being made to inform owners of the law and evidently their failure to file has not been with intent to evade or disobey the law. In no case have owners refused to file when they were informed of their obligation.

Application for approval of plans and specifications for construction:

Dam	County	Owner	Estimated cost
Felt Lake	Santa Clara	Leland Stanford Jr. University	\$78,962
Chatsworth	Los Angeles	City of Los Angeles	3,894,065
Lake Madrone	Butte	Mansfield & McCallum	20,000

* Since August 14, 1929.

Fees received during month \$9,383.63.

Fees received to date \$57,926.19.

Application for approval of plans for repairs or alteration:

Dam	County	Owner
Rapley	El Dorado	A. J. Rapley
Arrow-Bear	San Bernardino	Arrow-Bear Company

Plans approved for construction:

Dam	County	Owner	Estimated cost
Juncal Main	Santa Barbara	Montecito Co. Water Dist.	\$388,862.82
Salt Springs	Amador	Pacific Gas & Electric Co.	6,930,000
Lyons	Tuolumne	Pacific Gas & Electric Co.	287,000
Peach Tree	Monterey	Fort Klamath Meadows Co.	800
Wrigley No. 1	Los Angeles	Santa Catalina Island Co.	14,650
Wrigley No. 2	Los Angeles	Santa Catalina Island Co.	5,500
Glendale Park Manor	Los Angeles	City of Glendale	49,300

Plans approved for alterations or repairs:

Dam	County	Owner
Eurbank No. 4	Los Angeles	City of Burbank
Belvedere	Marin	Marin Municipal Utility Dist.

Inspection of dams under construction, enlargement or repair:

Dam	County	Remarks
Almanor	Plumas	Repairs
Bear Gulch	San Mateo	Repairs
Belvedere	Marin	Repairs
Calaveras	Calaveras	Construction
Chatsworth	Los Angeles	Construction and enlargement
Glendale Brand	Los Angeles	Construction
Hansen	Los Angeles	Construction
Juncal	Santa Barbara	Construction
Lake Hodges	San Diego	Repairs
Lower San Fernando	Los Angeles	Enlargement
Lyons	Tuolumne	Construction
Mary Joe	San Diego	Construction

Dam	County	Remarks
Merced Falls	Merced	Enlargement
Moccasin	Tuolumne	Construction
Peach Tree	Monterey	Construction
Salt Springs	Amador	Construction
Shaver Lake	Fresno	Enlargement
Silver Lake	Amador	Enlargement
Wrigley	Los Angeles	Construction

RUN-OFF DATA

Rainfall and run-off studies referred to in our last report have been continued through the present month to determine the required spillway capacity of dams to carry peak flows. Automatic recording rain and stream gages have been established in a few selected typical areas for the purpose of obtaining the run-off of maximum rainfall during short periods.

WATER RIGHTS

Applications to Appropriate—During the month there were 31 applications to appropriate water received. Eight were canceled and five approved.

Permits and Licenses—During the month four permits were revoked.

ADJUDICATIONS

Shasta River (Siskiyou County)—The final reply brief covering the issues raised by exceptions to the Division's Order of Determination was completed and filed with the Superior Court.

Whitewater River Adjudication (Riverside County)—A field inspection was made of various incomplete water appropriation projects. Two orders were entered granting extensions of time to complete incomplete appropriations.

Clover Creek (Shasta County)—The Division's report as referee in the Clover Creek court reference and exhibits thereto were completed and filed with the Superior Court.

Davis Creek (Modoc County)—A tentative stipulation for consent judgment has been prepared for submission to the water users involved in the Davis Creek court reference at a meeting to be held March 18th.

Mill Creek (Modoc County)—A proposed schedule of distribution has been prepared for submission to the water users involved in the Mill Creek court reference at a meeting to be held March 18th. It will be recommended that this schedule be administered by a water master during the 1930 season, as a trial allocation.

Water Distribution—The water master reports covering the 1929 season for Owl, Soldier and Emerson creeks, all in Modoc County, have been completed. Water master service for the 1930 season has been commenced on these streams.

It seems that one of the employees of Henry Ford dreamed that Henry died. He dreamed that he saw the black casket being borne by six of Henry's oldest and most faithful employees. As the casket came by, Henry raised up, looked around, and offered the following suggestion:

"If you would put rollers under this casket, you could lay off five men."—*Sour Owl*.

Stenographer—"Howja spell sense?"

Employer—"Dollars and cents, or horse sense?"

Stenographer—"Well, like in 'I ain't seen him sense.'"—*Kreolite News*.

Offer Trophy for Safety Work in State Highway Patrol Contest

By HELEN LUCILE HOLT, Director, Safety Conference, California State Chamber of Commerce.

THE California State Chamber of Commerce is deeply appreciative of the efforts being made by the State Department of Public Works through the California Highway Patrol to regulate and control traffic in the interest of public safety.

This loyal group of men, who every day are facing the problems of keeping the traffic on our highways moving in an orderly fashion, are unquestionably making a great contribution to the happiness, welfare and safety of the motorist.

It is with this in mind, and in recognition of the work which is being done, and, in the hope that we may be able to secure a complete report of the concrete safety work being done by this group of men, that the Board of Directors of the State Chamber of Commerce has decided to offer to that division of the Highway Patrol presenting, at the end of a year's time, the most complete record of accomplishments in the safety field, a trophy to be emblematic of their value to our state.

The contest will be among the several divisions of the California Highway Patrol, and will be decided upon the basis of most effective work done in making the highways safe, and will take into consideration the relationship of the work being done to the district served, and will not be particularly governed by the size of the territory or the number of men involved, in other words, the idea is to equalize all districts, irrespective of size, and to place the contest definitely on a basis of effectiveness of program.

The award, which is to be offered, will be in the nature of a cup to be permanently held by that division winning it three times. The contest will be judged on the basis of a written report to be made at the conclusion of the contest by a proper representative of each division to the judges of the contest.

It is the hope of Mr. Wm. M. Garland, president of the California State Chamber of Commerce, that the trophy will be presented in person by the Governor of the State of California, the Director of the Department of Public Works, the Chief of the State Division of Motor Vehicles, the Superintendent of the

California Highway Patrol and representatives of the State Chamber of Commerce.

The State Chamber recognizes the fact that the California Highway Patrol will carry on just as effective work should there not be a contest among the divisions, but is specifically carrying out the contest in order that the state, as a whole, may become more aware of the safety work being done by the Patrol, and more than this, that other states in the United States may profit from our splendid achievements. We are already sufficiently aware of the fine work being done, but the contest will enable us to present concrete written achievements.

The California State Chamber of Commerce desires to congratulate Mr. Meek, Chief Snook and Mr. Biscailuz on the courteous and efficient work being done by the California Highway Patrol.

PARIS ADOPTS PARKING RULE

For the first time in its history Paris has adopted a half-hour parking limit.

Increased registrations of automobiles led to the rule, which applies to the entire downtown district.

Parking lots in three classes are provided: "R" lots for car owners living or working in the immediate vicinity, "M" lots for car owners who do not live in the vicinity, and "pay" lots.

TEXAS—Bexar County has created an innovation in county highway systems by adopting uniform and standard marking for its roads.

DELAWARE—A highway devoted to industrial traffic only is proposed to be built from Wilmington along the Delaware River to Philadelphia.

ARIZONA—This state has embarked on a program of highway and bridge construction covering a period of ten years at an estimated cost of \$50,000,000.

A colored man got his nerve together and took a flight in an airplane. As he climbed out of the ship on its return to the field, he turned to the pilot and said:

"Suh, Ah has to thank you fo' both dem rides."

"What are you talking about?" said the aviator. "You only had one."

"No suh," returned the passenger "Ah done had two—mah fust an' mah last."—Round Table.

MOTOR VEHICLE DIVISION REPORTS

FRANK G. SNOOK, Chief

As of March 1, 1930, the state has registered 1,699,069 automobiles, 13,670 solid tire trucks, 64,479 pneumatic tire trucks, 6,386 motorcycles, 7,932 solid tire trailers and 25,338 pneumatic tire trailers. In comparing these figures with the total registrations of 1929, we find that only 210,294 automobiles, trucks, trailers, etc., remain unregistered to date. This reduction is accounted for through the number of vehicles that are in dealers' possession that have been reported on inventory forms, and those commercial vehicles that are used in seasonal hauling and are not registered until needed by their owners. We feel confident that the total registration for 1930 will surpass 1929. The total fees received as of March 1 are \$7,872,462.22. This sum will likewise be increased, but, due to a decrease in commercial fees, it is possible that the total fees will be smaller than those collected in 1929.

On March 1 approximately the same number of motorcycle and trailer dealers had been licensed as in 1929. There is a decrease of 557 in the number of automobile dealers for 1930 compared to 1929. This number no doubt will be increased as the year progresses.

The total number of the Highway Patrol personnel at this time is 304 officers, men and clerks, exclusive of the administrative officials and clerical personnel at the Sacramento office.

During the month of February, 15,895 persons were stopped by the officers of the Highway Patrol and 5315 arrests made. The Patrol covered 465,230 miles during the month.

To date approximately 700 concerns and individuals have made application to be authorized as brake testing stations. Of this number 410 have been inspected and approved. Investigations are still being made on the remaining applications.

In several districts the inspectors have been supplied with necessary equipment for weight testing of commercial vehicles under the revised provisions of the California Vehicle Act. Every district inspector will be supplied with this equipment very soon, and rigid enforcement in this connection will be carried on extensively.

Arrangements have been made to establish the first school of traffic instructions at Sacramento. For this purpose a cooperative agreement has been made with the government to use Mather aviation field. It is expected shortly that all will be in readiness to call in the traffic officers for their preliminary instructions.

The following persons were appointed members of the California Highway Patrol during the month of March:

INSPECTOR APPOINTED

Ray Franck of Redding has been appointed inspector for the district comprising Shasta, Trinity, Siskiyou and Tehama counties. Headquarters at Red Bluff.

TRAFFIC OFFICERS NAMED

Following are appointments to the various counties:

Contra Costa County—Richard H. Trembath, George R. Cockerton, Wilfred H. Kennerley, Charles E. Boomhower.

Alameda County—Harold T. Hendricks, William A. Hamilton, George J. Barron, Anthony Enos.

Amador County—Vernon J. Farewell, Harrison M. Shear.

Merced County—Donald Halterman, Niel C. Nicholson, Chas. F. Sloat.

Napa County—Eugene C. Riordan, Joseph P. Mathews.

Fresno County—Will J. Eudaly, B. H. Schallenberg.

Marin County—Ivan A. Carbine, Vernon E. Dwelly, Thos. H. Wentworth.

Placer County—H. A. Duryea.

Sacramento County—John A. Daroux, Jack A. Thielen, Thos. Robinson.

Santa Cruz County—Victor C. Calhoun, Arthur E. Day.

Glenn County—Irvine C. Kimball.

NEW REDWOOD PARK ADORNS STATE HIGHWAY

(Continued from page 4.)

remains is brushed out and in good condition for a road of the corduroy type. It passes through richly massed redwoods with very luxuriant undergrowth and is well worthy of being reinstated as a slow, rambling route. Its course through the park as proposed is about five miles in length."

Within the confines of the park are fragments of the old Eureka pack trail, famous in the days of the pioneer. Mr. Knight recommends that an effort be made to awaken interest in this historic old relic, so that it may be reestablished as a link with the romantic early days.

"The entrance to the park, from both north and south, is an important factor if the unique beauty and appeal of this area are to be enjoyed to the full. Beginning in a key almost commonplace, and gradually increasing in charm and interest as the traveler progresses into the recesses of the park, the climax is finally reached, as the view discloses suddenly a scene of superb redwood forest etched against the dramatic background of the ocean. Although the northern and southern approaches can not compare in any way with the grandeur in store for the traveler farther along, they are of tremendous significance to the "tone" of the park as a whole. Unsightly structures in the way of roadside refreshment stands and other obstructions to the loveliness of the countryside must be so dealt with that there may be no jarring note, in order that the visitor to the park may reap the fullest possible aesthetic enjoyment and spiritual benefit therefrom."

Buck: "Can you give me a definition of an orator?"

Private: "Sure. He's the fellow who's always ready to lay down your life for his country."—*Kenebec Journal*.

NEW DESIGNS IN HIGHWAY CONSTRUCTION

(Continued from page 2.)

type of structural member, beam, or otherwise is designed to resist the stresses and strains of service. Greater unit strengths in concrete are being obtained than ever before. All other types of pavement, including even the low type temporary gravel or crushed rock, are laid with the utmost scientific care in selection of materials, placing, etc., to insure smooth, durable surfaces.

The importance of suitable subgrade and drainage is realized fully.

The design of this factor is considered to be as important fundamentally as the design of the pavement itself, and is now given its full share of consideration.

Practically all important paved state highways are being divided by plainly visible white traffic stripes into well defined traffic lanes. This work was started about a year ago and is being pushed toward completion as rapidly as possible.

GRADE CROSSING ELIMINATION

This work is being pushed forward as fast as funds become available therefor.

DRAINAGE

Although the importance of this factor always has been recognized, it is being given increasing attention in connection not only with the disposal of surface drainage but also in connection with subgrade pavement foundations and appearance. In flat country deep parallel side borrow ditches, such as were often in times past designed to supply material for roadway fills, are no longer permitted as they are considered unsightly, unhealthy in that they often hold stagnant water and breed mosquitoes, and are dangerous. During the past two or three years, many such ditches have been backfilled and eliminated, often in connection with shoulder widening.

LANDSCAPING

Increasing attention is being paid to this factor of design, especially on recreational roads. Engineers of the Division of Highways are trained to give special attention to the aesthetics of highway designs and to avoid wherever practically possible destruction or injury of trees, streams, parking sites, and all types of scenery and natural or cultivated beauty.

Roadside tree planting is encouraged, the

state usually assuming responsibility for the care but not the planting of the trees.

Especial attention is given during both location and construction to the development of wide shoulder parking sites at points where good views may be obtained.

JOINT HIGHWAY DISTRICTS

One of the most important recent trends has been the development of the joint highway district. In line with certain requirements prescribed by law, two or more counties may form a joint highway district to construct an important road, and may request and, subject to the state's approval, may receive state aid in the form of financial contributions and engineering advice. This naturally leads toward higher standards of construction and better coordination of the county road systems.

The preceding notes present only a few of the more important improvements in the trend of modern highway design. It may be stated briefly that the current policy of the California Division of Highways is the production of highways which will at all times provide to the public the fullest measure of transportation service and satisfaction.

TEST YOURSELF

The following definitions are given in the *Wisconsin Engineer* as answers one of the professors received in a vocabulary test:

tandem—trance, riot, uproar.
palpable—pleasing to the taste, very fine, excited.
façade—a period of five years.
ludicrous—delicious.
askance—can have for asking.
exorcise—to kill one's wife.
intrigue—poison for insects.
chimera—animal which changes color with environment.
nostalgia—bunch of flowers.
marital—pertaining to the sea.
maritime—period of marriage.
bovine—sad, melancholy, pertaining to a dog.
polygamy—worshipping more than one god.
equestrian—a judge.
science—dealing with things that are not understood.
category—a bag of tricks.
tent—one who occupies another's property.
weal—small water animal.

FROM THE OLD SCOTCH

Scotch Father (out riding)—Wee Sandy, why are ye a-hidin' under the lap-robe?

Sandy—Whist Father, dinna ye see the toll bridge we're a-coming to?

Father (quickly)—Hoot lad, move over so that your mither can get under wi' ye.

"Why is Jones looking for a cashier, he only hired one last week."

"That's the one he is looking for."

Improvements in Highway System Secured Through March Contracts

REDWOOD HIGHWAY

Two grade eliminations on this highway were made possible by the following contracts:

In Marin County an overhead crossing over the tracks of the Northwestern Pacific Railroad at Forbes Station consisting of one 46-foot steel beam span and 190 feet of timber trestle on pile bents. This grade separation is on the new alignment just north of San Rafael. Grading and paving of this section is now under construction. Rocca and Caletti of San Rafael was awarded this contract for \$16,170.

In Humboldt County an undergrade crossing at Loleta under the same railroad tracks and being situated on the recently constructed realignment on that portion of the Redwood Highway between Loleta and Beatrice. Fred J. Maurer and Son of Eureka were awarded this contract for \$10,880.

PACIFIC HIGHWAY

In Glenn County on the West Side Pacific Highway between Logandale and Willows, 5.2 miles will be paved with Portland cement concrete. This pavement is to be placed on the recently graded 33-foot roadbed over this section of the highway and is the final step in its three-stage construction. The first stage of construction consisted of grading. The second was the placing of a 12-inch gravel subbase, which raised the grade sufficiently to protect the roadbed from the possible overflow of water from the irrigation of the adjoining rice fields. The present improvement has been shifted to the west so that the center line of the ultimate 40-foot pavement will be centered in the 100-foot right of way. This contract was awarded to Basich Brothers Construction Company of Los Angeles for \$146,319.

TAHOE-UKIAH HIGHWAY

In Lake County between Middletown and the old Williams road, 23 miles will have light fuel oil furnished and applied as a dust layer. The Basalt Rock Company of Napa was awarded this contract for \$5,842.

MOTHER LODGE HIGHWAY

The grading and surfacing with crusher run base and untreated crushed gravel or stone for 2.8 miles on either side of Calaveritas Creek, makes another important improvement on this highway, replacing the present narrow and crooked road with a graded roadbed of 24 feet and surfacing 20 feet wide. Larsen Brothers of Galt is the contractor for a price of \$45,494.

VALLEY HIGHWAY

In San Joaquin County two important contracts have just been let for improvement of the section between Lodi and Stockton.

Between Cherokee Station and Harney Lane, 6.9 miles will be graded 36 feet wide and paved with Portland cement concrete 20 feet. This construction replaces the old 16-foot bituminous macadam built by the county. This contract was awarded to T. M. Morgan Paving Company of Los Angeles for \$251,562.

Another contract in conjunction with the above mentioned road construction is the building of four reinforced concrete girder bridges over Calaveras River, and Mosher, Bear and Live Oak creeks. Each bridge will have a clear roadway width of 34 feet. Jacobs and Pattiani of Oakland are the contractors for a price of \$48,875.

CREST DRIVE

H. W. Rohl Company of Los Angeles received the award of contract for grading 1.9 miles in San Bernardino County between The Pass and Waterman Canyon. This improvement is another sector of one of southern California's recreational highways and is on an entirely new alignment of that portion of the Crest Drive from The Pass between Waterman Canyon and Devils Canyon down Waterman Canyon. This project will bring to modern standards of mountain highway construction the worst section of the road from San Bernardino to Big Bear Lake. The present old road has grades as steep as 16 per cent and curves so sharp that stages and trucks negotiate them with great difficulty. Contract price on this improvement, \$100,372.

COMPLETION OF CONTRACTS

PACIFIC HIGHWAY

O. F. Brown of Sacramento recently completed a contract for moving buildings, appurtenances and utilities from the state right of way through Wheatland, in Yuba County, at an approximate cost of \$2,670. In Sacramento County Mr. Brown recently completed another contract for moving buildings from the state highway right of way about 8 miles north of Sacramento at an approximate cost of \$495.

VALLEY ROUTE

Contract for constructing an undergrade crossing near Califa, Madera County, under the S. P. Railroad has been completed at an approximate cost of \$32,700, and accepted as satisfactory. Otto Parlier of Tulare was the contractor.

Another contract in Madera County for constructing a graded roadbed and placing asphaltic concrete surfacing between Califa and the northerly county boundary, for about 5.6 miles, and at an approximate cost of \$148,600, has been completed and accepted. A. Teichert and Son of Sacramento were the contractors.

COAST HIGHWAY

A contract for widening the pavement with oil-treated crusher run base between Eagle Creek and El Capitan Creek, Santa Barbara County, for a distance of 5.5 miles and at an approximate cost of \$17,483 has been satisfactorily completed. Cornwall Construction Company of Santa Barbara was the contractor.

Another contract on this route in Ventura County for super-elevating curves on the Conejo Grade at an

approximate cost of \$2,800 has been completed. Griffith Company of Los Angeles was the contractor.

SAN DIEGO-EL CENTRO HIGHWAY

Basich Brothers Const. Company of Los Angeles just recently completed the constructing of graded roadbed and placing Portland cement concrete pavement between Pine Valley and Kitchen Creek, in San Diego County, for a distance of 7.2 miles at an approximate cost of \$309,000.

HIGHWAY BIDS AND AWARDS For Month of March

CALAVERAS COUNTY—Between $1\frac{1}{2}$ miles north and $1\frac{1}{2}$ miles south of Calaveritas Creek, about 2.8 miles in length to be graded and surfaced with crusher run base and untreated crushed gravel or stone. Dist. X, Rt. 65, Sec. B. W. H. Hauser, Oakland, \$53,582; Lord & Bishop, Oroville, \$67,586; Mathews Const. Co., Sacramento, \$48,803; Chigris & Sutso, San Francisco, \$50,087; Tieslau Bros., Berkeley, \$56,407; M. J. Bevanda, Stockton, \$56,786; A. J. and J. L. Fairbanks, Ins., South San Francisco, \$58,963; W. C. Cooley, Berkeley, \$56,776; Hemstreet & Bell, Marysville, \$55,660; A. Teichert & Son, Sacramento, \$62,105; Kennedy-Hayles Const. Co., Oakland, \$57,714. Contract awarded to Larsen Brothers, Galt, \$45,494.25.

GLENN COUNTY—Between Logandale and Wilows, 5.2 miles to be paved with Portland cement concrete. Dist. III, Rt. 7, Sec. A. T. M. Morgan Paving Co., Los Angeles, \$162,986; M. J. Bevanda, Stockton, \$168,487; N. M. Ball, Porterville, \$164,670; Fredrickson & Watson, Oakland, \$162,298; C. W. Wood, Stockton, \$155,698; Mathews Const. Co., Sacramento, \$163,123; Hanrahan Co., San Francisco, \$162,919. Contract awarded to Basich Bros., Los Angeles, \$146,319.

HUMBOLDT COUNTY—An undergrade crossing under the Northwestern Pacific tracks at Loleta. Dist. I, Rt. 1, Sec. G. Smith Brothers, Eureka, \$11,586. Contract awarded to Fred J. Maurer & Son, Inc., Eureka, \$10,880.40.

LAKE COUNTY—Between Middletown and the Old Williams Road, on the Tahoe-Ukiah Route, 23 miles to have light fuel oil dust layer applied. Dist. IV, Rt. 49, Secs. A, B and C. C. W. Wood, Stockton, \$8,259; Deysher & Lafargue, San Anselmo, \$6,520; Geo. French, Jr., Stockton, \$6,955; C. F. Fredericksen & Sons, Lower Lake, \$7,071; Lee J. Immel, Berkeley, \$8,954; J. A. Casson, Hayward, \$6,404; Chas. Kuppinger, Lakeport, \$6,694. Contract awarded to Basalt Rock Co., Napa, \$5,824.37.

MARIN COUNTY—Overhead crossing over the tracks of the Northwestern Pacific R. R. at Forbes Station. Dist. IV, Rt. 1 Sec. A. M. B. McGowan, San Francisco, \$19,725; W. L. Proctor, Santa Rosa, \$17,919; Fredrickson & Watson, Oakland, \$19,963; A. T. Howe, Santa Rosa, \$17,052; Healy-Tibbitts Const. Co., San Francisco, \$21,365. Contract awarded to Rocca & Coletti, San Rafael, \$17,170.50.

SAN BERNARDINO COUNTY—Between The Pass and 2 miles down Waterman Canyon, 1.9 miles to be graded (on new alignment). Dist. VIII, Rt. 43, Sec. A. George Pollock Co., Sacramento, \$108,892; J. G. Donovan & Son, Los Angeles, \$103,277; Lewis Construction Co., Los Angeles, \$147,808; Gist & Bell, Arcadia, \$103,927; Sander Pearson, Santa Monica, \$120,789; O. A. Lindberg, Stockton, \$115,741; Triangle Rock & Gravel, San Bernardino, \$115,493;

C. G. Willis & Son, Los Angeles, \$106,095; Pearson & Dickerson, Riverside, \$174,352; J. P. Holland, Inc., San Francisco, \$101,757. Contract awarded to H. W. Rohl Co., Los Angeles, \$100,372.

SAN JOAQUIN COUNTY—Between Cherokee Station and Harney Lane, four reinforced concrete girder bridges between Lodi and Stockton across Calaveras River, Mosher, Bear and Live Oak creeks. Dist. X, Rt. 4, Sec. C. Fredrickson & Watson Const. Co., Oakland, \$50,056; M. J. Bevanda, Stockton, \$56,722; J. F. Knapp, Oakland, \$49,823; Bodenhamer Const. Co., San Diego, \$60,797; N. M. Ball, Porterville, \$64,914; Geo J. Ulrich Const. Co., Modesto, \$51,803; M. B. McGowan, San Francisco, \$56,726. Contract awarded to Jacobs and Pattiani, Oakland, \$48,875.

SAN JOAQUIN COUNTY—Between Cherokee Station and Harney Lane, 6.9 miles to be graded and paved with Portland cement concrete. Dist. X, Rt. 4, Sec. C. Isbell Const. Co., Fresno, \$290,120; Healey-Moore Co., Oakland, \$314,389; C. W. Wood, Stockton, \$259,579; M. J. Bevanda, Stockton, \$264,808; J. F. Knapp, Oakland, \$269,845. Contract awarded to T. M. Morgan Paving Co., Los Angeles, \$251,562.50.

ARCHITECTURAL AWARDS For the Month of March

STATE FAIR GROUNDS, Sacramento. Contract for general work in the Live Stock Unit, awarded to McGillivray Construction Co. of Sacramento; price, \$118,205.

Contract for plumbing work, same building, awarded to Luppen and Hawley, Sacramento, price, \$9,564.

Contract for electrical work, same building, awarded to Latourrette-Fical Company of Sacramento; price, \$2,400.

INDUSTRIAL HOME FOR ADULT BLIND. Contract for construction of new Broom Factory, awarded to A. Fredrick Anderson of Oakland; price, \$24,260.

PUBLIC WORKS BUILDING, Sacramento. Contract for ventilating and roof sprinkling system, awarded to McLaughlin Sheet Metal Works of Sacramento; price, \$6,645.

MENDOCINO STATE HOSPITAL, Talmage. Contract for building crematory furnace awarded to J. T. Thorpe & Son, Inc., San Francisco; price, \$2,530.

CHICO STATE TEACHERS COLLEGE, Assembly Building. Contract for general work, awarded to Campbell Construction Company of Sacramento; price, \$133,616.

Contract for plumbing, heating and ventilating on above award to Frederick W. Snook Company of San Francisco; price, \$18,523.

Contract for electrical work on above, awarded to Alta Electric Company of San Francisco; price, \$13,904.

HE MIGHT AS WELL

Prospective Car Buyer—I want to buy a car that will do one hundred miles per hour, forty miles on a gallon of gas, ride like an easy chair, turn in a thirty-foot street, cost not more than \$500, and run for years without any repairs. What would you suggest?

Salesman—Walk.

FLOODLIGHTING THE STATE CAPITOL

(Continued from page 6.)

effect is provided by mounting 24 200-watt Type C lamps in Crouse-Hinds vaporproof fittings with ruby globes on the inside of the dome, one over each window. These lamps are not lighted when the general floodlighting is on, but are used on special occasions to provide a red silhouette effect.

To assist the floodlighting to overcome the lost reflection due to the extremely dark weathered copper surface of the dome, 1200 10-watt lamps are mounted on the ribs of the dome and around the edge of the smaller dome, capping the entire structure.

COST FIGURES

The installation represents a total connected load of 62.4 k.w. It is arranged on a 3-phase, 4-wire system. It is controlled by Diamond H contactors with push-button stations located in the basement.

The cost of the entire installation was approximately \$7,000.

The system is in operation every night of the year from 8 to 11 o'clock in the evening. The operating cost per day is as follows:

Current	\$3 74
Lamp renewals and depreciation ..	0 75
Interest on investment	1 34

Total daily cost

The installation was executed under contract by the Latourrette-Fical Company of Sacramento.

MARCH CONTRACTS LET BY ARCHITECTURE DIVISION

During March contracts have been awarded for work of the Division of Architecture having a total value of \$297,031. These projects included work on additional wings for the San Francisco State Building, the Live Stock Unit at Agricultural Park, Sacramento, the Broom Factory at the Industrial Home for the Adult Blind in Oakland, and improvements upon the Public Works Building, Sacramento, and also at the Mendocino State Hospital.

THE COURTEOUS MOTORIST

"Which do you like better, balloon tires or high-pressure tires?"

"I like balloon tires better."

"What kind of a car do you have?"

"I don't have any; I'm a pedestrian."

Appel—"My son is a jack of all trades. What shall I do with him?"

Sass—"Buy him a drug store."

HIGHWAY MILEAGE IN EUROPE
AND THE UNITED STATES

The following figures showing comparative highway figures for the United States and Europe are taken from the 1929 edition of Highways Handbook published by the Highways Education Board of Washington, D. C.:

	Miles in Europe	Miles in United States
Unimproved	58,098	2,390,144
Earth, sand, clay or gravel, graded and drained	1,178,458	458,982
Water bound macadam	370,857	64,596
Water bound macadam, sur- face treated	6,880	-----
Bituminous or penetration macadam	6,428	30,153
Asphalt	3,680	9,155
Cement concrete	1,102	55,274
Stone, block or paving brick ..	12,209	4,628
Not specified	812,626	379
Total	2,450,430	3,016,281

The same authority gives the following additional data:

	Europe	United States
Area to 1 mile of road	4,208	1.00
Automobiles	4,140,126	24,629,921
Automobiles to 1 mile of road	1.69	8.17

Highways Stir Praise of Visitor.

This from the Los Angeles Times:

Visiting Los Angeles for the first time since 1901, John B. Drake, vice president of the Drake Hotel Company of Chicago, operator of the Blackstone and Drake hotels in the midwestern metropolises, expressed himself as amazed at the development that has taken place in the last three decades.

Drake was particularly impressed with California's highways, on which he motored in northern and central California before coming to Los Angeles. The state's highways, he commented, are the best he has seen in the country.

"California has been a revelation to me," Drake said. "I think it would be a good thing if easterners could visit here and see what is happening."

Drake declared that American business is showing steady improvement and that he looks for a return to normal conditions within a few months.

TRY HORSEBACK

One of our statisticians says that he would rather be sunburned on his vacation than tanned on a weekend.

Fair One: Now before we start for this ride, I want to tell you that I don't smoke, drink or flirt. I visit no wayside inns, and I expect to be home by ten o'clock.

Young Gallant: You're mistaken.

Fair One: You mean that I do any of those things?

Young Gallant: No, I mean about starting for this ride.

SAN JUAN GRADE DECISION IS ANNOUNCED

(Continued from page 9.)

and discussed and explained in the various conferences and discussions already referred to.

In your letter you state that it has been determined "to handle the San Juan Grade situation in the following manner:

1. Proceed to make the necessary surveys, plans and estimates of cost to relocate the 'Coast Highway' westerly of the present San Juan Grade, as indicated on the blueprint marked, 'Suggestion No. 2,' and make provision for starting the construction thereof in our next budget.

2. Retain and maintain the present San Juan grade as a part of the state highway system to constitute an extension of the present Hollister county seat lateral, such extension to run from San Juan Bautista over the grade to a new connection with the projected, relocated 'Coast Highway' at a point south of the present grade; also shown on said blueprint.

3. Relinquish the short unit now in the 'Coast Highway,' between San Juan Bautista and the point where the new relocation would depart from the present road north of San Juan Bautista, to the county of San Benito, this unit to be maintained by the county."

It is proposed that the section of the Coast Highway to be constructed will commence at the present Coast Highway, a short distance north of San Juan Bautista and extend in a general southerly direction to a point south of San Juan grade, and there connect with the present Coast Highway. The distance from the point where construction begins on the coast line north of San Juan Bautista to the point where the new construction will connect with the present highway south of the San Juan grade is approximately the same as the distance between these points along the present state highway through San Juan Bautista and over the San Juan grade.

Some of the reasons for the relocation of this section of the Coast Highway are stated in your letter as follows:

- "1. The present San Juan Grade can not, within reasonable engineering possibility and within the limits of justifiable expenditure of public funds, be made to meet the traffic and safety requirements of the main north and south trunk line of the state highway. In other words, it has passed the peak of its adaptability and usefulness for such major trunk line uses.

The exhibits heretofore submitted to you bear this out through statistical data.

The relocation will vastly improve grades and curves, increasing, of course, the carrying capacity of the road and adding to the safety and expedition of travel and transportation.

A few interesting figures may show the merits of the new line.

The highest point on the present road is 1015 feet; the highest point on the new road will be 550 feet. The length of adverse grades will be cut in half. The minimum radius curve on the present road is 100 feet; on the relocation 1000 feet. Total number of curves on the old road is 113; on the new line 38. The minimum sight distance on the present road 75 feet; on the relocation, 600 feet.

The relocation will afford opportunity for construction at low cost of a safe, convenient road

adapted to indefinite expansion as traffic requires, and capable of handling traffic safely at any reasonable speed fixed by law."

Your statement just quoted is fully supported by the reports of engineers heretofore submitted.

The advantages that will result from the elimination of San Juan grade and the adoption in lieu thereof of the section to be constructed thus plainly appears.

These advantages are substantial, are not temporary, but on the contrary are permanent and will grow in magnitude with the increase of traffic over the Coast Highway which inevitably will occur.

The public purpose that will be subserved justifies the new construction and the abandonment of the portion of the coast highway known as San Juan grade, and likewise justifies the relinquishment to the county of the portion of the present state highway extending from San Juan Bautista northerly to the point at which the new construction begins, and it is my view that this change may legally be effected.

Section 363b of the Political Code, as amended in 1929, is as follows:

"The Commission is hereby granted the power to alter or change the route of any road and to abandon any portion thereof, under the jurisdiction of the Department of Public Works (whenever and wherever) in the opinion of the Commission such alteration, change or abandonment shall be necessary or advisable by reason of alteration or revision in alignment of portions of routes of state roads or highways or shall be for the best interests of the state."

In terms this section seems ample to warrant the determination of the Commission in this regard. However it may well be questioned how far the legislature may go in view of the provisions of the State Highway Act of 1909, and subsequent state highway acts, for the reason that these several highway acts were referendum measures. But I am not inclined to enter into an examination of this particular question, for it is my view that the proposed changes may legally be made without regard to this section of the Political Code.

I am aware that the State Highway Act of 1909, under which the Coast Highway was constructed, provides that

"All highways constructed or acquired under the provisions of this act shall be permanently maintained and controlled by the State of California."

In 1926 the Highway Commission was considering a change in the state highway in Tulare County. As theretofore constructed the highway extended through Visalia the county seat, and it was proposed to adopt a new section of the state highway which would leave the city of Visalia off the main highway, but connected therewith by a lateral. The question thus presented in its legal aspects was quite similar to the one now being examined, and on February 13, 1926, I advised that the change then being considered could legally be made, and in referring to the provisions of the Highway Act of 1909, heretofore quoted, I said:

"This is a mandatory provision and full force and effect must be accorded to it. I can not give to this provision however a construction which would cast upon the state the burden of maintaining a section of a highway after such section had, by reason of highway improvement made for the purpose of correcting curves, grades, or shortening distance, eliminated such portion from the highway and rendered it thereafter unneeded and unuseful. Nor can I give to this provision a construction which would prevent the proper and

1929 Grade Crossing Accident Record

The number killed and injured at grade crossings in California was higher in 1929 than in any previous year, the casualties amounting to 1154 (including 200 killed and 954 injured), as compared with the previous peak of 957 in 1927, and 897 in 1928. Included in these figures are accidents at all crossings, including private crossings but excluding accidents between crossings, according to a report compiled by J. G. Hunter, transportation engineer of the State Railroad Commission.

The following table shows the statistics since 1913, in which year there were a total of 460 casualties. It will be noted from this table that the casualties per 10,000 motor vehicles have substantially decreased since 1913, although practically the entire decrease was during the years 1913 to 1918.

Since 1918, and during the last twelve years, there has been no marked increase or decrease in the casualties per 10,000 motor vehicles. Motor vehicle registration has increased from approximately 125,000 in 1913 to 2,000,000 in 1929.

Year	Casualties			Motor vehicle registration	Casualties per 10,000 vehicles
	Killed	Injured	Total		
1913	83	377	460	122,444	37.6
1914	93	378	471	148,235	31.7
1915	73	338	411	190,196	21.6
1916	103	337	440	263,434	16.7
1917	117	231	348	337,333	10.3
1918	69	152	221	390,773	5.7
1919	78	199	277	503,522	5.5
1920	104	260	364	595,187	6.1
1921	96	297	393	698,343	5.6
1922	128	392	520	878,108	5.9
1923	134	392	526	1,114,977	4.7
1924	129	454	583	1,331,719	4.4
1925	169	560	729	1,451,543	5.0
1926	139	629	768	1,610,770	4.8
1927	194	763	957	1,702,639	5.6
1928	165	732	897	1,822,262	4.9
1929	200	954	1154	1,983,969	5.8

persistent efforts made by highway authorities to improve state highways by correction of curves, reducing grades and shortening distance, though such improvements of necessity must result in the abandonment of sections of roads theretofore constructed and theretofore used and maintained.

The language from the opinion just quoted is applicable to the present problem, and I conclude that the proposed relocation of the Coast Highway may be legally made.

This conclusion however makes necessary the consideration of a question necessarily resulting from it.

The abandonment of that portion of the Coast Highway known as San Juan grade and the portion thereof extending northward from San Juan Bautista to the point of intersection of the new construction with the present state highway would leave Hollister, the county seat of San Benito County, without a direct state highway connection with the Coast Highway. The Highway Act of 1909, and subsequent acts, require that all county seats not situated upon a main highway shall be connected therewith by a lateral. This requirement justifies the Commission's determination to maintain the San Juan grade as a part

of the lateral connecting Hollister with the Coast Highway, and by its maintenance Hollister has the connection with the Coast Highway contemplated by the statute.

It may be added in passing, that through the maintenance by the county of the portion of the Coast Highway north of San Juan Bautista, Hollister will in fact be connected with the state highway at a point north of San Juan Bautista, as well as at the point south of San Juan grade.

My conclusion is that all that is proposed to be done, as indicated in your letter, may be legally done.

I have not overlooked the suggestion in your letter that the legislature may hereafter "by statutory enactment reincorporate" that portion of the state highway north of San Juan Bautista to be abandoned "in the state highway system." This may and doubtless should be done, but this future possibility should not be taken into consideration in dealing with the legal question before me.

Very truly yours,

U. S. WEBB,
Attorney General.

State Highway Progress Reports

COLUSA COUNTY

The widening of the roadbed to a uniform width of 26 feet between Colusa and Meridian was completed by C. R. Merrill, contractor, on February 6. The work involved the placing in embankment of more than 25,000 cubic yards of earth to widen the shoulders to four feet on each side of the existing 18-foot Portland cement concrete pavement.

Plans and estimates have been completed for grading of state highway between Bear Creek and a point $5\frac{1}{2}$ miles west of Williams.

Plans and estimates have been completed for proposed improvement between Williams and Maxwell. The proposed work is to consist of constructing a graded roadbed from material to be excavated from a drainage ditch on the west side of the right of way and installing the necessary drainage structures. This is to be followed as soon as permissible with the placing of a blanket of gravel 12 inches thick over the entire width of the fill. After bridges are built and sufficient time has elapsed to allow for the fills to settle, a Portland cement concrete pavement will be constructed. The paving is scheduled in the tentative program for the S3d and S4th fiscal years.

DEL NORTE COUNTY

The Holdener Construction Company which has the contract for stockpiling crushed rock screenings over 39 miles of the Redwood Highway between Elk Valley and the Oregon line have engaged Smith Bros. to complete the work and the contract is approximately complete.

Smith Bros. have also completed their contract for placing corrugated metal pipe underdrains along the state highway between a point approximately five miles east of the Crescent City and the Hionchi Bridge over Smith River.

EL DORADO COUNTY

Fourteen thousand cubic yards of excavation of the 88,000 cubic yards required to complete the $1\frac{1}{2}$ miles of new 24-foot graded roadbed between Bay View Rest and one mile north of Eagle Falls, has been placed in embankment by Nate Lovelace, contractor. Work is behind schedule and every effort is being made to speed up the work with a view to causing as little inconvenience as possible during the coming summer to traffic, which will have to be carried through construction.

GLENN COUNTY

Proposals for the construction of 5.2 miles of 20-foot Portland cement concrete pavement between Logandale and Willows was advertised for March 26, 1930. The work to be done consists of widening the

existing roadbed with pit run gravel to be imported from local site $2\frac{1}{2}$ miles east of the highway and constructing a Portland cement concrete pavement 20 feet wide and 6 inches to 9 inches thick (standard section).

HUMBOLDT COUNTY

The work of producing and stockpiling bituminous macadam rock along the Redwood Highway for a 20 feet by 2 inches bituminous macadam pavement between a point one mile south of Orick and the northerly Humboldt County line has been taken over by the state for completion. It is intended that this rock shall be stockpiled during the winter season in order that the Heafey-Moore Company who have the contract for placing the bituminous macadam may proceed with the work as soon as weather conditions permit next summer.

The Heafey-Moore Company who also have a contract for placing a 2 inch by 20 foot bituminous macadam pavement for 10.7 miles between Arcata and Little River expect to resume the work of completing their contract as soon as weather conditions permit, and it is understood will start the construction at Arcata and work northerly to complete to Mill Creek, approximately one mile north of Mad River.

Mercer-Fraser Company who have the contract for the construction of the new Trinity River Bridge near Willow Creek have again started operations after the winter shut down.

The E. C. Coats contract for grading and surfacing a 28-foot standard roadway on that portion of the Redwood Highway between Fish Creek and Stephens Grove in the vicinity of Miranda is expected to be well advanced by the time the touring season begins next summer. The work is now approximately 35 per cent complete.

The Engelhart Paving and Construction Company have practically completed the producing and placing of crushed rock surfacing on approximately 7.3 miles of the Redwood Highway between Dean Creek and Fish Creek, approximately six miles south of Miranda.

H. H. Boomer who has the contract for grading and surfacing a portion of the state highway, approximately 1.2 miles in length immediately north of Garberville, has continued his operations throughout the winter and the work is now approximately 15 per cent complete.

The contract for the grading and surfacing of 1.4 miles of the Redwood Highway from the southerly Humboldt County line to Richardson Grove has just been awarded to contractors, Chigris and Sutsos. The contractors have just arrived on the job and began setting up camp approximately March 25.

INYO COUNTY

From the southerly boundary to Little Lake, Fred W. Nighbert is making fair progress on his contract. Likewise, the adjoining contract which extends to

Coso Junction, which is now under construction, Fred W. Nighbert, contractor, is progressing slowly.

From Coso Junction to Olancha, the Allied Contractors, Inc., have moved in considerable equipment and forces, and every indication is that rapid progress will be made on this 21-mile stretch.

KERN COUNTY

The George Herz Company, which was recently awarded a contract between Cinco and seven miles north of Ricardo, have moved onto the job and construction is getting underway.

Between Seven miles north of Ricardo and Freeman, the G. W. Ellis Company has recently completed its contract.

The adjoining project from Freeman to the northern boundary of Kern County, which is under construction by Bartlett & Mathews-Black & Hagey, is nearing completion, but progress has not been at an entirely satisfactory rate.

LAKE COUNTY

Widening of the roadbed from 20 to 24 feet between Sweet Hollow Summit and Abbott Mine, in Lake County is about 65 per cent completed.

Grading of a 24-foot roadbed between Abbott Mine, Lake County, and Bear Creek, Colusa County, is about 40 per cent completed. No section of roadway, however, has been completely finished. Heavy rains during February retarded construction operations.

All of the foregoing is on a part of the Ukiah-Tahoe Highway and work is being done by prison road camp forces augmented by necessary skilled free labor.

The construction of 10.6 miles of the Ukiah-Tahoe Highway between Lucerne and Clear Lake Oaks was recently completed by von der Hellen, Pierson and Logan. This construction provides a graded roadbed 24 feet wide surfaced 20 feet wide by 6 inches thick with untreated crushed gravel. It is proposed to oil treat the surface as soon as possible by state forces.

LOS ANGELES COUNTY

The contract for a line change immediately north of the Newhall Tunnel has been awarded to McCray Co. Good progress is being made on this work. It is expected that this contract will be completed next June.

The first contract on the La Canada-Mt. Wilson Highway for grading 2.6 miles of roadbed was awarded to H. W. Rohl Company on August 14th. Rough grading is in progress on one and one-half miles. It is expected that this contract will be completed by next July.

The second contract on the La Canada-Mt. Wilson Highway for grading 1.5 miles of highway was awarded to T. M. Morgan Paving Company on January 27, 1930. This extends northerly from the end of the H. W. Rohl contract. This contract will probably require more than a year to complete.

A contract for paving the Newhall alternate with Portland cement concrete, 30 feet wide, has been awarded to Jahn & Bressi. Grading of this section has just been completed by LeTourneau & Lindberg. The new location is on greatly improved alignment and eliminates Saugus, Newhall and the Newhall Tunnel from the Ridge Route. This section is 8.6

miles long. Paving will probably be completed by next September.

A contract for grading and paving a line change near Liberty School, 4 miles west of Calabasas, was awarded to the Will F. Peck Company January 18, 1930. This line change eliminates several bad curves and improves the grade. Grading work is now in progress. It is expected that this contract will be completed next August.

A contract for grading a 38-foot roadbed on the first section of the Alternate Ridge Route from Castaic school to Canton Creek was awarded to H. E. Doering, von der Hellen and Pierson on February 25, 1930. This section is 7 miles in length and will probably require more than a year to complete.

Surveys are in progress on the rest of this route which will be a saving of more than 7 miles in distance over the present ridge route.

LOS ANGELES-VENTURA COUNTIES

A contract for oil mix shoulders between Calabasas and Conejo Summit has been awarded to the Southwest Paving Company. It is expected that this contract will be finished in April.

MENDOCINO COUNTY

The contract for placing a four-inch thickness of crushed gravel surfacing on portions of the Redwood Highway between a point 2 miles south of Arnold and the Sherwood-Laytonville road has been practically completed by the contractors, Hemstreet and Bell.

von der Hellen and Pierson have just been awarded the contract for constructing approximately 425 feet of rubble masonry retaining wall, approximately nine miles south of the Mendocino-Humboldt County line. The contractors have just arrived on the work and expect to begin operations immediately.

MONO COUNTY

Plans have recently been completed for the early construction of the project from Sonora Junction to four miles south of Coleville, which project follows the West Walker River and when completed will form a mecca for sportsmen and tourists.

The adjoining project from Sonora Junction south to Bridgeport is now being estimated and planned in the district office.

MONTEREY COUNTY

The new subway under the Southern Pacific Railroad at Spence five miles south of Salinas is complete. Triberti-Massaró were the contractors. The work was under the supervision of the Bridge Department. This structure eliminates a very dangerous grade crossing.

The change of line and approaches to the new bridge across the Salinas River at San Ardo are under construction by Frederickson and Watson and Frederickson Brothers, contractors. The project is about 1.5 miles in length. Satisfactory progress is being made. Ben C. Gerwick is the contractor on the bridge which is under the supervision of the Bridge Department.

Plans are being prepared for a new bridge and a major line change at the crossing of the Salinas River near Bradley.

On the San Simeon-Carmel Highway construction work is in progress with convict labor. Two camps are maintained. At Little Sur a crew of 60 men and two power shovels are working, and between Villa Creek and a point north of Alder Creek, 75 men and three power shovels are working. About 7.4 miles of graded roadway have been completed. Recent rains have caused a number of slides on this work.

Mr. H. L. Leventon who has been superintendent of the prison camp at San Simeon has resigned to accept a position with the Division of Water Resources. Mr. H. B. Henry from District II is the new superintendent.

Surveys for the location of the road are in progress between the two camps.

NEVADA COUNTY

The Callahan Construction Company on December 12, 1929, suspended work for the winter on their contract for grading and surfacing between Indian Springs and Soda Springs near the summit of the Colfax-Truckee road. The contractor will resume work just as soon as weather conditions will allow.

NEVADA AND PLACER COUNTIES

T. E. Connolly on January 4 suspended work for the winter on his grading contract between Airport and Indian Springs on the Dutch Flat-Donner Lake wagon road. The project covers the construction of 9.3 miles of 28-foot graded roadbed. Construction will be resumed as soon as weather conditions permit.

ORANGE COUNTY

A contract for widening the roadbed between Sunset Beach and Newport the entire width of the 90- to 100-foot right of way, and the placing of an additional 10-foot strip of Portland cement concrete has been awarded to the Macco Construction Co. When this work is completed the pavement will be 30 feet wide for the entire distance. It is expected that this work will be completed by next November.

SAN BENITO COUNTY

Plans are being prepared for the reconstruction of the state highway from a point three and one-half miles north of Hollister to the Pacheco Pass Lateral, a distance of about five miles. About two-thirds of a mile of this project is in Santa Clara County.

A survey for the relocation of the state highway between Salinas and San Juan Bautista has been ordered and work on this survey will start at once. This change is partly in Monterey County and partly in San Benito County.

SAN DIEGO COUNTY

A contract for grading the Rose Canyon road between Balboa avenue and Torrey Pines road was awarded on August 13th to the R. E. Hazard Contracting Company. This section is 5.4 miles long

and is to be a 46-foot graded roadbed. It is expected that this contract will be completed by July 1, 1930.

A contract for 4.5 miles of 38-foot graded roadbed between La Posta Creek and Miller Creek on the San Diego-El Centro Highway was awarded on May 27th to the Nevada Contracting Company. It is expected that this contract will be completed next June.

A contract for grading 2.9 miles of 36-foot roadbed from Kitchen Creek to La Posta and paving with 20 feet by 7 inches Portland cement concrete was awarded on June 25th to Basich Bros. This section is on the San Diego-El Centro Highway. Rough grading is completed and concrete paving is now in progress. It is expected that this contract will be finished by July 1, 1930.

A contract for grading a 38-foot roadbed between Miller Creek and Tecate Divide on the San Diego-El Centro Highway was awarded to Monarch & Breen on August 17, 1929. This work is rapidly nearing completion and should be finished by May 1, 1930.

SAN LUIS OBISPO COUNTY

Asphaltic concrete pavement 20 feet in width is being placed on the Coast Highway between Atascadero and Paso Robles. Steele Finley is the contractor. This work is expected to be finished in June.

Street improvements including a half-mile of state highway are being constructed in the town of Atascadero. This work is handled by a local improvement district. M. J. Bevanda is the contractor.

On the Coast Highway between the Santa Maria River and Los Berros Creek, a distance of 7.2 miles, the road is being reconstructed with a 36-foot roadbed and a 20-foot Portland cement concrete pavement. Grading on this contract is progressing at a rapid rate with two power shovels working two shifts. J. F. Knapp is the contractor.

Plans have been completed on the proposed reconstruction of the Coast Highway between San Luis Obispo and Cuesta Grade, a distance of about three miles.

SANTA BARBARA COUNTY

On the Coast Highway between Wigmore and Zaca, a distance of four miles, the road is being reconstructed with a 36-foot roadbed and a 20-foot Portland cement concrete pavement. Rough grading is well under way. The Cornwall Construction Company is the contractor.

Plans are complete for a change of line on the Coast Highway about two miles south of Buellton. This change will require a new bridge over Nojoqui Creek.

YOLO COUNTY

C. W. Wood, contractor, completed 1000 feet of Portland cement concrete pavement 20 feet wide at Mullen Crossing. The resulting construction improved the surface, alignment and grade for 500 feet each side of the Southern Pacific Railroad tracks.

The teacher asked little Abie to give a sentence using the word "diadem."

After much effort, Abie turned in the following: "People who drive onto railroad crossings without looking, diadem sight quicker than those who stop, look, and listen."—*Exchange*.

WATER APPLICATIONS AND PERMITS

Applications for Permit to Appropriate Water Filed with the State Department of Public Works, Division of Water Resources, during the month of March, 1930.

TRINITY COUNTY—Application 6578. The New River Mining Co., Ltd, c/o H. W. Hall, Box M, Corona, for 40 c.f.s. from Quimby Creek tributary to New River to be diverted in Sec. 29, T. 7 N., R. 7 E., 11, M., for mining purposes. Estimated cost \$10,000.

YOLO COUNTY—Application 6579. Lars Jorgensen, Hobart Bldg., San Francisco, for 200 c.f.s., 100,000 acre-feet per annum from Putah, Pope, Capell, Elicura creeks tributary to Sacramento River to be diverted in Sec. 25, T. 8 N., R. 2 W., M. D. M., for domestic and industrial purposes. Estimated cost \$3,900,000.

TRINITY COUNTY—Application 6580. R. E. Roberts, Burnt Ranch, for 2 c.f.s. from Jan. 1st, to Dec. 31st, from Dixie Creek tributary to New River to be diverted in Sec. 2, T. 5 N., R. 6 E., H. B. and M., for mining and domestic purposes ($\frac{1}{2}$ acre domestic irrigation).

SUTTER COUNTY—Application 6581. Fred Holmes and R. E. Hughes, 41 Palm Ave., Woodland, for 10 c.f.s. from East Dredge Cut of Sutter By-pass tributary to Sacramento River to be diverted in Sec. 3, T. 12 N., R. 3 E., M. D. M., Sec. 19, T. 13 N., R. 3 E., M. D. M., for recreational purposes.

SUTTER COUNTY—Application 6582. C. Fred Holmes and R. E. Hughes, 41 Palm Ave., Woodland, for 42.26 c.f.s. from East Dredge Cut of Sutter By-pass tributary to Sacramento River to be diverted in Sec. 3, T. 12 N., R. 3 E., M. D. M., Sec. 19, T. 13 N., R. 3 E., M. D. M., for irrigation purposes. Estimated cost \$15,000.

SACRAMENTO COUNTY—Application 6583. A. L. White, Sacramento, for 2.5 c.f.s. from March 1st, to October 15th, of each season from Sacramento River to be diverted in Sec. 33, T. 10 N., R. 3 E., M. D. B. and M., for irrigation purposes. (80 acres.) Estimated cost \$2,000.

LOS ANGELES COUNTY—Application 6584. John J. Johnson, Sunland, for 0.25 c.f.s. from Jan. 1st, to Dec. 31st, from unnamed spring tributary to Los Angeles River watershed to be diverted in Sec. 2, T. 2 N., R. 14 W., S. B. M., for domestic and irrigation purposes. (83 acres.) Estimated cost \$1,500.

MONO COUNTY—Application 6585. Ralph B. Lloyd, Los Angeles, for 100,000 acre-feet per annum from East and West Walker River and Adobe Valley to be diverted in Sec. 14, 22, 27, 33, T. 6 N., R. 22 E., M. D. M., Sec. 33, 34, 35, T. 4 N., R. 25 E., M. D. M., for power purposes.

MONO COUNTY—Application 6586. Ralph B. Lloyd, Los Angeles, for 100,000 acre-feet per annum from East and West Walker River and Adobe Valley to be diverted in Sec. 14, 22, 27, 33, T. 6 N., R. 22 E., M. D. M., Sec. 33, 34, 35, T. 4 N., R. 25 E., M. D. M., for irrigation and domestic purposes on 50,000 acres.

CONTRA COSTA COUNTY—Application 6587. Henry R. Vail, c/o E. H. Frazier, 422 $\frac{1}{2}$ D St., Marysville, for 37 c.f.s. from Old River, Dredger Cut and Italian Slough tributary to San Joaquin River to be diverted in Sec. 13, T. 1 S., R. 3 E., M. D. M., Sec. 6, 7, 18, T. 1 S., R. 4 E., for irrigation purposes. Estimated cost \$10,000.

SAN JOAQUIN COUNTY—Application 6588. American Trust Co., a corporation, 461 California St., San Francisco, for 6 c.f.s. from Stanislaus tributary to San Joaquin River to be diverted in Sec. 21, T. 2 S., R. 8 E., M. D. M., for irrigation purposes. Estimated cost \$2,500.

VENTURA COUNTY—Application 6589. Julius Olender, 1812 Tulare St., Fresno, for 0.04 c.f.s. from unnamed spring tributary to In Piru Creek Watershed to be diverted in Sec. 25, T. 7 N., R. 19 W., S. B. M., for mining and domestic purposes. Estimated cost \$100.

PLUMAS COUNTY—Application 6590. Telluric Mining and Smelting Co., Seattle, Wash., for 0.10 c.f.s. from Jan. 1st, to Dec. 31st, from unnamed rivulet tributary to (In Indian Creek Drainage Area) to be diverted in Sec. 12, T. 26 N., R. 9 E., M. D. B. and M., for mining purposes. Estimated cost \$200.

MENDOCINO COUNTY—Application 6591. Hale Burger, Yorkville, for 50 acre-feet per annum from Rancheria Creek tributary to Navarro River to be diverted in Sec. 25, T. 13 N., R. 14 W., M. D. B. and M., for irrigation and domestic purposes (10 acres). Estimated cost \$1,000.

SAN BERNARDINO COUNTY—Application 6592. John M. Willoughby, 846 N. Hudson Ave., Los Angeles, for $\frac{1}{2}$ c.f.s. from unnamed spring tributary to Mojave Desert to be diverted in Sec. 15, T. 3 N., R. 1 W., S. B. R. and M., for domestic and irrigation purposes (40 acres). Estimated cost \$600.

SUTTER COUNTY—Application 6593. Estate of California E. Hale, c/o John E. Hale, Marysville, for 1.75 c.f.s. from Feather River tributary to Sacramento River to be diverted in Sec. 35, T. 15 N., R. 3 E., M. D. M., for irrigation purposes. Estimated cost \$4,200.

MENDOCINO COUNTY—Application 6594. Snow Mountain Water and Power Co., San Francisco, for 50 c.f.s., 14,500 acre-feet per annum, from South Eel River tributary to Eel River to be diverted in Sec. 30, T. 18 N., R. 11 W., M. D. M., for irrigation purposes on 4905.9 acres. Estimated cost \$2,000,000.

KERN COUNTY—Application 6595. Geo. O. H. Buchner, c/o Walter C. Hintze, 1051 Subway Terminal Bldg., Los Angeles, for 1 c.f.s. Jan. 1st, to Dec. 31st, of each season from well tributary to South Fork Rag Gulch to be diverted in Sec. 22, T. 26 S., R. 28 E., M. D. B. and M., for mining and domestic purposes. Estimated cost \$15,000.

TRINITY COUNTY—Application 6596. A. M. Knapp, Weaverville, for 80 c.f.s. from Big French Creek tributary to Trinity River to be diverted in Sec. 17, T. 5 N., R. 8 E., M. D. M., for mining purposes. Estimated cost \$20,000.

NEVADA COUNTY—Application 6597. South Yuba Co., Ltd., c/o W. E. Plank, Washington, Nevada Co., for 40 c.f.s. from Scotchman Creek tributary to South Fork of Yuba River to be diverted in Sec. 18, T. 17 N., R. 11 E., M. D. M., for mining purposes. Estimated cost \$2,200.

TRINITY COUNTY—Application 6598. Anton Weber, Trinity Alps, for 0.75 c.f.s. from Elk Gulch tributary to Stuarts Fork of Trinity River to be diverted in Sec. 21, T. 35 N., R. 9 W., M. D. B. and M., for irrigation purposes (60 acres).

INYO COUNTY—Application 6599. J. F. Chrysler and E. H. Cook, Lone Pine, for 1 c.f.s., March 1st, to Nov. 30th, of each season from Carroll Creek tributary to Owens Lake to be diverted in Sec. 31, T. 16 S., R. 36 E., M. D. M., for irrigation and recreational purposes (20 acres). Estimated cost \$300.

SIERRA COUNTY—Application 6600. E. A. Humphreys, c/o R. F. Taylor, Downieville, for 25 c.f.s. from South Fork of North Fork of Yuba River tributary to Yuba River to be diverted in Sec. 30, T. 20 N., R. 12 E., M. D. M., for mining purposes. Estimated cost \$5,000.

SANTA CLARA COUNTY—Application 6601. G. T. Letcher, c/o Louis Oneal, First National Bank Bldg., San Jose, for 45 acre-feet per annum, from unnamed spring to be diverted in Sec. 10, T. 7 S., R. 1 W., M. D. M., for irrigation and domestic purposes.

SAN LUIS OBISPO COUNTY—Application 6602. M. H. Stephens, San Luis Obispo, for total 480 gallons per day from 2 springs tributary to Day Creek to be diverted in Sec. 32, T. 32 S., R. 16 E., M. D. B. and M., for stock-watering purposes. Estimated cost \$400.

MERCED COUNTY—Application 6603. J. L. Firpo and John Caraglio, c/o Hugh K. Landram, Merced, for 4 c.f.s., April 1st, to Oct. 1st, of each season from Merced River tributary to San Joaquin River to be diverted in Sec. 35, T. 5 S., R. 12 E., M. D. B. and M., for irrigation purposes (329.7 acres). Estimated cost \$2,200.

LAKE COUNTY—Application 6604. Martin Judge, Jr. and Co., Crocker First National Bank Bldg., San Francisco, for 250 c.f.s., 175,000 acre-feet per annum from North Fork Cache Creek tributary to Cache Creek to be diverted in Sec. 4, T. 14 N., R. 6 W., M. D. M., for industrial and domestic purposes. Estimated cost \$3,000,000.

LAKE COUNTY—Application 6605. Martin Judge Jr. and Co., Crocker First National Bank Bldg., San Francisco, for 175,000 acre feet per annum tributary to North Fork of Cache Creek to be diverted in Sec. 4, T. 14 N., R. 6 W., M. D. M., for irrigation purposes. Estimated cost \$1,000,000.

SAN MATEO COUNTY—Application 6606. The Board of Trustees of the Leland Stanford Jr. University, A. F. Rath, Comptroller, Stanford University, Palo Alto, for 10 c.f.s., 5300 acre-feet per annum, from San Francisco Creek to be diverted in Sec. 17, T. 6 S., R. 3 W., M. D. M., for domestic purposes. Estimated cost \$350,000.

SAN MATEO COUNTY—Application 6607. The Board of Trustees of the Leland Stanford Jr. University, A. F. Rath, Comptroller, Stanford University, Palo Alto, for 30 c.f.s., 5300 acre-feet per annum from San Francisco Creek to be diverted in Sec. 17, T. 6 S., R. 3 W., M. D. M., for irrigation purposes. Estimated cost \$350,000.

PLACER COUNTY—Application 6608. Bear River Water and Power Co., c/o J. L. Rollins, Manager, Colfax, for 111,020 acre-feet per annum from Bear River and its tributaries tributary to Feather River to be diverted in Sec. 22, T. 15 N., R. 9 E., M. D. B. and M., for power purposes (4250 h.p.). Estimated cost about \$2,000,000.

DEL NORTE COUNTY—Application 6609. Geo. C. Walton, Crescent City, for 0.12 c.f.s., Jan. 1st, to Dec. 31st, from Rock Creek tributary to Smith River to be diverted in Sec. 4, T. 16 N., R. 1 E., H. M., for irrigation and domestic purposes (1½ acres). Estimated cost \$200.

SAN BERNARDINO COUNTY—Application 6610. Alvin W. Bercaw, 917 W. 35 St., Los Angeles, for 0.25 c.f.s., Jan. 1st, to Dec. 31st, of each season from 5 unnamed springs tributary to Mojave Desert to be diverted in Sec. 27, T. 4 N., R. 2 W., S. B. B. and M., for irrigation and domestic purposes (50 acres). Estimated cost \$1,500.

SAN DIEGO COUNTY—Application 6611. Ocean-side Mutual Water Co., c/o A. L. Sonderegger, 925

Central Bldg., Los Angeles, for 1000 acre-feet per annum from Calaveras Creek tributary to Agua Hedionda Creek to be diverted in Sec. 34, T. 11 S., R. 4 W., S. B. B. and M., for domestic and irrigation purposes.

SAN JOAQUIN COUNTY—Application 6612. F. J. Dietrich and Geo. W. Leistner and Geo. A. Ditz, c/o Neumiller and Ditz, 605 Bank of Italy Bldg., Stockton, for 1.44 c.f.s. from Calaveras River tributary to San Joaquin to be diverted in Sec. 27, T. 40 N., R. 6 E., M. D. B. and M., for irrigation purposes (115.46 acres).

SAN FRANCISCO COUNTY—Application 6613. L. F. Trumbull, 714 Sheldon Bldg., San Francisco, for 200 gallons per day from unnamed spring tributary to Lower Echo Lake to be diverted in Sec. 1, T. 11 N., R. 17 E., M. D. M., for domestic purposes.

MONO COUNTY—Application 6614. Lloyd Summers, Mammoth Lakes, for 0.68 c.f.s. from Lake Mary tributary to Mammoth Creek-Owens River to be diverted in Sec. 16, T. 4 S., R. 27 E., M. D. B. and M., for domestic purposes. Estimated cost \$4,000.

Permits to Appropriate Water issued by The Department of Public Works, Division of Water Resources, during the month of March, 1930.

SANTA CLARA COUNTY—Permit 3442, Application 6167. Issued to Ida M. McArthur et al. Cupertino, March 5, 1930, for 3 c.f.s. from Stevens Creek in Sec. 11, T. 7 S., R. 2 W., M. D. M., for irrigation on 144.9 acres. Estimated cost \$3,500.

SANTA CRUZ COUNTY—Permit 3443, Application 5990. Issued to Anna M. Werner, Santa Cruz, March 6, 1930, for 0.06 c.f.s. from Bean Creek in Sec. 13, T. 10 S., R. 2 W., M. D. M., for irrigation and domestic on 3 acres. Estimated cost \$450.

SANTA CRUZ COUNTY—Permit 3444, Application 4842. Issued to Forest Lake Mutual Water Company, San Francisco, March 6, 1930, for 0.6 c.f.s. from Gold Gulch and two unnamed tributaries in Sec. 29, T. 10 S., R. 2 W., M. D. M., for domestic use. Estimated cost \$10,000.

NEVADA COUNTY—Permit 3445, Application 6484. Issued to Siberia Mine, San Francisco, March 10, 1930, for 1 c.f.s. from Grizzly Creek in Sec. 36, T. 18 N., R. 8 E., M. D. M., for mining use. Estimated cost \$2,500.

PLUMAS COUNTY—Permit 3446, Application 6469. Issued to Henry Holley, Twain, March 10, 1930, for 0.014 c.f.s. from unnamed spring in Sec. 21, T. 25 N., R. 8 E., M. D. M., for domestic use. Estimated cost \$200.

LOS ANGELES COUNTY—Permit 3447, Application 6425. Issued to Joseph Argay, Mt. Wilson, March 12, 1930, for 50 acre-feet per annum from Coldwater Canyon Creek in Sec. 34, T. 3 N., R. 12 W., S. B. M., for mining use. Estimated cost \$2,500.

STANISLAUS COUNTY—Permit 3448, Application 6497. Issued to Alexander J. Silveria, Crows Landing, March 17, 1930, for 0.5 c.f.s. from San Joaquin River in Sec. 8, T. 6 S., R. 9 E., M. D. M., for irrigation on 40 acres. Estimated cost \$2,000.

DEL NORTE COUNTY—Permit 3449, Application 6503. Issued to C. R. Ward et al., Crescent City, March 17, 1930, for 0.15 c.f.s. from two unnamed creeks in Sec. 19, T. 17 N., R. 2 E., H. M., for domestic use. Estimated cost \$2,000.

SUTTER COUNTY—Permit 3450, Application 6504. Issued to Frank Berry, Yuba City, March 18, 1930, for 0.5 c.f.s. from Feather River in Sec. 4, T. 14 N., R. 3 E., M. D. M., for irrigation on 40 acres. Estimated cost \$1,100.

MENDOCINO COUNTY—Permit 3451, Application 6426. Issued to Neil G. MacKinnon, Cummings, March 18, 1930, for 26,000 gallons per day from Big Dan Creek in Sec. 12, T. 23 N., R. 17 W., M. D. M., for irrigation and domestic use on 16 acres. Estimated cost \$1,200.

AMADOR COUNTY—Permit 3452, Application 6032. Issued to Pacific Gas & Electric Company, San Francisco, March 24, 1930, for 200 c.f.s. and 50,000 acre-feet per annum from Bear River and Cold Creek in Secs. 19 and 28, T. 8 N., R. 16 E., M. D. M., for power purposes. Estimated cost \$7,000,000.

SUTTER COUNTY—Permit 3453, Application 6457. Issued to E. H. Christenson & Son, Yuba City, March 26, 1930, for 10,96 c.f.s. from East Dredge Cut of Sutter By-pass in Sec. 28, T. 13 N., R. 3 E., M. D. M., for irrigation on 438.68 acres. Estimated cost \$6,000.

LOS ANGELES COUNTY—Permit 3454, Application 1562. Issued to City of Pasadena Water Department, Pasadena, March 26, 1930, for 14.5 c.f.s. from Arroyo Seco in Sec. 5, T. 1 N., R. 12 W., S. B. M., for municipal purposes. Estimated cost \$290,000.

SUTTER COUNTY—Permit 3455, Application 6533. Issued to A. M. Donahoe, Yuba City, March 27, 1930, for 1 c.f.s. from Feather River in Sec. 14, T. 14 N., R. 3 E., M. D. M., for irrigation on 80 acres. Estimated cost \$2,500.

MERCED COUNTY—Permit 3456, Application 6470. Issued to San Joaquin Light & Power Corporation, Fresno, March 31, 1930, for 1750 c.f.s. from Merced River in Sec. 4, T. 5 N., R. 15 E., M. D. M., for power purposes. Estimated cost \$400,000.

SAN DIEGO COUNTY—Permit 3457, Application 6357. Issued to Edith Austin Ayres, San Diego, March 31, 1930, for 100,000 gallons per day from six springs unnamed in Secs. 29, 32 and 33, T. 12 S., R. 4 E., S. B. M., for domestic use. Estimated cost \$32,500.

DAM APPLICATIONS

APPROVALS

AND PLANS

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources, during the month of March, 1930.

STANISLAUS COUNTY—Woodward Reservoir Dam No. 66. South San Joaquin Irrigation District, Manteca, owner; earthfill, 60 feet above streambed with a storage capacity of 35,000 acre-feet. Situated on main supply canal in Sec. 9, T. 1 S., R. 10 E., M. D. M., for storage and regulation purposes for irrigation use. Estimated cost \$225,000.

EL DORADO COUNTY—Williamson Dam No. 464. Hector Williamson, Placerville, owner; earth fill, 25 feet above streambed with a storage capacity of 92.4 acre-feet. Situated on an unnamed creek tributary to Webber Creek in Sec. 35, T. 11 N., R. 9 E., for storage purposes for irrigation use.

MARIPOSA COUNTY—Exchequer Dam No. 58-2. Merced Irrigation Company, Merced, owner; arch gravity, 288 feet above streambed with a storage capacity of 289,000 acre-feet. Situated on Merced River in Sec. 13, T. 4 S., R. 15 E., M. D. M., for storage purposes for irrigation and power use. Estimated cost \$5,116,073.

LOS ANGELES COUNTY—Twin Lakes Park

Lower Dam No. 774. Nelson A. Gray, Glendale, owner; concrete, 31 feet and five inches above streambed. Situated on Browns Canyon in Sec. 7, T. 2 N., R. 16 W., S. B. M., for diversion purposes for recreation use.

LOS ANGELES COUNTY—Twin Lakes Park Upper Dam No. 774-2. Twin Lakes Park Company, Los Angeles, owner; gravity, 24 feet above streambed. Situated on Devils Creek tributary to Aliso Canyon in Sec. 7, T. 2 N., R. 16 W., S. B. M., for diversion purposes for recreation use.

TUOLUMNE COUNTY—Don Pedro Dam No. 68. Turlock & Modesto Irrigation Districts, Turlock and Modesto, owners; gravity arch, 264 feet above streambed with a storage capacity of 289,000 acre-feet. Situated on Tuolumne River tributary to San Joaquin River in Sec. 35, T. 2 S., R. 14 E., M. D. M., for storage purposes, for irrigation and power use. Estimated cost \$3,097,419.

STANISLAUS COUNTY—La Grange Dam No. 68-2. Turlock & Modesto Irrigation Districts, Turlock and Modesto, owners; masonry, 129 feet above streambed with a storage capacity of 500 acre-feet. Situated on Tuolumne River tributary to San Joaquin River in Sec. 16, T. 3 S., R. 14 E., M. D. M., for diversion purposes for irrigation and power use. Estimated cost \$550,000.

STANISLAUS COUNTY—Owen Reservoir Dam No. 68-3. Turlock Irrigation District, Turlock, owner; buttress, 46 feet above streambed with a storage capacity of 49,000 acre-feet. Situated on Main Canal in Sec. 1, T. 4 S., R. 12 E., M. D. M., for regulation purposes for irrigation use. Estimated cost \$35,417.

LOS ANGELES COUNTY—Verdugo Road Dam No. 5-3. City of Glendale, Glendale, owner; earthfill, 23½ feet high with a storage capacity of 23 acre-feet. Situated on no stream for storage purposes for municipal use. Estimated cost \$60,800.

LOS ANGELES COUNTY—Tenth and Western Dam No. 5-4. City of Glendale, Glendale, owner; earthfill, 23½ feet high with a storage capacity of 46 acre-feet. Situated on no stream for storage purposes for municipal use. Estimated cost \$78,190.

LOS ANGELES COUNTY—Chevy Chase Dam No. 5-5. City of Glendale, Glendale, owner; earthfill, 24 feet high with a storage capacity of 46 acre-feet. Situated on no stream for storage purposes for municipal use. Estimated cost \$84,475.

MODOC COUNTY—Payne Dam No. 143. H. G. and R. A. Payne, Alturas, owners; earthfill, with a storage capacity of 2000 acre-feet. Situated on no stream tributary to the South Fork of Pit River in Sec. 15, T. 41 N., R. 13 E., M. D. M., for storage purposes for irrigation use.

NEVADA COUNTY—Farad Dam No. 105. Sierra Pacific Power Company, Reno, Nevada, owner; crib, 8 feet above streambed. Situated on Truckee River in Sec. 30, T. 18 N., R. 18 E., M. D. M., for diversion purposes for power use.

NEVADA COUNTY—Fleish Dam No. 105-2. Sierra Pacific Power Company, Reno, Nevada, owner; crib, 10 feet above streambed. Situated on Truckee River in Sec. 18, T. 18 N., R. 18 E., M. D. M., for diversion purposes for power use.

EL DORADO COUNTY—Loon Lake Dam No. 105-3. Sierra Pacific Power Company, Reno, Nevada, owner; gravity, 30 feet above streambed with a storage capacity of 8000 acre-feet. Situated on Gerle Creek tributary to Rubicon River in Sec. 4, T. 13 N., R. 15 E., M. D. M., for storage purposes for domestic and irrigation use.

RIVERSIDE COUNTY—Fishermans Retreat No. 1 Dam No. 811. D. Gerster, Redlands, owner; earthfill, 14 feet above streambed. Situated on San Timoteo Creek tributary to Santa Ana River in Sec. 28, T. 2 S., R. 2 W., S. B. M., for storage purposes for irrigation use.

RIVERSIDE COUNTY—Fishermans Retreat No. 2 Dam No. 811-2. D. Gerster, Redlands, owner; earthfill, 4 feet above streambed. Situated on San Timoteo Creek tributary to Santa Ana River in Sec. 28, T. 2 S., R. 2 W., S. B. M., for storage purposes, for irrigation use.

EL DORADO COUNTY—Webber Creek Dam No. 53. El Dorado Irrigation District, Placerville, owner; multiple arch, 85 feet above streambed with a storage capacity of 1275 acre-feet. Situated on Webber Creek tributary to South Fork American River in Sec. 18, T. 10 N., R. 12 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$180,000.

EL DORADO COUNTY—Blakely Dam No. 53-2. El Dorado Irrigation Company, Placerville, owner; earthfill, 20 feet above streambed with a storage capacity of 175 acre-feet. Located in Sec. 12, T. 10 N., R. 11 E., M. D. M., for regulating purposes for municipal use.

PLACER COUNTY—Morning Star Dam No. 325. McGeechin Placer Gold Mining Company, Sacramento, owner; earthfill, 40 feet above streambed with a storage capacity of 2200 acre-feet. Situated on Shirlatt Creek tributary to North Fork of American River in Sec. 17, T. 15 N., R. 11 E., M. D. M., for storage purposes for domestic, power and mining uses. Estimated cost \$50,000.

SAN BERNARDINO COUNTY—Chino Ranch No. 1 Dam No. 801. Scott Investment Company, Rowland & Chandis, Los Angeles, owners; earthfill, 14 feet above streambed. Situated on a branch of Brea Canyon in Sec. 13, T. 2 S., R. 9 W., S. B. M., for storage purposes for irrigation use.

SAN BERNARDINO COUNTY—Chino Ranch No. 2 Dam No. 801-2. Scott Investment Company, Rowland & Chandis, Los Angeles, owners; earthfill, 18 feet above streambed. Situated on branch of Brea Canyon in Sec. 13, T. 2 S., R. 9 W., S. B. M., for storage purposes for irrigation use.

SAN BERNARDINO COUNTY—Chino Ranch No. 3 Dam No. 801-3. Scott Investment Company, Rowland & Chandis, Los Angeles, owners; arch, 27 feet above streambed. Situated on branch of Brea Canyon in Sec. 13 S., T. 2 S., R. 9 W., S. B. M.

YUBA AND PLACER COUNTIES—Camp Far West Dam No. 52. Camp Far West Irrigation District, Wheatland, owner; gravity arch, 42 feet above streambed with a storage capacity of 5000 acre-feet. Situated on Bear River tributary to Feather River in Sec. 21, T. 14 N., R. 6 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$166,978.

NEVADA COUNTY—Bowman Diversion Dam No. 61. Nevada Irrigation District, Grass Valley, owner; arch, 21 feet above streambed. Situated on Canyon Creek tributary to South Yuba River in Sec. 8, T. 18 N., R. 12 E., M. D. M., for diversion purposes for irrigation and other uses.

PLUMAS COUNTY—Feather River Improvement Dam No. 282. Feather River Improvement Company, Blairsden, owner; rockfill, 10 feet high with a storage capacity of 150 acre-feet. Situated on no stream tributary to Feather River in Sec. 7, T. 22 N., R. 12 E., M. D. M., for storage purposes for irrigation use.

SANTA CLARA COUNTY—Grant Company No. 1 Dam No. 621. Grant Company, San Francisco, owner; earthfill, 22 feet above streambed with a stor-

age capacity of 25 acre-feet. Situated on Arroyo Aguagne, tributary to Penitencia Creek located in Rancho Canada de Pala for Diversion purposes for irrigation use. Estimated cost \$6,000.

SANTA CLARA COUNTY—Grant Company No. 2 Dam No. 621-2. Grant Company, San Francisco, owner; earthfill, 14 feet above streambed with a storage capacity of 180 acre-feet. Situated on Arroyo Aguagne tributary to Penitencia Creek located in Rancho Canada de Pala for storage purposes for irrigation use. Estimated cost \$2,000.

SIERRA COUNTY—Webber Lake Dam No. 295. Hobart Estate Company, Hobart Mills, owner; wood. Situated on Little Truckee River tributary to Truckee River in Sec. 28, T. 19 N., R. 14 E., M. D. M., for storage purposes for recreation use.

SIERRA COUNTY—Independence Lake Dam No. 295-2. Hobart Estate Company, Hobart Mills, owner; wood. Situated on Independence Lake tributary to Little Truckee River in Sec. 34, T. 19 N., R. 15 E., M. D. M.

LAKE COUNTY—Bucksnot Dam No. 392. Estate of W. F. Detert, San Francisco, owner; earthfill, 30 feet above streambed with a storage capacity of 1000 acre-feet. Situated on Bucksnot Creek tributary to Pintah Creek in Sec. 9, T. 10 N., R. 6 W., M. D. M., for storage purposes for irrigation use. Estimated cost \$100,000.

AMADOR COUNTY—Central Eureka Dam No. 476. Central Eureka Mining Company, Sutter Creek, owner; earthfill, 17 feet above streambed with a storage capacity of 10 acre-feet. Situated on Anderson Gulch tributary to Sutter Creek in Sec. 7, T. 6 N., R. 12 E., M. D. M., for storage purposes for irrigation and debris use.

SAN BERNARDINO COUNTY—Arrow Bear Dam No. 807. Arrow Bear Lake Company, Los Angeles, owner; gravity, 10 feet above streambed. Situated on South Fork of Deep Creek tributary to Deep Creek for storage purposes for recreation use. Estimated cost \$5,000.

SISKIYOU COUNTY—Pruett Dam No. 184. R. H. Pruett, Yreka, owner; earthfill, 20 feet above streambed for storage purposes for domestic use.

LASSEN COUNTY—Triplet Dam No. 247. James Olsen, Madeline, owner; earthfill, with a storage capacity of 40 acre-feet. Situated on hill watershed in Sec. 23, T. 37 N., R. 13 E., M. D. M., for storage purposes for irrigation use.

TEHAMA COUNTY—Dunn Ranch Dam No. 261-2. C. Fred Holmes, Gerber, owner; earthfill, 31 feet above streambed with a storage capacity of 115 acre-feet. Situated on Dry Gulch tributary to Sacramento River in T. 25 N., R. 2 W., M. D. M., for storage purposes for stock watering use.

LOS ANGELES COUNTY—Malibu Dam No. 773. Marblehead Land Company, Los Angeles, owner; concrete, 102 feet above streambed with a storage capacity of 574 acre-feet. Situated on Malibu Creek in Sec. 19, T. 1 S., R. 17 W., S. B. M., for storage purposes for irrigation and domestic use. Estimated cost \$152,927.59.

MODOC COUNTY—James Flat Dam No. 121. W. O. Blasingame and Fred H. Huffman, Alturas, owners; earthfill, 14 feet above streambed with a storage capacity of 1408 acre-feet. Situated on Mosquito Creek tributary to Willow Creek in Sec. 25, T. 47 N., R. 10 E., M. D. M., for diversion and storage purposes for irrigation use. Estimated cost \$7,500.

MODOC COUNTY—Antelope Dam No. 121-3. W. O. Blasingame and Fred H. Huffman, Alturas, owners; earthfill, 10 feet above streambed with a storage

capacity of 1550 acre-feet. Situated on South End of Antelope Plains tributary to Clover Swale and Pit River in Sec. 11, T. 43 N., R. 10 E., M. D. M., for diversion and storage purposes for irrigation use. Estimated cost \$3,500.

RIVERSIDE COUNTY—Holmes Dam No. 1 No. S16. Lawrence Holmes, Arlington, owner; concrete, 27 feet above streambed with a storage capacity of 65 acre-feet. Situated on Cajolca Canyon tributary to Tamaseal Canyon in Sec. 12, T. 4 S., R. 6 W., S. B. M., for storage purposes for irrigation use. Estimated cost \$20,000.

NEVADA COUNTY—Lake Vera Dam No. 303. W. H. Griffith, Nevada City, owner; buttress, 16 feet above streambed with a storage capacity of 136.24 acre-feet. Situated on Rock Creek tributary to South Yuba River in Sec. 25, T. 1 N., R. 9 W., M. D. M., for storage purposes for recreation use. Estimated cost \$4,000.

ALAMEDA COUNTY—Central Reservoir Dam No. 31. East Bay Municipal Utility District, Oakland, owner; earthen, 50 feet high with a storage capacity of 485 acre-feet. Situated on Hopkins street and 23d avenue for storage purposes for domestic use.

ALAMEDA COUNTY—Berryman Reservoir Dam No. 31-S. East Bay Municipal Utility District, Oakland, owner; earthen, 40 feet high with a storage capacity of 69 acre-feet. Situated on Euclid avenue, north of Rose street, Berkeley, for storage purposes for municipal use.

ALAMEDA COUNTY—Piedmont No. 1 Reservoir Dam No. 31-10. East Bay Municipal Utility District, Oakland, owner; earthen, 50 feet high with a storage capacity of 33.76 acre-feet. Situated on Bullard Drive and Estates Drive, Piedmont, for storage purposes for municipal use.

ALAMEDA COUNTY—Claremont Reservoir Dam No. 31-9. East Bay Municipal Utility District, Oakland, owner; earthen, 17 feet high with a storage capacity of 25.16 acre-feet. Situated at Claremont avenue and Webster street, Berkeley, for storage purposes for municipal use.

ALAMEDA COUNTY—Piedmont No. 2, Reservoir Dam No. 31-11. East Bay Municipal Utility District, Oakland, owner; earthen, 50 feet high with a storage capacity of 59.8 acre-feet. Situated at Scenic and Mulberry streets, Piedmont, for storage purposes for municipal use.

CONTRA COSTA COUNTY—Summit Reservoir Dam No. 31-42. East Bay Municipal Utility District, Oakland, owner; earthen, 21 feet high with a storage capacity of 116.6 acre-feet. Situated on Spruce street for storage purposes for municipal use.

ALAMEDA COUNTY—30th Avenue Reservoir Dam No. 31-13. East Bay Municipal Utility District, Oakland, owner; earthen, 16 feet high with a storage capacity of 32.91 acre-feet. Situated at head of Maybelle avenue, Oakland, for storage purposes for municipal use.

MODOC COUNTY—French Dam No. 143-2. G. P. French, Alturas, owner; gate, 7 feet above streambed. Situated on Inland Basin in Sec. 21, T. 41 N., R. 13 E., M. D. M., for storage purposes for stock and irrigation use.

AMADOR COUNTY—Sutter Creek Flushing Dam No. 13. City of Sutter Creek, Sutter Creek, owner; concrete, 14 feet above streambed with a storage capacity of 10 acre-feet. Situated on Sutter Creek in Sec. S, T. 6 N., R. 11 E., M. D. M., for storage purposes for flushing use. Estimated cost \$2,000.

MODOC COUNTY—Round Valley Dam No. 145-S. G. O. Trauzettal, Alturas, owner; earth and rockfill,

8 feet above streambed. Situated on Round Valley tributary to Triangle in Sec. S, T. 44 N., R. 44 E., M. D. M., for storage purposes for irrigation use.

NEVADA COUNTY—Liberty Hill Dam No. 307. Wm. Maguire and Wm. Nicholls, Jr., Nevada City, owners; earthen, 50 feet above streambed. Situated on Bear River tributary to Feather River in Sec. 27, T. 15 N., R. 10 E., M. D. M., for storage purposes for debris use.

LASSEN COUNTY—Laxalt Dam No. 248. Peter Laxalt, Madeline, owner; earthen, 20 feet above streambed with a storage capacity of 50 acre-feet. Situated on McDonald Creek for storage purposes for irrigation and stock use.

RIVERSIDE COUNTY—Liberty Ranch Dam No. 821. C. E. Foxley, Romoland, owner; earthen, 16 feet above streambed with a storage capacity of 200 acre-feet. Situated on Salt Creek in Sec. 5, T. 6 S., R. 3 W., S. B. M., for storage purposes, for irrigation use. Estimated cost \$3,500.

SAN BERNARDINO COUNTY—Green Valley Dam No. 804. De Witt-Bair Realty Company, Los Angeles, owner; multiple arch, 60 feet above streambed with a storage capacity of 250 acre-feet. Situated on Green Valley Creek tributary to Deep Creek in Sec. 22, T. 2 N., R. 2 W., for storage purposes for recreation use. Estimated cost \$60,000.

AMADOR COUNTY—Treasure Debris Dam No. 473. Treasure Mining Company, San Francisco, owner; arch, 28 feet above streambed with a storage capacity of 0 acre-feet. Situated on Rancheria Creek tributary to Mokelumne River in Sec. 36, T. 7 N., R. 10 E., M. D. M., for storage purposes for debris use.

FRESNO AND MADERA COUNTIES—Mendota Dam No. 683. San Joaquin & Kings River Canal and Irrigation Company, Inc., San Francisco, owner; concrete, 17 feet above streambed with a storage capacity of 3000 acre-feet. Situated on San Joaquin River in Sec. 19, T. 13 S., R. 15 E., M. D. M., for diversion purposes for irrigation use.

FRESNO COUNTY—Sequoia Lake Dam No. 693. Sequoia Lake Conference, Y. M. C. A., Fresno, owner; rockfill, 47 feet above streambed with a storage capacity of 3000 acre-feet. Situated on Mill Flat Creek tributary to Kings River in Sec. 1, T. 14 S., R. 27 E., M. D. M., for storage purposes for recreation use.

CONTRA COSTA COUNTY—Mt. Diablo Dam No. 583. Mt. Diablo Country Club, Diablo, owner; earthen, 15 feet above streambed with a storage capacity of 95 acre-feet. Situated on Green Valley tributary to San Ramon Creek in Sec. 21, T. 1 S., R. 1 W., M. D. M., for storage purposes for recreation use.

CONTRA COSTA COUNTY—Black Hills Dam No. 583-2. Mt. Diablo Country Club, Diablo, owner; earthen, 38 feet above streambed with a storage capacity of 27 acre-feet. Situated on an unnamed creek tributary to Green Valley Creek in Sec. 14, T. 1 S., R. 1 W., M. D. M., for storage purposes for recreation use.

LOS ANGELES COUNTY—Little Rock Dam No. 57. Little Rock & Palmdale Irrigation District, Little Rock and Palmdale, owners; multiple arch, with a storage capacity of 5400 acre-feet. Situated on Little Rock Creek in Sec. 27, T. 5 N., R. 11 W., S. B. M., for diversion and storage purposes for irrigation use.

SAN BERNARDINO COUNTY—Wiggins Hill Dam No. 17. City of San Bernardino, San Bernardino, owner; earthen, 15.6 feet above streambed with a storage capacity of 36.8 acre-feet. Situated on Devil Canyon tributary to Santa Ana River for diversion purposes for municipal use. Estimated cost \$6,000.

SANTA CRUZ COUNTY—Boyea Creek Dam No. 96. Coast Counties Gas & Electric Company, Santa Cruz, owner; timber, 13 feet above streambed with a storage capacity of 50 acre-feet. Situated on Boyea Creek tributary to Big Creek in Sec. 5, T. 10 S., R. 3 W., M. D. M., for storage purposes for power use.

SANTA CRUZ COUNTY—Mill Creek Dam No. 96-2. Coast Counties Gas & Electric Company, Santa Cruz, owner; rock crib, 50 feet above streambed with a storage capacity of 350 acre-feet. Situated on Mill Creek tributary to Scotts Creek in Sec. 29, T. 9 S., R. 3 W., M. D. M., for storage purposes for power use.

YUBA COUNTY—Boyer Dam No. 61-11. Nevada Irrigation District, Grass Valley, owner; earthfill, 20 feet high with a storage capacity of 50 acre-feet. Situated on Excelsior Ditch in Sec. 2, T. 15 N., R. 6 E., M. D. M., for regulation purposes for irrigation use.

PLUMAS COUNTY—Tailings Dam No. 271. Walker Mining Company, Spring Garden, owner; earthfill, 25 feet above streambed with a storage capacity of 57 acre-feet. Situated on Little Grizzly Creek tributary to Indian Creek in Sec. 12, T. 24 N., R. 11 E., M. D. M., for storage purposes for debris use. Estimated cost \$38,000.

RIVERSIDE COUNTY—Holmes Upper Dam No. 816-2. Lawrence Holmes, Arlington, owner; reinforced concrete, 18 feet above streambed with a storage capacity of 50 acre-feet. Situated on Cajolea Canyon tributary to Tamascal Creek for storage purposes for irrigation use.

PLUMAS COUNTY—Australia Dam No. 275. Australia Placer Mining Company, Quincy, owner; earthfill. Situated on Waupensie Creek tributary to Spanish Creek for storage purposes for debris use.

MONO COUNTY—Walker Lake Dam No. 533. Farrington Estate, Mono Lake, owner; earth and rockfill; 6 feet above streambed with a storage capacity of 597 acre-feet. Situated on Walker Lake tributary to Mono Lake in Sec. 7, T. 1 S., R. 26 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$2,000.

MONO COUNTY—Sardine Lake Dam No. 533-2. Farrington Estate, Mono Lake, owner; rockfill, 10 feet above streambed with a storage capacity of 305 acre-feet. Situated on Sardine Lake tributary to Walker Creek and Mono Lake in Sec. 15, T. 1 S., R. 25 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$500.

NEVADA COUNTY—Omega Dam No. 302. South Yuba Mining & Development Company, San Francisco, owner; arch, 54 feet above streambed. Situated on Scotchman Creek tributary to South Yuba River for storage purposes for debris use. Estimated cost \$13,000.

Applications for approval of plans and specifications for construction or enlargement of dams filed with the State Department of Public Works, Division of Water Resources, during the month of March, 1930.

BUTE COUNTY—Lake Madrone Dam No. 342. George Mansfield and Duncan McCallum, Oroville, owners; Ambursen, 27 feet above streambed. Situated on Berry Creek tributary to Feather River in Sec. 27, T. 21 N., R. 5 E., M. D. M., for storage purposes for recreation use. Estimated cost \$20,000. Fees paid \$200.

Applications for approval of plans and specifications for repair or alteration of dams filed with the State Department of Public Works, Division

of Water Resources, during the month of March, 1930.

EL DORADO COUNTY—Rupley Dam No. 463. A. J. Rupley, Placerville, owner; earthfill. Situated on Webber Creek tributary to American River in Sec. 11, T. 11, R. 11.

SAN BERNARDINO COUNTY—Arrow-Bear Dam No. 807. Arrow-Bear Lake Corporation, Los Angeles, owner; gravity. Situated on South Fork of Deep Creek tributary to Deep Creek.

Plans and specifications for the construction or enlargement of dams approved by the State Department of Public Works, Division of Water Resources, during the month of March, 1930.

LOS ANGELES COUNTY—Glendale Park Manor Dam No. 5-2. City of Glendale, Glendale, owner; earthfill, 270 feet high with a storage capacity of 10.7 acre-feet. Situated on no stream for storage purposes for municipal use. Estimated cost \$49,300. Total.

CONTRA COSTA COUNTY—Chenery Dam No. 581. California Water Service Company, San Francisco, owner; earthfill, 30.5 feet above streambed with a storage capacity of 3113 acre-feet. Situated on no stream tributary to Sacramento River for storage purposes for industrial and domestic use. Estimated cost \$300,000.

Plans for the repair or alteration of dams approved by the State Department of Public Works, Division of Water Resources, during the month of March, 1930.

MARIN COUNTY—Belvedere Dam No. 33-4. Marin Municipal Utility District, San Rafael, owner; earthfill. Nature of Repairs—Installing new outlet pipe.

LOS ANGELES COUNTY—Malibon Lake Dam No. 771. Malibon Lake Mountain Club, Los Angeles, owner; arch. Situated on Malibon Creek in Sec. 12, T. 1 S., R. 18 W., S. B. M.

SEATTLE PUBLIC LIBRARY

MOUNTAINS

By HARRY T. FEE.

Don't care much for valleys,
Don't banker much for seas,
But I'm crazy about mountains
All carpeted with trees.

Where the songs of birds and branches
Meet the singing of a stream,
And the sun is just a gleaming
Like the rapture of a dream.

There's a lot o' pretty scenery
In this old world as a whole,
But it's only in the mountains,
I seem to lose my soul.

They're prettier than roses,
Or springtime daffodils,
Oh—I'm crazy about mountains—
I'm daffy about hills.

And though I count the glory
Of each supernal world—
The drama of song and story
Which history has unfurled,

There's nothing in creation
To me so set apart,
As this beauty of the mountains
That sits upon my heart.

The Maximum Conservation of Water With Reference to the California Plan

By EDWARD HYATT, State Engineer

WATER is indispensable to human existence and in a large section of the world is the limiting natural resource; that is, the extent to which life can be sustained is or will be determined by the amount of usable water. It follows that in such localities the most complete possible use of the supply provided by nature is of vital importance, and does at the present time or will in the future transcend all other factors.

Where water occurs plentifully with respect to human needs a region is denoted humid and where insufficient, arid, with an intermediate and more or less indeterminate classification of semiarid. Under these criteria eastern United States is termed humid and the western part arid or semiarid, the dividing line being approximately at the 99th meridian, which passes somewhat west of the center of Kansas. The state of Kansas has made allowance for the dissimilar water supply conditions within its borders by enacting a different water code for the area west of the 99th meridian from that in force in the eastern half of the state.

The seventeen states lying partly or wholly west of the 99th meridian have, therefore, come to be considered the arid or irrigation states, which include North and South Dakota, Kansas, Nebraska, Oklahoma, Texas and all states west of those named. An association of the State Engineers of these seventeen irrigation states is actively functioning on matters pertaining to water, water rights, irrigation, reclamation and similar items of common interest. These so-called arid states include 60 per cent of the land area of the United States, 50 per cent of the farm lands and 91 per cent of the total irrigated area, as well as 19 per cent of the total popu-

lation and 24 per cent of the farm population of the country.

By reason of scarcity of supply, the problem of water conservation assumes a more compelling aspect in the west than in eastern or middle western United States, and the greatest progress looking toward its complete use has been made in the arid states. This discussion will deal mainly with conservation accomplishment and future plans in the

west and be illustrated by investigations under way in California, which has gone the farthest in the way of state-wide water plans. However, it is thought that the principles and methods hereinafter enumerated will in large degree be applicable to similar studies and development in other parts of the United States.

If maximum conservation is to be achieved, it naturally follows that the most complete possible utility must be made of existing water supplies for all useful purposes. Before approaching the purely technical phase of the study, therefore, the engineer should have a clear conception of fundamental consideration such as all present and future beneficial uses of water in the region under investigation, their

relative importance and amount, whether consumptive or nonconsumptive, degree of interference one with another, and legal or commonly accepted priorities, if any.

There are many and varied uses to be considered in a conservation program, including methods of regulation to prevent damage by water itself, such as flood control, which is usually so important in any study that for the purposes of the investigation it is considered a use. The known services fall into some five general classes as follows:

First—Consumptive, which includes municipal,

EDWARD HYATT, State Engineer.

stock, industrial, irrigation and some forms of mining and milling.

Second—The extraction of energy inherent in water by reason of its relative elevation, in which class are hydro power, including both hydroelectric and hydromechanical, and hydraulic and some other forms of mining.

Third—Use of the buoyancy of water for transportation purposes, consisting of all forms of navigation.

Fourth—Its utility as a scenic attraction and by reason of fish life maintained. This class consists of recreation and commercial fishing.

Fifth—The control of water to prevent damage; flood regulation, salinity control, and drainage. Salinity control, perhaps peculiar to California, consists in furnishing fresh water to hold back saline encroachment from the ocean and bays. Drainage is a concomitant of irrigation or of farming wet lands.

The thirteen uses listed may not all occur in a given region or state, however, they all do exist in California. Interference between different types may exist as between hydro power and irrigation, or navigation and other purposes, and must be taken into account.

The relative legal position of the divergent uses should also be known. On navigable streams and lakes the paramount right of the United States to regulate in the interest of navigation is unquestioned.

Subject to the superior right of the United States in the interest of navigation, most of the western states have by statute or administrative rule recognized certain relative priorities of water rights. Ten states have covered this by law. Domestic and municipal purposes are always first, irrigation generally second and other uses third, although in some cases stock watering comes in class one or two, and in one state mining is in class two under certain conditions. The Colorado River compact between the seven states comprising the drainage basin of that river, defines "domestic use" as including household, stock, municipal, mining, milling, industrial and other like purposes, but excludes the generation of electrical power.

The first step toward designing a solution of the problem is the collection and analysis of the engineering data, the critical feature of which is the water supply. From existing streamflow and rainfall data extended in time and location by standard engineering methods, an estimate of the location, amount and method of occurrence of the total water crop is obtained. In nearly all instances it is found that the bulk of the water occurs at a different time of year from the season of greatest use, therefore conservation inevitably hinges on storage, both seasonal and cyclic. Reservoir sites are often, if not usually, the controlling item in the conservation of a

stream's waters. Therefore, reservoir sites are located and searchingly analyzed as to adequacy, cost and yields through the dry cycles which will determine the economic size and yield. It is not generally possible to capture for use more than 60 to 80 per cent of the mean discharge of a stream, even with unlimited reservoir capacity, which is often further limited by lack of favorable dam and reservoir sites.

The question of adequacy of sites for dams of great height and large storage capacity is assuming more and more importance and is leading to the enactment of laws requiring state supervision of dams in the interest of safety. This is a necessary step in order to reassure the public as regards the building of these structures of great potential danger and thus clear the way for the conservation program.

Concurrently with the water supply investigation a thorough study of present and future water needs should be carried out, which will include all of the uses heretofore listed in so far as they exist in the region under investigation. In irrigation states, such as California, over 90 per cent of the water consumptively used is for irrigation. It follows, therefore, that any development program in an arid state will revolve mainly around irrigation, giving due consideration, however, to all other purposes. A determination should be made of the arable lands of the state and of the amounts of water needed for their proper cultivation. This requires a classification of all such lands, which, while necessarily of a reconnaissance nature, is based upon soil, topography, climate, location and upon economic factors.

Knowing the amount, location and feasible yield of the total water supplies, the present usage being made therefrom; the amount, location and irrigation needs present and future of the arable lands, and the similar demands for other purposes, physical data is available for trial studies which will result in a comprehensive plan for utilization. Usually it will be found that the water is furnished by nature not only irregularly as to time, but also irregularly as to location. In other words, some areas will possess a surplus over and above their present and future needs and others be deficient either now or for future development. This inequality of location is in fact, one of the principal reasons why state direction and planning are necessary for if there were sufficient water for all purposes private development could proceed in accordance with economic laws, or if the

Construction Records Made During 1929

On California State Highway System

By EARL WITTHYCOMBE, Assistant Construction Engineer

AN ANALYSIS of the construction jobs on the California state highway system reveals in an interesting manner the progress that is being made in building better highways in this state. The following are outstanding facts and records that tell the story of construction progress during 1929:

PORTLAND CEMENT CONCRETE

Record for smoothness—Resident Engineer, C. N. Ainley; contractor, Griffith Co.; between Santa Ana and Anaheim in Orange County.

Record for average concrete strength—Resident Engineer, H. B. Lindley; contractor, Matich Bros.; line change west of San Clemente in Orange County.

Record for cement control—Resident Engineer, F. R. Baker; contractor, T. M. Morgan; between Shasta River and Gazelle in Siskiyou County.

Record for daily yardage—Resident Engineer, C. A. Potter; contractor, Fredrickson & Watson; between Ben Ali and Sylvan School in Sacramento County.

ASPHALTIC CONCRETE

Record for smoothness—Resident Engineer, C. T. Schultz; contractor, Peninsula Paving Co.; between Chualar and Salinas in Monterey County.

Record for best hand finished job—Resident Engineer, M. C. Fosgate; contractor, Hollywood Paving Co.; between Alto and Sausalito in Marin County.

Record for density of pavement surface—Resident Engineer, C. T. Schultz; contractor, Sam Hunter; between Stony Creek and Tecolote Creek in Santa Barbara County.

Record for stability of pavement surface—Resident Engineer, M. C. Fosgate; contractor, Hollywood Paving Co.; between Alto and Sausalito in Marin County.

Record of production—Resident Engineer, C. T. Schultz; contractor, Peninsula Paving Co.; between Chualar and Salinas in Monterey County.

SUMMARY OF 1929 PAVEMENT CONSTRUCTION

Riding quality was improved on both types of hard surface pavements over that of the previous year.

The outstanding accomplishments of the season's work were the reduction in roughness and the increase in average daily production of both portland cement concrete and asphaltic concrete mixtures.

The best machine finished asphaltic concrete project averaged but three and one-half inches of roughness per mile greater than the best portland cement concrete project.

The record average daily production of portland cement concrete pavement has been increased to 361.6 cubic yards. This figure is obtained by considering each start of the mixer as a day's run and represents approximately 90.4 per cent of the maximum output that could have been secured had there been no delays.

The high daily average of asphaltic concrete tonnage has been increased to 790.7 which represents 72 per cent of the maximum obtainable without delays.

PORTLAND CEMENT CONCRETE PAVEMENTS

Mix.—The maximum density method of proportioning coarse aggregate with the amount of fine aggregate governed by the resulting voids in the coarse aggregate and with a definite amount of excess for workability, constitutes the method of design of mixtures. The amount of cement is held uniformly to six sacks per cubic yard of concrete actually placed. As an experimental section, a day's run of concrete on one of the larger jobs of last season's construction was proportioned with but 4.83 sacks of cement to the cubic yard in an attempt to produce a compressive strength of 3500 pounds per square inch at 28 days.

The average for a series of casts made from this mix was 3630 pounds or 84.4 per cent of that produced from the same job with six sacks of cement to the cubic yard.

Design.—Panels are uniformly 10 by 20 feet with thickened longitudinal edges. Provision for expansion is made at 60-foot intervals and under special conditions at 40 feet. The intermediate joints are of the weakened plane type. A double line of one-half inch square deformed marginal bars is placed around all sides of the panel and held in place, four inches from the edge, by steel chairs driven into the subgrade. One end of all longitudinal steel is extended through the joint and fitted with a sleeve to serve as a dowel. Three additional three-quarter-inch round dowels are provided at expansion joints with provision for expansion at the ends of the dowels and the steel.

Construction.—Central proportioning by weighing each of the coarser aggregates, above and below the one and one-half-inch screen size, and the sand in separate boxes was uniformly practiced during the past season.

All construction was in 10-foot widths with the exception of one project where, for the convenience of traffic, 20-foot construction was permitted with a weakened plane longitudinal joint. The slab was poured from the side with an extension boom on the mixer.

It was definitely proven in last season's construction that delayed finish resulted in smoother riding surfaces, and this is being practiced on all subsequent work. Nearly all jobs have increased production to the point where two finishing machines or two heavy longitudinal floats are necessary in order to secure compaction, and delayed finish is secured by maintaining the maximum interval between the two machines or the floats, as the case may be.

Pavements are opened to traffic, following an 8-day watering period, on the basis of strengths developed by beams cast and broken in the field.

Result of Tests.—The average compressive strength of pavement concrete during 1929 for the entire state was 3630 pounds per square inch. This represents 24 projects. Of these 24 projects, 17 were selected by headquarters representatives to cast a special series of 10 to 15 cylinders for 28-day comparisons. The average strength from the job cylinders for these projects was 3940 pounds per square inch, as compared to 4365 pounds average on the basis of the casts made by headquarters.

Of the jobs selected for casting by headquarters, seven were selected by the laboratory for coring. The laboratory cores, after being corrected for height and age, show an average compressive strength of 4894 pounds per square inch, the corresponding headquarters casts show 4401 pounds, and the field casts show 3848 pounds per square inch. Assuming that the cores represent the true strength of the concrete in the pavement it would appear from this analysis that the headquarters casts represent but 90 per cent of the actual strength of the concrete and the field casts, but 79 per cent.

In the past it has been the practice to include in the 6-inch by 12-inch cylindrical cast a true representation of all the aggregate contained in the pavement mixture. It was questionable whether the maximum size aggregate, two and one-half-inch material, did not unduly influence the resulting strength in a cylinder of such dimensions, and it was later proven by our own investigations that such was the case. It then became a question as to the advisability of increasing the dimensions of the specimen to take care of the maximum size of rock or uniformly eliminating from the material selected for casting, all of the aggregate above a certain screen size. To increase the size of cylinders would have resulted in discarding a considerable portion of our field and laboratory equipment. It has been decided to screen the mixture on a one and one-half-inch square mesh prior to casting in order to secure uniformity. The early results from this method are exceptionally encouraging.

ASPHALTIC CONCRETE

Mix.—Since the latter part of the 1929 construction season mixtures are being designed and controlled by means of the stability test of the mortar content. The fine aggregate for a project is selected prior to the letting of the contract by means of relative stability values and often a convenient source of sand that would otherwise be rejected on the basis of specification requirements for sieve analysis is accepted if these stability values are satisfactory. This method has resulted in a wider use of local materials with a consequent greater economy in the price per ton of the mixtures in place.

Samples are taken at two-hour intervals during the operation of the plant, screened through the 10-mesh sieve while yet warm and submitted daily to the laboratory for a stability test. A rational use of this stability value is attempted at all times. Realizing the danger of sacrificing the qualities in the resulting pavement that prolong its useful life, no attempt is made to secure unreasonably high stability values.

Imported filler is not used in either base or leveling course mixtures but is maintained at approximately 8 per cent of the total dry mixture for the surface course.

Design.—Black base construction, on new subgrade, has come into more general use during the past season. Base course varies from four to five inches in center thickness, according to local conditions, and surface course is uniformly two inches in thickness over the full width. The outer edges of the pavement are uniformly thickened to nine inches corresponding to the portland cement concrete section. A subbase of natural cementing material is used under the pavement where local soil conditions are unfavorable for subgrade.

Construction.—Some hand finish was permitted on work during the past season but this type is rapidly being abandoned for the superior machine-finished work.

Mixing plants are now being manufactured and in use on state work with a capacity of nearly three

times that of the plants in general use a few years ago. The use of such plants has been made possible largely by the increase in capacity for handling tonnage on the street with machine methods. These plants have not as yet been brought up to their normal capacity for the duration of the job, but the delays can be attributed largely to the plant rather than to street operations. The maximum tonnage secured in eight hours on state work to date is slightly more than 1100 tons.

TABLES

The usual yearly summary of the hard surface pavements is tabulated by types for the entire state and includes all projects constructed during the 1929 season. A yearly comparison by districts of hard surface pavements is tabulated with comparisons of state averages.

Roughness records of bituminous macadam, plant oil mix, road oil mix and armor coat built by construction funds are shown in tabulated form. These records of the lighter types of pavements are not to be assumed as being truly representative of the results being obtained by any of the individual districts as time did not permit the securing of records of all of these types of projects constructed.

Detailed figures on 1929 construction records will be found on pages 20-24.

"SAY IT WITH INK"

James F. Collins, State Director of Professional and Vocational Standards, gives the above advice to contractors.

Practically all complaints filed with Collins against contractors under the contractors' registration law, have resulted from misunderstandings and disagreements under verbal contracts. The director says:

"There is altogether too common practice in the construction industry in California of carrying on the business through verbal contracts. It is obviously impossible to bring the information affecting a controversy between contracting parties to a basis upon which a decision can be rendered when the memories and personal interpretations of the contracting parties is all that is available for evidence.

"This menace to efficient and harmonious settlement of disagreements between contractor and client, or between contractor and subcontractor, will exist until the construction industry brings itself to a business-like method of contracting, whether it be for big or little undertakings."—*California Constructor*.

"I didn't begin with askings.

I took the job and I stuck;

And I took the chance they wouldn't.

And now they're calling it luck."

—Kipling.

Mother—"Why did you strike your little sister?"

Young Bobby—"Well, we were playing Adam and Eve, and instead of tempting me with the apple, she ate it herself."—*Vancouver Province*.

"What do you do?"

"I keep house, scrub, scour, bake, wash dishes, cook, do the laundry, iron, sew."

And the census-taker listed her: "Housewife—no occupation."—*Boston Transcript*.

The Modern El Camino Real

By COLONEL JNO. H. SKEGGS, District Engineer

COULD the old mission padres of early California history see today the modern El Camino Real replacing the original winding, dusty trail which they trod on foot or rode on the back of the slow-moving donkey, it is difficult to state which would seem the more miraculous to them—the myriads of swift self-propelled vehicles slipping by, or the smooth wide roadway stretching ahead mile after mile in long, straight courses, varied with graceful curves. It was lovely in

Of first rank in importance on this highway is that section from San Francisco to San Jose. Locally, this section of the El Camino Real has assumed the name of the Peninsula Highway. For years it was the only through artery serving the Peninsula and San Francisco, and of passing interest Contract No. 1 under the California Highway Commission in 1912 and 1913 was let for constructing that portion of this road from South San Francisco to Burlingame in this section.

The parallel building on the Peninsula of the Skyline Boulevard, Route 55, which was started in 1923, and the Bayshore Highway, Route 68, commenced in 1924, somewhat contrary to expectations has failed to halt the steadily increasing traffic on Route 2, the Peninsula Highway. This is due to the rapidly growing urban settlements along the Peninsula, many towns showing an increase in population of over 100 per cent in the last ten years.

From reconstruction funds allotted in the budgets of the past and present biennium, construction of the 14-mile section from Palo Alto to Santa Clara is now in progress. This extends approximately from the Santa Clara County line at San Francisquito Creek in Palo Alto to Scott Lane in Santa Clara, and passes through in succession the towns of Palo Alto and Mayfield (now combined as Palo Alto), Mountain View and Sunnyvale.

This section calls for three important line changes: one about one mile beyond the heart of Mayfield, some 3000 feet in length; one at

View looking east toward Sunnyvale-Saratoga road intersection where important line change begins.

the simple beauty of those historic days, but they would find it hardly less beautiful now, and far more magnificent.

The transition from the crooked trail of Mission times to the present stately highway has been slow but steady and in keeping with the demands of the day. After the trail came the crooked wagon road, later straightened into the more or less rectangular county road with a definite, though narrow right of way. With the advent of the automobile came the need for a smooth surface, and the metal surfaced county highway anticipated these first demands, after which short stretches of pavement in the vicinity of the larger cities and towns were required.

Throughout the entire progressive movement the "Kings Highway" has retained its identity as being not only the most historic but the most important artery of the state. Latest traffic counts show that this is yet consistently the most heavily traveled state road in California.

View showing the new abutments for widening the San Francisquito Creek 60-foot span arch bridge from present 30-foot to completed 76-foot roadway width.

Anzini's Corner, about 2000 feet in length; and one from Sunnysvale to Butcher's Corner, about 1.8 miles long and saving 0.6 mile distance over the previous location. This 14-mile section is now located with a maximum grade of 1 per cent and a minimum radius curve of 2000 feet.

In brief, the proposed construction calls for utilization of the present 20- to 24-foot width pavement in resurfacing with Type "A" asphalt concrete and widening with asphalt concrete, and concrete over compacted rock base to a 40-foot paved width through Palo Alto; the balance being paved to a 40-foot width of 8-inch to 10-inch thickness of concrete. The roadbed width for the above pavement is approximately 60 feet throughout on a 100-foot right of way. From Mayfield on to Santa Clara the present 20-foot width pavement is to be resurfaced with asphaltic concrete and widened to a completed 30-foot pavement width with 8-inch to 10-inch thickness

tion on a 30-foot width roadbed in the original 66-foot county right of way. All but the last half mile of this was constructed under contract in 1914 of 4-inch Portland cement concrete, with 1½-inch topeka top and 3-foot rock shoulders on either side. The same type of construction was placed on the last half mile by state forces in 1918 and 1920.

The present contract called for placing of 4-inch to 5½-inch thickness of asphalt concrete over the original 20-foot pavement, widening 10 feet on one side only, with 8-inch to 10-inch thickness Class "A" concrete.

A line change of special importance was made from Sunnyvale to Butcher's Corner. This resulted in a saving of 0.6 mile distance and eliminated two right angle turns with 260- and 300-foot radii. This new location, 1.8 miles in length with 100-foot right of way, was paved with 3 ten-foot strips of 8-inch to 10-inch concrete over a 4-inch compacted rock base.

Map showing the modern El Camino Real from Palo Alto to Santa Clara.

concrete. The graded roadbed width is to be 50-feet in general, on a 100-foot right of way.

Due to the interurban nature of this highway, right of way problems present difficulties as serious and almost as costly and difficult as those of construction. About 320 owner-ships are involved in right of way negotiations in this piece of highway.

For convenience in construction, this 14-mile stretch from Palo Alto to Santa Clara has been divided into three sections—4.4 miles of which, from Sunnyvale to Santa Clara, having been completed in December, 1929. Another section 4.7 miles in length from Palo Alto to San Antonio Road is now under construction, and the center link of 4.9 miles will shortly be advertised.

The 4.4-mile portion of the Peninsula Highway between Sunnysvale at Saratoga Road intersection and Scott Lane in the City of Santa Clara was constructed under Contract 04EC5. Bids for this work were received on May 22. Work was commenced June 8 and completed December 26, 1929.

Previous to the above contract, this road had been constructed to a 20-foot paved sec-

Right of way problems on this project were somewhat complicated, the line change alone involving some 22 ownerships and costing, exclusive of moving buildings and improvements, in excess of \$86,000. The total number of ownerships involved was 62.

At Sunnyvale-Saratoga Road intersection, it was necessary to move one commercial garage building 75 feet by 100 feet, two service stations and all fixtures, a cafe, and one residence. Three thousand trees had to be removed. It was necessary to go to condemnation with but one property owner on the entire 4.4 miles of right of way negotiation.

This section is in the heart of a rich territory wholly occupied by orchards and intensively cultivated fields merging into urban settlements. Many interesting features were presented in construction of special siphons for irrigation systems which the new location literally cut in two.

A particularly interesting combined right of way and construction problem presented itself in changing the channel of Calabasas Creek. The original channel of this creek extended easterly and was within the right

(Continued on page 32.)

Progress Report on Bay Bridge Borings

THE State Department of Public Works has made public the following statement regarding the borings in San Francisco Bay in connection with the proposed San Francisco-Oakland Bay crossing. The results of holes drilled to date on three different lines are tabulated herewith.

Sixteenth street line.

This line of holes, being numbers 18, 19, 20 and 21, on the map, starts opposite Sixteenth street in San Francisco and crosses to Alameda at a point approximately 8000 feet south of the Alameda Mole.

Rock was found only at boring No. 21, the hole nearest the San Francisco side, at a depth of 292 feet below mean low water. This line has been abandoned as being impractical on account of the great depth to rock.

Pier No. 34 line.

This line of holes, being numbers 1, 2, 3, 4, 5, 6, 7, 9, 11 and 17, starts at Pier No. 34 in San Francisco and crosses to a point on the Alameda shore about 1200 feet south of the Alameda Mole. In the hole just off the end of Pier No. 34 rock was found at a depth of 223 feet below mean low tide. Holes 5, 6 and 7 at an approximate distance of 2800 feet from the pier line and on Rincon Reef showed rock at 44, 49 and 50 feet, respectively. At a point 1600 feet from the pier line rock was encountered at 110 feet below water. Hole No. 1, 6800 feet from the end of Pier 34, encountered rock at 293 feet below low tide. The remaining holes on this line were stopped at a depth of around 300 feet without encountering rock.

Goat Island line.

This line of holes extends from Pier 22 in San Francisco to Goat Island and thence to the Oakland shore near the Key Route Mole and are holes numbers 8, 12, 22, 23, 24, 25 west of Goat Island and holes 13, 14 and 16 east of Goat Island. At the end of Pier 22 rock was encountered at a depth of 163 feet below tide. At 3500 feet off Pier 22, rock was encountered at 140 feet, and holes 150 feet east and 200 feet west of hole 23 found rock at a depth of 127 and 143 feet, respectively. These holes are numbers 23, 24 and 25. Hole No. 12, located 2000 feet west of Goat Island, encountered rock at a depth of

158 feet. Hole No. 10, 600 feet off Goat Island, encountered rock at a depth of 87 feet. Hole No. 16, located 600 feet east of Goat Island, found rock at a depth of 217 feet. Hole No. 13, located 1500 feet east of Goat Island, struck hard material at 190 feet, but was jetted to 270 feet below high tide. Hole No. 14 penetrated largely sand to a depth of 323 feet.

It is expected that borings will be completed by July 1st, and the final report of preliminary borings made to the Bay Bridge Commission shortly afterwards.

The map herewith shows the location of the holes and the material encountered at the bottom of each boring. The State Department of Public Works, Division of Highways, wishes to emphasize the fact that this is simply a preliminary statement of progress.

The final report when complete will be made to the San Francisco Bay Bridge Commission for such action as it may deem best.

The San Francisco Bay Bridge Commission was appointed jointly by President Hoover and Governor Young, the President naming Mark Requa as chairman and Rear Admirals L. E. Gregory and W. H. Standley, representing the Navy, and Colonel G. D. Pillsbury and Major E. E. Daly, representing the Army. Governor Young named Senator A. H. Breed, Professor O. D. Marks of Stanford University, George Cameron of San Francisco, C. H. Purcell, State Highway Engineer.

Funds for the borings are being supplied by the city and county of San Francisco and the State Bridge Authority, which was recently organized under the Toll Bridge Laws, passed by the last Legislature.

With the receipt of the report by the San Francisco Bay Bridge Commission, it is expected that an early meeting of the commission will be held and the subject fully discussed. From present indications this meeting of the commission should take place some time in July or August.

The teacher was giving the class a lecture on gravity.

"Now children," she said, "it is the law of gravity that keeps us on this earth."

"But, teacher," inquired one small child, "how did we stick on before the law was passed?"—*Hercules Record.*

Welcoming Nonresident Car Owners to Tour in California

By FRANK G. SNOOK, Chief of the Division of Motor Vehicles

FEW STATES in the Union are as liberal toward the driver of the nonresident or out-of-state car as California.

California permits all nonresident cars from every state to remain here six months without securing a California license if the motorist takes out a nonresident permit within ten days from the time he enters the state.

Many states require the visitor from other states to secure a license almost as soon as he arrives. Other states have a "reciprocity" arrangement which gives the visiting motorist the same length of time to secure a license as is given in the state from which he comes.

If a visitor indicates his intention of staying in California less than ten days he is not even required to secure a visitor's permit. However, if he stays longer than ten days without getting such a permit, he is required to get his California license immediately.

Even this is no hardship, comparatively speaking, as California's license fee of \$3 for passenger cars is the lowest in the country. In some states the fee runs as high as \$50 and \$60 annually.

Our liberality toward the out-of-state motorist is bearing fruit in a constantly-increasing tourist crop. Already the 1930 season gives promise of being a record-breaking one. During the first three months of the year visitors' permits were issued to 15,800 cars, and what is still more gratifying we issued California licenses during this period to 31,141 out-of-state motorists, indicating that large numbers of these visitors like California well enough to make it their home.

Few people realize, possibly, the big part the Division of Motor Vehicles plays in welcoming these visitors and in assisting to make their respective visits pleasurable. They receive almost their first impression of California at our border or "courtesy" stations where our officers register them and issue visitors' permits to them.

We are striving constantly to instruct these nonresidents in our laws for their own protection as well as the protection of the people of our own state. Our hardest task is to acquaint them with the regulations governing registration. These regulations are,

necessarily, somewhat strict for the automobile thief is constantly at work moving cars from one state to another and knows every weakness in the registration laws.

In general, we require the following from the prospective nonresident registrant:

1. Proof that the applicant's car has been registered properly in his own state. The certificates of registration and title are generally regarded by us as sufficient to establish this. In the absence of certificate of ownership or title, a notarized bill of sale is required.
2. Proof that the applicant has permission of the legal owner (if there be one) to register the car in California and that all prior claims of any other character against the car have been satisfied. This means written permission from the lien holder, usually obtainable by a telegram.

We have little trouble with the rank and file of the nonresidents, most of them being able to furnish us readily with proof that is satisfactory. Most of them recognize that while these regulations are somewhat stringent they protect the registrant as well as the public. We find that the registrant who kicks is very likely to be the registrant who is trying to "put something over."

California system of registration is recognized as one of the finest in the United States. The "pink" certificate is regarded everywhere as indisputable evidence of ownership of the car. This is one of the reasons why crooks are constantly figuring out schemes for breaking down our system knowing that if they can obtain our certificates they will have a better chance to dispose of their ill-gotten gains.

Another angle of the nonresident situation that gives us much trouble is that matter of licenses for operators. During the last few years California has been building up a rather stringent system of licensing operators, the aim being to weed out the unfit and to increase the general standard of drivers.

At present all applicants for an original license must submit to an examination of their general fitness to drive and a new section of the law permits the division to give examinations every two years to all operators.

The application of our laws to the nonresident has been a matter requiring con-

The Science of Mechanical Ventilation

By CARL A. HENDERLONG, Assistant Engineer, Division of Architecture

MODERN methods of heating and ventilating assembly halls and theaters require considerable study. It is the purpose of this article to describe in a brief non-technical way, the methods used to provide suitable heating and ventilating for theaters and also to describe the system as laid out for the new Assembly Hall at Chico which follows closely modern theater practice. This new Assembly Hall is, in reality, identical in construction to a theater; contains a full size stage and has a seating capacity of 1500 persons.

CARL A. HENDERLONG.

Most of us are occasionally patrons of the theater. Perhaps some, in moving their feet around under the seats, have kicked against the ventilator, or mushroom as it is technically called, and won-

dered just what its function was.

As will be shown later, the problem of satisfactory theater ventilation is mostly an example of cooling, even in the winter time with the air outside being around the 40-degree mark.

A number of people congregate for entertainment in a cold room. The room soon becomes hot, often uncomfortably so. This results from the heat given off by the occupants. An adult at rest, gives off in bodily heat, approximately 450 B.t.u. per hour. A B.t.u. or British thermal unit, is the heat necessary to raise one pound of water one degree Fahrenheit.

In a theater or assembly hall of average construction containing 1500 seats, if filled to capacity or nearly so, the amount of heat given off by the occupants would be more than sufficient to heat the room well above 70 degrees Fahrenheit with outside temperature 40 degrees, provided no outside air were introduced. In fact, an overheated and uncomfortable condition would soon be produced.

It thus becomes apparent that some method of cooling is necessary, virtually at all seasons of the year. Many of us will perhaps recall some of the theaters of a few years ago. Lack of mechanical ventilation of any kind made even the most enjoyable of shows at times rather depressing. Thirty to fifty cubic feet of air per person per minute is now accepted by the Engineering Fraternity, as a satisfactory amount of air for proper ventilation of theaters.

Some of the eastern states require mechanical ventilation for all theaters, halls or in any crowded place of assemblage. There is no such ventilating code in California. Theater owners, however, realizing that the satisfactory patronage of their shows required adequate provision for ventilation, have in the main, installed such systems.

The Assembly Hall now under construction at the Chico State Teachers College, has a seating capacity of 1500. This requires that not less than 45,000 cubic feet of air per minute be supplied into the building for proper ventilation and cooling. This large volume of air must be introduced into the building without drafts of any kind and also in a way so as not to interfere with the architectural scheme of decoration and design. The ventilating fans and other equipment must also operate noiselessly or nearly so, since any apparent noise would be objectionable to the theater performance.

There are two systems in common use for the introduction of the fresh air into the building: one known as the downward or overhead system requiring the air to be introduced at the ceiling through grilles of openings, and the other the upward system, which supplies air through mushrooms located under seats. A mushroom, as it is called, is nothing more than a bell-shaped top placed over a cast iron or steel sleeve 6 inches to 9 inches in diameter, which sleeve is in turn connected to the air duct or plenum space below the floor of the theater. Raising or lowering of the bell regulates the amount of air passing through it. The former system required refrigeration for cooling the air in hot weather while fairly satisfactory results are obtained with only air washers for cooling if the upward system is used.

When expense of installation and operation is not an important factor, refrigeration and the downward system produces by far the most satisfactory results. With properly designed equipment, it is perfectly possible to maintain a temperature of 70 degrees Fahrenheit and 40 degrees humidity in the theater at all times, even though it may be 110 degrees in the shade outside. Since the cost of an adequate refrigerating system for cooling such a volume of air

Traffic Officer Helps Mother and Babies.

This letter comes from Oroville:

Motor Vehicle Dept.,
Sacramento, Cal.

Dear Sirs:

I wish to compliment you on the speed cops of Butte County. I wish to say we have, to my judgment, real gentlemen here. The other day while motoring from Oroville to Gridley, I picked up a tack in my tire and was stalled with three little babies, from four years to nine months old.

I could have changed the tire alone, but I wish to state that I certainly appreciate the help which I received from our speed cop, and I wish to send my thanks into you for helping to maintain such gentlemen. Perhaps there are quite a few complaints sent in about all of them, and I do not feel that a few compliments and thanks sent in will hurt them, especially the ones of this district.

Yours truly,

Mrs. E. L. Johnson and babies,
Oroville, California.

* * * * *

Thanks For These Kind Words.

This letter comes from F. Z. Lee of Los Angeles:

Today I saw a copy of your magazine CALIFORNIA HIGHWAYS AND PUBLIC WORKS and I was very agreeably surprised at wonderful amount of information contained in it. Too, the very attractiveness of it puts it on a high class as a magazine.

I would certainly like to get the magazine and would appreciate your putting my name on the mailing list for the publication.

If the February number is available I would be very glad to get it. It has a very useful map on the back cover.

* * * * *

Best Safety Rule Is "Obey The Law."

Floyd G. Yoder, member of the Orange County unit of the California Highway Patrol writes as follows in the April issue of *The Police Blotter*, publication of the Orange County Peace Officers' Association:

YOU are responsible! YOU who read, write and sometimes think, YOU who operate an automobile,

YOU who have occasion to ride in one, and YOU who find it necessary at times to cross the street or walk upon the highway. Just YOU few mentioned above. Those who do none of these things can not be held responsible, and need not cringe at the finger of accusation.

Death—the cold, final word, *death*, uttered 2100 times over the bodies of automobile victims in this state of YOURS during the year 1929. Thirty-two thousand and some odd injured. Many of them cripples for the remainder of their days.

How can this all happen in one short year, happen before your very eyes, happen to your friends and loved ones, and what did YOU do about it? WHAT ARE YOU GOING TO DO ABOUT IT IN THE FUTURE?

Two thousand one hundred killed. There they lie side by side in our imaginary lane of graves stretching for one and one-half miles. What's in the picture? Why the cause? Simply this: "man's inhumanity to man," our indifference to the rights and cares of others. Remember this, every time you see or hear of an accident, *one or more persons are responsible*. The automobile itself is not a thing of death. The human element behind that automobile is alone responsible.

There is no other calamity that could strike this or any other state that would exact 10 per cent of the toll of lives taken by our road rudeness without arousing the entire citizenry to aid, assistance and preventive action.

Someone asked, "What can I do about it?" It is a singular fact that a little over 50 per cent of accidents are accompanied by a violation of the California Vehicle Act. You can therefore—OBEY THE LAW. That will cut the accident rate by one-half. Extend to your fellow man on the highway the same courtesy and consideration you extend to him on the sidewalk or in the elevator and you will cut the other half to a surprisingly low figure.

* * * * *

Road Cuts Running Time More Than Half.

The Calexico *Chronicle* in a recent issue has the following to say:

Yesterday I traveled over 30 miles of the state's oiled highway in Chuckawalla Valley between Blythe and Mecca.

The state engineers solved the question by adding a small amount of gravel to the native material—which is mostly sand—and then adding oil. The result is a road which for all practical purposes is equal to a paved highway. The running time for the 94 miles between Mecca and Blythe is now 2½ hours. Before the state took over the road the minimum time for the trip was 6 hours.

Registrations And Fee Figures Given For State.

Although California ranks second in the United States in the number of motor vehicles in use, it is tenth in total amount of registration fees paid, according to the United States Department of Agriculture figures.

New York leads in the number of motor vehicles registered with 2,263,259, and also is first in registration fees with \$38,293,313.

California is second in vehicles registered with 1,974,341, but collects less than one-third of the registration fees of New York, with \$10,489,068. Until recently New York had no gas tax, which may account for its high registration fee. Pennsylvania is second to New York in registrations, with \$29,264,495, but is fourth in the number of automobiles registered.

In addition to more than \$10,000,000 in registration fees, Californians pay over \$30,000,000 in gas taxes in the state. However, the gas tax is general now throughout the United States, varying from 2 to 6 cents a gallon. California pays 3 cents a gallon, which is a little below the average for the nation.

Urges Good Roads Across Continent

The following letter has been received from Sam S. Porter of San Diego, one of the foremost enthusiasts in good road construction in California:

San Diego, California, March 20, 1930.

Governor C. C. Young
Sacramento, California

My Dear Governor:

Have been reading, for some time now, dispatches re the unemployment condition. Am of the belief that the building of more county, state and national highways would tend greatly to solve the question of the unemployed.

In building hard surface roads across our continent, one from the Atlantic to the Pacific for the southern states, one from the Atlantic to the Pacific through the heart of our United States, and one from the Atlantic to the Pacific for our extreme northern states, would not only give employment to the majority out of work but would stimulate business industry through materials to an extent, I believe, far beyond our fondest expectations.

Personally, I believe that the building of good roads will absolutely relieve the labor question. It not only gives the real laboring man employment, but will give many a professional man, work, such as engineers, superintendents, draughtsmen, etc. Such work will consume, with a multitude of men employed, vast amounts of foodstuffs, it will use divers kinds of machinery, plows, scrapers, steam shovels, tractors, camp outfits, etc., as well as oil, asphalt, sand, rock and cement; and to me the strength of it all is that no section of our country would be getting an overproduction of anything, but something that is bound to benefit all.

Business men everywhere should boost the crusade for employment of labor on road building. I believe it will mean the greatest relief for the unemployed a condition which is to be deplored; it will also help to maintain a national wage scale—which would mean a higher standard of living for the wage earner.

Good roads everywhere mean increased travel and a

community that is not easy of access and that can not be reached by innumerable feeders, in the shape of good roads branching in every direction, will find itself isolated.

With our nation, our states, our counties, our cities, all in the mood and our citizens clamoring for more and better roads, we should not relax. "More and better roads" should be our slogan. Good roads make good business. If we could just keep up a united stand while the people are in the humor, and all put our best efforts into getting road building started right away and with no further delays, what a blessing it would be throughout the United States.

Of course, I realize perhaps the public should be advised some in advance on this subject and too much can not be said in favor of good roads. The press is a moulder of public opinion and can help much; but those who have the power to place and push in the world we should try to reach.

A few good points for good roads: Good roads stimulate production. Good roads would mean better service at less cost. The save of wear and tear on conveyances, the speedier transaction of business and many other advantages.

By the building of good roads we are not producing anything that will be a drag on the market. Analyze the great good that will come to any royal citizen by virtue of good roads. They will help keep the motor owner out of the mud and dust if he can drive over a good, modern paved highway. Our country is alive with auto owners. It is possible now for people of moderate means as well as wealthy people to enjoy the use of an automobile, and they are constantly moving about. And it has been the experience of towns and counties that have developed their highways, that business has been stimulated and all have profited thereby. So what it will do for a community it will do for a county, a state, or our great nation.

As we build paved roads transforming our dirt roads into smooth dustless 365 day a year boulevards we must of necessity stretch our purse strings and help pay, but it will be worth it, and we should encourage good roads. Already our national highways are doing wonders and they should be supported by everyone. There should be an even greater movement in the United States in favor of all good road projects.

Good roads must be back of the business battle line.

In this connection an unknown author has aptly said: "Roads rule the world—not kings nor congresses, nor courts, nor ships nor soldiers. The road is the only royal line in democracy, the only legislature that never changes, the only court that never sleeps, the only army that never quits, the first aid to the redemption of any nation, the exodus from stagnation in any society, the call from savagery in any tribe, the high priest of prosperity, after the order of Melchisedec, without beginning of days and end of life. The road is unpire in every war, and when the new map is made, it simply pushes on its great campaign of help, hope, brotherhood, efficiency and peace."

I believe Chambers of Commerce in every progressive city in the United States should support a movement for good roads across our continent. I realize good roads mean work—constant work—and real cooperation, and that the citizens would be behind our government for a movement of this kind that would benefit so many of our good people.

With good wishes, believe me,

Cordially and sincerely,

SAM S. PORTER,
The San Diego Hotel.

Progress Made on Feather River Lateral

By H. S. COMLY, District Engineer

WHEN the final decision was made on the route of the Feather River Highway early in 1928, the so-called North Fork Route being selected, steps were taken at once to get the work under way. In March, 1928, two field location parties were organized, and the location surveys commenced at the two ends of the route. These surveys were followed by the construction of two convict camps in the months of May and June, and active work commenced on construction at both points about the first of July, 1928. One of these camps was established about 8 miles northeast of Oroville, at the center of a 7-mile section from the crossing of the Feather River upstream, while the other one was installed about a mile down the river from the station of Paxton, in Plumas County, at the center of an 8-mile section, extending from Spanish Peak to a connection with the county road between Quincy and Westwood.

The general scheme of work proposed was to construct the 69-mile section between Oroville and the above county road connection, leaving the 9-mile section from that point to Quincy for the last construction, as traffic is served by a fair road on that section at the present time. Meanwhile, during the construction of the above mentioned 69-mile section, the state has and will maintain the existing county road direct from Oroville to Quincy, which traverses the ridge between the North Fork and the Middle Fork of the Feather River. This road is closed by snow for five or six months of the year as a usual thing, but with the improvements made on it since the state has maintained it, handles traffic very well during the remainder of the year.

The entire length of the proposed construction between Oroville and Quincy is 78 miles, and the total cost of the work was estimated at approximately \$7,000,000 in 1925, this estimate being based on a highway with a graded roadway 20 feet wide and a crushed rock surface 18 feet wide. The estimate was based on what information was available from old surveys which were made on a low standard of alignment, grade and width, several years before, and for this reason it was necessarily approximate. During the succeeding years our standards of alignment and grade

have become much higher. However, based on estimates made on our present location surveys, on which the higher standards are used, and construction costs to date, it does not appear at this time that the above mentioned figure will be materially exceeded unless a wider standard of road is adopted on the remaining work.

Included in the 78 miles of construction are 14 bridges from 40 to 700 feet in length, and four railroad grade separations, the cost of these structures being included in the above mentioned estimated total cost.

During the past 21 months, since the inception of the work, 17 miles of highway have been graded and 4.5 miles surfaced, at a total expense of \$995,000. Also, the bridge across Indian Creek, in Plumas County, has been constructed at a cost of \$30,000, and the large bridge across the Feather River, 4 miles northeast of Oroville, is now under construction, and when completed, about September 1st, will have cost \$170,000. The total expenditure at this time, therefore, including the amount which will be expended in completing the last named bridge, is \$1,195,000. The above mentioned work is distributed as follows:

Construction by convict camp number 16, at Paxton, of 6.5 miles of graded highway at a cost of \$430,000. The Indian Creek bridge was also built by this camp at an expense of \$30,000, making the total expenditure on this section \$460,000.

Construction of 6 miles of graded highway by convict camp 17, located 8 miles northeast of Oroville, at an expense of \$365,000.

Construction of a graded highway with crushed rock surfacing from Oroville to the Feather River crossing, 4.5 miles, at a cost of \$170,000.

Feather River bridge, 4.5 miles northeast of Oroville, 700 feet in length, at an expense of \$170,000.

In addition to the above mentioned accomplishment, plans are now completed on a 2-mile section of highway just south of Pulga, about 35 miles northeast of Oroville, and this work is just being advertised for contract. In connection with this section, plans are now being prepared by the Bridge Department for a bridge across the Feather River at the northerly end of the section, and it is expected that this work will be placed under contract in the near future. This grading project is estimated to cost \$325,000, and the bridge \$150,000. Including these two projects,

which are budgeted in this biennium's program, and the total expenditure to date given above, the funds which have been expended or are directly obligated, for the construction of this highway amount to \$1,670,000.

When these projects are completed, 19 miles, or approximately 25 per cent of the road will have been graded and 4.5 miles of this length will have been surfaced, and there will, therefore, remain approximately 59 miles to be graded and 74 miles to be surfaced. The surfacing of the 14.5 miles of highway which will have been graded but not surfaced, will cost about \$100,000, so that the entire cost of these 19 miles will be \$1,770,000, or approximately 25 per cent of the total estimated cost. These 19 miles include some of the heaviest construction on the route and two of the most expensive bridges, but they also include some of the lightest construction on the road, so they represent a fair average of the entire construction, but if anything, the remainder of the work will be somewhat heavier in cost.

It is proposed to continue the work with the two convict camps and it is expected that these two camps will complete the sections they are now on and move to new locations, as indicated on the map, in the late summer of this year. Camp 16 will engage in the construction of a 10-mile section from the mouth of the East Branch to Spanish Peak, at the westerly end of their present work. Camp 17 will engage in the construction of the 7-mile section from the end of their present work to a point in Dark Canyon, about 2 miles south of the Big Bend road. In general, it is proposed to contract all of the work between the work covered by these two camps, that, from Dark Canyon to East Branch, a distance of approximately 31 miles, of which 29 miles has not as yet been directly obligated for construction. The 9-mile section from the connection to the county road east of Paxton to Quincy will also be constructed under contract, according to present plans. The future prosecution of the construction of the 38 miles which it is proposed to contract and of the remainder of the convict work on this road will depend upon the rate at which funds become available for the work.

In preparation for the future prosecution of the work, three large location parties are now at work in the canyon, completing the surveys. It is expected that all location surveys will be completed late this summer or early in the fall. To date, 48 miles of location surveys have been completed, and 30 miles remain to be made.

U. S. Reclamation Board Aids in Water Study

CLEARING the way for early completion of investigations into California's coordinated water program, with a view to securing definite action on the project at the next session of the State Legislature, Governor Young announced today that the United States Reclamation Bureau will undertake an immediate economic study of the water conservation plan.

The Reclamation Bureau inquiry, designed chiefly to determine the physical and financial feasibility of the proposed plan for conservation and full utilization of Sacramento-San Joaquin Valley waters, will be carried on under a cooperative agreement initiated by Governor Young with the United States Department of the Interior. It will supplement the work of army engineers, now investigating navigation and flood-control phases of the problem, and the study of the Hoover-Young Water Commission.

Governor Young announced that the Secretary of the Interior has approved a \$25,000 deficiency appropriation as the federal government's share in cost of the investigation, which will be matched by a similar state allotment.

"I am very gratified at this new evidence of the earnest desire of the national administration to assist California in working out a satisfactory solution of our water problem," Governor Young declared, in announcing enlistment of the Reclamation Bureau's aid.

"We now have the effective cooperation of the branches of the federal government most directly concerned, namely, War Department, Federal Power Commission and Bureau of Reclamation. It is hoped and anticipated that under the program laid out and with the assistance of these federal offices and the various commissions functioning, a full report can be presented to the California Legislature, which will convene in January of next year. It was most important, in connection with the full investigation, that certain studies relative to irrigation and reclamation phases be made by or in cooperation with the Reclamation Bureau. This is now assured."

The Reclamation Bureau survey, it was announced, will bear on the following points:

The character and urgency of the requirements for water to be used for irrigation purposes.

The available water supply.

The automobile license plates in Pennsylvania, which bear no more than five characters, display many amusing combinations. Among the odd ones are "123-Go," "MA," and "PA," "US," "OH," "4U2" and "F2," which is attached to the hearse of an undertaker in Chambersburg.

WELCOMING NONRESIDENT CAR OWNERS TO TOUR IN CALIFORNIA

(Continued from page 10.)

siderable tact and judgment on the part of our officials. In general, it has been our practice to permit the nonresident having a driver's license from another state to proceed unmolested.

If he has no such license or comes from a state where no license is required he must take the examination. We feel this is just for in the interests of safety we are entitled to know whether he can drive well enough to measure up to our standards.

There are a number of states, notably those in the south, where there are no requirements of any kind for driving a motor vehicle. Our officers are furnished with lists showing the requirements in every state.

These lists show also the date of expiration of registrations in all states and other information necessary to the officer in dealing with the nonresident.

The value of the tourist crop in dollars and cents can not be estimated. It unquestionably runs into the millions of dollars every year. It is the constant endeavor of the Division of Motor Vehicles and its subsidiary bodies to do everything possible to make these visitors feel at home.

THE ROAD

By HILAIRE BELLOC

The road is one of the great fundamental institutions of mankind. We forget this because we take it for granted. It seems to be so necessary and natural a part of human life that we forget that it ever had an origin or development, or that it is as much the creation of man as the city and the laws.

Not only is the road one of the greatest human institutions because it is fundamental to social existence, but also because its varied effect appears in every department of the state.

It is the road which determines the sites of many cities and the growth and nourishment of all.

It is the road which controls the development of strategies and fixes the site of battles.

It is the road which is the channel of all trade and, what is more important, of ideas.

In its most humble function it is a necessary guide without which progress from place to place would be a ceaseless experiment; it is a sustenance without which organized society would be impossible; thus, and with those other characters I have mentioned, the road moves and controls all history.

"You know, automobiles are making people lazy."

"They are, are they? Say, did you ever see the pedestrians trying to get across the street at a busy corner?"

THE MAXIMUM CONSERVATION OF WATER WITH REFERENCE TO THE CALIFORNIA PLAN

(Continued from page 2.)

region were so arid that the available water had been or could be completely utilized under private auspices no other agency would be needed.

Assuming this condition of relative surpluses and deficiencies, a searching engineering analysis should be made to devise the best technical and economic method of solution. The area of surplus becomes the subject of an intensive study to determine the true amount of exportable water, and in this connection the state investigation must assume ultimate development within said region as it would be poor policy to export water from one area to another for the same use to the material detriment of the first. The present and ultimate supplemental needs of the deficient areas are also ascertained, and then it becomes an economic question as to whether or not exportation can be planned and carried out at a cost which will be justified by the benefits received. It will be found at once that certain supplies of water can not be regulated or captured without excessive costs, which may be on account of wide irregularity of occurrence, lack of suitable reservoir sites or of geographic or topographic location which would require transmission conduits of great length.

In developing a plan for maximum ultimate use, however, the engineer is not entirely limited to present day values, since the accomplishment of the total plan will probably take generations and values can reasonably be anticipated to increase in this time. In California water sells as low as 37½ cents an acre-foot in some agricultural localities and in others, under somewhat similar conditions, as high as \$30 an acre-foot. Certainly the lower figure will increase rapidly with future development.

In such a plan reservoirs can be made to serve a wide utility of purposes. Conservation reservoirs of large capacity located in the foothill regions of a stream channel are approximately at the dividing line between the valley and the mountain watershed. Such reservoirs will permit hydroelectric power, mining, and such incidental agricultural and other uses as occur in the mountain regions to proceed unrestricted with but negligible inter-

ference, as the released and returned waters will be reregulated by the storages below the upper users and made available for municipal, irrigation, industrial and other services in the usual manner below the foothill reservoirs.

The reregulated waters are passed through a power house at the foot of each dam under a schedule of diversion which will produce the maximum power revenue obtainable, subordinate, however, to the requirements for irrigation and other uses. During the early years of the irrigation development the demand for these purposes will be small and the diversion schedules can fit closely with the power demand curve and under this condition many of the large foothill storages proposed in California will produce sufficient by-product power revenue to carry the greater part of the fixed charges of the respective projects. As the irrigation demand increases the character of the power will change from firm to secondary and this revenue will materially decrease.

This is all predicated upon the theory that power generation at the foothill reservoirs is secondary to their other uses, which is commonly accepted as a state policy, as power is obtainable from other sources, while water is not. The development of hydroelectric power in the mountain watershed above will usually increase the utility of the foothill storage as the latter is the residuary legatee of all waters stored upstream for nonconsumptive use in the watershed.

A reservoir of sufficient capacity may also be used to a material degree for flood control. Flood control and other uses may seem to be difficult of reconciliation in a single storage due to the fact that to serve flood control alone the reservoir space is reserved for that purpose, while to accomplish the other intents it is ordinarily filled as quickly as possible, and many engineers believe that these uses can not be combined except through the medium of open ports in the dam which dedicates the storage space above the ports to flood control and the space below to other purposes. An intensive study of flood flow characteristics has, however, led to the conclusion that the use of reservoirs for flood control is compatible to a marked extent with that for other services.

Knowing the seasonal characteristics of rainfall and runoff on a given drainage basin and stream, it is possible to design a method of holding a predetermined amount of storage space in reserve through the flood season for equating of the peaks, and after the flood

danger has definitely passed to allow the reserved space to fill and permit the reservoir to perform full service thereafter for other uses. While the power head is decreased during the flood season, by passing the larger amounts of water available at that time of year through a lower head, the loss in power output can be kept to a minimum.

Thus in California, at least, a single reservoir of large capacity may serve all or any of the following uses; domestic, municipal, irrigation, industrial, navigation, flood control, mining, salinity control and hydro power. Navigation would be benefited by released water from the reservoir increasing the depth in the channels during the period of low flow, and salinity encroachment would be held back by the outflow of fresh water. The design of the transmission and distributary works to effect delivery of water from the areas of surplus to the areas of deficiency is carried out along standard engineering lines.

Coordination of the water supplies and uses to form a plan for maximum conservation on the above basis then requires, as is apparent to any hydraulic engineer, intensive scientific and engineering analyses on the basis of the most complete obtainable basic data. With such an ultimate plan laid out the next step is to specify the proper economic order in which the various units should be constructed, as it is axiomatic that units should not be built but reasonably in advance of their need. Interest charges on unused works, resulting from too optimistic estimates of the progress of colonization, are one of the chief sources of embarrassment to irrigation projects in the west today.

Assuming the best possible progressive engineering plan devised the whole field of economics is opened up as to what are the benefits to be anticipated from its execution, the proper rate of development of units of the project, the financing and the equitable allocation of costs among all beneficiaries, including the state and the federal governments. The state and the United States should be expected to participate in the costs on the bases of state-wide and nation-wide benefits to be derived under existing state and national policies or as the same may be reasonably expected to be modified in the future. There will be an undoubted state-wide value in that the cities and industrial areas in non-agricultural regions will benefit from increased markets, commerce and transportation, and the national government will be directly aided by whatever is done in the

interest of navigation and flood control and also by the reclamation of land.

The legal phase of the problem must not be slighted as it may contain insurmountable obstacles. Water being an elusive subject, erratic in flow and difficult of measurement, often flowing underground, water law has become equally obscure and difficult and is one of the most fruitful fields of litigation. A thorough legal analysis of the proposed plan, leading up to the conclusion that it is legally and judicially capable of execution, and a reliable estimate of what water rights, rights of way and attendant litigation will cost, both in time and money, is a necessary item in the final cost estimate.

Having carried through such an investigation and produced an answer to each of these items in its proper sequence, a complete physical plan will be available, also a decision as to the immediate units justified if any; a conservative estimate of the cost of the projects recommended, also the anticipated financial benefits to all interests. If the benefits do not justify the cost, construction should be deferred until values and necessities have increased to the required point. If the cost is found reasonable, immediate execution should proceed more or less independently of the amount of the estimate, since no justifiable cost is too large to provide for future growth and development of a state and to prevent retrogression in areas already overdeveloped as regards water supply.

An investigation roughly along the lines heretofore indicated has been under way in California since 1921. The whole history and progress of this state, as with the others in the west, has been and is bound up with the use of its water supplies. From about 1900 on, as the unregulated summer flow of the streams became exhausted, it had become more and more realized that water was not unlimited and that unless properly conserved the growth of the state would be limited thereby. Many areas, large and small, were expanding irrigated areas beyond the dependable water supply, some by over-optimistic estimates based on the records or estimates of flow of a few wet years, but more by pumping from underground sources a greater amount than the replenishment thereto. In one section of the San Joaquin Valley some 20,000 irrigation pumping plants have in the last four years drawn from the underground storage an estimated net amount of 2,000,000 acre-feet in excess of the recharge in the same period. Irrigation diversions on the

rivers tributary to San Francisco Bay have so reduced the fresh water inflow that a delta area of some 400,000 highly productive acres has been seriously threatened by the incursion of salt water from the bay itself. It is beyond the power either of the people in the San Joaquin Valley and southern California, whose underground supply is insufficient, or of the delta area to remedy conditions facing them. These and similar conditions of shortage appeared in a great many places in California between 1900 and 1920, and were accentuated by the series of dry years commencing in 1917. These conditions especially led to the desire for a state-wide investigation and plan for complete utilization of water resources and the rehabilitation of areas facing abandonment of irrigation.

This investigation will have cost by the end of the current year approximately a million dollars, exclusive of stream gaging, topographic mapping and soil surveys. Water and land resources were first classified. From the stream flow data collected under the direction of the United States Geological Survey and the United States Weather Bureau rainfall records, an estimate of the 50-year mean run-off for each stream in the state was prepared. To carry this out for the entire area necessitated evolving new methods of technical attack to enable mass production.

As to precipitation data there were available 277 rainfall station records over ten years in length, many of which were of much greater time. The average or mean annual rainfall was obtained for each station. The total rainfall for a season at any station in per cent of its annual mean, was termed "The Index of Seasonal Wetness" for that year. The indices of wetness for each station for the period were plotted as mass diagrams, showing the accumulated departure from the mean, then by superimposition these diagrams were compared to define the various areas in the state having the same general precipitation characteristics. This established 26 precipitation divisions.

The state was then divided for purposes of study into 140 drainage basins, each basin being either a major drainage or a group of minor drainages. Streamflow records were available at 200 regular U. S. G. S. stations for varying periods up to a maximum of 28 years, and in addition fragmentary records at about 300 additional stations. From these data rainfall run-off curves were plotted and by superimposition critically compared both geographically and by types. Through these

comparisons the characteristic shapes of the curves both geographically and by type were closely determined and it was possible to extend the run-off curves to streams on which there were no actual flow measurements. By these methods rainfall run-off curves were completed for each of the 140 drainage basins in the state. Applying the indices of seasonal wetness in the 26 precipitation divisions to the rainfall run-off curves in the 140 drainage basins the value of the seasonal run-off for every drainage area in the state for the full 50-year period was estimated.

Mass diagrams of run-off were drawn for each area. These were plotted as accumulated run-off in per cent of variation from the annual mean, thereby producing a graph which gives all of the desired information in but a fraction of the space required by the usual mass curves. Irrigation draft lines were then prepared, being plotted in identical units and on the same scales as the mass diagrams. Superimposing the draft lines on the mass diagrams, the utilizable flow of the drainage basin with any given storage capacity was obtained, corrected for evaporation.

The location and amount of the irrigated and irrigable lands of the state were determined and a duty of water fixed for each of 16 agricultural divisions.

Special research was carried out with regard to possible flood control by reservoirs in combination with other uses. The probability of flood discharge for each stream was first calculated, followed by a compilation day by day for the years of record on certain selected streams to determine methods of flood control and their degree of interference with the purposes to be served. It was found that flood occurrence on these streams had controlling and limiting factors, which were as far as possible reduced to graphical representation. A method of flood control operation was devised, depending upon the rainfall to date and other factors. This analysis took much time and effort to complete and is of an intricate technical nature, and was recently issued in printed form.

Underground water studies in various sections of the state were also carried out in greater detail than ever theretofore attempted, and a technical method of evaluating the movement of water underground evolved.

Upon the basis of these engineering studies a preliminary plan for the conservation of the water resources of California was designed. The early units of the plan contemplated re-

(Continued on page 25.)

THE MAXIMUM CONSERVATION OF WATER WITH REFERENCE TO THE CALIFORNIA PLAN

(Continued from page 19.)

lieving existing emergencies, particularly supplying water to areas which have already overdrewn the present supply. In southern California there was proposed the importation of Colorado River water in a manner which is now under intensive study by the Metropolitan Water District of that area. In the Sacramento and San Joaquin valleys, otherwise known as the Great Valley, the plan contemplated storage of water in the northern watersheds, surplus to the ultimate future needs of that area, and its transportation to the deficient lands of the San Joaquin Valley several hundred miles to the south. In devising the transmission system a gravity canal was at first considered, but was found to be prohibitive in cost. From a diversion on the Sacramento River at the proper elevation to afford gravity delivery to the southern end of the San Joaquin Valley would require a canal very nearly 1500 miles in length, which would be in mountain or foothill country almost its entire distance. As a substitute a plan of allowing the water stored in the Sacramento Valley to flow after release down the Sacramento River to the delta area and to be pumped therefrom into the San Joaquin Valley, was investigated and found to present a superior solution. In this set-up the channel of the San Joaquin River would be used as a conduit and by a system of dams and pumping plants the Sacramento River water would be forced up the San Joaquin River against its grade to the desired elevation. This arrangement was found to be vastly cheaper than the gravity lay-out, both in capital and annual costs, and it also had many other advantages, such as more dependable water supply, elasticity of operation and freedom from legal and water right difficulties.

This engineering plan has not yet been completed in all of its details, but the conception has been presented. By-product power will be realized to its fullest extent and irrigation, saline control, navigation and flood control will be accomplished as an effect of its execution, as well as the furnishing of water for other purposes.

One item in the ultimate plan of interest is the construction of a dam or barrier across Carquinez Straits in San Francisco Bay, some miles below the junction of the Sacra-

mento and San Joaquin rivers. Various sites for such a dam were explored, varying from one to two miles in width and in water depth from 100 to 50 feet or less. After a thorough study it was decided that such a structure could be built, but at a cost of about \$50,000,000. Its construction is a necessary item ultimately. It would eliminate the salt water menace and would make possible the transfer of water into the San Joaquin Basin with a minimum of loss; however, it is not indispensable to such transfer for many years, as the salinity problem in the agricultural delta could be controlled by the wastage of sufficient fresh water to hold the salt water from the bay at a predetermined point.

The physical plan has taken fairly definite shape, and many of its main cost items are known. However, until the last year no study had been made nor conclusion reached as to its economic or legal feasibility, method of financing, nor of obtaining the necessary federal consent and justifiable participation. At the present time the completion of the engineering work is being carried out, as well as the economic and other items. Determination of the value of such a gigantic proposal is indeed a difficult matter and requires the combined services of engineers, economists, agriculturalists, attorneys, financiers and statesmen.

The technical studies, while of the greatest magnitude, are the most definite and susceptible of determination, the economic answer being far more difficult to get at with a reliable degree of accuracy. Such studies are proceeding, however, and it is expected that a conclusion as to the feasibility of the project or certain units thereof will be reached within a year. After taking all benefits into account if the plan is feasible, legal, financial and political plans for carrying it out will next come under study.

There is great public interest in California in this suggested plan, and general acceptance of the idea that the conception is sound and will come about in later years, if not at once. Great pressure is being exerted for an early start by the areas undergoing reduction in cultivated areas on account of lack of water. The state and the national governments have appointed commissions to investigate and report upon the whole subject and it is receiving wide attention from legislators, financiers, business men, farmers and considerable attention even from larger cities. The magnitude of the proposed work is illustrated by the cost estimates, which range from \$100,000,000 with the fewest number of units suggested to over

\$700,000,000 with the maximum which have been recommended for early consideration.

If such a plan is carried out under the direction of the state itself, and it does not seem possible for any other agency to successfully accomplish it, other questions of a state or political nature arise. California climatically and geographically is separated into several divisions. The northwest coast area with 25 per cent of the water supply of the state and only 2 per cent of the agricultural lands has no water problem and little interest in the situation. The Great Central Valley, with approximately 13,000,000 acres of land and 37,000,000 acre-feet of mean annual water supply, will require such a plan for its development, and it has furnished the main support for the investigations to date. Southern California with 20 per cent of the land and only 1 per cent of the water supply has more than half the population and the assessed valuation of the entire state and is undergoing a water shortage of such severity that relief is imperative. This section plans to import water from the Colorado River at a cost in the neighborhood of \$300,000,000. It is apparent that a conservation plan, carried out under state auspices, and partly or wholly by state bond issue, must assist all portions of the state in need and not be local in character. It is also apparent that to recommend a plan, sound from the engineering and economic standpoints, which will also properly take into account the various sections of the state in such a way as to be satisfactory to the voters of the entire state who must ultimately pass upon it, is indeed a problem of the first magnitude, which can be solved only by the cooperative and constructive efforts of all concerned. Wide vision, sound business judgment and complete and accurate information are essential to the success of such an undertaking.

U. S. RECLAMATION BOARD AIDS IN WATER STUDY

(Continued from page 15.)

The means for conserving available water. The means for conveying and distributing water to and over areas of deficient water supply.

The ability of lands to contribute to the cost of development.

The physical and economic feasibility of the plan.

The units of the plan worthy of first consideration.

Statistical Story Of U. S. Highways Is Told in Booklet

A statistical story of the growth of highway systems in the United States and in the world is recited in *Highways Handbook*, recent illustrated publication by the Highway Education Board.

"The building of the modern highway system," says Thos. H. MacDonald, chairman of the Board, in a brief introduction, "has no counterpart in the public works of any nation.

"The construction of the Panama Canal was a task of large magnitude; its completion a great national achievement; yet large as it was the contribution of the federal government alone to the construction of highways far outmeasures it, and the part of the federal government in the program of road improvement has been relatively small. The greater part of the work has been done by the states and their subdivisions.

"The story of this great constructive work wants no elaboration. The bare figures of miles built and money invested are impressive beyond need of added emphasis; and it is such an unembroidered story that is told by the facts and figures presented in this booklet."

Data and information used in the booklet are from government tabulations, the Board says, the United States Bureau of Public Roads and the automotive division of the Bureau of Foreign and Domestic Commerce being the principal sources of supply. The 97 pages of the handbook, the first comprehensive grouping of highway statistics into one volume, are divided into ten chapters, each treating of a separate phase of the subject.

One chapter is devoted to a general summary, an itemization of interesting features in connection with the subject. What is the longest paved road in the world; what state has the largest highway mileage; what is the shortest road and the most narrow street; what is the proportion of the United States highways to the rest of the world? These and a hundred other pertinent questions are answered in the section on "milestones."

For the student, the book is a treasure trove. Tables giving total road mileage, road income, and expenditures, and other related data, by years, by types, by states and by counties appear frequently in the booklet. The total road expenditure for 1928, for instance, was \$1,423,870,278, which is broken up into various subdivisions covering construction, maintenance, administration, purchase of equipment and bond interest.

Of the total 1928 highway income of \$1,566,946,170, 20 per cent was derived from motor vehicle fees, 18 per cent from gasoline taxes, 5 per cent from federal aid, 17 per cent from bonds, 27 per cent from general taxes and 13 per cent from miscellaneous funds. General taxes fall 2 per cent short of covering the cost of maintenance alone.

In the table on total mileage and total mileage surfaced, it is disclosed that of the 3,016,281 miles of rural roads in the United States, 69 per cent is under the supervision of local authorities, or those other than state and federal officials.

Average automobile receipts for highway improvement have increased steadily from year to year, the booklet shows, despite or perhaps because of the growing number of automobiles. In 1919, with a registration of 7,566,446 vehicles, the average receipts per

Water Rights

Report on Dam
Inspections

WATER RESOURCES INVESTIGATION

SAN JOAQUIN VALLEY

Land Classification and Crop Survey.—All field and office work including mapping of land classification is complete. All field work and office compilations on the crop surveys are complete. Map delineating cropland areas yet to be made.

Ground Water Investigation.—A geological and hydrographic study of ground water storage reservoirs was initiated during the month. These studies will determine the location and capacity of these reservoirs and also the rate of absorption of surface applications. These items are very important in the distribution and utilization of the run-off of San Joaquin Valley streams south of San Joaquin River because they have important bearing on the size and operation of surface storage reservoirs for maximum utilization of the water resources of the southern San Joaquin Valley.

Main Supply Canals.—A paper location and field reconnaissance and cost estimates have been completed for all gravity canals from Feather River to Kern River and from American River to Mendota on the San Joaquin River. A location survey and preliminary cost estimates of Canal from Kings River to Kern County have been completed. The survey for a higher location of a canal from the San Joaquin River to Kings River which would deliver water to Kern River by gravity is 50 per cent complete.

SACRAMENTO VALLEY

Water Supply.—Estimates of the run-off of Sacramento River at Iron Canyon, Sacramento River at Kennett, Feather River at Oroville, Yuba River at Smartsville, Butte Creek, American River at Folsom and American River at Van Trent as would be impaired by ultimate upstream use in the mountain and foothill areas have been completed. Maps have been prepared showing the location of these mountain and foothill users.

Land classification.—Land classification and crop survey have been completed in the Sacramento Valley. This covered an area of 8,000,000 acres. The area covered in the past month includes lands in the foothill area along the west side of the valley from Vacaville to Redding together with lands in the northern end of the valley in Shasta and Tehama counties. Summaries have been prepared in the office of both crops and land classification by counties, together with summaries for irrigation and reclamation districts.

Water Requirements.—A study is now under way to determine the gross daily and consumptive use of water in the Sacramento Valley.

Surveys.—Additional surveys of the Fairview dam site on the Trinity River and complete surveys of the Camp Far West dam site and reservoir site on the Bear River have been made. A test pit has been started at the Iron Canyon dam site and bids have been called by the U. S. Engineer's office for three test tunnels at the Kennett dam site.

Engineering Advisory Committee.—An inspection trip was made by the Engineering Advisory Committee during the past month to dam sites on the Feather, Yuba and Bear rivers. This committee consists of the following engineers: F. C. Herrmann, J. B. Lippincott, Fred H. Tibbets, J. D. Calloway, Walter L. Huber.

Geologic Examinations of Dam Sites.—Geologic examinations and reports have been made by a geologist of dam sites on the Feather, Yuba and Bear Rivers.

SALINITY INVESTIGATIONS

During the past month the work on salinity investigations has been devoted entirely to office studies and analyses of the data collected during the past year. Substantial progress has been made on the analyses of the relation of salinity to stream flow and tidal action. Every effort is being made to complete the program of office studies and obtain final conclusions as to the behavior of salinity and complete the preparation of a report thereon by the middle of this coming summer.

Thirty-two regular salinity observation stations are being maintained continuously, covering the entire tidal basin of the upper bay and delta region. Samples are being taken and analyzed every four days at these stations. In addition, the drainage water at eight stations on several of the islands in the delta is being sampled and analyzed every four days.

SALT WATER BARRIER INVESTIGATION

Work on the salt water barrier investigation during the past month has been chiefly concentrated on an intensive survey of the industries within the area affected by the salt water barrier. The field work on the industrial survey was actually started on March 14 and has been prosecuted diligently since that date. A printed questionnaire which has been carefully prepared is presented to each industry by a personal representative from the State Engineer's office and the data are filled in on this questionnaire by the executives and engineers of the various industries. Thus far the industrial survey has been confined to the upper bay area including Contra Costa, Solano, Sonoma and Marin counties. It is possible that the survey will be carried at a later time into Alameda County. Work

has also been started on a survey of the agricultural development in the delta area. This survey will be extended into the marsh land and upland area tributary to the Suisun and San Pablo bays to include all of the agricultural area which may be affected by the proposed barrier.

On March 28 the Engineering Advisory Board on the Salt Water Barrier investigation, consisting of C. E. Grunsky, Thomas H. Means, George A. Elliott, A. Kempkey, Chas. D. Marx, C. T. Leeds, Geo. A. Atherton, met in the State Engineer's office in Sacramento and carefully reviewed the program of work and the operations and studies under way. A field trip was made by boat on March 29 inspecting all of the proposed barrier sites.

A cooperative investigation has been continued during the past month by the Department of Public Health, Bureau of Sanitation on an intensive study of sewage pollution and industrial waste and their effect on the proposed barrier. The State Fish and Game Commission of the Department of Natural Resources has continued work on their cooperative investigation of the fishing industry and the relation of the barrier thereto.

NAPA COUNTY INVESTIGATION

The water resources investigation of Napa County which is being carried on in cooperation with the county, is well under way. Permanent recording stations have been installed on Conn Creek at the mouth of the Canyon, and on Napa River near St. Helena and near Napa by which a continuous record of the flow of the streams at those points will be made available. Frequent measurements are being made also on Conn Creek at various points between the Canyon mouth and the confluence with Napa River for the purpose of ascertaining to what extent this is a rising or a losing stream, i. e., to what extent it is a contributor or a drain of ground water. And in order to ascertain the effect of stream flow, rainfall and diversions upon the ground water some eighty wells have been selected, scattered throughout the Napa Valley, in which frequent readings of water level will be taken.

SANTA CLARA INVESTIGATION

The investigation of water resources in Santa Clara County carried on in cooperation with the Santa Clara Valley Conservation District is also well under way. Stream gaging stations with continuous flow recorders have been established on Stevens, Alamos, Los Gatos, and Guadalupe creeks and occasional measurements are being made on those streams to ascertain the percolation in the stream channel at various sections. The fluctuation of ground water levels is being observed at approximately 240 wells.

FLOOD CONTROL AND RECLAMATION

MAINTENANCE OF SACRAMENTO AND SAN JOAQUIN DRAINAGE DISTRICT

Maintenance work on the flood control project has been mostly routine during this period. Preparations have commenced for irrigating the willow planting along the east levee of the Sutter By-pass. The drainage pumping plants along the Sutter By-pass levee have been in operation a considerable portion of the time.

The Dutton Dredge Company's dragline excavator has completed the enlargement of the West Intercepting Canal, and is now engaged in cleaning and enlarging the canals in the pumping plant No. 3 system.

A dragline machine operated by Robert P. Easley has completed cleaning the ditches of the No. 1 pumping system and is now proceeding to clean the main drainage canal from pumping plant No. 2 to Gilsizer Slough.

Repairs have been made to the flume crossing of the Sutter-Butte Canal Company over the West Intercepting Canal where it has been enlarged, and a new bridge is being constructed on the Wadsworth ranch made necessary on account of enlarging the West Intercepting Canal.

FLOOD CONTROL PROJECT MAINTENANCE, BANK PROTECTION

All of the ten tree and steel retards on the right bank of the Feather River near Nicolaus have been completed. This work was undertaken in cooperation with the county of Sutter and was done under contract with the Pacific Coast Construction Company.

The eight current retards on the right bank of the Sacramento River below Knights Landing in Reclamation District No. 730 have been completed.

The cooperative work of bank protection on the left bank of the Sacramento River opposite Rio Vista, in cooperation with Brannan Island Reclamation District No. 2067 is practically complete. The work consisted of depositing rubble rock, maximum size 10 inches, along the bank for a distance of about 3000 feet, and approximately 2000 tons were placed.

Request has been made for cooperation with the Sacramento River West Side Levee District in the construction of three retards on the right bank of the Sacramento River, three miles below Colusa, at an estimated cost of \$8,100.

SACRAMENTO FLOOD CONTROL PROJECT

The work of by-pass clearing has been resumed. A force of approximately twenty-five men is working out of Sutter City in the Butte Slough By-pass, and the Robbins camp has been reopened with a crew of about thirty men. A. Mitchell is proceeding with clearing 100 acres under contract, which work is approximately 25 per cent complete. Preparation is being made to establish a camp of about twenty-five men on our floating equipment in the southern part of the Sutter By-pass.

The five contracts for clearing timber in the Feather River overflow channel above Marysville are continuing and are about 80 per cent complete. During the past period the timber surveys in this area have been completed.

In connection with the West Intercepting Canal, which was recently completed by the California Debris Commission, we are doing miscellaneous work in connection with various right-of-way agreements, consisting of fence and bridge construction, leveling spoil bank, and caring for irrigation and drainage.

A number of reports have been prepared on applications for the Reclamation Board.

RUSSIAN RIVER JETTY

Repairs to the gas shovel have been completed and the quarry work has been discontinued pending the completion of additional length of timber construction on the jetty. The driving crew and equipment have been organized and commenced work on March 31 with a crew of ten men.

SALINAS RIVER CHANNEL

A conference was held in the Attorney General's office on April 8 with Mr. Leon French, Colonel Bennett and a number of representatives of the various sporting organizations, in regard to securing right of

way for this channel. The matter is not yet clear, but a number of means were suggested. An attempt will be made to get this work under way as soon as possible. Examination of the site of the work and the immediate vicinity was made on April 13.

NAVARRO RIVER JETTY

As a preliminary to the completion of plans for this work, an examination of the site was made on April 8. It is planned to have the work under way some time during June.

DAMS

APPLICATIONS RECEIVED FOR APPROVAL OF DAMS BUILT PRIOR TO AUGUST 14, 1929

39 applications were received for approval of existing dams during this period bringing the total of such applications to 615. There remain about 70 dams for which applications have not been received. The great majority of these owners have been reached and with very few exceptions have expressed their willingness to file. Most failures to file have been due to ignorance of the law and every effort is being made to reach all owners.

APPLICATION FOR APPROVAL OF PLANS AND SPECIFICATIONS FOR CONSTRUCTION

Dam	County	Owner	Estimated cost
Allen	Sutter	Preston School of Industry	---- \$10,120
Lake Loveland	San Diego	Southern California Water Supply Company	----- 490,258

The Lake Loveland project is located on the upper reaches of the Sweetwater River in San Diego County. The purpose of this dam is to store 27,700 acre-feet of water for municipal, domestic, irrigation and industrial uses. It is to be a concrete arch with variable radius, 183 feet in height.

Consultants have been retained to review the plans for the Chatsworth project of the city of Los Angeles. This board consists of: J. B. Lippincott, Consulting Engineer of Los Angeles; Prof. Chas. D. Marx, Consulting Engineer, Leland Stanford Jr. University; Prof. John P. Buwalda, Consulting Geologist of the California Institute of Technology.

PLANS APPROVED FOR CONSTRUCTION

Dam	County	Owner	Estimated cost
Chenery	Contra Costa	California Water Service Company	----- \$300,000
Rock Creek	El Dorado	Arthur Rasor	----- 2,000

PLANS APPROVED FOR ALTERATIONS OR REPAIRS

Dam	County	Owner
Malibu Lake	Los Angeles	Malibu Lake Mountain Club

e. Inspections have been made on almost all privately owned dams situated in the lower altitudes, and are now being extended to dams at about 5000 feet elevation, which is the practical limit of accessibility. These are in the nature of preliminary investigations and a final inspection will be made after an analysis of each dam has been made in the office.

Arrangements have been made with the larger owners looking toward handling of each owner's dams by the same inspector as far as possible. This will eliminate duplication and tend to create better cooperation with all parties concerned.

WATER RIGHTS

ACTION ON APPLICATIONS TO APPROPRIATE WATER

During the month of March there were received 37 applications to appropriate water. Six applications were canceled, and 16 were approved. Fifteen permits were revoked.

Field work in connection with the inspection of projects under permit was recommenced on March 31 after the usual winter cessation of such activities. A revision of methods in this phase of the work has made possible a considerable reduction of effort and expense. By careful study of the annual progress reports and by letters to permittees in doubtful cases, inspections are avoided unless the project is abandoned or actually ready for license. Whereas, formerly approximately 25 per cent of all pending permits were inspected annually, this year less than 10 per cent of the pending permits will be inspected. Permits were hitherto inspected on an average of at least twice before disposed of by revocation or license, whereas, under the present system, at least three out of each four inspections result either in license action or revocation, thus disposing of the case.

PIT RIVER INVESTIGATION

The routine field work of the Pit River investigation was continued throughout the month. Staff gages were installed in the gravity ditches throughout the area to obtain an accurate record of diversions during the 1930 season. A snow survey along the several snow courses within the area was made on April 1st.

ADJUDICATIONS

Shasta River (Siskiyou County): This case has been submitted to the court, except for the Long Bell Lumber Company's Exception relative to the water rights on Beauglian Creek. This latter matter is still pending, awaiting action by the exceptors' attorney in securing a settlement of the points involved by an agreement among the water users.

Whitewater River (San Bernardino and Riverside Counties): The Whitewater River adjudication proceedings are pending in the Superior Court of Riverside County, by consent of all parties in interest, awaiting developments in regard to the proposed All American Canal from the Colorado River, the construction of which, if assured, will probably eliminate the remaining issues and open the way for a decree without further trial.

North Cow Creek (Shasta County): Submission of the final referee's report is being withheld pending negotiations now in progress which, if successful, will settle one of the important issues in the case out of court.

Oak Run Creek (Shasta County): Case pending in court awaiting entry of a decree in the North Cow Creek proceedings. A stipulation for consent judgment contingent upon the confirmation of certain findings in the North Cow Creek case has been signed by all parties in the Oak Run Creek case, and this stipulation is now before the court.

Claver Creek (Shasta County): Case pending in court and will be set on the calendar for hearing on the referee's report at an early date.

Butte Creek (Siskiyou County): This matter is pending in the Superior Court, awaiting action by the parties involved.

Emerson Creek (Modoc County): The Emerson Creek Court Reference proceedings were terminated

by a court decree entered by the Superior Court of Modoc County, on March 25, 1930. This decree established the water rights to the extent of 24.65 cubic feet per second, owned by twelve parties for irrigation and domestic use on approximately 1900 acres of land.

The Emerson Creek case was referred by the Superior Court of Modoc County on April 1, 1927. Engineering data were collected in the field throughout the 1927 season, and a tentative schedule of allotments was administered by a water master during the 1928 season. On March 19, 1929, at a meeting of the parties involved, a stipulation for consent judgment fixing a schedule of allotments, based upon the results of the trial distribution of 1928, was presented to and adopted by the water users. The court decree was entered in accordance with the provisions of this stipulation.

Los Alamos Creek (Santa Barbara County): A stipulation for consent judgment has been signed by a majority of the water users and is now being circulated among the remainder of them.

Davis Creek (Modoc County): A stipulation for consent judgment was submitted to the water users at a meeting held at Davis Creek on March 18. The stipulation was signed by all parties present, with the exception of two, and is now being circulated among nonresident water users.

Mill Creek (Modoc County): A proposed schedule of distribution for the 1930 season was submitted to and adopted by the water users at a meeting held on March 18. This schedule will be administered by a water master during the 1930 season, as a trial allocation of the waters of the stream.

Deep Creek (Modoc County): The Deep Creek case was referred to the Division by the Superior Court of Modoc County on March 22, 1930, under the procedure provided for in section 24 of the Water Commission Act. This case involves the rights of some 20 parties to the use of the waters of Deep Creek in Surprise Valley, Modoc County, for irrigation and domestic purposes on approximately 1200 acres of land. Field work on the investigation was begun on March 23, 1930, and is being conducted in conjunction with the water master service on the various streams in Modoc County.

WATER DISTRIBUTION

Davis, Emerson, Mill, Orel and Soldier Creeks (Modoc County): Water master service was begun on these streams for the 1930 season on March 19, and involves the distribution of water for approximately 11,000 acres of land.

Little Shasta River (Siskiyou County): Water master service commenced on April 1st for the 1930 season. An area of approximately 5000 acres of land is covered by the distribution of the waters of this stream.

Pit River (Modoc County): Water supervisor service was commenced on Pit River on April 1, 1930. This service consists of the supervision of all diversions from Pit River in Big Valley, in accordance with an agreement entered into by the Big Valley Water Users with the object of conserving water by the elimination of wastage through keeping the parties posted as to water supply conditions and causing them to divert in rotation during the critical period of the season. The resident engineer in charge of the Pit River investigation has been appointed Pit River Water Supervisor and will carry on the distribution work in conjunction with the Pit River investigation. Supervision will be maintained over diversions supplying water for the irrigation of approximately 10,000 acres of land.

IRRIGATION, WATER STORAGE DISTRICTS

During the month construction work in progress in the Banta-Carboma, El Dorado, Oroville-Wyandotte, Thermalito and West Stanislaus irrigation districts was inspected and conferences were held with officials of the first two districts named above. Visits of inspection were made to the Woodbridge, West Side and Hollister irrigation districts and to the proposed Richvale and Rio Seco irrigation districts. The Richvale and Rio Seco irrigation districts are located in Butte County and comprise 19,700 acres and 8000 acres, respectively, of rice lands now served by the Sutter-Butte Canal Company.

A number of proponents and opponents for the organization of the proposed Feather and Sutter irrigation districts located in the Sutter-Butte area and comprising 45,000 acres and 25,000 acres of land, respectively, visited the office and presented their views regarding the formation and organization of these districts.

The compilation of irrigation district financial and economic data has been continued through the present month.

California Bond Certification Commission.—The California Bond Certification Commission approved the private sale of \$2,500 par value of bonds of the West Side Irrigation District for construction work necessary in the development of the project; also, private sale of bonds of the Banta-Carboma irrigation district in the amount of \$6,000 par value and approval of expenditures by this district in the amount of \$5,760 for the development of the project.

Approval of change of plans was granted the El Dorado Irrigation District.

WATER RESOURCES COMMISSIONS

The fourth meeting of the Joint Legislative Committee and the Hoover-Young Commission considering the water resources of California convened at the Municipal Auditorium, Oakland, California, at 10 a.m. on April 8. The session continued throughout April 8 and 9.

The fifth meeting of the Joint Legislative Committee and the Hoover-Young Commission, called as an emergency meeting at Hotel Oakland at 10 a.m., April 16, presented and discussed with Dr. Elwood Mead, Commissioner of the United States Bureau of Reclamation, the water resources problems of California.

A newspaper writer in the *Chicago Tribune* has the following to say about the practice of driving through traffic signals:

"When the President rides out on business, he rides through traffic signals, and the citizens who recognize him lift their hats if he isn't past and gone before they can uncover. But of recent years, in New York and Chicago anyway, this privilege of riding through traffic has been accorded all local dignitaries above the rank of bailiff of the municipal court and to a great variety of visiting orchestra leaders, ecclesiastics, flag pole sitters and channel swimmers, so perhaps it shouldn't count as a distinctive presidential prerogative here."

MOTOR VEHICLE DIVISION REPORTS

FRANK G. SNOOK, Chief

ACCIDENT FIGURES ARE COMPILED

The annual report of motor-vehicle accidents has been completed for the year 1929 by the Bureau of Research, Statistics and Traffic Safety. There were 26,921 accidents reported to the division for the year 1929, resulting in death to 2,244 persons and injury to 35,443. This is an increase of 368 deaths, or 19.6 per cent over 1928. It is estimated that approximately 20 per cent of this increase, representing from 73 to 74 deaths, is statistical, due to the improved authenticity of reports.

Provisional figures received to date for January and February indicate a probable decrease under the corresponding period of 1929. In view of the fact that an increase of over 10 per cent is apparent for the United States during the same period this year, according to information received by the California Highway Patrol, it appears that the accident situation has been somewhat improved in California.

SUSPEND LICENSES FOR JUDGMENTS

Since January 1, the Division has been busy acting upon certified copies of judgments sent to us in accordance with the provisions of section 73 (g), which makes it mandatory upon the division to suspend any operator's or chauffeur's license and all registration certificates and license plates of any person who fails to satisfy a judgment rendered against him for property damage or personal injuries caused by an automobile within 15 days after same has become final. To date 141 cases have been reported. Suspension of licenses has been made in 51 cases, which affected 59 persons. The remaining number are being worked on, and as soon as they are complete as to form formal notices will be sent the judgment debtors.

ARREST CAUSES ARE CLASSIFIED

During March the California Highway Patrol established night patrols in Napa, Sacramento, Marin, Alameda, Placer, Merced and Fresno counties. Throughout the state the officers stopped 17,170 vehicles, and arrested 5221 persons. Those arrested were charged as follows:

Reckless driving.....	129
Drunken driving.....	74
Speeding.....	347
Faulty lights.....	3550
Rules of the road (not including above noted violations).....	445
Miscellaneous violations.....	560
Truck violations.....	116

The total fines reported were \$26,965.55, and the officers covered 481,681 miles of highway in their patrol work.

REGISTRATION FEE COLLECTIONS

The total registration fees collected for the first quarter of the calendar year 1930, are \$8,006,260.59, and cover the registration of the following number of vehicles:

Automobiles and commercial vehicles under 3000 pounds.....	1,742,030
Pneumatic trucks.....	66,978
Solid trucks.....	13,837
Pneumatic trailers.....	27,161
Solid trailers.....	8,200
Motorcycles.....	6,934

In addition to the above, 29,365 automobiles and trucks, 3720 trailers, and 776 motorcycles have been registered under exempt license plates.

For the first quarter of 1930, nonresident motorists secured 15,800 nonresident permits. This number is almost doubled by the nonresident motorists who have applied for California registration, which totals 31,141.

INFORMATION SOUGHT FROM RECORDS

Proof that the records of the division are a great source of information is given in the fact that during January and February, 16,657 letters were received, requesting information on 24,114 registrations. These requests were received from police departments, commercial businesses, collection agencies, insurance and finance companies, attorneys and individuals. Now that our files are complete this bureau's work will increase greatly for the next two or three months.

NEW TRAFFIC OFFICERS NAMED

Following are appointments to various counties:

GLENN COUNTY—L. R. Linville.

NEVADA COUNTY—Edward C. Hunt.

PLACER COUNTY—Irvin D. Elliott and G. C. Herring.

SACRAMENTO COUNTY—O. R. Latta.

SAN MATEO COUNTY—Louis E. Rinkel.

STATISTICAL STORY OF U. S. HIGHWAYS IS TOLD IN BOOKLET

(Continued from page 26.)

car were \$8.68, while ten years later, with a registration in excess of 24,000,000 automotive vehicles, the average income per car was \$25.63.

A chapter on federal aid operations, falls second in the booklet, while separate chapters are allotted to the state highway systems, and to county and local activities.

World highway mileages afford a vivid comparison of the growth of automotive transportation in the United States, statistics for 137 nations and autonomous countries being presented.

A chapter on highway uses offers an interesting study, while another on uniform warning and direction signs, portrayed in colors, gives the signs recommended for use by the American Association of State Highway Officials.

Chapters on highway films available, on bibliography, and finally on organizations interested in highway development complete the study, with an explanatory note outlining briefly the activities of the Highway Education Board.

According to the Ohio Farm Bureau Mutual Automobile Insurance Company, automobile drivers between the ages of 18 and 20 are the greatest hazard to traffic. This finding was made on an examination of 2000 traffic accidents.

"I advertised that the poor would be welcome in this church," said the minister; "and after inspecting the collection I see that they have come."

THE MODERN EL CAMINO REAL

(Continued from page 7.)

of way approximately 35 feet north of and parallel to the center line for a distance of 0.6 mile before joining Campbell Creek, which flows to the north. This channel was discontinued and filled up, giving a full 12-foot shoulder width with flat slopes to or near the right of way line. Through agreement with the property owners a new channel was extended almost due north from the highway about $\frac{1}{2}$ mile, at which point it empties into a deep borrow pit from which material was taken to fill the original channel along the highway. Approximately 700 feet beyond this borrow pit a levee extending in a northeasterly direction was thrown up for a distance of 1650 feet, at which point it was directed southeast for 740 feet, this point being approximately 2000 feet north of the highway about half way between Calabasas and Campbell creeks. From this point, in a northeasterly direction, a new channel was cut across to a junction with Campbell Creek approximately 3000 feet north of the highway. During the summer months Calabasas Creek is dry, but in the rainy season water flows down the new channel to the borrow pit, it now acting as a reservoir which tends to replenish the supply of ground water to adjacent property. During heavier rains this reservoir overflows and is contained within the levees around the low-lying contiguous land. This results in a deposit and gradual upbuilding of light silt—a feature desired by the property owner. In time of excessive flood the water finds outlet through the new channel beyond. Most of the water settles and is conserved. The silt deposit each spring is plowed into the heavy soil with entirely beneficial results. The past season saw a deposit of several inches. Thus the state was relieved of further responsibility in maintaining 0.6 mile of Calabasas Creek, and was enabled to obtain a highway of standard section with adequate provisions for future widening. This work was done under Day Labor Work Order under informal bid contract by N. M. Ball of Porterville, who was also the general contractor on this section between Sunnyvale and Santa Clara. C. F. Price was the resident engineer. Construction cost of this section was approximately \$227,000.

The second section of this 14 miles now under construction extends from 1000 feet north of the county line at San Francisco Creek in San Mateo County to San Antonio

Road in Santa Clara County. This has a net length of 4.36 miles though it has a gross length of 4.74 miles, there being an exception of 0.38 mile through the town of Mayfield.

This project extends through the combined City of Palo Alto and Mayfield. The details, both as to right of way and construction, are rather involved due to present structures, city pavement, curbs and sidewalks, and intersecting streets. Several improvements in alignment are being effected by acquisition of right of way largely on one side in acquiring the new 100-foot width without discarding any of the original right of way. One such change extends from the beginning of the project for a distance of 0.7 of a mile, removing reverse curves and unsightliness from alignment, and provides for widening the 60-foot span arch bridge over San Francisco Creek bridge on one side only to a 76-foot roadway width including one 6-foot sidewalk.

Two other slight changes are effected at curves in the vicinity of Yeguas Creek to make it necessary to widen the structure on one side only, and the approach to the important county road intersection at San Antonio avenue near the end of this project.

A more important revision in location is made about $3\frac{1}{2}$ miles from the beginning of this job, where a 300-foot radius curve is eliminated. From a right of way standpoint, this change involves a heavy expenditure, including moving of buildings, in settlement with one party only, "Mammy's Shack," of more or less local fame.

The original pavement was constructed to a 20-foot width of 5-inch waterbound macadam with $1\frac{1}{2}$ -inch topeka top and 3-foot oil macadam shoulders, though through the town of Mayfield, 6-inch concrete, 24 feet in width, was placed, under contract in 1911, excepting the first 1400 feet which was placed this same year by state forces. The present contract calls for $4\frac{1}{2}$ inches of Type "A" asphalt concrete surface laid in two courses over the present pavement, widening over 6-inch compacted rock base to 40-foot width, with 8-foot shoulders from the beginning of the project to Mayfield. Through Mayfield, excepting the 0.38-mile business district, 40 feet of 8-inch to 10-inch concrete in four 10-foot strips is being placed over a 4-inch compacted rock base. The balance of the project includes about one mile of 8-inch to 10-inch thickness of concrete, 30 feet wide, and one mile of $4\frac{1}{2}$ -inch asphalt concrete Type "A" in two courses on present 20-foot pavement and 10-foot width of 8-inch to 10-inch thickness

Class "A" concrete over 4-inch compacted rock base on the left side.

Right of way involved 103 ownerships out of which 6 suits were necessary, one of which is a friendly suit against Stanford University, this being the only legal way title could be obtained. The widening of right of way through the town of Palo Alto was facilitated by the abandonment and removal of the tracks of the Peninsula Railway Company for approximately two miles. The removal of these tracks from the highway right of way is the result of negotiations carried on with the railway company over a period of six years or more, and is considered an achievement of note, for it is felt that there is no justification for the location of an electric railway inside a state highway right of way.

It is necessary to carry all traffic through this job since the only detours available are Palo Alto streets, which would require through traffic to cross twice at grade the main line of the Southern Pacific Railway, where over 70 fast trains pass daily. The completion date for this contract between Palo Alto and San Antonio Road is September 12, 1930. Contract allotment is approximately \$311,000, which includes the construction of the San Francisquito Bridge for which a special allotment of \$20,000 had been budgeted. Hanrahan Company of San Francisco is the contractor, and C. F. Price the resident engineer.

The final and center link of this 14-mile section from Palo Alto to Santa Clara is 4.89 miles in length without exceptions and extends from San Antonio Avenue to Sunnyvale.

This project involves but one line change—that at Anzini's Corner—where it is proposed to replace the existing 400-foot radius curves reversing on 135 feet of tangent, with two 2000-foot radius curves, reversing on 350-foot tangent. It is planned to make park areas of the two triangular pieces of property between the old and the new locations at this change. The present pavement was constructed 20 feet in width in 1913 and 1914, and consists of a 1½-inch topeka top over a 5-inch water-bound macadam base for the first 2½ miles of this section, the balance being a 1½-inch topeka top over a 4-inch concrete slab.

The present plans are for a graded roadbed 50 feet in width, a pavement 30 feet in width throughout in a full 100-foot right of way. A 4½-inch asphalt concrete Type "A" surface laid in two courses will be placed on the existing 20-foot pavement throughout, excepting through the line change at Anzini's Corner, where a 30-foot width of 8-inch to 10-inch thickness concrete is to be placed over a 4-inch

compacted rock base. Widening is to be effected from the beginning of this project to the line change at Anzini's Corner on the left side, approximately one mile in length, by placing a 10-foot strip of concrete Class "A" 8 inches to 10 inches thickness over a 4-inch compacted rock base. Beyond the line change for the balance of the project, this widening of similar construction will be on the right side of the existing pavement.

This strip of highway passes through the town of Mountain View, where city lots of 25-foot frontage are involved. Due to this fact, 155 parcels and owners must be dealt with. Right of way negotiations also involve the moving of about 40 buildings, some half dozen service station pump installations and many irrigation conduits, in addition to about 20 ornamental gate posts and columns and the usual fence.

The construction contract will call for removing and replacing about 8000 feet of concrete or iron irrigation pipe from 8 inches to 12 inches in diameter, widening Stevens Creek 20-foot span arch bridge on both sides to a completed 76-foot roadway width, and replacing the Permanente Creek 12-foot span arch, which was built by the county in 1899, with a concrete box to be constructed inside the present arch to give full 76-foot roadway width.

A good detour is available for the entire job during construction; but, due to the heavy urban local settlement, this is not considered practicable; so it is planned to carry full traffic through the job during construction.

Right of way negotiations for this section are progressing nicely, and it is expected that it will be advertised shortly.

It is expected that the public will be enjoying the fully reconstructed and otherwise modern improved El Camino Real, between Palo Alto and Santa Clara, not later than the spring of 1931.

AIN'T IT THE TRUTH

"When you find a public official who pleases everybody, there will be a glass plate over his face and he will not be standing up."

A backwoodsman one day found a mirror which a tourist had lost. "Well, if it ain't my old dad," he said as he looked in the mirror. "I never knew he had his pitcher took."

He took the mirror home, stole into the attic to hide it, but his actions did not escape his suspicious wife. That night, while he slept, she slipped up to the attic, and found the mirror. "I'm-m," she said, looking into it. "So that's the old hag he's been chasin'."—*The Dravo Bulletin*.

THE SCIENCE OF MECHANICAL VENTILATION

(Continued from page 11.)

runs into a considerable amount and also since the Assembly Hall will be unused during the warmest summer weather due to the vacation period, the installation at the Chico College has been designed to use the upward system.

To force the air into the building, large fans or blowers are utilized. The installation at Chico contains four such fans, one supplying air to the main floor and another supplying air to the balcony. One main exhaust fan removes the air from the seats under the balcony and also from grilles in the ceiling over the balcony and main floor. The other fan is a small one for separate ventilation of the motion picture projection room. This air is removed from the building through ornamental plaster grilles located in the ceiling over the balcony and main floor, and also through metal grilles located in the portion of the ceiling under the balcony. Removal of air from the space occupied by the seats under the balcony is very necessary, otherwise, this space would tend to become pocketed with dead air. The exhaust air is subsequently discharged to the outside. To create a slight pressure in the theater, the capacity of the exhaust fan is somewhat less than the supply fans. The slight pressure is necessary to prevent cold draughts from entering from the outside when the theater doors are opened.

To cool and change the air, a saturating or cooling type air washer is provided. This piece of equipment serves the double purpose of cooling and washing the air removing about 95 per cent of the dirt in suspension. The fresh air, entering the building through the fresh air intake, is drawn through the washer by the fans and then discharged over heaters to the plenum space under the main balcony floor, and enters the building through mushrooms located under the seats. The air washer consists essentially of a number of spray nozzles, a metal housing and water tank, and a pump to recirculate the water. There is also provided in the air washer a number of staggered plates, called eliminator plates, designed to separate the air from any water or spray after it has passed through the nozzles. The spray nozzles are similar in construction to the type of nozzle used for lawn sprinkling. The washer for the Chico Assembly Hall is to be equipped with 156 nozzles and the pump circulates 520 gallons per minute. The air, passing through the fine mist-like spray created by the nozzles, is cooled by evaporation much the same as a water bag, hung on the outside in moving air, keeps the contents cool although the air surrounding it may be exceedingly warm. This apparent phenomenon is caused by extraction of heat by evaporation and is made possible by the fact that air has two temperatures, a dry bulb temperature which is the temperature one observes on the ordinary thermometer, and a wet bulb temperature. The wet bulb temperature is obtained by covering the mercury bulb with a small piece of cloth which is then moistened with water and whirled or placed in moving air of the same temperature until the reading becomes stable. Unless the air is saturated with moisture, as for instance a fog, the wet bulb temperature is always lower than the dry bulb. The difference between the two indicates the relative humidity.

Recent research by the United States Bureau of Mines and the United States Bureau of Public Health, in conjunction with the American Society of Heating and Ventilating Engineers, has shown that there are

three important factors which go to make up the effective temperature or create a comfortable feeling; namely, dry bulb temperature, wet bulb temperature and air motion. The first two have already been described. Air motion, an example of which is the ordinary desk fan, gives a feeling of coolness although it does not lower the temperature of the air surrounding it. This coolness is caused by increased evaporation of moisture on the surface of the skin, lowering the temperature; furthermore, the lower the humidity of the air of corresponding temperature, the greater the feeling of coolness due to increased evaporation. Air of high humidity is saturated with moisture and in such a state, air motion is of little or no importance in so far as cooling is concerned. That is the reason one reads of numerous fatalities following an eastern heat wave where a temperature of only 90 degrees Fahrenheit is accompanied by high humidity. It has been determined that 70 degrees Fahrenheit and 40 per cent humidity produces the greatest feeling of comfort to the normal person at rest.

As a rule, California enjoys low humidity, or dry air, especially so in the interior valleys. This provides fairly satisfactory cooling of the air by the washer method. A temperature of 100 degrees Fahrenheit at 20 per cent humidity, a condition common in the summer time in the interior valleys, is far more comfortable than 90 degrees and 70 per cent humidity common in the eastern states.

With a saturating type washer and cooler such as is to be installed at Chico, air entering the washer at 100 degrees Fahrenheit and 20 per cent humidity, would leave the washer and enter the Assembly Hall at about 60 degrees Fahrenheit, saturated with moisture. Expansion of the air after it enters the room, caused by bodily and external heat, raises the temperature slightly and lowers the humidity. Thus a comfortable condition is maintained in the building.

If it were not for the enormous amount of cold air forced into the building for ventilating requirements, very little heating would be necessary. To heat this cold air in the winter time, necessary heaters are provided similar in construction to the ordinary steam radiator, only many times larger. A metal casing is provided around the heaters and the air is forced through by the fan or blower. Steam for supply to the heaters is obtained from the central heating plant of the college at a pressure of 75 pounds per square inch and reduced to 10 pounds by a pressure reducing valve. The air passing through the heaters is warmed to approximately 70 degrees Fahrenheit. Inasmuch as the balcony tends to become warmer than the main floor, due to the ability of heat to rise, separate heaters are provided for the balcony and main floor.

To prevent overheating, due to fluctuation of temperature outdoors, a system of temperature control is provided. Two thermostats are provided, one for the balcony and one for the main floor. A thermostat is a small sensitive device about 4 inches high and 2 inches wide mounted on the inside wall of the theater, usually placed approximately 5 feet above the floor. It works on the well-known principle of metal to expand or contract due to changes in temperature. Thus this principle is used to actuate a small valve in the thermostat controlling the supply of compressed air to the diaphragm operated valves in the steam supply to the heaters. Compressed air is furnished by a small compressor in the fan room and is used as the motive force to operate the diaphragm valves. Thus, if the room becomes too warm, the thermostat located in the theater shuts off the steam and if the room becomes too cold, it opens the valves to admit steam to the heaters.

State Highway Progress Reports

IMPERIAL COUNTY

San Bernardino-El Centro Route—Rapid progress is being made on the A. M. Peck Company paving contract from Brawley to a point four miles west of Westmoreland. The Westmoreland end of this project was completed first to offer the least inconvenience to traffic.

El Centro-San Diego Route—R. E. Hazard has started work on pavement widening and resurfacing from Dixieland to Seeley. A contract has been awarded to Basich Bros. for paving from Myers Creek bridge to three miles west of Coyote Wells.

El Centro-Yuma Route—A. M. Peck Company has started work on the drainage and irrigation structures between El Centro and Holtville. A 20-foot pavement will be constructed on this project.

LOS ANGELES COUNTY

A contract has been awarded to Ben F. Dupuy for oiling shoulders on the Roosevelt Highway between the westerly boundary of Los Angeles County and Santa Monica.

The contract for a line change immediately north of the Newhall Tunnel has been awarded to McCray Co. This contract is approximately one mile in length and is on much better alignment than the present highway. It is expected that this contract will be completed next June.

The first contract on the La Canada-Mt. Wilson Highway for grading 2.6 miles of roadbed was awarded to H. W. Rohl Company on August 14th. Work is rapidly nearing completion and it is expected that this contract will be completed by June 15th.

The second contract on the La Canada-Mt. Wilson Highway for grading $1\frac{1}{2}$ miles of highway was awarded to T. M. Morgan Paving Company on January 27, 1930. This extends northerly from the end of the H. W. Rohl contract. This contract will probably require more than a year to complete.

A contract for paving the Newhall Alternate with Portland cement concrete, 30 feet wide, has been awarded to Jahn & Bressi. Grading of this section has just been completed by Le Tonnneau & Lindberg. The new location is on greatly improved alignment and eliminates Saugus, Newhall and the Newhall Tunnel from the Ridge Route. This section is 8.6 miles long. Paving will probably be completed by next September.

A contract for grading and paving a line change near Liberty School, four miles west of Calabasas, was awarded to the Will F. Peck Company January 18, 1930. This line change eliminates several bad curves and improves the grade. Grading work is now in progress. It is expected that this contract will be completed next August.

A contract for grading a 38-foot roadbed on the first section of the Alternate Ridge Route from Castaic School to Canton Creek was awarded to H. E. Doering, von der Hellen and Pierson on February 25, 1930.

This section is 7 miles in length and will probably require more than a year to complete.

Surveys are in progress on the rest of this route which will be a saving of more than seven miles in distance over the present Ridge Route.

LOS ANGELES-VENTURA COUNTIES

A contract for oil mix shoulders between Calabasas and Conejo Summit has just been completed by the Southwest Paving Company. There is now a 24-foot width of surfaced highway the full length of this contract.

ORANGE-LOS ANGELES COUNTIES

A contract for oiling shoulders between Galivan and Irvine and from Fullerton to Leflingwell Ranch in Los Angeles County has been awarded to G. M. Duntley.

ORANGE COUNTY

A contract for widening the roadbed between Sunset Beach and Newport the entire width of the 90 to 100-foot right of way, and the placing of an additional 10-foot strip of Portland cement concrete has been awarded to the Maceo Construction Company. When this work is completed the pavement will be 30 feet wide for the entire distance. It is expected that this work will be completed by next September.

RIVERSIDE COUNTY

Riverside-Ontario Route—A contract has been awarded to Matich Brothers for the construction of the pavement of the undergrade crossing under the Union Pacific tracks at Wineville. The railroad bridge work is practically completed.

SAN BERNARDINO COUNTY

Old Trails Highway—Contractors Gist and Bell have completed the grading contract from Alray to the Summit of Cajon Pass and the road has been opened to traffic. This improvement is over a new location on which the alignment has been improved and the distance materially shortened. This improvement will reduce the accident toll on this road and afford a new sense of security to the motorist driving over it. When weather conditions become favorable the road surface will be oil treated.

The New Mexico Construction Company are laying plant mixed oil treated surfacing on their two contracts extending from two miles west of Argos to six miles east of Auboy.

Arrowhead Trail—The George Herz Company is making substantial progress in laying oil treated surfacing on their contract from Barstow to Yermo.

Crest Route—Lewis Construction Company has started clearing the right of way on their grading contract between four miles west of Running Springs Park and Squirrel Inn. They plan to clear and burn all the brush immediately to avoid the fire hazard which would occur if the brush were burned later in the season.

A contract has been awarded to W. H. Rohl Company for grading from the Pass between Devils Canyon and Waterman Canyon, a distance of two miles down Waterman Canyon. This project will eliminate most of the heavy grades and switch backs in the upper end of Waterman Canyon. The clearing has been done and actual grading started.

SAN DIEGO COUNTY

A contract for grading the Rose Canyon road between Balboa avenue and Torrey Pines road was awarded on August 13th to the R. E. Hazard Contracting Company. This section is 5.4 miles long and is to be a 46-foot graded roadbed. It is expected that this contract will be completed by June 1, 1930.

A contract for 4.5 miles of 38-foot graded roadbed between La Posta Creek and Miller Creek on the San Diego-El Centro Highway was awarded on May 27th to the Nevada Contracting Company. It is expected that this contract will be completed next June.

A contract for grading 2.9 miles of 36-foot roadbed from Kitchen Creek to La Posta and paving with 20 feet by 7 inches Portland cement concrete was awarded on June 25th to Basich Bros. This section is on the San Diego-El Centro Highway. Rough grading is completed and concrete paving is now in progress. It is expected that this contract will be finished by June 15, 1930.

A contract for grading a 30-foot roadbed between Miller Creek and Tecate Divide on the San Diego-El Centro Highway was awarded to Monarch & Breen on August 17, 1929. This work is rapidly nearing completion and should be finished by May 15, 1930.

A contract for oiling the shoulders on various stretches aggregating approximately 35 miles between San Diego and Myers Creek Bridge on the San Diego-El Centro Highway was recently awarded to the Gilmore Oil Company.

Another contract for oiling the highway shoulders between Oceanside and the Orange County line has been awarded to G. M. Duntley.

VENTURA COUNTY

A contract has been awarded to California Road Oil Service Company for oiling shoulders from Camarillo to Ventura and from Ventura to Seacliff.

IMPROVEMENTS THROUGH APRIL AWARDS

RED BLUFF-SUSANVILLE LATERAL—Reinforced concrete girder bridge 105 feet long across the North Fork of the Feather River at Chester in Plumas County. This bridge consists of three 35-foot spans on concrete pile bents, and is located within the limits

of the grading and surfacing project now under way on this road between Morgan Springs and Lake Almanor. Contract awarded to A. T. How of Santa Rosa for \$10,900.

PACIFIC HIGHWAY—In Yuba County, paying through Wheatland with Portland cement concrete 0.9 of a mile. Grading of roadbed 36 feet wide and paving 20, on realignment, eliminating the right-angle turns in this town. Contract awarded to C. W. Wood of Stockton for \$31,296.

MOTHER LODGE COUNTRY—On this lateral in Calaveras County a reinforced concrete girder bridge across Calaveritas Creek is being built. This is situated about 3 miles south of San Andreas. Contract awarded to George J. Ulrich Construction Company of Modesto for \$18,037.

COMPLETION OF CONTRACTS

RED BLUFF-SUSANVILLE LATERAL—Contract for surfacing with untreated crushed gravel or stone and stockpiling screenings between Susanville and two miles west of Milford in Lassen County, covering 19.4 miles, and at an approximate cost of \$48,000, has been completed and accepted. Hein Bros. & Chittenden of Napa were the contractors.

OROVILLE-QUINCY LATERAL—Contract for grading roadbed and placing crushed rock surfacing between Oroville and the Feather River in Butte County, distance about 4.1 miles, at an approximate cost of \$181,400, has been satisfactorily completed and accepted. Arris-Knapp of Oakland were the contractors.

CARMEL-SAN SIMEON HIGHWAY—Construction of a bridge across Villa Creek on this highway in Monterey County, at an approximate cost of \$20,000, has been accepted. H. C. Whitty of Sanger was the contractor.

COAST ROUTE—Contract for constructing a graded roadbed and placing asphalt concrete pavement between Chualar and Salinas for about 10.3 miles in Monterey County, at an approximate cost of \$262,300, has been satisfactorily completed and accepted. Peninsula Paving Company of San Francisco was the contractor.

REDWOOD HIGHWAY—Contract for constructing a bridge across San Antonio Creek on this highway on the Marin-Sonoma County line, at an approximate cost of \$20,000, has been completed and accepted. McDonald & Maggiora of Sausalito were the contractors.

VALLEY ROUTE—Contract for grading roadbed and placing asphalt concrete pavement between south-erly Tulare County boundary and Pixley has been accepted. The Valley Paving Company of Visalia was the contractor.

SAN BERNARDINO-BARSTOW ROUTE—Contract for the construction of a bridge in San Bernardino County near Cajon Station at an approximate cost of \$13,100, has been accepted. Pittman & Hippenstiel were the contractors.

HIGHWAY BIDS AND AWARDS For Month of April

CALAVERAS COUNTY—Reinforced concrete girder bridge across Calaveritas Creek, about 3 miles south of San Andreas, consisting of one 60-ft. span on

concrete piers and six 30-ft. spans on concrete bents and abutments with rubble masonry wing walls. Dist. X, Rt. 65, Sec. B. Peter McHugh, San Francisco, \$21,131; Fredrickson & Watson Const. Co., Oakland, \$20,917; M. B. McGowan, San Francisco, \$22,185; O. G. Ritchie, San Jose, \$20,523; N. M. Ball, Porterville, \$21,079; Jacobs & Pattiani, Oakland, \$20,868; Geo. G. Wood, Fresno, \$18,826; Bodenhamer Const. Co., San Diego, \$19,689. Contract awarded to George J. Ulrich, Modesto, \$18,037.

LOS ANGELES COUNTY—Between the westerly boundary and Santa Monica, about 26.5 miles to have heavy fuel oil furnished and applied to shoulders. Dist. VII, Rt. 60, Secs. A, B. California Road Oil Co., Los Angeles, \$11,326; G. M. Duntley, Los Angeles, \$10,258; Gilmore Oil Co., Los Angeles, \$11,148. Contract awarded to Ben L. Dupuy, Los Angeles, \$10,081.

MODOC COUNTY—Two timber bridges, one across North Fork of Pit River about 3½ miles NE. of Alturas, and one across Shields Creek channel change about 4 miles NE. of Alturas. Dist. II, Rt. 28, Sec. C. M. B. McGowan, San Francisco, \$16,772; R. B. McKenzie, Red Bluff, \$15,402. Contract awarded to Smith Brothers Company, Eureka, \$13,875.

PLUMAS COUNTY—Reinforced concrete girder bridge across the North Fork of the Feather River at Chester, consisting of three 35-ft. spans on concrete pile bents. Dist. II, Rt. 29, Sec. A. M. B. McGowan, San Francisco, \$14,024; J. P. Brennan, Redding, \$12,263; R. B. McKenzie, \$12,968. Contract awarded to A. T. Howe, Santa Rosa, \$10,990.60.

SANTA BARBARA COUNTY—Buckhorn Creek to second crossing, Cuyama River, about 15.1 miles in length, apply heavy fuel oil on roadbed. Dist. V, Rt. 57, Sec. B. Bradley Truck Co., Santa Maria, \$4,297; Ben F. Dupuy, Los Angeles, \$4,629; A. Teichert & Son, Inc., Sacramento, \$6,215. Contract awarded to Gilmore Oil Co., Ltd., Los Angeles, \$4,185.72.

SANTA BARBARA COUNTY—Between Elwood overhead crossing and Goleta, and between Carpinteria and Rincon cutoff, about 65.5 miles oiling. Dist. V, Rt. 2, Secs. G, I, K, H. Seaside Oil Co., Summerland, \$4,366; Gilmore Oil Co., Los Angeles, \$5,988; California Road Oil Service Co., Los Angeles, \$4,867. Contract awarded to Bradley Truck Co., Santa Maria, \$4,130.

SAN BERNARDINO COUNTY—Between Bartstow and the Kern County line, about 37.5 miles in length, furnishing and spreading fuel oil on roadway. Dist. VIII, Rt. 58, Secs. A, B, C, D. Gilmore Oil Co., Ltd., Los Angeles, \$8,430; Leonard C. Pulley, Long Beach, \$8,861; Basalt Rock Co., Inc., Napa, \$8,957; California Road Oil Service Co., Los Angeles, \$8,957; Ben F. Dupuy, Los Angeles, \$10,969. Contract awarded to G. M. Duntley, Los Angeles, \$8,047.20.

SAN DIEGO AND IMPERIAL COUNTIES—Various locations comprising about 35.4 miles in all, to have heavy fuel oiling applied to shoulders. Dist. VII, Rt. 12, Secs. B, C, D, E, F, G, H, A. California Road Oil Service Co., Los Angeles, \$23,031. Contract awarded to Gilmore Oil Co., Los Angeles, \$22,165.40.

YUBA COUNTY—Through Wheatland, about 0.9 of a mile to be graded and paved with Portland cement concrete. Dist. III, Rt. 3, Sec. A. Basich Brothers Construction Co., Los Angeles, \$23,441; Mathews Construction Co., Sacramento, \$25,604. Contract awarded to C. W. Wood, \$31,296.50.

The red light is the place where you catch up with the driver who passed you at fifty miles an hour eight or nine blocks down the line.—Detroit News.

WATER APPLICATIONS AND PERMITS

Applications for permit to appropriate water filed with the State Department of Public Works, Division of Water Resources, during April, 1930.

MENDOCINO COUNTY—Application 6615. Hooper Bros., Valley Oaks Ranch, Ukiah, for 1.5 c.f.s. 10 acre-feet from unnamed winter drainage creek tributary to East Branch of Russian River to be diverted in Sec. 26, T. 16 N., R. 12 W., M. D. M., for irrigation purposes. Estimated cost \$1,000.

LAKE, NAPA, YOLO AND SOLANO COUNTIES—Application 6616. Karl Brehme of 1201 Hobart Bldg., San Francisco, for 200 c.f.s. and 100,000 acre-feet from Putah, Pope, Capel, Etiwara creeks tributary to Sacramento River to be diverted in Sec. 25, T. 8 N., R. 2 W., M. D. M., for industrial and domestic purposes. Estimated cost \$3,900,000.

CONTRA COSTA COUNTY—Application 6617. John Fleuti, Moraga, for 0.916 c.f.s. from (1) Grizzly Creek, (2) unnamed spring tributary to Walnut Creek to be diverted in Sec. 15, T. 1 S., R. 2 W., M. D. M., and Sec. 10, T. 1 S., R. 2 W., M. D. M., for domestic purposes. Estimated cost \$1,000.

SAN BERNARDINO COUNTY—Application 6618. Los Angeles Council of Camp Fire Girls, 1107 Security Bldg., Los Angeles, for 1/32 c.f.s. from Santa Ana River, to be diverted in Sec. 10, T. 1 N., R. 1 E., S. B. B. & M., for recreational purposes. Estimated cost \$1,000.

SISKIYOU COUNTY—Application 6619. John A. Foss, Hamburg, for 2 c.f.s. from Caroline Creek tributary to Klamath River to be diverted in Sec. 14, T. 46 N., R. 12 W., M. D. M., for irrigation purposes.

YUBA COUNTY—Application 6620. David N. Jones, c/o Steel and Lingenfelter, Marysville, for ½ c.f.s. from Dry Creek tributary to Bear River to be diverted in Sec. 34, T. 15 N., R. 6 E., M. D. B. & M., for irrigation and domestic purposes (50 acres). Estimated cost \$1,000.

EL DORADO COUNTY—Application 6621. Spicky Polish Corp., 1401 Third St., San Francisco, for 1 c.f.s. from White Rock Creek tributary to South Fork American River to be diverted in Sec. 32, T. 11 N., R. 11 E., M. D. M., for industrial purposes.

LOS ANGELES COUNTY—Application 6622. Cienega Springs Water Co., c/o R. B. Bidwell, Glendora, for .025 c.f.s. from tunnel to spring tributary to Big Dalton-San Gabriel Watershed to be diverted in Sec. 22, T. 1 N., R. 9 W., S. B. B. & M., for domestic purposes.

SAN JOAQUIN COUNTY—Application 6623. L. E. Grimsley, Est. Joseph Geiger, deceased, P. E. Holt & Anderson Orchard Co., a California corporation, c/o Neumiller & Ditz, 605 Bank of Italy Bldg., Stockton, for 2.56 c.f.s. from Calaveras River tributary to San Joaquin River, to be diverted in Sec. 4, T. 2 N., R. 9 E., M. D. M., for irrigation purposes (204.69 acres).

SAN JOAQUIN COUNTY—Application 6624. Raymond T. McGurk & C. H. McGurk, c/o Neumiller & Ditz, Bank of Italy Bldg., Stockton, for 2.91 c.f.s. from Calaveras River tributary to San Joaquin River to be diverted in Sec. 33, T. 3 N., R. 9 E., M. D. B. & M., for irrigation purposes (233 acres).

LOS ANGELES COUNTY—Application 6625. Geo. H. Lettean, 305 Security Bldg., Los Angeles, for

0.29 c.f.s. from 7 springs at head of Mint Canyon tributary to Santa Clara River Watershed to be diverted in Sec. 31, T. 6 N., R. 13 W., S. B. M., and Sec. 1, T. 5 N., R. 14 W., S. B. M., for irrigation and domestic purposes (230 acres).

EL DORADO COUNTY—Application 6626. United States, El Dorado National Forest of Placerville, for .0019 c.f.s. from Hemlock Creek, tributary to Upper Echo Lake to be diverted in Sec. 35, T. 12 N., R. 17 E., M. D. M., for domestic purposes. Estimated cost \$250.

EL DORADO COUNTY—Application 6627. United States, El Dorado National Forest of Placerville, for .005 c.f.s. from Hemlock Creek tributary to Upper Echo Lake to be diverted in Sec. 35, T. 12 N., R. 17 E., M. D. M., for domestic purposes. Estimated cost \$200.

TRINITY COUNTY—Application 6628. J. O. Gillice of Weaverville for (a) 50 c.f.s., (b) 100 c.f.s. from (a) Cedar Creek, (b) Horse Linto Creek tributary to Trinity River to be diverted in Sec. (a) 29, T. 7 N., R. 6 E., H. B. & M., and Sec. (b) S, T. 7 N., R. 6 E., H. B. & M., for mining purposes. Estimated cost \$150,000.

RIVERSIDE COUNTY—Application 6629. O. J. McMahan, c/o Frazier M. Sallee, San Jacinto, for .12 c.f.s. from unnamed stream to be diverted in Sec. 4, T. 7 S., R. 3 E., S. B. B. & M., for irrigation and domestic purposes (10 acres to be irrigated). Estimated cost \$2,000.

SAN JOAQUIN COUNTY—Application 6630. City of Stockton, Stockton, for 200 c.f.s. and 65,500 acre-feet per annum from Calaveras River tributary to San Joaquin River to be diverted in Sec. 31, T. 4 N., R. 11 E., M. D. B. & M., for power purposes (2550 h.p.).

SAN JOAQUIN COUNTY—Application 6631. City of Stockton, Stockton, for 50 c.f.s. and 90,000 acre-feet per annum from Calaveras River tributary to San Joaquin River to be diverted in Section 31, T. 4 N., R. 11 E., M. D. B. & M., for municipal purposes. Estimated cost \$1,500,000.

TULARE COUNTY—Application 6632. C. W. Gray of Hollywood, for .0012 c.f.s. from Mosquito Creek tributary to East Fork Kaweah River to be diverted in Sec. 16, T. 17 S., R. 31 E., M. D. M., for domestic purposes. Estimated cost \$350.

RIVERSIDE COUNTY—Application 6633. Wm. R. Peeler of 1701 S. Grand Ave., Los Angeles, for .0025 c.f.s. from spring tributary to Lake Elsinore to be diverted in Sec. 25, T. 6 S., R. 5 W., S. B. B. & M., for domestic purposes. Estimated cost \$500.

EL DORADO COUNTY—Application 6634. Wm. B. Parker of Placerville for 0.27 c.f.s. from Emigrant Ravine Creek tributary to Hangtown R. Webber Creek, South Fork American River to be diverted in Sec. 4, T. 10 N., R. 11 E., M. D. M., for irrigation purposes (22 acres). Estimated cost \$50.

SISKIYOU COUNTY—Application 6635. Buzzard Hill Mine, Inc., c/o L. J. Rowland, manager, Happy Camp, for 12.5 c.f.s. from Independence Creek tributary to Klamath River to be diverted in Sec. 32, T. 15 N., R. 7 E., H. M., for power and domestic purposes. Estimated cost \$10,000.

SISKIYOU COUNTY—Application 6636. Buzzard Hill Mine, Inc., c/o L. J. Rowland, manager, Happy Camp, for 0.05 c.f.s. from Independence Creek tributary to Klamath River to be diverted in Sec. 32, T. 15 N., R. 7 E., H. M., for irrigation and domestic purposes. Estimated cost \$2,000.

SISKIYOU COUNTY—Application 6637. Buzzard

Hill Mine, Inc., c/o L. J. Rowland, manager, Happy Camp, for 0.25 c.f.s. from Independence Creek tributary to Klamath River to be diverted in Sec. 32, T. 15 N., R. 7 E., H. M., for mining purposes. Estimated cost \$10,000.

MODOC COUNTY—Application 6638. John Miller, Lake City for 1.65 c.f.s. from Mill Creek tributary to Upper Lake to be diverted in Sec. 36, T. 44 N., R. 15 E., M. D. B. & M., for irrigation and domestic purposes (115.2 acres).

MODOC COUNTY—Application 6639. W. J. Hays, Mrs. Nannie Daniels, G. M. Warrens and Mrs. C. H. Darst, Lake City, for 3 c.f.s. from Mill Creek tributary to Upper Lake to be diverted in Sec. 36, T. 44 N., R. 15 E., M. D. B. & M., for irrigation and domestic purposes (252 acres).

MODOC COUNTY—Application 6640. Simon Bennett, Cedarville, for 1.35 c.f.s. from Mill Creek tributary to Upper Lake to be diverted in Sec. 36, T. 44 N., R. 15 E., M. D. B. & M., for irrigation and domestic purposes (160 acres).

MODOC COUNTY—Application 6641. Grove Wimer, Lake City, for 1 c.f.s. from Mill Creek tributary to Dry Alkali Lakes, to be diverted in Sec. 35, T. 44 N., R. 15 E., M. D. M., for irrigation purposes (15 acres). Estimated cost \$100.

MENDOCINO COUNTY—Application 6642. Murphy & Yarbrough, c/o H. S. Stocker, Ukiah, for 1 c.f.s. from Forsyth Creek tributary to Russian River, to be diverted in Sec. 16, T. 16 N., R. 12 W., M. D. M., for irrigation and domestic purposes (121.2 acres). Estimated cost \$800.

BUTTE COUNTY—Application 6643. H. D. March, Chico, for .5 c.f.s. from spring tributary to Little Butte Creek to be diverted in Sec. 30, T. 22 N., R. 3 E., M. D. M., for power purposes. Estimated cost \$2,000.

BUTTE COUNTY—Application 6644. H. D. March, Chico, for .5 c.f.s. from spring tributary to Little Butte Creek to be diverted in Sec. 30, T. 22 N., R. 3 E., M. D. M., for irrigation and domestic purposes (70 acres). Estimated cost \$2,000.

LAKE COUNTY—Application 6645. Martin Judge, Jr., and Co., Crocker First National Bank Bldg., San Francisco, for 250 c.f.s. and 175,000 acre-feet per annum from North Fork Cache Creek tributary to Cache Creek to be diverted in Sec. 4, T. 14 N., R. 6 W., M. D. M., for industrial and domestic purposes. Estimated cost \$3,000,000.

LAKE COUNTY—Application 6646. Martin Judge, Jr., and Co., Crocker First National Bank, Bldg., San Francisco, for 175,000 acre-feet per annum from North Fork of Cache Creek, tributary to Cache Creek to be diverted in Sec. 4, T. 14 N., R. 6 W., M. D. M., for irrigation purposes (50,000 acres). Estimated cost \$1,000,000.

SISKIYOU COUNTY—Application 6647. Buzzard Hill Mine, Inc., c/o L. J. Rowland, manager, Happy Camp, for 2.75 c.f.s. from Buzzard Creek tributary to Klamath River to be diverted in Sec. 4, T. 15 N., R. 7 E., H. B. & M., for power purpose (68.7 h.p.). Estimated cost \$2,000.

SISKIYOU COUNTY—Application 6648. Buzzard Hill Mine, Inc., c/o L. J. Rowland, manager, Happy Camp, for .25 c.f.s. from Buzzard Creek tributary to Klamath River to be diverted in Sec. 4, T. 15 N., R. 7 E., H. B. & M., for mining and domestic purposes. Estimated cost \$2,000.

SAN DIEGO COUNTY—Application 6649. Southern California Water Supply Co., c/o F. M. Faude, vice president, Loveland Engineers, Inc., 1010 Bank

of Italy Bldg., San Francisco, for 18.6 c.f.s. and 40,000 acre-feet per annum from Sweetwater River tributary to San Diego Bay to be diverted in Sec. 17, T. 16 S., R. 2 E., S. B. B. & M., Storage in T. 17 S., R. 2 E., S. B. B. & M., for irrigation and domestic purposes (5000 acres). Estimated cost \$1,500,000.

EL DORADO COUNTY—Application 6650. Florence D. Smith, 219 Kentucky St., Petaluma, for .001 c.f.s. from Winfield Spring tributary to Fallen Leaf Lake to be diverted in Sec. 13, T. 12 N., R. 17 E., M. D. B. & M., for domestic purposes. Estimated cost \$125.

VENTURA COUNTY—Application 6651. Chester F. Robbins, 468 E. Main St., Ventura, for 1.00 c.f.s. from Middle Fork of Lockwood Creek tributary to Lockwood Creek, Piru Creek, to be diverted in Sec. 20, T. 8 N., R. 21 W., S. B. B. & M., for irrigation and domestic purposes (80 acres). Estimated cost \$2,000.

PLACER COUNTY—Application 6652. Bear River Water and Power Co., c/o J. L. Rollins, manager, Colfax, 211,020 acre-feet per annum from Bear River tributary to Feather River to be diverted in Sec. 22, T. 15 N., R. 9 E., M. D. B. & M., for power purposes (4250 h.p.). Estimated cost \$2,500,000.

SANTA CLARA COUNTY—Application 6653. Mrs. A. F. Cochrane, c/o Louis O'Neal, First National Bank Bldg., San Jose, for 0.25 c.f.s. from Coyote River tributary to San Francisco Bay to be diverted in Sec. 11, T. 9 S., R. 3 E., M. D. M., for irrigation purposes (51 acres).

SANTA CLARA COUNTY—Application 6654. Mrs. A. F. Cochrane, c/o Louis O'Neal, First National Bank Bldg., San Jose, for 0.22 c.f.s. from Coyote River tributary to San Francisco Bay to be diverted in Sec. 11, T. 9 S., R. 3 E., M. D. M., for domestic purposes. Estimated cost \$250.

SANTA CLARA COUNTY—Application 6655. Mrs. A. F. Cochrane, c/o Louis O'Neal, First National Bank Bldg., San Jose, for 0.22 c.f.s. from Coyote River tributary to San Francisco Bay to be diverted in Sec. 13, T. 9 S., R. 3 E., M. D. M., for irrigation purposes (18 acres). Estimated cost \$1,500.

SANTA CLARA COUNTY—Application 6656. Mrs. A. F. Cochrane, c/o Louis O'Neal, First National Bank Bldg., San Jose, for 0.12 c.f.s. from Coyote River tributary to San Francisco Bay to be diverted in Sec. 11, T. 9 S., R. 3 E., M. D. M., for irrigation purposes (9½ acres).

SAN LOUIS OBISPO COUNTY—Application 6657. Dr. O. M. Polin, c/o J. D. McGregor, Gibson-Drexler Bldg., San Luis Obispo, for 1.78 c.f.s. from well tributary to San Luis Obispo Creek, to be diverted in Sec. 10, T. 31 S., R. 12 E., M. D. M., for irrigation purposes (131 acres). Estimated cost \$20,000.

LOS ANGELES COUNTY—Application 6658. William H. Cruzan, Rt. 1, Box 110, Saugus, for .5 c.f.s. from 3 springs, tributary to Mint Canyon, Santa Clara River, to be diverted in Sec. 4, T. 5 N., R. 14 W., S. B. B. & M., for mining purposes. Estimated cost \$26,000.

EL DORADO COUNTY—Application 6659. U. S. El Dorado National Forest, c/o Edwin F. Smith, supervisor, Placerville, for .0027, or approximately 1800 gals. per day, from unnamed stream tributary to Upper Echo Lake to be diverted in Sec. 35, T. 12 N., R. 17 E., M. D. M., for domestic purposes. Estimated cost \$150.

BUTTE COUNTY—Application 6660. A. H. Dakin, Magalia, for 40 c.f.s. from Empire Creek tribu-

tary to West Branch of North Fork of Feather River to be diverted in Sec. 20, T. 23 N., R. 4 E., M. D. B. & M., for mining purposes. Estimated cost \$300.

RIVERSIDE COUNTY—Application 6661. J. O. Blackburn, Hemet, for 3000 gallons per day from Bee Canyon Spring tributary to San Jacinto River to be diverted in Sec. 12, T. 5 S., R. 1 E., S. B. B. & M., for irrigation purposes. Estimated cost \$3,000.

RIVERSIDE COUNTY—Application 6662. Lucile Mann Morris, Keen Camp, for 8 miner's inches, or .2 c.f.s., from spring tributary to San Jacinto River to be diverted in Sec. 8, T. 6 S., R. 4 E., S. B. B. and M., for irrigation purposes (20 acres). Estimated cost \$1,100.

SAN BERNARDINO COUNTY—Application 6663. Otto E. Kanka, Lucerne Valley, for 20 miner's inches, or .5 c.f.s., from unnamed spring tributary to Mojave Desert to be diverted in Sec. 10, T. 3 N., R. 1 W., S. B. B. & M., for irrigation and domestic purposes. Estimated cost \$3,000.

SUTTER COUNTY—Application 6664. James R. Young, Cranemore, for 1.94 c.f.s. from Sacramento River tributary to Suisun Bay to be diverted in Sec. 14, T. 13 N., R. 1 E., M. D. B. & M., for irrigation purposes (154.97 acres). Estimated cost \$5,000.

Permits to appropriate water issued by the Department of Public Works, Division of Water Resources, during April, 1930.

ORANGE COUNTY—Permit 3458, Application 5304. Issued to San Juan Water Co., Los Angeles, April 2, 1930, for 2000 acre-feet per annum from San Juan Creek in Sec. 23, T. 8 S., R. 5 W., S. B. M., for domestic purposes.

MENDOCINO COUNTY—Permit 3459, Application 6544. Issued to Robert B. Finn, Mill Valley, April 5, 1930, for .025 c.f.s. from unnamed creek tributary to South Eel River in Sec. 21, T. 19 N., R. 12 W., M. D. M., for domestic purposes. Estimated cost \$450.

MARIPOSA COUNTY—Permit 3460, Application 6041. Issued to William Winsell, Nipinnawasee, April 15, 1930, for 500 gal. per day from Chowchilla Creek in Sec. 18, T. 5 S., R. 21 E., M. D. M., for domestic purposes. Estimated cost \$1,200.

MARIPOSA COUNTY—Permit 3461, Application 6139. Issued to Chris W. and Ebba W. Jeppeson, Romona, April 15, 1930, for .0031 c.f.s. from Chowchilla Creek in Sec. 18, T. 5 S., R. 21 E., M. D. M., for domestic purposes. Estimated cost \$1,200.

SIERRA COUNTY—Permit 3462, Application 6563. Issued to United States Tahoe National Forest, Nevada City, April 17, 1930, for 0.04 cubic foot per second from unnamed spring in Sec. 1, T. 20 N., R. 12 E., M. D. M., for domestic and recreational purposes. Estimated cost \$100.

LASSEN COUNTY—Permit 3463, Application 6324. Issued to Lester F. Totten, Bieber, April 21, 1930, for 2 acre-feet per annum from unnamed stream in Sec. 16, T. 36 N., R. 11 E., M. D. M., for stock watering. Estimated cost \$350.

INYO COUNTY—Permit 3464, Application 6532. Issued to H. M. White, Independence, April 28, 1930, for 0.002 c.f.s. from small unnamed spring in Sec. 10, T. 13 S., R. 34 E., M. D. M., for mining and domestic purposes. Estimated cost \$50.

YUBA COUNTY—Permit 3465, Application 6543. Issued to Wallace James Stanford, Wheatland, April 28, 1930, for 0.67 c.f.s. from Dry Creek in Sec. 34, T. 15 N., R. 6 E., M. D. M., for irrigation and domestic purposes on 100 acres. Estimated cost \$3,500.

LOS ANGELES COUNTY—Permit 3466, Application 6548. Issued to Isaac Wiskerson, Palmdale, April 28, 1930, for .025 c.f.s. from Granite Springs in Sec. 24, T. 6 N., R. 14 W., S. B. M., for irrigation and domestic purposes on 2 acres. Estimated cost \$400.

SIERRA COUNTY—Permit 3467, Application 6433. Issued to J. B. Harris, Downieville, April 29, 1930, for 0.125 c.f.s. from two unnamed springs in Sec. 32, T. 20 N., R. 10 E., M. D. M., for power purposes. Estimated cost \$500.

GLENN COUNTY—Permit 3468, Application 6562. Issued to William F. Linton, Orland, April 30, 1930, for 0.81 c.f.s. from unnamed stream in Sec. 8, T. 21 N., R. 3 W., M. D. M., for irrigation and domestic purposes on 5 acres. Estimated cost \$400.

TRINITY COUNTY—Permit 3469, Application 6149. Issued to C. M. Salyer, Salyer, April 30, 1930, for 80 c.f.s. from Cedar Flat Creek in Sec. 24, T. 6 N., R. 5 E., H. M., for mining purposes.

DAM APPLICATIONS, APPROVALS AND PLANS

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources, during the month of April, 1930.

AMADOR COUNTY—Original Amador Dam No. 472. J. W. Bullock, Amador City, owner; ambursen, 28 feet above streambed. Situated on Amador Creek tributary to Mokelumne River in Sec. 34, T. 7 N., R. 10 E., M. D. M., for storage purposes for debris use. Estimated cost \$17,500.

AMADOR COUNTY—Ludekins Dam No. 475. Ludekins Brothers, Pine Grove, owner; earthfill, 18 feet above streambed with a storage capacity of 8 acre-feet. Situated on Grass Valley tributary to Main Creek in Sec. 34, T. 7 N., R. 12 E., M. D. M., for storage purposes for debris use. Estimated cost \$2,000.

CALAVERAS COUNTY—San Mateo Produce Dam No. 495. California Lands, Inc., San Francisco, owner; arch and rock fill, 8 feet above streambed with a storage capacity of 60 acre-feet. Situated on an unnamed creek tributary to Calaveras River in Sec. 4, T. 3 N., R. 10 E., M. D. M. Estimated cost \$20,000.

CALAVERAS COUNTY—Salt Springs Valley No. 496. The California Company, Inc., Stockton, owner; earthfill, 53 feet above streambed with a storage capacity of 19,170 acre-feet. Situated on Rock Creek tributary to Littlejohn Creek in Sec. 16, T. 2 N., R. 11 E., M. D. M., for storage and diversion purposes for mining and irrigation use. Estimated cost \$100,000.

EL DORADO COUNTY—Ruple Dam No. 463. A. J. Ruple, Placerville, owner; earthfill, 12 feet above streambed with a storage capacity of 2 acre-feet. Situated on Webber Creek tributary to American River in Sec. 11, T. 11 N., R. 10 E., M. D. M., for storage purposes for irrigation use.

HUMBOLDT COUNTY—North Fork Dam No. 201. California Barrel Company, Arcata, owner; wood, 22 feet above streambed with a storage capacity of 20 acre-feet. Situated on Long Prairie Creek tributary to North Fork Mad River in Sec. 12, T. 6 N., R.

2 E., H. B. & M., for storage purposes for logging use. Estimated cost \$10,000.

LASSEN COUNTY—Hog Flat Dam No. 236. Lassen Irrigation Company, Standish, owner; rock and earthfill, 18 feet above streambed with a storage capacity of 8000 acre-feet. Situated on Hog Flat tributary to Susan River located in Sec. 20, T. 30 N., R. 10 E., for storage purposes for irrigation use. Estimated cost \$10,000.

LASSEN COUNTY—Lake Leavitt Dam No. 236-2. Lassen Irrigation Company, Standish, owner; earthfill with a storage capacity of 14,000 acre-feet situated on Alkali Lake Basin tributary to Susan River in Sec. 15, T. 29 N., R. 13 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$30,000.

LASSEN COUNTY—McCoy Flat No. 236-3. Lassen Irrigation District, Standish, owner; rock and earthfill, 14 feet above streambed with a storage capacity of 18,000 acre-feet, situated on Susan River in Sec. 23, T. 30 N., R. 9 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$17,500.

LOS ANGELES COUNTY—Shea Dam No. 777. R. P. Shea, Los Angeles, owner; arch 15 feet above streambed with a storage capacity of 15 acre-feet. Situated on an unnamed creek tributary to Antelope Valley Creek in Sec. 17, T. 7 N., R. 14 W., S. B. M., for storage purposes for recreation use. Estimated cost \$12,000.

LOS ANGELES COUNTY—Kewen No. 5 Reservoir Dam No. 2. City of Alhambra, Alhambra, owner; earthfill, 22 feet above streambed with a storage capacity of 15 acre-feet. Situated on Mill Creek tributary to San Gabriel River in Sec. 33, T. 1 N., R. 12 W., S. B. M., for storage purposes for municipal and other uses. Estimated cost \$67,627.

MOHOC COUNTY—Webb Flat Dam No. 160. Peter Gerig, Bieber, owner; earthfill, 5 feet above streambed with a storage capacity of 100 acre-feet, situated on an unnamed drainage tributary to Egg Lake in Sec. 7, T. 41 N., R. 7 E., M. D. M., for storage purposes for stock water use.

MODOC COUNTY—McGinty Dam No. 131. X. L. Land and Cattle Company, Alturas, owner; earthfill, 16 feet above streambed with a storage capacity of 340 acre feet. Situated on an unnamed drainage tributary to Goose Lake in Sec. 30, T. 46 N., R. 13 E., M. D. M., for storage purposes for irrigation and domestic use.

MONTEREY COUNTY—San Carlos Dam No. 644. Rancho San Carlos, Inc., Monterey, owner; rockfill, 15 feet above streambed with a storage capacity of 150 acre-feet. Situated on Yarnas Creek tributary to Carmel River in Sec. 18, T. 17 S., R. 2 E., M. D. M., for storage purposes for recreation use. Estimated cost \$13,500.

NAPA COUNTY—Gordon Valley Dam No. 14. City of Vallejo, Vallejo, owner; earthfill, 92 feet above streambed with a storage capacity of 10,000 acre-feet. Situated on Gordon Valley Creek tributary to Suisun Creek in Sec. 19, T. 6 N., R. 2 W., M. D. M., for storage purposes for municipal use. Estimated cost \$300,000.

NAPA COUNTY—Distributing Reservoir Dam No. 7-2. City of Napa, Napa, owner; gravity, 35 feet above streambed with a storage capacity of 28 acre-feet. Located in Lot 21, Imrieville, for distribution purposes for municipal use.

NEVADA COUNTY—Floriston Dam No. 305-2. Crown-Willamette Paper Company, San Francisco, owner; crib, 18 feet above streambed with a storage capacity of 11.15 acre-feet. Situated on Truckee River

in Sec. 30, T. 18 N., R. 18 E., M. D. M., for diversion purposes for power use.

NEVADA COUNTY—Swamp Angel Dam No. 306. Swamp Angel Mining Company, Arroyo Grande, owner; arch, 20 feet above streambed. Situated on Steep Hollow tributary to Bear River in Sec. 12, T. 16 N., R. 10 E., M. D. M., for storage purposes for debris use. Estimated cost \$4,500.

NEVADA COUNTY—Boulder Brook Dam No. 310. D. L. Jungck, Berkeley, owner; arch, 5 feet above streambed with a storage capacity of 30 acre-feet. Situated on Boulder Brook tributary to Bear River in Sec. 32, T. 14 N., R. 8 E., M. D. M., for storage and diversion purposes for irrigation use. Estimated cost \$5,000.

RIVERSIDE COUNTY—Lake Norconian West Dam No. 820-A. Rex B. Clark, Norco, owner; earthfill, 9 feet above streambed with a storage capacity of 500 acre-feet. Situated on no stream in Sec. 12, T. 3 S., R. 7 W., S. B. M., for storage purposes for recreation use.

RIVERSIDE COUNTY—Lake Norconian South Dam No. 820-B. Rex B. Clark, Norco, owner; earthfill, 13 feet above streambed with a storage capacity of 500 acre-feet. Situated on no stream in Sec. 12, T. 3 S., R. 7 W., S. B. M., for storage purposes for recreation use.

SACRAMENTO COUNTY—Daily Dam No. 452. Geo. O. Kyburz, Folsom, owner; earthfill, 13 feet above streambed. Situated on an unnamed draw tributary to Alder Creek, for storage purposes for stock watering use.

SAN BERNARDINO COUNTY—Los Serranos Dam No. 808. Davidson Investment Company, Long Beach, owner; earthfill, 12 ft. above streambed with a storage capacity of 110 acre-feet. Situated on no stream in Sec. 22, T. 2 S., R. 8 W., S. B. M., for storage purposes for irrigation use.

SAN DIEGO COUNTY—Green Dam No. 835. West Missouri Power Company, Escondido, owner; earthfill, 19 feet in height with a storage capacity of 8.4 acre-feet. Situated on no stream, for storage purposes for irrigation use. Estimated cost \$2,000.

SAN DIEGO COUNTY—Lemon Grove, Larger Dam No. 56-T. La Mesa, Lemon Grove and Spring Valley Irrigation District, La Mesa, owner; earthfill, 30 feet above streambed with a storage capacity of 15 acre-feet. Located in Sec. 25, T. 16 S., R. 2 W., S. B. M., for storage purposes for irrigation use.

SAN DIEGO COUNTY—Lemon Grove, Smaller Dam No. 56-S. La Mesa, Lemon Grove and Spring Valley Irrigation District, La Mesa, owner; earthfill, 30 feet above streambed with a storage capacity of 15 acre-feet. Located in Sec. 30, T. 16 S., R. 1 W., S. B. M., for regulating purposes for irrigation use.

SAN MATEO COUNTY—Crocker Dam No. 616. Provident Securities Company, Hillsborough, owner; earthfill, 35 feet above streambed with a storage capacity of 34 acre-feet. Situated on South Branch of Sanchez Creek tributary to San Francisco Bay. Located in San Mateo Rancho, for storage purposes for irrigation use.

SAN MATEO COUNTY—Notre Dame Dam No. 619. College of Notre Dame, Belmont, owner; earthfill, 40 feet above streambed. Situated on Belmont Creek for storage purposes for irrigation use.

SANTA CLARA COUNTY—Losse Dam No. 623. Vivian Losse Blair et al., Sunnyvale, owners; concrete. Situated on Stevens Creek tributary to San Francisco Bay in Sec. 3, T. 7 S., R. 2 W., M. D. M., for diversion purposes for irrigation use.

SANTA CRUZ COUNTY—Gilroy Dam No. 15. City of Gilroy, owner; concrete, 8 feet above streambed. Situated on Uvas Creek tributary to Pajaro River, for diversion purposes for municipal and domestic use. Estimated cost \$2,000.

SHASTA COUNTY—Burney Creek Dam No. 221. Mrs. Edna H. Black, San Francisco, owner; earthfill 11 feet above streambed with a storage capacity of 670 acre-feet. Situated on Burney Creek tributary to Pit River in Sec. 32, T. 36 N., R. 3 E., M. D. M., for storage purposes for irrigation and reclamation use. Estimated cost \$10,000.

YUBA COUNTY—Horse Valley Dam No. 332. Turner & Rabe, Comptonville, owner; arch, 25 feet above streambed. Situated on Horse Valley Creek tributary to Willow Creek, in Sec. 35, T. 19 N., R. 25 E., M. D. M., for storage purposes for debris use.

Application for approval of plans and specifications for construction or enlargement of dams filed with the State Department of Public Works, Division of Water Resources, during the month of April, 1930.

LOS ANGELES COUNTY—Mulholland Dam No. 6-17. City of Los Angeles, Los Angeles, owner; gravity arch, 191 feet above streambed with a storage capacity of 7437 acre-feet situated on Weid Canyon in Sec. 3, T. 1 S., R. 14 W., S. B. M., for storage purposes for municipal use.

SAN DIEGO COUNTY—Lake Loveland Dam No. 840-3. Southern California Water Supply Company, San Francisco, owner; arch, 183 feet above streambed with a storage capacity of 27,700 acre feet. Situated on Sweetwater River in Sec. 17, T. 16 S., R. 2 E., S. B. M., for storage and diversion purposes for municipal and other uses. Estimated cost \$490,258. Fees paid \$2,951.29.

SUTTER COUNTY—Allen Dam No. 1-12. Preston School of Industry, Waterman, owner; buttress, 21 feet above streambed with a storage capacity of 2½ acre-feet, situated on Downes or Ione Ditch in Sec. 27, T. 6 N., R. 10 E., M. D. M., for storage purposes for domestic use. Estimated cost \$10,120.

Plans and specifications for the construction or enlargement of dams approved by the State Department of Public Works, Division of Water Resources, during the month of April, 1930.

BUTTE COUNTY—Lake Madrone Dam No. 342-2. Geo. C. Mansfield and Duncan C. McCallum, Oroville, owner; ambursen, 27 feet above streambed. Situated on Berry Creek tributary to Feather River in Sec. 27, T. 21 N., R. 5 E., M. D. M., for storage purposes for recreation use. Estimated cost \$20,000.

EL DORADO COUNTY—Rock Creek Dam No. 465. Arthur E. Rasor, Georgetown, owner; earthfill, 30 feet above streambed with a storage capacity of 34.2 acre-feet. Situated on Rock Creek tributary to South Fork American River in Sec. 34, T. 13 N., R. 11 E., M. D. M., for storage and diversion purposes for domestic, irrigation, mining and recreation use. Estimated cost \$2,000.

Colored Parson—"Now kin enny ob yo' sinuers tell me why the lion didn't eat Dan'?"

Nobody answered.

"Wal, ah'll tell yer bunch of unbelievers," he yelled; 'twas cos most o' him was backbone, an' the rest was grit."

Traffic Officers Go to School

1 1 1 1 1 1

CALIFORNIA'S highway patrolmen are learning to do their jobs better by going to school.

Operated under a new section of the Motor Vehicle Act requiring its establishment, the first of a series of training schools for the officers was opened at the State Fair grounds in Sacramento on May 27th.

Approximately forty inspectors and captains from all parts of the state were chosen for the initial period of three weeks. A second group of fifty was drawn immediately after the officers attending the first school had returned to their regular duties.

The school is being operated along semi-military lines with reveille at 6.30 a.m. and taps at 10.30 p.m. Each day starts with thirty minutes of snappy physical exercise followed by close order drill. Classes start immediately after breakfast, continuing throughout the day and well into the evening.

Rigorous and intensive as this course of study and living seems it is enjoyed by the officers, who realize if they expect to make their living in the exercise of the duties of the traffic officer they must learn what those duties are and how best to perform them.

By a fortunate arrangement made possible

The traffic officers in school

Both schools were preliminary in character and will be a sort of prelude to the regular schools to be established for a three months' period to train patrolmen. Quarters of the United States Air Corps at Mather Field, near Sacramento, will be used for the final school periods, permission to use them having been obtained from the War Department by General James J. Borree, head of the Bureau of Schools and Education of the California Highway Patrol, who is in complete charge of the schools.

through the cooperation of the Department of Finance, the patrol was able to obtain the use of the grandstand building, which is equipped with a complete kitchen and dining room and has ideal facilities for sleeping quarters.

The men were thus able to get their meals in the same building in which classes were held, the entire upper floor of the building being taken over by the school.

Although the students were called on at times to do minor fatigue duty, all details of preparing and planning meals were left up to

(Continued on page 40.)

Making Our Highways Smooth

By R. M. GILLIS, Assistant Construction Engineer

BECAUSE the public demands above all things that a pavement shall be smooth riding, all of our highway departments are bending every effort in the construction of their roads to secure a surface that will give the fewest possible bumps to the motorist who passes over them. Engineers, contractors and equipment manufacturers are all working to perfect methods and machinery that will make the way of the passing autoist easier.

To have some unit of measure by which the roughness of a road could be accurately gauged, the California highway engineers have tried numerous devices to measure and record the size and number of bumps per mile of surface. In one instance a somewhat elaborate attachment on a car attempted to draw a profile of the road as recorded by the action of the car springs, in another a sled was drawn behind a car and electrical connections rang a bell when high or low spots in the surface were encountered. All of these methods were either inaccurate, cumbersome, or interfered with traffic when operated, and were not entirely satisfactory. In 1926 the Bureau of Public Roads designed an instrument for this purpose which could be attached to any car without marring it, was satisfactorily accurate and was simple in construction. This has been used by California for the past three years.

Briefly described, the "roughometer," as it is called, measures the spring travel of the car as it is driven over the road. A rack fastened by a rod to the front axle of the car engages a pinion fastened to the frame; through a ratchet the pinion drives a speedometer cable which turns a counter on the dashboard. The numbers registered by this counter are taken as units of roughness. A

The accompanying picture shows the machinery by which smoothness of California highways is tested. The top picture shows a roughometer attached under the hood of a car. The middle picture shows the counters attached to the dash. The upper dial registers units of roughness and the lower dial shows miles to the nearest hundredth. The lower picture shows the car running over the calibration board.

second counter on the dash is connected with the speedometer drive and registers miles to the nearest hundredth. A lever on the dash

The Barstow Overhead Crossing

By A. H. STOVER, Designing Engineer of Bridges

FOR the past several years the problem of elimination of highway crossings at grade with main line railroads has been one of steadily increasing importance in the construction of safe, high-speed, first-class highways. Hundreds of thousands of dollars have been

spent in California by the cities, counties, State Division of Highways, and the railroad companies for the construction of under-grade and overhead structures in order to eliminate grade crossings both on old and new highway construction. A great many of these eliminations have been effected by depressing the

A. H. STOVER

grade of the highway for a few hundred feet and supporting the tracks with steel girders resting on concrete abutments; and others, where the railroad may be crossed in a cut, by a few simple concrete spans. However, some of the crossing elimination projects involve major structures, costing two to three hundred thousand dollars. A notable example of the latter class is the overhead crossing and approach fills recently completed over the

tracks of the Atchison, Topeka and Santa Fe Railway in the town of Barstow, San Bernardino County. The importance of this project is due both to the geographical location with respect to the state and national highway system, and to the size and cost of the structure.

The location is at the intersection of state highway routes 31 and 58. Route 31 is one of the primary roads and extends from San Bernardino to the Nevada line near Jean. It is also a link in the Arrowhead Trail, a continental route extending through Wyoming, Utah and Nevada, on the way to the coast. Route 58 is also a part of the state primary system of roads and extends from Mojave by way of Barstow and Needles to the Arizona line at Topock. This route is a section of the transcontinental highway known as the National Old Trails, which carries a large volume of tourist traffic to and from California by way of Arizona, New Mexico and Colorado. With the large amount of out-of-state traffic and the local and commercial traffic on the highway, and a considerable amount of through and yard movement on the railroad, a safe and convenient crossing is of utmost importance for both parties, as well as the local citizens.

The structure itself is of sufficient size to warrant attention. It consists of three 172-foot by 6-inch steel truss spans, two 65-foot deck plate girder spans, one 76-foot deck plate girder span, one 40-foot steel span and approximately 392 feet of timber trestle. The

The New Barstow Overhead Crossing

total length of the bridge is 1193 feet, which, with about 800 feet of fill, involving 24,000 cubic yards of embankment, makes an overall length for the project of nearly 2000 feet.

The three truss spans and the deck plate girder spans are supported on concrete piers with spread footings. The timber spans and the steel beam span are on frame bents with concrete pedestals. All excavation for the footings were made by hand and, due to the fact that the material was very loose and dry and to the proximity of heavy rail traffic, substantial timbering was necessary in all of the pits. Practically all of the excavations were in made ground consisting of sand, rock and cinders; but satisfactory foundation material was encountered in the old stream bed which underlays the railroad fill at this point.

The center steel truss span was erected by cantilevering out from the adjacent spans, as the placing of false-work would have been practically impossible due to the great number of trains passing.

Customary methods of mixing and placing concrete were followed in the construction of the footings and piers, with the exception that certain adjustments were necessary to handle the work without interfering with train and yard operations of the railroad company. An especially smooth finish was obtained on the piers by the use of first-class form material and good workmanship, both in the construction of the forms and in placing the concrete. About 700 cubic yards of concrete were used in this part of the structure.

The 616 tons of structural steel required for the truss and plate girder spans was furnished by the Virginia Bridge and Iron Works, Roanoke, Virginia. The steel arrived at the bridge site on flat cars and was lifted into place by a locomotive crane. Experienced steel workers and riveters were employed and very satisfactory workmanship was obtained.

Since practically all of the steel spans of the structure are over the railroad tracks and yards and will be subjected to the steam and smoke of the locomotives, a black bituminous enamel paint was substituted for the gray aluminum paint ordinarily used on highway bridges in the state. As this paint has not been used extensively, the contractors were not familiar with the best methods of handling it, and had some difficulty at the beginning, but, after securing the services of a representative of the paint company, a very satisfactory job resulted.

The three long steel truss spans and the

plate girder spans were necessary to cross the numerous tracks of the Atchison, Topeka and Santa Fe division yards. Twenty-four tracks are now in use under the bridge and provision is made for several additional tracks which may be required at a future date. The 40-foot steel beam span crosses over a city street which accommodates local traffic paralleling the railroad yards. Two stairways from the level of the yards to the bridge deck and a sidewalk from the south end of the bridge to the north end of the plate girder spans are provided for the convenience of the railroad employees and other pedestrian traffic crossing the tracks. The sidewalk is five feet wide, the roadway on the bridge twenty-four feet, and the approach fills are graded to a width of thirty feet.

Bids for this contract were received June 13, 1929. The contract was awarded to the Lynch-Cannon Engineering Co. of Los Angeles. The contract was approved by the attorney for the state on July 16, 1929, but, due to the extreme hot weather and consequent difficult working conditions during the summer months on the Mojave Desert, no work on the bridge was done until October 10th.

Despite the delay in starting, the contractors completed all items of the contract April 28, 1930, nearly three months ahead of the scheduled date for completion.

First-class workmanship characterized the job throughout, and the resulting finished structure is highly satisfactory to the state, the railroad, and the local citizens.

The total cost of the contract was \$158,142.77.

Traffic Officer (reproachfully): "Young lady, do you know anything about the traffic laws of this city?"

Fair Motorist: "Yes, a little. Can I help you?"

Pat Murphy attended a safety meeting. The boys had been given some printed instruction and the safety man wanted to check on results.

"Pat," he said, "Can you give me six good reasons for safety?"

Now Pat wasn't up on his reading but he was rather quick with his comeback.

"Sure," he replied, "The four little Murphys, me wife and myself."—*Mo. Pac. Magazine*.

That he has outroughed "Wild West Bill," the bad man who rode into town on a mountain lion with a rattlesnake for a whip, is the claim of Joe Davis, telephone company employee of Winnemucca. Davis catches wildcats in his overalls.

While en route to Battle Mountain in an automobile he saw a young wildcat cross the highway and dart into a small culvert. He stopped his machine and determined to make a catch.

Removing his overalls, Davis tied the legs and placed the waist end over the culvert. Then he chased the wildcat into the trap. He has it at his home in Winnemucca to support his story.

State Supervision of Dams

By GEO. W. HAWLEY, Deputy in Charge of Dams*

THE continued economic growth and prosperity of California, in common with that of any semiarid region having variable stream flow, is in large part dependent on complete economic utilization of its water resources and the degree of flood protection afforded. The natural stream flow of California will admit of very limited increase over present use and consequently the future water supply will be obtained chiefly by storage.

It is, therefore, axiomatic that dam building will increase rather than diminish both in size and number of dams, and since the most favorable sites, topographically, geologically and economically, are first in order to be developed it follows that as requirements for storage and flood control increase the suitability of the available sites will be less favorable. As a complement of this proposition, the property values and number of lives which might be jeopardized through the failure of any dam or affected by the construction of a dam, are becoming increasingly great. Because of the urgent necessity for constructing additional dams, their increasing magnitude, and diversification of type, it is imperative to safeguard, in so far as is humanly possible, public safety and security against the potential hazards of impounded water. This can be effected only through proper and adequate engineering supervision over the design, construction, maintenance and operation of all dams.

Prior to the enactment of legislation governing the supervision of dams in California there existed in this state, as in many other states, several regulatory agencies with varying degrees of authority and responsibility, exercising jurisdiction in differing degrees from complete control over some dams to partial, ineffective, divided, or no supervision over others. Lack of centralized authority and responsibility can result only in confusion of authority, divided responsibilities, ineffective supervision and a state of insecurity in the minds of interested parties.

Inherent public fear attaches to dams more, perhaps, than to any other engineering work because, no doubt, of the appalling loss of life and property which has been caused by the

GEORGE W. HAWLEY

failure of dams and which it has been felt was in a high degree preventable. Public fear was accentuated by failure of the St. Francis Dam, together with questions as to the integrity and safety of other dams. Safeguarding the life and property of its people is a sovereign duty of the state and authorization to supervise the construction and maintenance of dams has been held to be not only a proper but necessary exercise of the police powers of the state. (Decision of Appellate Court in *Bent Bros. vs. Campbell*, published in November, 1930, issue, CALIFORNIA HIGHWAYS AND PUBLIC WORKS.)

The last legislature, cognizant of the imperative need of safeguarding life and property and in accordance with the police power of the state, enacted chapter 766, Statutes of 1929, governing the supervision of all dams in California other than those federally owned. This act, perhaps the most complete and far-reaching legislation enacted for a similar purpose by any governmental agency, embodies the salient features of many drafts proposed,

* (Resume of discussion before annual convention of A. S. C. E. Credit to be given transactions A. S. C. E.)

during the formulative stages, by individuals, engineering groups, municipalities, irrigation districts, power companies and outstanding legal authorities. The act, by reason of the thorough analysis of its many phases, conscientious effort directed to its preparation, and the extent gone to in reconciling major differences of opinion, has in general met with the accord of all interested parties as evidenced by the hearty cooperation and invaluable assistance rendered by such interests in their endeavor to make the law effective.

The law places under the jurisdiction of the State Engineer all dams in California, heretofore built or hereafter to be built, other than federal dams, which have a capacity of 10 acre-feet or more or a height of 15 feet or more, regardless of ownership or other supervisory control. The State Engineer is authorized to cooperate with agencies having joint jurisdiction, such as the California Debris Commission, Federal Power Commission and U. S. Forest Service, and is invested with authority and directed to supervise the construction, enlargement, alteration, repair, maintenance, operation and removal of dams for the protection of life and property.

Every owner of a dam completed prior to the effective date of the act is required to file application for approval of the dam, this application to be accompanied by such available and appropriate information concerning the dam as may be required.

The construction of any new dam or the enlargement, repair or alteration of any dam can not be commenced until the owner has obtained approval of the plans and specifications. It is required that the application for approval of plans and specifications for a new dam shall set forth the location, type, size and height of proposed dam and appurtenant works; contemplated use and storage capacity of the reservoir and such other pertinent data as may be required concerning foundation conditions, drainage basin area, precipitation, flood flow and other appropriate data.

During the construction, enlargement, repair or alteration of any dam there is required such inspections, investigations or examinations as may be necessary to secure conformity with approved plans and specifications; and in order to insure safety, the State Engineer has authority to order revisions or modifications in the plans and specifications, or, if conditions are revealed which will not permit the construction of a safe dam, the approval may be refused or revoked.

As soon as practicable after completion of any dam it is inspected, and upon a finding

that the work has been done in accordance with the plans and specifications and that the dam is safe for the use contemplated, a certificate of approval is issued. A similar procedure is provided in supervising the repair, alteration or removal of a dam.

Supervision over the maintenance and operation of dams in so far as is necessary to safeguard life and property from injury by the reason of the failure thereof is vested in the State Engineer.

There are at the present time about 650 dams under the jurisdiction of the department, segregated as follows: 400 earth dams, 46 rock fills, 26 timber dams, 97 arch dams and 82 gravity dams. There are some 1000 additional known dam sites, many or most of which must be developed as the needs for additional water demand and warrant.

The dams under jurisdiction vary in height from 15 feet to in excess of 350 feet and in type through the known range of design, namely: earth fill, rock fill, hydraulic fill, gravity and arch masonry types and various composite structures. The reservoirs formed have storage capacities from 10 acre-feet to 1,300,000 acre-feet and spillway capacities up to 120,000 second-feet. These dams are located from sea level to 11,500 feet elevation and are constructed on foundations ranging through the whole geological category. Many heterogeneous types of dams were completed during the early history of California for which no complete authentic records or data are available, and hence all necessary action must be based solely on field examination. It is required by law that a certificate of approval be issued for each dam or that work necessary to make the structure safe be done. Upon completion of this work, certificates of approval are to be issued. This action upon existing dams must be completed prior to August, 1932.

To accomplish the desired objective, namely the determination and establishment of safety of each of these 650 existing dams, in addition to supervising new construction, an experienced and sufficient personnel is being organized to cope with many involved technical and practical problems. The activities of the department are grouped in six general classifications: hydrographic studies, geological examinations, stress and structural analysis, supervision during construction, field examination of existing dams and appurtenant works and supervision of maintenance and operation.

In dams of magnitude or where the technical features involved are such as to require

California Wins Larger Power Fees

Governor Young has received a telegram from Congressman Englebright in Washington that the Comptroller General has sustained the position taken by the State of California with regard to the distribution of Federal Power Commission fees and that the Power Commission will shortly send the state government of California a check for \$108,000 in full payment of back fees under the new method of distribution. The payment due on July 1st under the previous interpretation would have been \$7,000 and \$8,000, so the state will receive approximately \$100,000 more than would otherwise have been the case. Under this decision California will in the future receive from the Power Commission approximately four times the money it would have under the old ruling. These payments may run as large as several hundred thousand dollars a year when the hydroelectric power resources of the state are fully developed.

Governor Young said, "I am pleased to note the new decision of the Power Commission and Comptroller General under which California receives an additional \$100,000 this year and will receive large payments in

the future. I consider this another evidence of the cooperative attitude of the United States in assisting the California water program."

The Federal Power Commission was created in 1920 and since that time has been collecting fees on its power projects throughout the country and distributing these fees to the various states, the Reclamation Bureau and other agencies in accordance with a ruling made by the Commission. In 1928, after an investigation by State Engineer Edward Hyatt of the Federal Power Commission Law and the distribution of fees thereunder, Governor Young reached the conclusion that the state was not receiving its proper share and took the matter up with the Power Commission. After extended correspondence, legal opinions, etc., the question was referred to the Comptroller General, who on February 3, 1930, ruled that the contention of Governor Young and State Engineer Hyatt was correct and that distribution should be made in the future in accordance with California's contentions. Request was then made that this decision be made retroactive and that payment for past years be in accordance therewith.

Snow Survey Shows Extent of Melting

ALTHOUGH the principal snow surveys as a basis for run-off estimates were made in late March and early April, additional surveys have been made in late April and early May at the key snow courses to furnish information for possible modification of earlier estimates and to indicate the extent of melting since April 1st. These later surveys complete the record of monthly surveys. January to May, for the key snow courses and should prove of value, when a sufficient number of years records are available, in relating snow and precipitation data to monthly *distribution* of run-off.

The precipitation to May 1st, in per cent of normal for the major stream basins on the western slope of the Sierra, is shown from the precipitation station data about as follows: Pit, McCloud and Upper Sacramento, 90 per cent; Feather, 100 per cent; Yuba, 85 per cent; American, 80 per cent; Mokelumne to Merced, 70 to 75 per cent, except Stanislaus, where a higher percentage is indicated; and Upper

San Joaquin to Kern, 60 to 70 per cent. The similar data for southern California stream basins show about 80 per cent for Santa Ana and 70 per cent for San Gabriel.

The snow surveys at the key courses show a melting of the April 1st pack as measured at the same courses, about as follows: Above 7500 elevation: Upper Sacramento and McCloud (one course, Mt. Shasta), no melting; Pit and Feather (one course, Mt. Lassen), 33 per cent; American (one course, Carson Pass), 17 per cent; Mokelumne (one course, Blue Lakes), 13 per cent; Tuolumne and Merced (average of six courses), 28 per cent; Mono (two courses), 16 per cent; Upper San Joaquin (one course, Kaiser Pass Meadows), 25 per cent; Kings (one course, Sand Meadows, 8100), 61 per cent; Kern (one course, Round Meadow), 35 per cent. Below 7500 elevation, except for five courses in the Yuba Basin which average 45 per cent, most of the courses show a melting from 80 to 100 per cent of the April 1st pack.

The Architect's Part in the State Work

By HARRY W. DEHAVEN, Chief Architectural Draftsman

LIKE any other art, craft, science, business or profession, the architectural practice of the present day is a product of evolution. The appropriation of the title Architect was the result of a gradual process. Today an architect is a professional person whose occupation consists in originating and supplying artistic and scientific data preliminary to and in connection with the construction of buildings, their appurtenances and decorations; in supervising the operations of contractors, and in preparing contracts between owners and contractors.

HARRY W. DE HAVEN

Probably no one man could unite, with any great degree of excellence, all the attributes which could be alleged as essential to the complete architect. This ideal state

is attained through the acquisition of an organization of specialists, competent in all the technical requirements of the building industry. Such is the Division of Architecture of the State Department of Public Works.

It is this organization that supplies the architectural service required by fifty different points of activity controlled by the state. Many of these points are institutions, and in effect are small cities with very unusual type of buildings required for their particular need. The accumulation of data on this specialized service renders this office more efficient in the production of the drawings and specifications for subsequent buildings at a much less office expenditure than was charged against the first.

There is an average of approximately \$10,000 worth of business produced daily by the Division of Architecture. The method in which part of this business is produced is after this manner:

Executing preliminary studies for all state buildings and developing the problems;

Investigating and selecting materials of construction, both concealed and exposed;

Preparing working drawings in detail, including scale and full-size detail. This method shows the contractor exactly what is required, and permits us to push the contractor to the limit after the contract is awarded and robs him of the usual excuse for delays, "Waiting for Details";

Designing and selecting fixed and movable furniture;

Interpreting building laws, etc.

The following subdivisions are found in the Division of Architecture:

Structural Design, Mechanical Design, Electrical Design, Surveying, Estimating, Specifications, and Superintendents of Construction.

The buildings constructed by the state are mostly of the one- and two-story type, built of reinforced concrete or brick because of their use and the nature of their occupants. State buildings of all kinds are noted as suitable for their purpose—strong, substantial and durable. They are the acknowledged criteria of good construction. This office has always given the first consideration to the importance of these factors.

Architecture may be defined as the art of building beautifully and constructing soundly. There is no formula that produces good architecture.

The architectural draftsman plays an important part in making a design a success, as it is he who develops the working drawings. He must be able to interpret in building terms the designer's idea in the form of drawings that the contractor can understand. Each set of drawings are thoroughly checked before being sent out for bids. This eliminates any chance of costly extras due to mistakes or misunderstanding on the part of the contractor as to just what is required.

The drawings for most of the buildings are made on tracing cloth in ink, and after all prints have been made, are filed as a permanent record. Should any change be made during construction, it is noted on the original drawings that a change order has been issued. In this way future alterations or additions can be made without making trips to the job and measuring the existing work, which saves considerable time.

The Old Plank Road Through the Sand Dunes and the New Highway

Old Plank Road to Be Preserved

By E. Q. SULLIVAN, District Engineer

SEVERAL weeks ago an editorial appeared in the *Calexico Chronicle* by the editor and publisher, Mr. Randall Henderson. The editorial follows:

A plea for the preservation of the old plank road—or what remains of it—which spanned the rolling sand dunes east of Imperial Valley before the paving was installed, is made in a recent issue of the *Arizona Sentinel*.

The *Sentinel* writer recalls some of the obstacles which confronted the state engineers when they undertook to replace the planking with cement. One group of experts declared that if the grade was low the blow sand would cover the highway. Another group insisted that if the road was high the wind would blow the sand from under it.

The State Highway Department solved the problem by placing an engineer on the location for a period of observation. The present highway is the result—and its success has vindicated the judgment of those who made the final decision.

Here is the *Sentinel* writer's comment:

"The old plank road, which for years was the only highway crossing the sand hills, connecting Yuma with Imperial Valley, is being carted away by vauldals. Since the coming of the hard-surfaced pavement, the old plank road has not been used; neither has it been forgotten.

Stretched for miles paralleling the highway it is always an interesting sight, not only to the tourist, but to those who have made the tedious trip across its many boards, bound together with iron strips. It is true that the planks are buried in many places, but the manner in which they yet shift with the sands and withstand the ravages of time and elements cause one to marvel at the ingenuity of the men responsible for the building of such a highway.

The name of the 'old plank road' is famous throughout the country. Tourists come this way just to see how we traveled across the sand hills years ago. It is really an interesting sight and should be left just where it is, or until the sands cover it over. It is not in the way and is on no one's property. Let's try and stop further despoliation of one of the southwest's most famous and interesting marks."

Thought had not been given to the preservation of the old plank road, and in fact the Imperial Irrigation District, being a public organization, had been given permission to use such planks as they might desire. The idea of preserving the old plank road as being an object of historical interest seemed good, and a letter was written by the Division of Highways to the Imperial Irrigation District as follows:

I have received a clipping from the *Calexico Chronicle* in which a plea is made for preservation of the old plank road across the sand hills because of its historic value. This is our route Imp-27-43.

You will recall that a number of years ago permission was requested from the Imperial Irrigation District to remove planks from the old road for use of the district. It is my recollection that this permission was granted the district.

I have not noticed that many, if any, of the planks have been removed from the old plank road by the Imperial Irrigation District.

In view of the local suggestion that the old plank road be preserved because of its historic value, please advise if the Imperial Irrigation District still desires to remove planks from the old road.

If it is still desired to use planks from the old plank road, please advise if it will not be satisfactory to remove only such parts of the old plank road as are beyond sight of the new highway.

I have received the following letter from the Imperial Irrigation District:

The district is in accord with the suggestion you make in your letter of April 11th regarding the old plank road across the sand hills. It is true we contemplated using the planks, but found that the cost of taking up and hauling to the valley was not economical. I think it is a fine idea to preserve the plank road, at least that portion in sight of the highway, and we will be glad to cooperate with you in doing this.

Yours very truly,

(Signed) M. J. Dowd,
Chief Engineer and General Superintendent.

Uniform Traffic Laws Termed Problem for States and Cities

FINAL recommendations for nation-wide uniformity of traffic rules and regulations on the municipal and state thoroughfares of the country were adopted by the drafting committee of the national conference on street and highway safety which concluded its three-day sessions May 29 in Washington, D. C. The State Department of Public Works and the California Highway Commission was represented at this meeting by State Highway Engineer C. H. Purcell.

The following account of this important conference is contained in *The United States Daily*:

The Secretary of Commerce, Robert P. Lamont, at the conclusion of the meetings, declared it is now up to the states and municipalities to carry on the recommendations adopted.

"I think the deliberations of the conference," he told the delegation, "are a convincing guaranty that they will have the earnest support of the organizations and associations which have been represented here."

The report of the drafting committee was presented to the conference by George B. Young, delegate from Montpelier, Vt., for the national conference of commissioners on uniform State Laws. The report, it was announced, did not make any material changes in the uniform vehicle code or the model municipal traffic ordinance as they had been originally presented to the conference.

RAIL SIGNALS MODIFIED

Upon the motion of W. N. Doak, national legislative representative of the Brotherhood of Railway Trainmen, and the concurrence of Dr. Julius H. Parmelee, acting chairman of the committee on railway grade crossings and highway intersections, it was agreed to broaden the language of the code relating to signaling devices and warning signs at cross-

ings so as not to hamper or interfere with the future development and improvement of these mediums of protection.

An effort to remove the provision requiring inspection of automobiles as to mechanical fitness and safety prior to issuance of license tags was met with rejection at the hands of the delegates. The belief that the provision would impose an unduly heavy tax upon the public authorities in connection with the licensing of automobiles and doubt if it could be carried out in his state was expressed by H. B. Myers, chief of police of New Orleans.

Defending the provision, George W. Elliot, general secretary of the Philadelphia Chamber of Commerce, declared that under the statute of the state of Pennsylvania 1000 defective and unsafe automobiles have been removed from the highways of his state in a single year and that defects in 2000 others were remedied.

Mr. Elliot pronounced the Pennsylvania law as one of the strongest factors for safety on the streets and highways in his state, and declared no inconvenience or delay is experienced by motorists in obtaining their annual licenses as a result of the operation of the law. He asserted that it would be a

distinct backward step for the conference or for any state or city to refuse to support the proposal for the mechanical inspection of motor vehicles.

SPEED LIMITS FIXED

Included in the recommendations adopted by the conference are provisions fixing a 20-mile-per-hour speed limit in business districts, 25 miles in residential districts and in public parks within cities, and 45 miles outside of business and residential districts.

With respect to slow driving the code declares: "It shall be unlawful for any person

State Highway Engineer C. H. Purcell, who attended National Safety Conference at Washington, D. C.

unnecessarily to drive at such a slow speed as to impede or block the normal and reasonable movement of traffic except when reduced speed is necessary for safe operation or because upon a grade or when the vehicle is a truck or truck and trailer necessarily in compliance with law proceeding at reduced speed."

Concerning passing of vehicles proceeding in opposite directions to code requires that drivers "shall pass each other to the right, each giving the other at least one-half of the main traveled portion of the roadways as nearly as possible."

RULES FOR OVERTAKING

Regarding overtaking and passing cars the recommendations provide that the driver of an overtaken vehicle "shall give way to the right in favor of the overtaking vehicle on suitable and audible signal and shall not increase the speed of his vehicle until completely passed by the overtaking vehicle."

It is also required that "the driver of a vehicle shall not drive to the left side of the center line of a highway in overtaking and passing another vehicle proceeding in the same direction unless such left side is clearly visible and is free of oncoming traffic for a sufficient distance ahead to permit such overtaking and passing to be completely made without impeding the safe operation of any vehicle overtaken."

When approaching curves, etc., the code rules against driving to the left side of the center line of a highway "when approaching the crest of a grade or upon a curve in the highway where the driver's view along the highway is obstructed within a distance of 500 feet."

With respect to municipal traffic regulations, the recommendations provide that a left turn at an intersection be made on the green light. The regulation, as contained in the model municipal traffic ordinance, declares that "the operator of a vehicle or street car intending to turn to the left at an intersection where traffic is controlled by traffic control signals or by a police officer with proper care to avoid accident and shall proceed to make such left turn only upon the 'go' signal, unless otherwise directed by a police officer."

The conference expressed its approval of the cooperation of the various public organizations in solving the traffic problem and passed a resolution offered by H. S. Bottenheim, editor of the *American City*, calling upon Secretary Lamont to appoint a committee to consider the establishment of a national foundation for the study of congestion and public safety.

LACK OF DATA HANDICAPS COMMITTEE

The resolution follows in full text:

"Whereas, the various committees of this conference, in their efforts to base their reports not on opinions but on facts, have been seriously handicapped by the lack of authoritative and comprehensive data on many vital phases of the traffic, transportation and safety problems; and congestion in urban communities is of growing importance and complexity, with resultant economic loss conservatively estimated at \$2,000,000,000 annually and an appalling annual toll in human lives and suffering; and

"Whereas, there is a close relationship between congestion of vehicles on the city streets and city planning, highway design, land utilization, and the public transit facilities of the community; and

"Whereas, public authorities, civic organizations, property owners, business, financial and insurance interests, transportation agencies, automobile manufacturers and owners of automobiles are interested in

the development of measures, both corrective and preventive, for the relief of congestion which shall bring about the greatest possible improvement at minimum costs, equitably distributed; now, therefore, be it

"Resolved, (1) that the third national conference on street and highway safety urgently requests the cooperation of the federal government, through such technical research and fact-finding experimentation as could properly be conducted by the Bureau of Public Roads of the Department of Agriculture, the Department of Commerce, and other governmental offices; and to this end the conference earnestly recommends to the Congress of the United States that necessary legislation be provided to permit the proper governmental agencies to conduct such research and experimentation upon important phases of the traffic and congestion problem, and to cooperate in these matters with municipal and other local authorities.

COMMITTEE FOR NATIONAL ORGANIZATION SUGGESTED

"And (2) That the conference further requests that the Honorable Robert P. Lamont, as its chairman, appoint a committee to consider ways and means of establishing a national foundation, nongovernmental in character, equipped with the funds and manpower adequate to conduct comprehensive studies of such problems of congestion affecting public safety, the stability of property values and the orderly development of urban communities, as are indicated on the list appended hereto. It is suggested that, in its research on these and similar problems, the proposed foundation use as fully as practicable the cooperation of existing organizations and educational and research institutions in their respective fields.

The conference also expressed in a resolution its gratification to President Hoover for his leadership in the movement for uniform recommendations. The resolution follows in full text:

"Under the inspiration of your appeal to this conference at its opening meeting to promulgate effective measures for the reduction of traffic accidents and congestion, the conference has considered and adopted reports covering every phase of this vital and complex problem, and the members thereof, representing nearly every state and important civic or business group in the nation, return to their communities and to their official, professional and business responsibilities inspired with a deep determination to make the recommendations of this conference effective, so that your confidence in us may not have been misplaced.

SAFETY GREATLY ADVANCED BY UNIFORM STANDARDS

"The uniform standards and recommendations approved by this conference represent, it is confidently believed, a great advance in the principles of safe use of public streets and highways, resulting from the cooperative and cumulative efforts of traffic leaders throughout the nation, made possible by your wisdom and foresight in organizing the national conference in 1924.

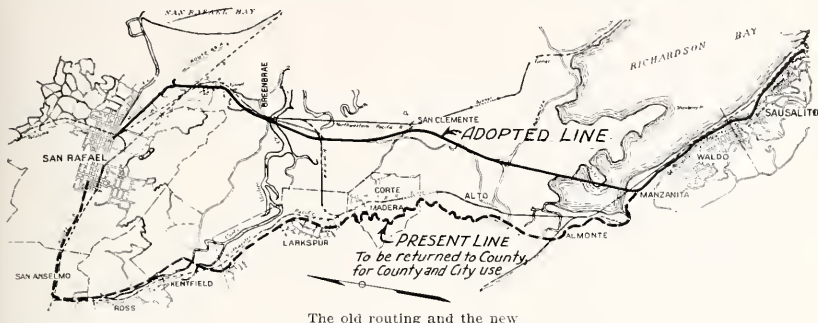

"Before adjourning we wish once more to express our gratitude for your leadership in this movement, and we believe and expect that the future will demonstrate the ability of the American people to solve or at least ameliorate this problem."

Secretary Lamont in addressing the conference at the conclusion of its sessions said:

"The deliberations of this conference have, I think, been impressive in two respects. They have brought into clear perspective the gravity and complexity of the problem with which it has dealt and indicated practical methods by which it must be approached.

(Continued on page 40.)

Improved Routing is Formally Adopted

THE recent adoption by the California Highway Commission of the location for state highway from a point near Alto across the head of Richardson Bay into Sausalito, completes the revised routing between San Rafael and Sausalito of the southerly terminal of the Redwood Highway, State Highway Route No. 1. The adopted route shortens the distance between these two towns by four miles over the present traveled road. It will remove a large volume of through traffic from the many congested areas encountered in the various towns through which the present highway passes. It will eliminate the crooked and steep Corte Madera grade and the traffic hazards occurring at the many intersections encountered on the present highway. The superior alignment, grades, and shorter distance will permit of an appreciable saving in time for traffic.

From Manzanita to Sausalito the new route coincides very nearly with the existing road, making provision, however, for revisions which will eliminate the bad curvature and permit of widening this important highway to an adequate width to properly serve traffic. The location from Sausalito northerly will better serve the large volume of traffic and affords the best opportunity for a possible future connection to the proposed Golden Gate bridge.

Grading of the new location has been practically completed from San Rafael to Alto, and a contract has been awarded for the placing of a bituminous pavement on this graded portion. Additional funds are available in this budget program for carrying the construction southerly from Alto across the head of Richardson Bay. Plans for this additional

section, including a bridge across the bay, are now being prepared and will be advertised for contract before the end of the year.

SAFETY RULES CITED

Every careful automobile driver realizes, in this modern day, that he is constantly facing the possibility of accidents, either to himself or to some other person.

1. Be sure that your brakes are in good working order. Inspect them frequently.
2. Keep your mind on your driving, and anticipate sudden emergencies.
3. Obey all traffic and parking regulations.
4. Keep to the right, and comply with road markings and signs.
5. Signal for stops and turns. Watch the car ahead.
6. Slow down at crossings, schools and dangerous places.
7. Never pass cars on hills, curves, or crossings.
8. Adapt your driving to road conditions, rain, ice, soft spots and ruts.
9. It doesn't pay to take the "right of way" too seriously.
10. When you drive, remember the other times when you are a pedestrian.
11. Consider the right and privileges of others.
12. Know the law. It was passed for your protection.

Twenty of the forty-eight states of the Union require drivers of motor vehicles to have operators' licenses, the Division of Motor Vehicles has announced as a result of a survey of requirements by the various states. While some of these states issue licenses merely upon application of the prospective driver, most of them require the applicant to undergo an examination of his mental and physical fitness to drive as well as his experience.

Letters Tell of Service Given By Traffic Officers

Despite the little unpleasanties of his calling, the traffic officer receives something frequently from the public besides brickbats.

So much is gleaned from what Roy W. Youngblood, assistant superintendent of the California Highway Patrol, dubs his "bouquet file" containing many letters of thanks from motorists for small favors extended them by the officers in carrying out the patrol's policy of courtesy to the public.

While an irate driver writes in occasionally to complain because he was "clocked" doing 60 miles an hour, the bulk of the letters come from those who received help when they ran out of gas, were assisted in starting a balky engine, in patching or changing a tire or were otherwise helped in one of the numerous little things that is part of the traffic officer's daily grind.

"We are trying to have the public cease to fear the traffic officer and to regard him as a friend," Youngblood explained.

One letter expresses the thanks of a grateful Stanislaus County farmer for assistance offered by the night patrol in putting out a fire in his chicken house. Another tells of an officer who raced for a doctor when a baby of a stranded motorist developed convulsions. Another expresses thanks to an officer who secured help from a distant garage when a bearing went out.

The file contains a letter from Governor C. C. Young indicating the executive is much impressed with the spirit of helpfulness exhibited by the officers toward the public. Governor Young's attention was drawn to this phase of the work recently when he noticed a motorist apparently in trouble along the roadside in Solano County. Two miles farther Governor Young met traffic officer Leo J. Boyle and informed him of the situation.

Without knowing the identity of the Governor, who was traveling in a private car, the officer thanked him for the information and, mounting his motorecycle, went at once to the assistance of the stranded motorist. The officer was surprised to find out later that his informant had been none other than the state's chief executive.

According to present plans the new highway between Laredo, Texas, and Mexico City will be open for traffic by fall of this year.

Here Is Picture of Typical Driver-Victim In Auto Accidents

From the United States Daily

In an attempt to answer the question of who is the typical motor vehicle driver causing fatal accidents and who is the typical victim of such accidents, the committee on street and highway safety appointed by the Governor of Massachusetts has analyzed the detailed reports of all automobile fatalities in the state last year and has evolved two composite characters.

The person who caused such accidents in 1929 is identified by the statistics, states the committee, as follows:

He was a physically perfect, sober, alert man, over 25 years old, who had driven an automobile for more than five years. He was driving a passenger car equipped with two-wheel brakes in perfect order, as was also his emergency brake. His lights and other equipment were in good condition. He was driving in daylight, between 6 and 7 o'clock on a beautiful, clear Sunday afternoon, proceeding straight ahead on a straight, smooth bituminous pavement, the surface of which was absolutely dry. There were neither obstructions on the highway nor to the driver's view. On the other hand, there were no traffic lights and there was no traffic officer on duty. The location was a thickly settled residential district, yet the driver was moving at more than 25 miles an hour. He was going too fast for existing conditions and was to blame for the death.

The victim is identified by the committee, likewise, through a study of the statistics, as follows:

He was a physically perfect, sober, attentive man, over 55 years old. He was crossing the street between intersections in the same district through which the "killer" happened to be driving. Aside from the fact that he did not attempt to cross the street at its intersection, he was not otherwise at fault. He died of a fractured skull.

SPEED FOR NIGHT DRIVING

What is the proper speed for night driving?

This question often has been asked and answers are varied, but the Mississippi Supreme Court has just handed down an opinion which, it is believed, will not only insure safety, but will act as a precedent for other court decisions.

The case in question reversed the judgment of the lower court and the decision was that "an automobile driver at night should be able to stop within the range of headlights of the car."

The Connecticut Department of Motor Vehicles' analysis of accidents of the eastern state, shows that automobile accidents are more likely to occur at intersections of good road surfaces, during daylight, in clear weather, on June Sundays.

Highway Use in California Shown To be Greatest in United States

CALIFORNIA leads the nation in the amount of gasoline consumed for highway use, according to statistics compiled by the United States Bureau of Public Roads. The net total of gasoline taxed and used by motor vehicles in California in 1929 was 1,139,736,244 gallons. Pennsylvania came second and New York third.

The 48 states and the District of Columbia collected \$431,636,454 in taxes on the sale of 13,400,180,062 gallons of motor fuel in 1929, reports received by the Bureau of Public Roads of the U. S. Department of Agriculture show. This includes a 12-month collection in 46 states and the District of Columbia, a 5-month collection in Illinois and the collections of 8 months in New York. Illinois and New York were the last states to adopt this method for part payment of the highway bill. The pioneer states—Oregon, Colorado, North Dakota and New Mexico—led the way in 1919. Now all the others have followed, but the tax did not become effective in New York until May 1 and in Illinois until August 1.

The average fee per gallon was 3.22 cents as against 3 cents in 1928. In the course of the year 20 states increased the rate of taxation either one or two cents. The highest tax per gallon was 6 cents; the lowest 2 cents. At the close of the year, three states had a 6-cent tax; eight a 5-cent tax; 19 a 4-cent tax; one, Utah, a 3½-cent tax; 10 a 3-cent tax and seven states and the District of Columbia a 2-cent tax.

In 1929 the rate per gallon was increased one cent in Colorado, Florida, Indiana, Kansas, Minnesota, North Carolina, North Dakota, Ohio, Oklahoma, Pennsylvania, South Carolina, Vermont, Washington and Wyoming; 2-cent increases became effective in Georgia, Louisiana, Montana, Nebraska, Tennessee and Texas.

Comparison of the total number of vehicles registered in 1929, with the total tax collected and with the taxable gallonage in all states (except New York and Illinois) and in the District of Columbia shows an average tax revenue of \$17.72 per vehicle and an average purchase of 532 gallons of gasoline.

After deducting collection costs, the entire net revenue in 34 states was used for construction and maintenance of rural roads. In the other fourteen states and the District of Columbia, a total of \$24,405,207 was used for other purposes. In three states part of the tax money helped support public schools. In eight states, a part of the revenue went to cities for repair and improvement of streets, as did the entire collection for the District of Columbia. In six states, small sums were deposited in general funds; in Mississippi, a special, extra tax was collected in two counties for seawall protection of highways and in New Jersey a small fraction of the

receipts was turned over to the Department of Commerce and Navigation.

Of the revenue applied to rural roads, \$297,967,756 was used for construction and maintenance of state highways; \$85,113,708 for construction and maintenance of local roads; and the remainder, \$23,371,785, applied as payments on state and county road bonds.

The following table shows the total number of gallons taxed in the several states:

<i>State</i>	<i>Net gallons of gasoline taxed and used by motor vehicles</i>
Alabama	178,162,903
Arizona	63,995,783
Arkansas	133,620,566
California	1,139,736,244
Colorado	141,466,891
Connecticut	202,354,590
Delaware	31,198,248
Florida	223,373,467
Georgia	219,609,473
Idaho	48,658,984
Illinois	388,659,266
Indiana	410,936,759
Iowa	311,859,516
Kansas	288,716,546
Kentucky	154,717,831
Louisiana	176,645,631
Maine	91,610,422
Maryland	157,429,197
Massachusetts	487,940,778
Michigan	710,300,302
Minnesota	338,631,771
Mississippi	140,902,401
Missouri	384,033,575
Montana	57,514,249
Nebraska	208,869,358
Nevada	16,307,535

WHEN ROCK IS ROCK

These are pictures of solid rock excavation along the new state highway north of Bay View Rest on the Lake Tahoe road in El Dorado County.

Excavation along the entire project is at the rate of 50,000 cubic yards per mile, ranging from 80,000 cubic yards per mile of solid rock, as shown in the photographs, to 21,000 cubic yards per mile of boulders and cemented clay to 50,000 cubic yards per mile of loose rock, boulders and disintegrated granite.

The photographs were taken April 8.

The elevation above sea level of the work photographed is 6500 feet.

BELIEVE IT OR NOT

Mr. W. F. Holbrook, maintenance superintendent of District Four, reports a rather unique adventure.

A short time back, while driving down King's Mountain on the Skyline Boulevard, Mr. Holbrook noticed an extremely large hawk gracefully sailing overhead a short distance in front of him. The hawk suddenly swooped down upon an unsuspecting cottontail rabbit sitting on the top of a heavy cut just ahead.

However, in attempting to escape with his prey the hawk found he had a little more than he could carry, but refused to let go and gradually dropped until he was directly in front of the car in which Mr. Holbrook was driving. The latter, sensing the collision, applied his brakes, but was unable to stop in time. Hawk and rabbit struck the windshield of the car, demolishing it completely.

After bringing the car to a stop and recovering somewhat from the shock, Mr. Holbrook found the hawk returning to consciousness on the front seat of the car beside him, with a death-like grip on the right cuff of his coat sleeve.

The rabbit was found completely shattered between the front fender and the hood of the engine, so tightly imbedded by the impact that it was difficult to remove him.

Mr. Holbrook is still trying to find out how he managed to escape with but three minor cuts from the flying glass of the shattered windshield.

THE ARCHITECT'S PART IN THE STATE WORK

(Continued from page 8.)

In some instances the work is done by day's labor or inmate labor, and the Division of Architecture acts in the same capacity as general contractor, ordering all material. In this case, requisition drawings are made showing shape and quantity of material required for such as millwork, sheet metal, ornamental iron, cast stone, terra cotta, etc., and bids are taken for each material separately.

The final link in our service to the state is superintendence. We make this a real service.

Southern Road.

Roadside Burning Is Commended.

C. C. Cottrell, secretary of the Stop Forest Fires Committee of California, writes to Director Meek as follows:

At a meeting of the Stop Forest Fires Committee of California, held in San Francisco last week, I was instructed to write you regarding the activities of your department in the way of destroying for fire prevention purposes the grass, weeds and brush growing along the roadsides.

The committee was of the opinion that notwithstanding some temporary defacements that occur and a few complaints made by certain citizens of the state, that the work was entirely justified. It was stated that what we are all after is to prevent worse and irreparable scars.

The committee instructed me to commend your department for its activities in this direction.

Express Appreciation for Road Improvement.

This letter comes from the Mill Valley Chamber of Commerce:

The Mill Valley Chamber of Commerce, which met on Wednesday, May 28, 1930, wish to commend your appropriation of \$80,000 for the development of the Alto-Tiburon highway, as well as your announced intention of immediately proceeding to the completion of that section of road.

Southern Pacific To Remove Billboards from Lands.

The Southern Pacific Railroad in a letter to C. H. Purcell, State Highway Engineer, has promised its full cooperation in the elimination of billboards from its land fronting on the state highways.

The following letter has been received by Mr. Purcell from E. A. McAllaster, land commissioner of the company:

In response to yours of the 21st ult., concerning your finding of many unsightly signboards lining state highways in southern California situated upon lands belonging to Southern Pacific Land Company.

Southern Pacific Land Company has not authorized the construction of any signs upon any of its lands abutting upon state highways in southern California.

The Division of State Highways is hereby authorized to act on behalf of Southern Pacific Land Company in any lawful and appropriate manner in accomplishing the removal of any signs which may exist upon Southern Pacific Land Company lands abutting upon state highways.

This authority, however, applies only to unsold lands of the company. If such signs are found to be upon lands covered by outstanding sale contracts jurisdiction in respect thereto rests with the contract holder.

If any signs are noted as being situated upon Southern Pacific Land Company lands, but at such a distance from the highway as renders them unobjectionable so far as the Division of Highways is concerned, I will be obliged if you will, as such discoveries are made, inform me of the location, character and wording of the sign, and the name of the party who apparently is responsible for its construction or is benefited by its use.

Maintenance of Mountain Highways Is Commended.

Major Evan W. Kelley writes from Washington, D. C., to his boyhood friend, Jack Reid, maintenance foreman on the Downieville lateral, as follows:

Ever since my trip at Christmas time to Downieville and home, I have intended to drop you a line to compliment you on the excellent maintenance work you are doing on the highway leading into our old town.

The standard you have attained is not excelled east, west, north or south, on earth roads; at least I have never encountered a superior demonstration of the art of dirt road maintenance anywhere, and since leaving California it has been my fortune to have covered many thousands of miles of highways and byways in every state of these United States of ours. Again I congratulate you.

Lassen Maintenance Station Beautified.

The Susanville Mail records the following improvement:

The maintenance station of the State Highway Commission on the Johnstonville road has undergone an extensive landscape change during the past two weeks, and when the work is completed and the lawns, plants, flowers, trees and shrubbery have grown, the

station will present a very pretty and artistic appearance.

The beautifying of this station fits into the general scheme of the State Highway Commission of landscaping all the highway stations in the state.

The area of the local station is two acres. Trees have been planted around the yard and three lawns have been seeded. Forty Arizona ash trees and thirty native cedars as well as an abundance of shrubbery have been planted. Along the front fence on the north side climbing wild rose has just been put in, and along the east side of the fence yellow jasmine has been planted. A very hardy collection of fine Chinese chrysanthemums have been planted and the natural wild sagebrush hedge that has been put in is the first of its kind ever attempted in this locality.

Snook Outlines License Policy.

No immediate steps will be taken toward cancellation of operators' licenses issued in 1927 and 1928, it was announced here today by Frank G. Snook, chief of the Division of Motor Vehicles.

Such licenses are valid and will remain so until canceled, Snook said.

The motor vehicle chief explained that the files had been brought up to date by the drive made last year against holders of obsolete licenses when several hundred thousand renewals were made.

"It probably will be at least a year before we make any attempt to cancel licenses issued in 1927 and 1928," Snook said.

"We feel there is no particular reason for doing it at this time and that cancellation of these licenses would only be a hardship on the motorists and an expense to the state."

* * * * *

Palms to Adorn Southern Road.

The following is from the San Bernardino Sun:

Beautification of the Ocean-to-Ocean highway between Redlands and the Santa Ana River bridge, east of Colton and south of San Bernardino, will be started immediately. This announcement came recently from J. E. Stanton, district maintenance engineer for the State Highway Commission.

Four hundred Washington palms are to be brought from the Coachella Valley to line the Redlands-San Bernardino link of the transcontinental motor highway, said Mr. Stanton. The palms, already potted at Indio and made ready for transplanting, range from two to five years of age.

* * * * *

Drivers Must Obey School Bus Law.

Rigid enforcement of the law requiring drivers of motor vehicles to come to a stop immediately before passing school buses load-

ing or unloading school children was ordered today by Eugene W. Biscailuz, superintendent of the California Highway Patrol.

Pointing out that nearly one-third of the traffic fatalities are children under 9 years of age, Biscailuz instructed inspectors and squad captains to pay particular attention to this phase of enforcement.

The state law requires motor vehicles to stop before passing buses loading or unloading children and to proceed then at a speed not greater than ten miles per hour and with "due regard for the safety of the children."

* * * * *

Publisher Urges Tree Planting on Highways.

Alfred E. Harrell, publisher of the *Bakersfield Californian*, when he gave a talk last week at the Delano Woman's Club, spoke of the planting of trees on the highway between Delano and Bakersfield, says the *Delano Record*.

Mr. Harrell has been an ardent exponent of beautifying the highways of Kern County, and he has spent some time on the tree proposition.

He had recently talked with Bert Meek of the State Highway Department, and where the highway has been widened to 90 feet trees will be planted. The state will select the variety of tree, but they will be paid for by the community through which the road passes. The first year the state will care for the trees for a flat sum of \$2.25 per tree. There is a 10-mile stretch now ready for planting.

Speaking of the financial aspects of the tree planting, Mr. Harrell stated it would cost about \$2,400, and that he had decided to make himself a committee of one to raise the money.

"If every man, woman and child will help, there will be no difficulty in raising funds, and by March of 1931 we can have an historic Arbor Day at Delano. The trees can be continued down the highway, and finally connect with Bakersfield."

* * * * *

Pedestrians' Rights Protected by Courts.

The Division of Motor Vehicles has called the attention of motorists of California to the fact that the courts of this and other states, in recent months, have held almost unanimously that pedestrians have the right of way over motor vehicles.

Desirous of informing the motorists of the need of careful driving where pedestrians are concerned, the division's bulletin pointed out

that court decisions have held that motor vehicles are required to give way to pedestrians and that pedestrians have frequently collected heavy damages from motorists who failed to do so.

"The large number of fatal accidents involving pedestrians and the fact that the courts almost invariably award damages to the pedestrian-plaintiff should be sufficient reason for extreme care in crowded streets and on highways used by pedestrian traffic," the bulletin said.

The bulletin said recent decisions by the courts have produced the following points in favor of the pedestrian:

1. The pedestrian has the right to use all parts of the highway, being chargeable only for the exercise of a due amount of care.

2. The pedestrian hit and injured in the center of the street can not be considered as negligent because he was there instead of on the sidewalk.

3. The pedestrian is not guilty of negligence because he fails to look behind him. The pedestrian is not bound, as a matter of law, to be looking and listening continuously to see if motor vehicles are approaching.

4. The rule of reasonable precaution requires that the driver be certain the pedestrian is aware of the approach of the vehicle at such distance as to avoid running over him.

5. The driver who strikes a pedestrian because he was blinded by the sun or lights can not escape responsibility by offering this as an excuse.

STATE SUPERVISION OF DAMS

(Continued from page 6.)

it or when controversial issues are involved, the State Engineer avails himself of the services and advice of consultants experienced in the particular phase under consideration to report upon these technical matters that a proper and sound solution of the problem may be reached.

It is the aim and endeavor of the department, rigidly adhered to, to require that the personnel refrain from forming conclusions on the basis of local or prejudiced influence, imposing unwarranted or dictatorial conditions beyond the requirements of safety, exerting unnecessary influence over construction, assuming engineering direction, or directing economic considerations such as choice of type, location, etc. It is likewise the desire of the department to minimize inconvenience to the owner, eliminate transgression on the engineering profession and cause a minimum disturbance of economic conditions. On the other hand, the personnel stands, at all times, willing to discuss, informally, with the engineer acting for the applicant controversial

problems of design or construction relating to the safety of the dam.

To the end that uncertainty, needless expense and inconvenience to the owner as well as the supervisory agencies may be minimized, an agreement has been effected by the State Engineer with the Federal Power Commission, U. S. Forest Service and the California Debris Commission providing a cooperative procedure for carrying on the activities of the agencies having joint jurisdiction over dams.

An analysis of records discloses that a major number of dam failures has resulted from inadequate spillway provisions and foundation or abutment insufficiencies. Where ordinary care has been exercised in the design or construction of a dam instances of failure within the structure itself have been extremely rare. This indicates not that less thought and effort be directed to technical design, but rather that more thought, and competent thought, be applied to geologic and hydrographic study.

State supervision of dams, if properly and competently administered and if directed aggressively to the proper requirements of safety in dam design and construction merits the support of the engineering profession in maintaining public confidence and advancing the technique of the profession; assures the public of unbiased and uninfluenced engineering opinion; dispels inherent public fear of dams; centralized and makes for uniform co-ordinated control, and records and makes available in condensed permanent form technical information and data of inestimable value. State supervision of dams should, however, be ever cognizant of the fact that the advancement of any community depends upon the development of its water resources through the construction of dams. Obviously this program must not be retarded through over-cautious and unwarranted functioning of the office having jurisdiction beyond reasonable requirements for assurance of safety.

A HOT ARGUMENT

Never helps develop cool judgment.
Is a poor way to make warm friends.
Seldom settles any real differences.
Can not be conducted in low tones.
Means tongues in high with brains in neutral.
Never smoothes any old animosities.
Seldom increases anyone's self-respect.—From *Farm Bureau Monthly*.

The number of motor cars now going to the scrap heap annually is nearly three times the volume of new car production in 1916, when the country's modern road-building program actually began.

Vol. 8 JUNE, 1930 No. 6

Added Care in Vacation Urged on Autoists by Governor

Calling attention to the fact that the approaching end of the school term in California will release thousands of children for play, Governor C. C. Young today urged motorists to be on the lookout for children in the streets and along the highways during the vacation season.

Concurrent with the Governor's statement, orders were issued to members of the California Highway Patrol to enforce strictly provisions of the law limiting speed in residential districts and to spread the warning to drivers to watch for children.

Records of the Division of Motor Vehicles show motor deaths among children are always heaviest during June, July and August.

Governor Young said:

"Every driver of a motor vehicle is asked to exercise the utmost caution during the coming school vacation period. Thousands of children will be playing in and along the streets and unless watched carefully will often get in the path of moving vehicles. Help us reduce this toll of young lives by doing your share."

NEW HAMPSHIRE—In the construction of the new Whitefield-Lancaster road through the White Mountains care was taken to preserve every natural beauty spot. Careful trimming and cutting has, in fact, added to the charm of this road.

A news story tells of a nonstop auto driver collapsing at the wheel of his car, after driving 201 hours.

Our hearty sympathy goes out to the driver—we, too, have tried to find a place to park!—*The Garage-man.*

Value of Public Work Program Told by Savant

California is witnessing the largest construction program in its history at a time when the need of construction activity is the greatest. The importance of just such a construction program that California is today enjoying was recently discussed by Dr. John M. Gries, chief of the construction division of the Department of Commerce, in an address before a conference on construction in connection with the annual meeting of the Chamber of Commerce of the United States.

Here are some of the things that Dr. Gries said:

During business depressions, when domestic industry, commerce and trade are at a low ebb, we may look in two directions for possible relief or stimuli, namely: (1) foreign trade, and (2) construction. Foreign trade is of great importance and every effort should be made to stimulate such trade, but if the depression is world-wide, it is difficult to enlarge or expand this important safety valve or spillway.

The annual expenditure for construction and upkeep in the United States amounts to about \$10,000,000,000. This is equal to about three-fourths of the total value of all farm products or to more than the value of all our imports and exports.

During depressions, many of our domestic industries, even if financially able, can not produce for stock to any great extent, for their products are more or less perishable or subject to market depreciation or obsolescence. The products of construction, however, are more durable, and in some lines we are many years behind our needs; for example: in grade eliminations, railroad crossings, highways, waterworks, flood control, river improvements, etc.

If we were to pick out a single industry whose increased activity would stimulate the largest number of other industries, that industry would be construction, for construction is the major market for the products of more than 20 important domestic industries, such as iron and steel, cement, lumber, brick, sand and gravel, hollow tile, copper, hardwood, terra cotta, millwork, plumbing equipment, lighting equipment, heating equipment, sanitary ware, paint, slate, granite, stone, etc. To increase the volume of construction means increased activity in all these industries and others that supply these industries. It means increased employment, increased sales, increased purchasing power and enlarged markets.

And among the groups the census takers should not overlook are the residents of drug store telephone booths.—*Judge.*

BUSINESS NOTE

"And now," said the teacher, "will someone please give us a sentence using the word 'candor'?"

"Please, 'm," said the bright little boy in the front seat, "my papa had a pretty stenographer, but after na saw her he candor."

Big Volume of
Work Is
Under Way

Projects
Completed
and Accepted

State Highway Work During May

C. H. PURCELL, State Highway Engineer,
Chief of Division

Many Highway
Improvements
Made Possible
Through Work
Now Undertaken

The following report summarizes progress in state highway work during the month of May:

Work placed under contract.....	\$823,900
Contracts pending and advertised.....	2,564,700
Work in progress, anticipated to be advertised during the coming month.....	3,702,400
Total.....	\$7,091,000

WORK COMPLETED, ACCEPTED

During this period among the contracts which have been completed and accepted are the following:

BARSTOW OVERHEAD

The overhead grade separation over the tracks of the Santa Fe Railroad at Barstow, in San Bernardino County, is now an accomplished fact. This large structure spans the yards of the railroad and consists of three 172½-foot steel truss spans, two 65-foot deck girder spans, one 76-foot deck plate girder span, one 40-foot steel beam span and approximately 392 feet of timber trestle, making the total length of the overhead 1155 feet. This improvement fills a long-felt need in this vicinity and serves a threefold purpose, as it is on a section of the state highway which is common to the road from Los Angeles and San Bernardino to southern Nevada, the route from Mojave to Barstow, and the road toward Needles and Arizona. The cost of the structure was \$163,200.

CAJON BRIDGE

Another structure to be completed in San Bernardino County is the 60-foot reinforced concrete slab bridge near Cajon station on the Cajon Pass road. This bridge was constructed at a cost of \$18,500 and eliminates a big dip in the highway. It has a clear roadway width of 34 feet.

MOJAVE TO OWENS VALLEY

The 14 miles between Freeman and the northerly boundary of Kern County have been graded to a width of 36 feet and surfaced with oil-treated crushed rock. This work was on a portion of the highway from Mojave to the Owens Valley or the easterly side of the Sierras. It is a link in the improvement of this arm of the state highway system upon which traffic is rapidly increasing. The road not only serves those living in the Owens Valley, but each year carries more and more recreational traffic from southern California to the mountains in the summer and to the desert in the winter. By the end of this year there will be approximately 200 miles of continuous and modern surfaced highway on this route. The cost of this project amounted to \$147,900.

WIDENING VALLEY ROUTE

The general program of widening the main Valley Route between Los Angeles and Sacramento has received impetus by the reconstruction of over twelve miles of this road between the southerly boundary of Tulare County and Pixley. This improvement has given a 36-foot roadway, and an asphalt concrete pavement 20 feet wide has been placed, using the old 15-foot Portland cement concrete as a base. The cost was \$316,500.

FEATHER RIVER LATERAL

At a cost of \$184,000, the first link of the all-year Oroville to Quincy highway along the North Fork of the Feather River has been completed. The project covered the four miles in Butte County between Oroville and the Feather River, where the road will cross both the Western Pacific tracks and the river on the beautiful reinforced concrete open spandrel arch bridge which is now under construction. At present motor travel to the city of Quincy and much of Plumas County is cut off for five or six months each year due to the heavy snowfall in the passes, and the completion of this new route will give to that locality an all-year highway.

BRIDGE LANDMARK REPLACED

The passing of one of California's landmarks is seen by the replacing of the old suspension bridge across the North Fork of the American River near Auburn. The old bridge connecting Placer and El Dorado counties at this point was erected in the early sixties and was next to the oldest bridge in the state highway system. It was in very poor condition and has been replaced by a 322-foot steel suspension span, having a 12-foot roadway width. The selection of this type of bridge was governed by the fact that the permanent location of this river crossing is dependent upon the building of a dam below the present site and that the loss will be held to a minimum when the permanent structure is erected. The bridge was erected at a cost of \$27,800 and is located near the northerly end of the interesting Mother Lode Highway.

COTTONWOOD BRIDGE

Another old and dilapidated bridge has gone the way of all faithful servitors of public convenience, and the worst portion of the Pacific Highway between Sacramento and Redding is eliminated. This improvement is the construction of a bridge, consisting of twenty 60-foot reinforced concrete girder spans on concrete piers and pile foundation, across Cottonwood Creek between Tehama and Shasta counties. The new bridge is constructed on an improved alignment, the roadway portion of which has just been advertised for bids in connection with the construction of a new reinforced concrete subway under the tracks of the

Southern Pacific Railroad in the town of Cottonwood. The bridge was built at a cost of \$167,800, and the subway and the Portland cement concrete pavement are estimated to cost \$163,500.

BID OPENINGS

Some of the more important projects for which bids were opened during the past four weeks include:

APPROACHES TO VICTORVILLE BRIDGE

A project for the construction of the roadway approaches to the new bridge, upon which construction is just starting, across the Mojave River near Victorville in San Bernardino County. This work, which will cost \$19,800, comprises 0.8 of a mile of 36-foot graded roadbed on an improved alignment of the state highway from San Bernardino to Barstow. The present bridge was constructed by the county some twenty years ago and was placed on an inferior standard of alignment. The new structure with its approaches will give a river crossing of modern standards of alignment and grade.

MOKELUMNE RIVER BRIDGE

In San Joaquin County an important improvement is to be made on the Los Angeles to Sacramento artery on that portion of this important route between Stockton and Sacramento, where it crosses the Mokelumne River at Lodi. A 162-foot reinforced concrete girder bridge with 665 feet of timber trestle approaches, together with three-quarters of a mile of roadway approach, is to be constructed as a crossing over the Mokelumne River. The bridge will replace the existing steel truss bridge with its timber approaches which was erected by the county in 1898, and will have a clear roadway width of 34 feet. The roadway approaches will be graded 36 to 40 feet wide and be surfaced with untreated crushed gravel or stone. They will be the first stage in the construction of a Portland cement concrete pavement on this section of the road. The present construction of the high fills necessary to the bridge approaches will allow ample time for settling before the placing of the pavement during the next biennium. The total cost of this improvement will be \$112,200.

TABOE-UKIAH SECTION

A new alignment of a portion of the Taboe-Ukiah lateral will be made on approximately 13 miles of this route between Bear Creek and five miles west of Williams in Colusa County, to be constructed at a cost of \$152,700. This project will replace with wide curves and easy grades the existing steep and crooked unimproved dirt road, from the mountains near Clear Lake to the Sacramento Valley. Its construction will mark a new link in the building of another improved highway across the state from the Sierras to the sea.

PACIFIC HIGHWAY

Another project just being started in Colusa County is the construction of a 39-foot graded roadbed between Williams and Maxwell, at a cost of \$67,900. This 8.3 miles is a portion of the West Side Road and is the first stage of the ultimate improvement of this section of the Pacific Highway. The roadbed is to be constructed to the west of the existing pavement so that the center line of the ultimate pavement will coincide with the center line of the recently acquired 100-foot right of way. The placing of a gravel base for the new pavement will be done later in the sum-

mer and paving will be laid during the next biennium. Particular care has been taken on the present project to secure adequate drainage, as the road passes through irrigated rice fields.

REDWOOD HIGHWAY PROJECT

At Scotia and from Fortuna to Loleta in Humboldt County a 20-foot Portland cement concrete pavement is to be placed on $4\frac{1}{2}$ miles of the scenic Redwood Highway. This work will increase the Portland cement concrete in Humboldt County on this route to some 33 miles. The grade and alignment of these two portions are excellent. Their cost will be \$164,250. Adjoining this improvement on the north, 2.5 miles of screened gravel surfacing, 22 feet wide, is to be placed on the recently constructed graded roadbed, and the 2.7 miles north of this improvement is to be graded and similarly surfaced to a new and modern gradient and alignment. This 5.2 miles of Redwood Highway improvement will cost \$56,500.

WORK ADVERTISED

Work advertised for bids during the past month includes the following projects:

FOOTHILL BOULEVARD

Widening of the roadbed to 56 feet and placing an asphalt concrete pavement 30 feet wide on the Foothill Boulevard from Azusa to Glendora in Los Angeles County. This project is in line with the general improvement of this heavily traveled road from Los Angeles to San Bernardino. This construction will give a three-lane pavement with wide shoulders over this mile of highway.

CUYAMA LATERAL

In Santa Barbara and San Luis Obispo counties, the Cuyama lateral is to be graded and surfaced with oil-treated crushed gravel or stone for a distance of 26 miles. The work will extend from the third crossing of the Cuyama River to the Kern County line, and proposes to straighten several curves and iron out the wrinkles of the present choppy gradient. The Cuyama lateral connects the San Joaquin Valley with the Coast Route at Santa Maria; it serves as an outlet for the Maricopa oil fields to the coast as well as connecting the valley artery with Route 2.

COAST ROUTE IMPROVEMENT

An important improvement to the Coast Route, between Los Angeles and San Francisco, is noted by the advertising for bids on the construction of a new bridge across the Salinas River at Bradley in Monterey County, about 21 miles north of Paso Robles. The present structure, which was built by the county in 1888, is in very poor condition, dangerously narrow, and is approached by two vicious curves. The new structure will be built on a new and sane alignment; it will consist of six 140-deck truss spans, with a concrete deck, resting on concrete piers, placed on pile foundations, and 810 feet of reinforced concrete girder spans on concrete bents placed on pile foundations. The clear roadway width will be 24 feet.

WORK SOUTH OF PALO ALTO

Another portion of the important Coast Route which runs from Los Angeles to San Francisco is to be reconstructed just to the south of Palo Alto. From San Antonio avenue in Palo Alto to Sunnyvale, five miles of the part of this road extending down the

peninsula from San Francisco is to be widened to a 50-foot roadbed and paved with asphalt concrete, over the existing 20-foot pavement, widened with Portland cement concrete to a minimum width of 30 feet. The paving of this portion of this heavily traveled highway will fill the last gap in the reconstruction of this route from Palo Alto to Santa Clara.

BIG BASIN PROJECT

In Santa Cruz County, Route 42, which traverses Big Basin, one of the state's most attractive recreational spots and known as "California Redwood Park," is to be graded and surfaced with water-bound macadam, with bituminous surface treatment 20 feet wide, for a stretch of over 2½ miles between Waterman Switchback and Saratoga Gap. The recently completed construction on the Skyline Boulevard and its lateral connections makes this Redwood forest accessible to one and one-quarter million people with less than three hours driving over roads of unusual scenic attractions.

SAUSALITO TO SAN RAFAEL

Another advertisement calls for bids on a bituminous macadam pavement 30 feet wide on the 4½ miles of the graded roadbed just being completed on a portion of the new alignment of the Redwood Highway between Sausalito and San Rafael. This work adds another link to the steady improvement of this scenic and popular highway. The new road will be nearly level and considerably shorter than the existing route.

WORK EAST OF TRACY

Reconstruction on two miles of the Santa Cruz to Stockton lateral has been advertised. The portion to be improved is located just east of Tracy from the South Banta road to the East Banta road, and is a link in the heavily traveled routes from San Jose to Stockton and from Oakland to Stockton. The work consists of widening the present 20-foot roadbed to 36 feet and placing an asphalt concrete pavement 20 feet wide over the existing narrow 15-foot Portland cement concrete pavement.

MOTHER LODGE IMPROVEMENT

The replacing of the existing old and rattling light steel bridge with its serpentine approaches, which carries the Mother Lodge Highway across the Cosumnes River from El Dorado County to Amador County, is estimated to cost \$32,700. The old structure was erected by the counties in 1895 and will be replaced by a timber bridge 291 feet long and located on a straightened alignment at this crossing.

SNOW LIFTING ENABLES WORK TO PROCEED

With the lifting of the snow from the Sierras comes a series of important improvements on the transcontinental highway which crosses the summit between Sacramento and Reno. This highway, while closed in the mountains for five or six months a year, carries a large tourist travel into the state each year and is also used by thousands of vacationists seeking recreation at Lake Tahoe and other points in the high Sierras. The work on this road advertised this period consists of:

Surfacing with crusher run base and untreated crushed gravel or stone, 22 feet wide, 10.8 miles from the South Fork of the Yuba River to Soda Springs in Nevada and Placer counties. This surfacing is being placed on the roadbed constructed on a new alignment last season.

YUBA RIVER BRIDGE

At the westerly end of the surfacing a bridge 100 feet long and consisting of two reinforced concrete girder spans is to be constructed across the South Fork of the Yuba River.

DANGEROUS GRADE CROSSING ELIMINATED

The construction of an overhead grade separation over the tracks of the Southern Pacific Railroad on the new alignment of this road at Yuba Pass in Nevada County will eliminate the use of the present dangerous grade crossing at Crystal Lake. While there have been only a few fatal accidents at the existing crossing, it is potentially one of the most dangerous blind crossings in California. The steep and tortuous mountain road makes an "S" curve across the double tracks of the railroad between a 100-foot opening in the snowsheds. During the summer months, when the highway is open to travel, 83 trains pass over this crossing daily, so it can easily be seen that the new grade separation will be a safety factor greatly appreciated by the traveling public using this road.

EMIGRANT GAP

Another grade separation on this route is to be an underpass consisting of a steel girder span on concrete abutments at Emigrant Gap in Placer County. The structure will be built on the site of the existing grade crossing, which likewise crosses the railroad between two right-angle turns.

GRADING ON FEATHER LATERAL

A short portion of two miles of heavy grading is to done on the new routing of the Oroville to Quincy lateral from Bardees Creek to the proposed bridge across the Feather River at Pulga in Butte County.

REDDING-ALTURAS LATERAL

In Shasta and Lassen counties 18 miles of the Redding-Alturas lateral is to be graded to 24 feet and surfaced with untreated crushed gravel or stone. This section extends from Fall River Mills to Big Valley and is located on an entirely new alignment. The new road will supplant the existing county road, which largely follows the section lines with the many attendant right-angle turns, and is of varying widths and has a badly broken gradient. The present alignment is located on an excellent alignment of large radius curves, long tangents, and easy grades.

ACCEPTANCE OF HIGHWAY CON-TRACTS DURING MAY

PACIFIC HIGHWAY

TEHAMA AND SHASTA COUNTIES—Contract for the construction of a bridge across Cottonwood Creek at an approximate cost of \$159,000 has been satisfactorily completed and accepted. Bodenhamer Const. Co. of San Diego was the contractor.

PLACER AND YUBA COUNTIES—Surfacing with bituminous and widening with oil treated gravel between Roseville and Andora Subway in Placer County, and in Yuba County between Dry Creek and Morrison's Crossing, 2.9 miles, at an approximate cost of \$18,600. J. E. Johnston of Stockton was the contractor.

REDWOOD HIGHWAY

MENDOCINO COUNTY—Contract for surfacing with untreated crushed gravel or stone between two

miles south of Arnold and the Sherwood-Laytonville road, about 8.7 miles, at an approximate cost of \$46,300, satisfactorily completed, etc. Hemstreet & Bell of Marysville, contractors.

HUMBOLDT COUNTY—Contract for surfacing with untreated gravel or stone between Dean Creek and Fish Creek, for about 7.3 miles, at an approximate cost of \$35,300, has been completed and accepted. Engelhart Paving and Construction Co. of Eureka, contractors.

MOTHER LODE HIGHWAY

TUOLUMNE COUNTY—Contract for placing screened gravel surfacing between one mile northwest of Shaw's Flat and the Columbia-Sonora road, for about 1.6 miles, at an approximate cost of \$6,300, satisfactorily completed, etc. Adams Company of Angels Camp, contractors.

PLACER AND EL DORADO COUNTIES—Contract for the construction of a suspension bridge across the North Fork of the American River near Auburn, at an approximate cost of \$26,500, satisfactorily accepted. Smith Bros. of Eureka, contractors.

TAHOE-UKIAH HIGHWAY

LAKE COUNTY—Contract for furnishing and applying fuel oil between Middletown and the Old Williams Road, for about 23 miles, at an approximate cost of \$6,100, satisfactorily accepted. Basalt Rock Company of Napa, contractor.

HAYWARD-NILES LATERAL

ALAMEDA COUNTY—Contract for constructing a graded roadbed and placing Portland cement and asphaltic concrete between Hayward and Niles, for about 8.7 miles, at an approximate cost of \$350,200, has been satisfactorily completed in accordance with the plans and specifications. Hanrahan Company of San Francisco, contractor.

VALLEY ROUTE

MADERA COUNTY—Contract for constructing a bridge across Cottonwood Creek, at an approximate cost of \$30,400, has been satisfactorily completed, etc. Geo. G. Wood of Fresno, contractor.

COAST ROUTE

VENTURA COUNTY—Contract for constructing oil-treated crushed rock borders from 3.8 miles east of Camarillo to Camarillo, 3.8 miles distance, at an approximate cost of \$12,000, satisfactorily completed. Southwest Paving Company of Los Angeles, contractor.

CHOLAME PASS LATERAL

KERN COUNTY—Contract for constructing a graded roadbed and placing a bituminous macadam surfacing between 5 miles and 7 miles east of Lost Hills, on the Cholame Pass route, distance of about 2 miles, at an approximate cost of \$44,100, satisfactorily completed and accepted. Hartman Construction Company, Bakersfield, contractor.

LOS ANGELES-OWENS VALLEY-BISHOP LATERAL

KERN COUNTY—Contract for constructing a graded roadbed and placing oil-treated crushed gravel or stone surfacing between Freeman and the northerly county boundary, and covering a distance of 13.9 miles, at an approximate cost of \$143,700, has been

satisfactorily completed, etc. Bartlett & Mathews of Pasadena, contractor.

CLAREMONT-RIVERSIDE LATERAL

RIVERSIDE COUNTY—Contract for constructing a graded roadbed and placing a Portland cement concrete pavement at the Wineville Subway, for about 0.5 of a mile, at an approximate cost of \$44,500, has been satisfactorily completed and accepted. Matich Brothers of Elsinore, contractor.

DIVISION OF ARCHITECTURE REPORTS

GEORGE B. McDOUGALL, Chief

In line with the administration's determination that the state shall use every available means to relieve present unemployment conditions, the Division of Architecture is urgently pushing forward its program of work so as to get all authorized building construction projects under way in the field at the earliest possible time.

Contracts awarded during May were on projects at the following state institutions: Pacific Colony; Patton State Hospital; Agricultural Park, Sacramento; Whittier State School.

ARCHITECTURAL AWARDS For Month of May

PACIFIC COLONY, Spadra. Contract for construction of Assistant Physician's Cottage, awarded to A. R. McMurray of Los Angeles for \$5,530.

PATTON STATE HOSPITAL, Patton. Contract for construction of Assistant Physician's Cottage, awarded to A. R. McMurray of Los Angeles for \$6,150.

STATE FAIR GROUNDS, Sacramento. Contract for general work on Restaurant Building, awarded to Guth & Fox of Sacramento for \$18,626.

Contract for plumbing and ventilating work on above building awarded to Latourrette-Fical Company of Sacramento for \$1,853.

Contract for electrical work on the above building, also awarded to Latourrette-Fical Company for \$1,132.

WHITTIER STATE SCHOOL, Whittier. Contract for general work on Ward Building and Shop Building, awarded to H. E. Kerr & Son of Los Angeles for \$46,190.

Contract for electrical work on the above buildings awarded to the American Electric Construction Company, Los Angeles, for \$2,575.

Contract for plumbing and heating work on above buildings awarded to Pacific Pipe and Supply Company of Los Angeles for \$11,218.

HIGHWAY MAINTENANCE STATION BUILDINGS in District VII, southern California. Contract awarded to A. R. McMurray of Los Angeles for construction of several groups of buildings at three maintenance stations for \$31,000.

STOCKTON STATE HOSPITAL. George M. Clark of Stockton awarded contract for drilling and testing water well at the Stockton State Hospital Farm for \$5,400.

of Water Study
Investigations

Review of May Activities

In the

Division of Water Resources

EDWARD HYATT, Chief of Division

Adjudication of
Water Rights

Irrigation and
Water Storage
Districts

WATER RESOURCES INVESTIGATIONS

MOJAVE RIVER INVESTIGATION

Levels were run to obtain elevation at wells in the lower part of the valley and measurements of depths to ground water were begun. The river ceased to flow in quantities sufficient to cross the percolating area of the upper basin during the month.

SANTA ANA INVESTIGATION

Field work has begun looking toward determination of what should be done toward conservation and flood control at Cucamonga, San Antonio, Day, Deer and Lytle Creeks. The field work on rainfall penetration was continued throughout the month in the regular way as was also the work on evaporation from seeped areas.

LOS ANGELES BASIN

A report was prepared at the request of the Conservation Association of Los Angeles County setting forth lines of research and investigation which should be conducted in Los Angeles Basin to permit conclusions as to the best method of utilizing local and imported waters.

NAPA COUNTY INVESTIGATION

In addition to the maintenance of the regular gaging stations on Napa River and Conn Creek several series of measurements were made on each stream at intermediate points in an effort to establish the location and extent of rising water and percolation losses.

SANTA CLARA INVESTIGATION

A base map is in course of preparation upon which to show well locations, gaging stations, underground water contours, etc. In the field, information was obtained with which to spot the wells which are being measured, and records of earlier surveys with respect to these wells were obtained. Some progress was also made in the computations of stream flow and percolation rates.

SAN JOAQUIN VALLEY INVESTIGATION

Ground Water Investigation: A geological study of potential underground reservoirs initiated last month has been completed and report rendered thereon. Maps have been prepared delineating the ground water elevations in Kern County for each year for the period 1924 to 1929. Similar maps are in preparation for Tulare, Kings, Fresno and Madera counties. These maps will be used to estimate the volumetric changes in the underground water supplies for the past several years and also for determining the under-

ground storage available in working out a plan for the maximum utilization of the water resources of the southern San Joaquin Valley in conjunction with the plan for importation of a supplementary supply from the Sacramento River Basin. A survey is now under way to determine the location, extent and capacity of these underground reservoirs as well as to determine the rate at which water can be introduced into them.

Main Supply Canals: The location survey of a canal which would divert from the San Joaquin River at elevation approximately 470 feet has been completed from that river to the Kings River. This canal would permit water to be diverted from the San Joaquin River by gravity to the Kern River without exchange of supplies at the Kings River. Office studies, preliminary designs and cost estimates have been made of several plans of exporting water from the Sacramento River Basin to the San Joaquin River Basin, namely:

1. A gravity route extending from the main streams in the Sacramento River Basin to the Kern River.
2. A gravity canal from the American River to Mendota on the San Joaquin River in conjunction with an exchange gravity canal extending from the San Joaquin River, elevation 470 feet, to the Kern River.
3. A dam and pump system up the main channel of the San Joaquin River to Mendota in conjunction with the gravity exchange canal under Item 2.
4. A pump and canal system paralleling the San Joaquin River on the west side from tide level to Mendota in conjunction with gravity exchange canal under Item 2.
5. A pump and canal system from tide level by the most direct route to the base of the hills, elevation 200 feet, and a gravity canal, thence to Mendota in conjunction with gravity exchange canal under Item 2.

With these studies as a basis the most economic plan will be selected for the importation of water from the Sacramento River Basin to the San Joaquin River Basin.

Geological Investigations: Geological examinations have been made and reports rendered on the Temperance Flat and Friant Dam sites on the San Joaquin River, Pine Flat Dam site on the Kings River, Ward Dam site on the Kaweah River and Pleasant Valley Dam site on the Tule River. Field examinations have been made also on the Bakersfield Dam site and Isabella Dam site on the Kern River.

SACRAMENTO VALLEY INVESTIGATION

Land Classification: A field classification has been completed on 8,750,000 acres, 750,000 acres being covered since the last report. Summaries have been completed of these lands by classes and the crops raised thereon for the year 1929. The areas of the irrigated lands for the years 1927 and 1929 have been compiled.

segregated by counties and also by source of water supply.

Surveys: Surveys of the Upper Narrows Dam site on the Upper Yuba River and an extension of the surveys on the Coloma Dam site have been completed.

SALINITY INVESTIGATIONS

The work on the salinity investigations has been directed toward the preparation of plates which delineate the history of the incursion of salinity into the upper bay and delta regions as well as to the relationship of stream flow into the delta and tidal action to the incursion of salinity. These graphs are based on analytical studies which have been made, utilizing the data that have been collected during the past ten years.

SALT WATER BARRIER INVESTIGATION

The survey of the industries and public water supplies has been continued through the past month, and at this time it is 75 per cent completed. Surveys of agricultural and reclamation developments within the delta area on the Sacramento and San Joaquin rivers are also completed.

Cooperative work arranged by this office with the state and federal agencies has been in active progress. The State Bureau of Sanitation of the Department of Public Health has been actively engaged in a field and office study of sewage pollution and industrial waste as related to the proposed salt water barrier. The Division of Highways is engaged in a very extensive study of the possibilities of utilizing the salt water barrier for a highway crossing over the bay at the several proposed sites. Additional geological studies of all the proposed sites for the barrier and surrounding areas have been started by Professor C. F. Tolman, consulting geologist. The geological examinations and reports are to be completed by the middle of July.

HOOVER-YOUNG COMMISSION

The sixth meeting of the Joint Legislative Water Committee and Hoover-Young Commission convened at Hotel Oakland, Oakland, May 7, 1930, with an excellent attendance by members of both the committee and commission. There were present, in addition, numerous interested public parties.

A. M. Barton, engineer of the American River Flood Control District, appeared and described the relationship between the proposed American River Flood Control Project and the contemplated Folsom Dam. An aerial survey map was used in presentation.

Edward Hyatt, State Engineer, explained the possibilities of a combined system embracing the Auburn, Coloma and Folsom reservoirs on the American River and gave the comparative investments in the American River system with the Kennett Dam.

F. I. Green and Dr. J. L. Rollins presented briefs and oral discussions of their respective projects on the American and Bear Rivers.

In the afternoon, under the direction of Mr. H. S. Gilman, president of the Angeles Forest Protective Association, there appeared eight professional engineers and government authorities speaking in behalf of the "Influence of California Forests and Water Conservation." This proved a subject of particular moment for consideration by the committee and commission.

IRRIGATION AND WATER STORAGE DISTRICTS

The El Dorado Irrigation District was visited in connection with the proposal of the district to increase its water supply by additional storage.

On April 26 the State Engineer rendered a report to the Board of Supervisors of Butte County approving an election on the organization of the Richvale Irrigation District, subject to the authorization of the board on final hearing of petition. The Richvale District contains about 18,000 acres in southern Butte County and obtains its present irrigation supply from the Sutter-Butte Canal Company.

On May 5, under authority vested him by the Water Storage District Act, the State Engineer issued an order excluding certain lands which had been petitioned for exclusion from the Tulare Lake Basin Water Storage District.

REQUESTS APPROVED

The following requests by various districts were approved by the California Bond Certification Commission upon recommendation of the State Engineer:

Rescission of a previous order by the commission approving expenditures requested in the amount of \$14,805, and the approval of a new order for expenditures by the El Dorado Irrigation District in the amount of \$11,345 for development of the project.

The West Stanislaus Irrigation District was authorized to sell at private sale \$50,000 par value of their bonds at 93 per cent.

The Banta-Carbona Irrigation District was granted approval of an expenditure for development of the project for \$5,760 and authorized to sell at private sale \$6,000 par value of bonds of the district at 96 per cent.

FINANCING STUDIES

On May 16 the commission appointed by Governor Young to investigate and study the financing and refinancing of irrigation and reclamation districts in California, of which the State Engineer is a member, met at the office of the Superintendent of Banks in San Francisco and effected a preliminary organization preparatory to holding hearings and proceeding with their inquiries.

There have been several meetings held during the past month in connection with the distribution of the waters of Kings River. The State Engineer has been appointed as referee in the matter of the distribution of water in the Kings River, which is a problem of major importance in the area affected, and has now under consideration a schedule providing for the administration of this stream when the water is at certain stages. Another meeting on this subject is to be held in the near future at which it is expected that a decision agreeable to all parties in interest may be arrived at.

CELEBRATE COMPLETION OF WORK

On April 26 the West Stanislaus Irrigation District celebrated the completion of its irrigation system. This district includes 21,000 acres lying on the west side of the San Joaquin River in Stanislaus County. The event was marked by a very interesting program consisting of historical pageantry, music and speeches. Through the pageant was traced the progress of development of the west side from the various stages of range lands and dry farming to the present era of intensive irrigated agriculture. Introductory talks

were made by President Cox of the district and Senator Bennett, attorney for the district, followed by Governor Young, Attorney General Webb and Bank Superintendent Wood, congratulating the district upon the successful culmination of its efforts. The Division of Water Resources was represented by Mr. Hyatt, State Engineer, and A. N. Burch and E. N. Bryan, assistants. The setting for the fete was a beautiful grove of oaks on the banks of the San Joaquin River, near the intake works of the district.

By invitation, on the evening of May 6 State Engineer Hyatt and his assistant, Mr. Burch, attended a meeting of land owners of the Woodbridge Irrigation District. The Woodbridge District, located in San Joaquin County, has an area of 13,000 acres, a large portion of which was highly developed before the district was organized. The district has just completed the rehabilitation of the old irrigation system which it took over from the Stockton and Mokelumne Canal Company. The officials of the district were holding "open house" in the newly built and equipped office in Woodbridge. Early in the evening a meeting of land-owners was held in the Woodbridge hall, at which the officials of the district gave a report on the progress of the work planned, with an explanation of costs and a statement of the financial condition of the district. It was shown that the construction program had been efficiently and economically carried out; that the district is financially sound, and its future prospects excellent. Mr. A. L. Cowell, attorney, spoke on the various phases of the water rights of the district. Other matters pertaining to the welfare of the district were discussed by district officials, the State Engineer and others.

Dam	County	Owner
Juneau	Sanja Barbara	Montealto County Water District
Silver Lake	Amador	Pacific Gas and Electric Company
Lower San Fernando	Los Angeles	City of Los Angeles
Burbank No. 5	Los Angeles	City of Burbank

OFFICE PROGRESS

Spillway discharge curves have been completed for practically all dams in the state. Maximum flood flows have been submitted by the Water Resources Investigations branch of the Division on the 95 dams in Modoc and Lassen counties. The spillways in these two counties have been analyzed on the basis of 1 in 100 years maximum flood. This study has lead to the conclusion that 34 of these spillways will need to be enlarged.

Methods and formulae for tabulating stresses in gravity dams have been prepared.

Curves and formulae for computing and tabulating stresses in arch and multiple arch dams have been made, and 38 arch and two multiple arch dams have been analyzed.

INSPECTIONS

An inspector and assistant have been assigned to Modoc and Lassen counties for the summer months. They are making a second and intensive inspection of the dams in this vicinity and will order all necessary work on spillways, outlets and repairing of slopes to make the dams safe.

All other dams in the state have been assigned to inspectors and by next fall the first inspection will have been completed for each dam.

FLOOD CONTROL AND RECLAMATION

DAMS

APPLICATIONS RECEIVED FOR APPROVAL OF DAMS BUILT PRIOR TO AUGUST 14, 1929

Twenty-four applications were received for approval of existing dams, bringing the total of such applications to 638. There remain about 50 dams for which applications have not been received. These lie mostly in the higher altitudes, where inspection is impossible at present.

APPLICATIONS RECEIVED FOR APPROVAL OF PLANS AND SPECIFICATIONS FOR ENLARGEMENTS AND ALTERATIONS

Dam	County	Owner	Estimated cost
Mulholland	Los Angeles	City of Los Angeles	\$293,488

PLANS APPROVED

Dam	County	Owner	Estimated cost
Lake Madrone	Butte	George C. Mansfield and Duncan C. McCallum	\$20,000
Mary Joe	San Diego	H. F. Schnell	30,000
Mulholland	Los Angeles	City of Los Angeles	293,488

Application was made by the city of Los Angeles and approved by the State Engineer for the placing of an earthen embankment against the downstream face of the Mulholland Dam, as well as making provision for restricting the water level in the reservoir to approximately 35 feet lower than its present height. This is designed to increase the stability of the structure as well as improve its general appearance.

Orders Authorizing Use have been issued pending issuance of certificates of approval of the following dams:

Maintenance of Sacramento and San Joaquin Drainage District: Flood control project maintenance work during this period has been mostly routine, and consisted of repairs to structures, cutting weeds, making firebreaks and irrigating willows. No construction work is under way. Two dragline excavators have been engaged throughout the period in cleaning the canals of the drainage system.

Flood Control Project Maintenance, Bank Protection: Repairs have been completed to three current retards in the Sacramento River near Princeton in cooperation with Levee District No. 3. Bank protection work on the left bank of the Sacramento River opposite Rio Vista in cooperation with Brannan Island District No. 2067 has been completed at a cost of \$4,650. This consisted of quarry rock revetment. Call has been made for bids to be opened on June 5 for the construction of a sand fill and levee pavement at Isleton, to complete the work for which a bulkhead was driven a short time ago. This work is in cooperation with the Division of Highways. Work is under way on the construction of two current retards on the right bank of the Sacramento River near Princeton, in cooperation with Reclamation District No. 2047. The estimated cost is \$6,000.

Sacramento Flood Control Project: The work of clearing timber in the Sutter By-pass has continued with a force of approximately 80 men, 55 of whom are operating out of two camps, one of which was established about May 1st on our floating equipment in Sacramento Slough. A contract for clearing 100 acres in the lower Sutter By-pass has been completed. A number of reports on applications have been prepared for the Reclamation Board, and one meeting of the board was attended by the Deputy in Charge

of Flood Control and Reclamation. Also, the Deputy in Charge of Flood Control and Reclamation attended a meeting of the construction committee of the Flood Control Association, and accompanied the committee on the field examination of the levees in the lower Yolo By-pass. The five contracts for clearing timber in the Feather River overflow near Marysville are practically completed, except some portions of the area where work can not be resumed at present on account of the overflow water. Surveys of brush and timber areas have been made in the lower Sutter By-pass and in the Feather River near Marysville.

Russian River Jetty: Driving of piles and the construction of the timber portion of the jetty have continued throughout the period with a force of eleven men. The end of the structure is now approximately 80 feet beyond the shore line. The quarry and railroad have not been operated during this period.

Navarro River Jetty: Call has been made for bids, to be opened on June 5, for the construction of a rock jetty at the mouth of the Navarro River in Mendocino County. This jetty will be 190 feet long and contain 2000 yards of quarry rock. During the period from April 15 to May 15 an average of 131 employees have been engaged on the above work, exclusive of contractor's employees.

SACRAMENTO-SAN JOAQUIN WATER SUPERVISOR

Compilations for the 1929 report are practically complete and the report is being stenciled for mimeographing. This is the usual annual report covering all diversions of water, stream flow measurements, results of return flow measurements, the salinity investigation, delta duty of water study, delta crop census, etc.

Field work was started the latter part of April with one engineer in charge on the river from Sacramento to Meridian, one from Meridian to Redding and a third covering the lower San Joaquin River, the Delta and the Feather, Yuba and American rivers.

All material for Bulletin No. 23 has now been submitted to the printer. This bulletin presents all data and records secured in the five-year period, 1924 to 1928, inclusive.

Continued field work on the salinity investigation has comprised the maintenance of regular observations at thirty-four delta stations.

A study and compilation of the Sacramento River riparian lands and use of water on them, both for normal and flood flow conditions, is nearing completion.

WATER RIGHTS

ACTION ON APPLICATION TO APPROPRIATE WATER

During the month of April, 50 applications to appropriate water were received, 31 were acted upon, 9 permits were revoked, and 6 licenses were issued.

PIT RIVER INVESTIGATION

Routine field work was continued throughout the month. Nineteen new gaging stations have been established for the purpose of obtaining more accurate data of the irrigation diversions and consumption during the current season. A meeting of the Permanent

Committee with representatives of the Division of Water Resources was held at Bieber on April 15th.

ADJUDICATIONS

Shasta River (Siskiyou County): The Long Bell Lumber Company's exception relative to water rights on Beanghan and Boles creeks, the only matter not yet submitted to the court, has been set for hearing in the Superior Court of Siskiyou County for June 13, 1930.

Whitewater River (San Bernardino and Riverside Counties): Still pending in the Superior Court of Riverside County awaiting developments in regard to the Proposed All American Canal from Colorado River.

North Cow Creek (Shasta County): Submission of referee's final report still being withheld pending negotiations now in progress towards settlement of one of the important issues.

Oak Run Creek (Shasta County): Case still pending in Superior Court of Shasta County awaiting the entry of a decree in the North Cow Creek case.

Cloror Creek (Shasta County): Case still pending in the Superior Court of Shasta County awaiting court's pleasure in placing it on the calendar.

Butte Creek (Siskiyou County): Case still pending in the Superior Court of Siskiyou County awaiting action by the parties involved.

Los Alamos Creek (Santa Barbara County): Action by referee being deferred awaiting the outcome of the circulation of a stipulation for consent judgment among the parties involved.

Davis Creek (Modoc County): A stipulation for consent judgment is being circulated among the parties who were not present at the water users' meeting held at Davis Creek on

Mill Creek (Modoc County): The trial schedule of distribution proposed by the Division of Water Resources is being administered by a water master during the current season.

Deep Creek (Modoc County): The field investigation of water supply and use of water was continued throughout the month. A plane table survey of the irrigated lands was commenced on May 6.

WATER DISTRIBUTION

Davis, Emerson, Mill, Oel and Soldier Creeks (Modoc County): Watermaster service on these streams was continued throughout the month.

Little Shasta River (Siskiyou County): Watermaster service on this stream was continued throughout the month.

Pit River (Modoc and Lassen Counties): Supervision over diversions from Pit River in Big Valley was continued throughout the month by the resident engineer on the Pit River investigation.

Hat and Burney Creeks (Shasta County): Watermaster service was commenced on these streams for the 1930 season on May 1st, and involves the distribution of water to approximately 5000 acres of land.

NEW YORK—In Monroe County a traveling library, mounted on a specially constructed motor truck, loaned over 60,000 volumes last year. Over 1,000,000 people are to be served throughout the state by this service according to present plans.

MOTOR VEHICLE DIVISION REPORTS

FRANK G. SNOOK, Chief

REGISTRATION COMPARISONS

A comparison of total registrations as of April 30, 1930, has been made against the total as of April 30, 1929. It is interesting to note that a gain has been made in every type of vehicle registered with the exception of solid tire truck equipment and in the number of transfers handled. The following table reflects the gain and loss as to classification:

	As of April 30, 1929	As of April 30, 1930	
Automobiles -----	1,675,832	1,776,444	100,612 gain
Pneumatic trucks --	52,502	69,588	17,086 gain
Solid trucks -----	19,021	14,136	4,885 loss
Motorcycles -----	7,332	7,428	96 gain
Trailers, pneumatic and solid -----	33,453	37,464	4,011 gain
Exempt autos -----	28,159	30,306	2,147 gain
Exempt motor- cycles -----	435	764	329 gain
Exempt trailers --	3,245	3,735	490 gain
Transfers -----	166,661	154,402	12,259 loss

On April 30, 1930, the division had issued 16,424 more chauffeurs' licenses than for the same period in 1929.

NONRESIDENT PERMITS

Records indicate that nonresident motorists have secured 5466 more permits up to April 30, 1930, than to April 30, 1929. On April 30, 1930, we had issued 16,131 nonresident permits.

On April 30, 1930, the division had collected \$8,539.316.77 in fees, which is \$297,263.08 less than for the same period in 1929. This loss in revenue is accounted for chiefly in the reduction in weight fee on commercial vehicles weighing between 3000 and 6000 pounds, which was reduced from \$15 in 1929 to \$8 in 1930. There is also a reduction in chauffeurs' fees from \$2 to \$1, and a change in the definition of a transfer.

BRAKE TESTING

During the month of April the California Highway Patrol inaugurated brake testing in several southern California cities. Between six and eight men worked on this detail with the assistance of local police. Within a period of four hours between 650 and 700 cars were checked.

An active program has been started in checking the conditions of the official headlight adjusting stations throughout the state. This work is being done in order to assure the public adequate service at these stations.

ENFORCEMENT PROGRAM

A campaign of enforcement during the summer months has been planned and a program has been worked out with officials of a number of the largest cities to include their cooperation with and independent of the California Highway Patrol.

During April, headlight enforcement drives were held in San Francisco, Oakland, Berkeley, Piedmont, Alameda, San Leandro and Hayward with very satis-

factory results. The police departments of these cities cooperated to the fullest extent.

HIGHWAY PATROL APPOINTMENTS For Month of May

The following officers have been appointed members of the California Highway Patrol in the following counties:

Santa Joaquin County—Milo L. Hewitt, Earl Foster, Emile E. Demitt, Jr.; George Ellis, Jr.

Kings County—Wm. L. Morton, Loren C. Rosenfeld.

Tulare County—L. H. Kober, Anstin W. Reynolds.

San Mateo County—Manfred J. H. Walzberg.

Stanislaus County—Chas. A. Brink.

Solano County—Coy F. Long, C. Elmer King.

Tehama County—John B. Shaffer, Edward W. Washburn, Paul R. Hobson, Donald M. Phillips, clerk.

Riverside County—Chas. D. Gandy, E. Gene Henderson, Jas. O. Linthicum, Ora E. Townsend.

San Diego County—Ralph B. Sutton.

Imperial County—Lewis Mitchell, J. Leroy Wells.

Kern County—Edgar J. Combs, Rex S. Hunter, Jas. C. Lane, Harold E. Nichols.

San Diego County—Herbert N. Coates, John V. Park, Joe Piper.

Orange County—H. E. Inge, John H. Turton, Chas. V. Wolfe.

Santa Barbara County—Fred T. Graves, Orville H. Ellis.

Ventura County—Dan Rentle, Jos. E. Waite, Raymond Mayhew.

San Bernardino County—Clyde D. Beach, Chas. D. Castle, Clifford L. Long.

Madera County—Wylmer W. Warner, L. D. Row.

Sonoma County—Irving H. Rohner, Geo. N. Nardi.

FOR THE WANT OF A HORSESHOE NAIL

For the want of a nail, the shoe was lost;
For the want of a shoe, the horse was lost;
For the want of a horse, the rider was lost;
All for the want of a horseshoe nail.

To which Herman Jerrett, right of way agent of District III, adds the following stanza, dedicating it to state highway engineers in general:

For the want of a tie, the line was lost;
For the want of a line, the land was lost;
For the want of the land, the ownership was lost;
All for the want of a proper tie.

Officers of the California Highway Patrol are expected to look smart and snappy, but not to swelter in heavyweight uniforms during summer weather. So much is indicated in a bulletin issued by Eugene W. Biscailuz, superintendent of the patrol, instructing officers that they may appear in lightweight uniforms during the coming summer season if they desire. Coats, breeches and caps must be of the same material and colors as the regulation uniform, except lighter in weight.

MAKING OUR HIGHWAYS SMOOTH

(Continued from page 2.)

throws both counters in or out of gear as desired.

In order to standardize the instrument the car is run over a short stretch of pavement and the units of roughness between two marked points are noted. A set of five boards is then laid across this same stretch at regular intervals, each set of boards being 10 inches wide and exactly one inch thick. The car is driven over the boards and the units of roughness between the marked points again noted. The additional units of roughness caused by driving the car over the five boards are then considered as being equal to 10 inches of roughness. With the calibration factor secured in this way the car is driven over any piece of road to be measured and the "inches of roughness per mile" figured from the units of roughness indicated for each mile by the counter on the roughometer. Since the instrument measures the travel of the springs only in compression, the calibration test records the spring compression when the car hits a board and again when it drops off. Different makes of cars and different cars of the same make will give entirely different results in units on the roughometer counter when driven over the same road. The use of the boards furnishes a correction factor for the dial readings so that results secured by different cars are standardized to a common basis and comparable results secured.

Since so many factors enter into the spring action of a car it has been found advisable to make a calibration run each time that the roughness of any section is to be measured. To operate the instrument properly it is of course necessary that the front snubbers be detached. Experience has shown that uniform results will be difficult to get until after a car has been run about 10,000 miles to get the stiffness out of the springs, and all spring connections must be thoroughly lubricated. Both in testing and making records the speed of the car is held as nearly as possible at 20 miles per hour. The inflation of tires is checked each time to a pressure of 50 pounds. On any given section of road, readings are taken at half-mile intervals on each side of the pavement and the average of the two sides used as the record for the job.

California now has two cars in the Construction Department equipped with roughometers, and readings are taken on all pav-

Dowell Bill Signing Is Commented Upon

State Highway Engineer C. H. Purcell is in receipt of the following letter:

AMERICAN ASSOCIATION
OF

STATE HIGHWAY OFFICIALS

In signing the Phipps-Dowell Bill President Hoover used two pens. These pens were presented by the American Association of State Highway Officials and the President, after signing the bill, gave one of the pens to Mr. L. C. Phipps, chairman of the Senate Committee on Post Offices and Post Roads and the other one to Mr. C. C. Dowell, chairman of the House Committee on Roads.

The ceremony in connection with the signing of the bill took place in the President's offices in the presence of all of the members of the Senate Committee and the House Committee having charge of this legislation.

There is a striking contrast in the fact that the first authorization of the Federal Government was \$5,000,000 in 1917 while the authorization in this bill carries \$125,000,000. This is also very substantial proof that the Federal Government is recognizing its increased responsibility in the construction of interstate highways.

Very sincerely,

W. C. MARKHAM,
Executive Secretary.

ing contracts as they are thrown open to traffic. At the end of the year a compilation of the figures for all state contracts is made and the results are published. In 1927 the average of all asphaltic concrete contracts was 22.1 inches per mile; in 1928 it was 14.7 inches per mile; and in 1929 it was 10.5 inches per mile. In 1927 the average of all portland cement pavements laid with joints at the end of every half day was 7.2 inches per mile; in 1928 with joints every 60 feet and dummy joints spaced 20 feet the average was 9.3 inches per mile; in 1929 with joints the same as in 1928 the average was 8.2 inches per mile. These results show the steady progress that has been made in getting smoother pavements each year. The smoothest asphaltic concrete pavement in 1929 was laid by the Peninsula Paving Co. of Redwood City on the section between Salinas and Chualar which tested 7.9 inches per mile. On the portland cement concrete work in 1929 the Griffith Co. of Los Angeles made the record of 4.4 inches per mile on their contract between Santa Ana and Anaheim.

By the use of these instruments the California engineers have been given a yardstick to measure the smoothness of the highways as they are built.

Civilizing Influence of Highways

By SAM TATE, Chairman Highway Board, State of Georgia

EDUCATORS have proven long ago that in the ultimate analysis education does not cost anything. It costs a great deal more for a state to remain in ignorance than it does to provide for the education of its citizens.

Ignorance, not intelligence, is the expensive thing. Precisely the same is true of good roads. There is a very real sense in which good roads do not cost anything. It is estimated that it costs 1 to 3 cents per mile more to travel over unpaved than on paved roads.

But after all, that is putting the matter at its lowest level; the cost of not having good roads will be a heavier toll in still other fields. It would be very instructive to have some one write for us the history of the influence of roads on civilization. Wherever nature has created or man has built a highway of travel, civilization has grown up along that highway.

The influence of great rivers on civilization has been tremendous. A river is a natural highway, and wherever nature has placed a highway, civilization has invariably followed. It was up the Mississippi Valley that civilization first pierced our own west.

The story of civilization begins with the story of a road. That is no accident. A road is a symbol of civilization.

Wherever there is a road it means that people have interests and dealings with others, and after all civilization itself is just a large group of people who have learned how to live with each other in a helpful and mutually profitable way.

It is the savage that lurks in the jungle; whenever a man ventures out of the jungle and joins with others in building a highway, however crude that highway may be, he has already learned the value of cooperation and has begun to ascend the scale of civilization.

Civilization and highways are always found together, and the one promotes the other. There is no road of which we have authentic information more ancient than the road that ran from Assyria to Egypt entering Palestine at Damascus and leaving it at Gaza.

Over this ancient route, even before the day of Moses, poured the stream of camel caravans that bore the wealth of Assyria to exchange it for the products of Egypt. It was to such a caravan that Joseph's brethren sold him and he was carried a slave into

Egypt over this ancient highway, which event not only shaped the destiny of Egypt but paved the way for the training, preservation and ultimate liberation of that race that has for centuries exercised such a mighty influence on the world.

No people have exerted an influence on civilization equal to that of ancient Israel.

A people can not live beside a road over which the commerce and culture of the world passes without feeling its force.

The Persian empire rose to its power and dominance because its kings were farsighted enough to see that no empire could be held together that did not build roads over which its soldiers and commerce could be quickly transported.

The ancient road from Susa to Sardis, 1500 miles long, was the backbone of the Persian empire, and it is but to recite a fact to say that the empire could not have existed without that great highway with its many branches.

It was nothing short of genius that gave young Rome the insight to build roads for her commerce and soldiery and to see to it that all these roads led to Rome.

Rome's first venture in road building was but the beginning of a system that finally reached from the highlands of Scotland across Europe to the frontiers of ancient Persia.

These roads went out from Rome like the spokes of a great wheel, and it is not even debatable that the Roman empire would have been impossible without this gigantic system of communication and transportation.

Over this great highway system sped not only soldiers and commerce, but ideas and customs. In short, the culture of one side of the empire came ultimately to belong to the other side, until the life of the empire was fused into a unity that would have been impossible without these roads.

From the time of the Caesars up until the nineteenth century, man did not essentially improve his method of communication. Through all these centuries the horse remained his swiftest means of travel.

One of the Roman emperors, by means of fresh relays of horses along his route, traveled a distance in one day that remained the world's record for speed until the day of our own grandfathers when the steam locomotive broke the record.

All thoughtful men know that civilization, material progress, and the higher values of life go hand in hand with the swiftness and certainty of the means of travel and communication.

It was no accident, therefore, but precisely what we would have expected, that the great burst of modern progress and material welfare should have come with the perfection of the steam locomotive. The beginning of our great wave of modern prosperity and material blessings goes back just about 100 years to the beginning of the great era of railroad construction in this country.

Whenever in history methods of communication and travel have been improved, there has invariably resulted an increase of man's material, intellectual and cultural wealth.

State Highway Progress Reports

ALAMEDA COUNTY

The Hanrahan Company, contractors on the construction of 8.7 miles of highway between Hayward and Niles, have fully completed their work.

The original roadway on this project had an effective width of about 34 feet, being an 18-foot width of 4½ inches Portland cement concrete with 8-foot earth shoulders on either side. The construction just completed provides a 50-foot roadbed width with 30-foot pavement throughout within a 100-foot right of way. The original pavement was utilized in so far as possible as a base for asphalt concrete surface, widening being effected by construction of the additional lane of Portland cement concrete 8 to 10 inches in thickness.

Three important line changes were made under the present construction, the most outstanding being that at the underpass of the Southern Pacific Railway at Niles, where an approach consisting of a 700-foot radius curve 150 feet in length, reversing on a 250-foot radius curve 180 feet long extending nearly through the structure, was replaced by a 500-foot radius curve 430 feet in length, making direct approach.

Right of way problems on this project were extremely complicated due to the heavy urban settlements along the highway with more than 200 owner-ships being involved. It was necessary to move and rehabilitate all residences and buildings on both sides for several blocks on the Hayward end of the job.

The construction cost of this project was approximately \$350,000, exclusive of right of way and rehabilitation of buildings.

COLUSA COUNTY

Construction of 13 miles of new state highway between Bear Creek and a point 5 miles west of Williams, on the Ukiah-Tahoe Highway, has been contracted for by Le Tourneau. The completion of this work will result in the abandonment of the present traveled way which is a tortuous narrow road between Abbott Mine and Freshwater Creek near the Williams end of the new project.

A 24-foot graded roadbed is planned from Bear Creek to the mouth of Salt Creek Canyon and from there to the junction with the present highway a 36-foot graded roadbed is planned. Completion of the work is estimated to be in April, 1931. Surfacing of this project is planned to begin some time prior to the middle of next year.

The work between Williams and Maxwell, consisting of construction of a 34-foot new grade alongside the present 15-foot concrete pavement, the details of which are noted in the April issue of THE JOURNAL, has been awarded to Fredericksen-Watson Construction Co. It is expected to complete the project this coming fall. No inconvenience will be experienced by the traveling public, who will have full use of the present pavement at all times while construction is under way.

DEL NORTE COUNTY

The Holdener Construction Company's contract for stockpiling crushed rock screenings over 35 miles of the Redwood Highway between Elk Valley and the Oregon line have engaged Smith Bros. to complete the work, and the material is now all in stockpile.

Smith Bros. have just been awarded a contract for furnishing and placing additional crushed rock surfacing at various locations along the Redwood Highway between Elk Valley and Patrick's Creek. It is expected that they will be ready to begin work within the next two weeks.

EL DORADO COUNTY

Construction of a new roadbed between Bay View Rest and one mile north of Eagle Falls is 30 per cent complete. Nate Lovelace, the contractor, has speeded up his progress during the past month and it is now expected that the work will be completed in December of this year, the scheduled time of completion.

GLENN COUNTY

The concrete paving project between Logandale and Willows, the details of which were noted in the April issue of THE JOURNAL, has been contracted for by Basich Bros. Construction Co., Inc., and is expected to be under way by the middle of May. The work, which is scheduled for completion before the end of the current year, will not inconvenience public traffic, which will use the old pavement alongside during construction of the new pavement and the west shoulders and will then have the use of the new pavement.

HUMBOLDT COUNTY

The work of producing and stock piling bituminous macadam rock along the Redwood Highway for a 20-foot by 2-inch bituminous macadam pavement between a point one mile south of Orick and the northerly Humboldt County line is now more than half complete, and the contractor, Heafey-Moore Company, who have the contract for placing the bituminous macadam, have started setting side forms and expect to start the laying of the macadam rock within another two weeks.

Heafey-Moore Company will also probably complete this week the placing of a 2-inch by 20-foot bituminous macadam pavement on the 10.7 miles between Arcata and Little River.

The Englehart Paving and Construction Company have been awarded the contract for grading and surfacing a new connection between the Arcata-Blue Lake road and the Redwood Highway at a point approximately one mile north of Arcata. The contract

involves grading and surfacing in the amount of approximately \$10,000.

Mercer-Fraser Company, who have the contract for the construction of the new Trinity River bridge near Willow Creek, now have a portion of the steel on hand and expect to begin erection in the near future.

Bids were received on May 21 for furnishing and placing crushed rock surfacing over the newly graded roadway between Loleta and Beatrice station and for extending the grading and placing of surfacing on an additional 1.8 mile of roadway at the northerly end of the same project.

Contractor J. B. Galbraith of Petaluma has just been awarded the contract for the construction of a concrete pavement between Fortuna and Loleta. It is expected that he will begin work within the next two weeks.

The E. C. Coats contract for grading and surfacing a 28-foot standard roadway on that portion of the Redwood Highway between Fish Creek and Stephens Grove in the vicinity of Miranda is more than 60 per cent complete, and it is to be expected that there will be very little interference with traffic during the touring season.

The Engelhart Paving and Construction Company has completed the producing and placing of crushed rock surfacing on approximately 7.3 miles of the Redwood Highway between Dean Creek and Fish Creek, approximately 6 miles south of Miranda.

H. H. Boomer, who has a contract for grading and surfacing a portion of the state highway, approximately 1.2 miles in length immediately north of Garberville, is approximately 40 per cent complete, and it is expected that his operations will not interfere with traffic during the summer.

Chigris and Sutsons were awarded the contract for grading and surfacing 1.4 miles of the Redwood Highway between the southerly Humboldt County line and Richardson Grove. They began work about March 25 and are now approximately 25 per cent complete.

LAKE COUNTY

State forces will commence by the middle of May to oil treat 10.6 miles of 20 feet wide crushed stone surfacing recently placed, by contract, on a new graded highway between Lucerne and Clear Lake Oaks. The work, it is estimated, will require two months to complete.

Widening of the roadbed to 24 feet between Sweet Hollow Summit and Abbott Mine is 95 per cent complete. Another month will see the completion of this work.

From Abbott Mine to Bear Creek, Colusa County, the construction of a new 24-foot graded roadbed is being carried on with sufficient force and equipment to insure the completion concurrently with or prior to the completion of the graded highway to the east now under contract for construction.

The Basalt Rock Company, working in conjunction with state maintenance forces, has completed its contract for the application of light fuel oil on Route 49 between Middletown and old Williams road, a distance of 23 miles. This work, which connects with Route 15 to Lakeport and Upper Lake, will insure much comfort and pleasure to the many tourists visiting this "Switzerland of America" this coming season.

Route 15, between Upper Lake and Ukiah, which passes the beautiful Blue Lakes, is being improved by the application of about 6 miles of armor coat over

the existing pavement by state maintenance forces. This work will be completed about the middle of June.

LOS ANGELES COUNTY

A contract has been awarded to Ben F. Dupuy for oiling shoulders on the Roosevelt Highway between the westerly boundary of Los Angeles County and Santa Monica. It is expected that this contract will be completed by July 1, 1930.

The contract for a line change immediately north of the Newhall Tunnel has just been completed by McCray Co. This contract is approximately one mile in length and is on much better alignment than the old highway.

The first contract on the La Canada-Mt. Wilson highway for grading 2.6 miles of roadbed was awarded to H. W. Rohl Company on August 14, 1929. Work is rapidly nearing completion and it is expected that this contract will be completed by July 1, 1930.

The second contract on the La Canada-Mt. Wilson highway for grading one and one-half miles of highway was awarded to T. M. Morgan Paving Company on January 27, 1930. This extends northerly from the end of the H. W. Rohl contract. This contract will probably require more than a year to complete.

A contract for paving the Newhall Alternate with Portland cement concrete, 30 feet wide, has been awarded to Jahn & Bressi. Grading of this section has just been completed by LeTourneau & Lindberg. The new location is on greatly improved alignment and eliminates Saugus, Newhall and the Newhall Tunnel from the Ridge Route. This section is 8.6 miles long. Paving will probably be completed by August 1st.

A contract for grading and paving a line change near Liberty School, four miles west of Calabasas, was awarded to the Will F. Peck Company January 18, 1930. This line change eliminates several bad curves and improves the grade. Grading work is now in progress. It is expected that this contract will be completed next September.

A contract for grading a 38-foot roadbed on the first section of the Alternate Ridge Route from Castaic School to Canton Creek was awarded to H. E. Doering, von der Hellen and Pierson on February 25, 1930. This section is 7 miles in length and will probably require more than a year to complete.

Surveys are in progress on the rest of this route which will be a saving of more than 7 miles in distance over the present Ridge Route.

MARIN COUNTY

The grading contract of Granfield, Farrar & Carlin for constructing the 4.4 miles section of new highway between San Rafael and Alto has practically been completed. This section of highway, which will supersede the original location through the towns of San Anselmo, Ross, Kentfield, Larkspur and Corte Madera, with a net present saving in distance of 2½ miles to Alto and an ultimate saving of 3¾ miles to Manzanita, has been advertised for bituminous macadam surfacing 30 feet in width. Proposals are to be taken on June 4th. The present project involves some 475,000 cubic yards of roadway excavation.

Three important major structures are nearing completion on this section of the highway. The first of these—an overhead crossing over the tracks of the

Northwestern Pacific Railroad near Greenbrae—consisting of one 38-foot and two 21-foot concrete girder spans, has been practically completed under contract of Siemer & Kendall and F. J. Main. The second major structure under contract with the Butte Construction Company over the Corte Madera Creek at Greenbrae, consisting of a bascule span over a clear channel of 40 feet and approximately 855 feet of timber trestle approach on pile bents, is progressing nicely, foundations for bascule span and trestle approaches having been completed. The third structure consists of one 150-foot steel truss span on concrete piers, one 41-foot and one 28-foot steel beam span on steel frame bents, and approximately 700 feet of timber trestle, is also progressing nicely under contract with the Frederickson and Watson Construction Company and Frederickson Brothers. One of the main span trusses has been set and the other is now in process of erection.

All work on the section between Alto and San Rafael was planned so that the date of completion of the structure and of the surfacing contract shortly to be let would practically coincide in order to open this section to provide for the heavy late summer and fall traffic.

Granfield, Farrar & Carlin also have the contract for grading and paving that 1.8 mile section of Route 1, between San Rafael and Gallinas Creek, upon a revised location which will net a saving of $\frac{1}{4}$ mile in distance.

This project, which is approximately 50 per cent completed at this time, calls for grading a 40-foot roadbed for 1.3 miles and a 50-foot roadbed for 0.5 mile, with 0.6 mile of 20-foot concrete pavement 7 to 9 inches in thickness, 0.4 mile of 30-foot concrete pavement, and 0.7 mile of 20-foot bituminous macadam and 0.1 mile of 30-foot bituminous macadam.

A major structure under contract to Rocco and Colletti over the Northwestern Pacific Railroad's Forbes Station in this section of highway, which consists of one 46-foot steel beam span and 190 feet of timber trestle approach on pile bents, is progressing nicely. This work should be completed at approximately the same time as surfacing and structure contracts between San Rafael and Alto, giving the public the use of the new highway from Alto to Ignacio by late summer. The section of the Redwood Highway from Forbes to Ignacio was graded and paved with a 20-foot width of Portland cement concrete by the Hanrahan Company in 1929.

MARIN AND SONOMA COUNTIES

Another major length of Route 1, the Redwood Highway, extending from Ignacio in Marin County to Petaluma in Sonoma County, a distance of 11.9 miles, is progressing rapidly under contract with the Hanrahan Company, the work being approximately 60 per cent complete. This project calls for some 350,000 cubic yards of roadway excavation upon revised location, which shows a net saving of approximately $\frac{1}{2}$ mile in distance from that of the original highway. It is being graded to a 40-foot roadway width with pavement 20 feet in width, 2.2 miles of which over the heavier newly graded portion is bituminous macadam, the balance being Portland cement concrete. Approximately 0.8 mile of the section to be paved with bituminous macadam has been set aside for experimental section for the purpose of trying out new methods expected to give a smoother and better riding pavement than it has been possible to obtain heretofore with this type. The date

of completion for this work has been set at September 25, 1930, and present indications are that the contractor will complete this work within the time limit specified. Its completion will give a major paved highway from Alto to Cloverdale.

One major structure across San Antonio Creek, under contract with McDonald and Maggiori, has been completed and accepted within the past month. This structure consisted of three 40-foot reinforced concrete girder spans, and cost \$30,400.

MENDOCINO COUNTY

Von der Hallen and Pierson expect to complete within another week the construction of approximately 425 feet of rubble masonry retaining wall at approximately 9 miles south of the Mendocino-Humboldt County line.

The contract for placing a 4-inch thickness of crushed gravel surfacing on portions of the Redwood Highway between a point two miles south of Arnold and the Sherwood-Laytonville road has been practically completed by contractors Hemstreet and Bell, and they are starting on their second contract of producing additional crushed rock screenings and stock piling the same in the vicinity of Long Valley Creek bridge.

Route 1, the Redwood Highway, between Cloverdale and Willits, is being resurfaced by state maintenance forces through the application of an armor coat over the present pavement, a total distance of approximately 20 miles, 8 miles being between Ukiah and Forsythe Creek, and 12 miles between Hopland and Cloverdale. Primary application of the light fuel oil on the present roadway has been fully completed, and armor coating is well under way and should be completed early in July in time to take care of the heavy summer tourist traffic on the main artery to the Redwood Empire.

The Basalt Rock Company, in conjunction with state maintenance forces, is applying light fuel oil under contract on 38 miles of Route 48, McDonald-to-the-Sea Highway. This work should be completed by June 1st and will offer a delightful side trip from Route 1 for tourists and sportsmen during the coming season.

MONTEREY COUNTY

The new subway under the Southern Pacific Railroad at Spence, five miles south of Salinas, has just been opened for traffic. This structure eliminates a dangerous grade crossing.

Satisfactory progress is being made on the new bridge at San Ardo. Ben C. Gerwick is the contractor on the bridge under the supervision of the Bridge Department. Frederickson & Watson and Frederickson Brothers are the contractors on the approaches.

On the San Simeon-Carmel Highway, construction work is in progress with convict labor. Two camps are maintained. At Little Sur a crew of fifty men and two power shovels are working, and between Villa Creek and Willow Creek, seventy men and three power shovels are working. About 7.4 miles of graded roadway have been completed.

Surveys for the location of the road are in progress between the two camps.

A timber bridge is being constructed across Alder Creek under the supervision of the Bridge Depart-

ment. The Dean Construction Co. of Berkeley is contractor.

Bids are being received for a new bridge across the Salinas River at Bradley. This will be under the supervision of the Bridge Department.

NEVADA COUNTY

Grading between Nevada City and one mile west of Washington road on the Ukiah-Tahoe Highway has been completed, oil treated stone surfacing is 80 per cent complete, and the entire project will be finished, it is estimated, by next July. C. R. Adams has the contract for both the grading and the surfacing.

ORANGE-LOS ANGELES COUNTIES

A contract for oiling shoulders between Galivan and Irvine and from Fullerton to Leffingwell Ranch in Los Angeles County has been awarded to G. M. Duntley. It is expected that this contract will be completed by July 1st.

ORANGE COUNTY

A contract for widening the roadbed between Sunset Beach and Newport the entire width of the 90 to 100-foot right of way, and the placing of an additional 10-foot strip of Portland cement concrete has been awarded to the Macco Construction Company. When this work is completed the pavement will be 30 feet wide for the entire distance. It is expected that this work will be completed by next September.

PLACER AND NEVADA COUNTIES

Resumption of 20 miles of grading after the winter shutdown on the highway between Airport and Soda Springs, a part of the Dutch Flat-Donner Lake wagon road, has been made by both T. E. Connolly, who has the contract for the first 9½ miles, and by Callahan Construction Co., who have the contract for the last 10½ miles. Seven miles of the Callahan job, between Big Bend Rangers Station and the end of the work has been completed and is ready for the surfacing which has been programmed for the entire length of the new grade. All of the grading is scheduled for completion by this coming fall and the surfacing is estimated to be completed by the summer of 1931.

SAN BENITO COUNTY

A survey is in progress for the relocation of the state highway between Salinas and San Juan Bautista by way of Prunedale. This will completely eliminate from the Coast Highway the present San Juan grade, which is one of the worst sections on this highway. This change is partly in Monterey County and partly in San Benito County.

SAN DIEGO COUNTY

A contract for grading the Rose Canyon road between Balboa avenue and Torrey Pines road has just

been completed by the R. E. Hazard Contracting Company. This section is 5.4 miles long and is a 46-foot graded roadbed.

A contract for 4.5 miles of 38-foot graded roadbed between La Posta Creek and Miller Creek on the San Diego-El Centro highway has just been completed by the Nevada Contracting Company.

A contract for grading 2.9 miles of 36-foot roadbed from Kitchen Creek to La Posta and paving with 20 feet by 7 inches Portland cement concrete was awarded June 25, 1929, to Basich Brothers. This section is on the San Diego-El Centro highway. Work on this section is rapidly nearing completion. It is expected that this contract will be finished by July 1, 1930.

A contract for grading a 30-foot roadbed between Miller Creek and Tecate Divide on the San Diego-El Centro highway was awarded to Monarch & Breen on August 17, 1929. This work is rapidly nearing completion and should be finished by July 1, 1930.

A contract for oiling the shoulders on various stretches aggregating approximately 35 miles between San Diego and Myers Creek Bridge on the San Diego-El Centro highway was recently awarded to the Gilmore Oil Company. It is expected that this contract will be finished by July 1.

Another contract for oiling the highway shoulders between Oceanside and the Orange County line has been completed by G. M. Duntley, contractor.

A contract for widening the roadbed and paving with Portland cement concrete 30 feet wide across San Mateo Flat, between San Onofre and San Clemente, has been awarded to Match Bros., contractors. The new pavement will be 0.57 of a mile long.

SAN LUIS OBISPO COUNTY

Work is nearing completion on the construction of a 20-foot asphaltic concrete pavement between Atascadero and Paso Robles. Steele Finley is the contractor.

Street improvements, including a half mile of state highway, in the town of Atascadero is complete. The work was handled by a local improvement district. M. J. Bevanda was the contractor.

On the Coast Highway between Santa Maria River and Los Berros Creek, a distance of 7.2 miles, the road is being reconstructed with a 36-foot roadbed and a 20-foot Portland cement concrete pavement. Grading work is complete and rapid progress is being made on the pavement. J. F. Knapp is the contractor.

Plans have been completed for the proposed reconstruction of the Coast Highway between San Luis Obispo and Cuesta Grade, a distance of about three miles, and this work will soon be advertised.

SAN MATEO COUNTY

Construction of the first link of the Bayshore Highway, which has been located as an express road to facilitate fast moving traffic between the cities of San Francisco and San Jose, is nearing completion under contract with the H. W. Rohl Company. This project would have been completed some time ago but for the occurrence of heavy slides near Visitation. The slide material has been utilized in improving the grades and in further widening of the roadway. Between Visitation and Sierra cut a 4 per cent grade has thus been eliminated, being replaced by a 1 per cent grade. This project, which extends from the San Diego County line at the city limits of San

Francisco to the north city limits of the city of South San Francisco, a distance of $3\frac{1}{2}$ miles, involves over 1,000,000 yards of grading.

Another major link of the Bayshore Highway extending 7.3 miles between the towns of San Mateo and Redwood City, under contract with Frederick & Watson Construction Company and Frederickson Bros., is now about 35 per cent completed. This project extends across the marshes and salt ponds along the westerly side of San Francisco Bay and involves some 630,000 cubic yards of grading quantities, about 40 per cent of which is composed of hydraulic fill between previously constructed levees. The balance of this material is being taken from Belmont Hill, some 250,000 yards having been placed at the present time between Belmont and San Mateo.

With a paving contract of 40 feet width concrete between the cities of South San Francisco and Burlingame and another grading contract between Redwood City and Palo Alto shortly to be advertised for bids, this highway will assume its portion of the traffic from the overburdened Peninsula Highway. This should develop much industrial property along the shores of San Francisco Bay.

Under state maintenance forces 11 miles of Route 55, Skyline Boulevard, between Tanforan road and La Honda road, work has just been completed on the placing of an armor coat. Heavy traffic is expected on this road during the summer months, particularly on holidays. An additional 14 miles of the Skyline Boulevard, between La Honda Road and Saratoga Summit, is being given a light oil seal coat at the present time by state maintenance forces.

Due to the fact that Route 55 follows the ridge along the county line, this section lies within three different counties, San Mateo, Santa Clara and Santa Cruz, swinging back and forth across the boundary line in numerous places. This work should be completed by the middle of June.

SANTA BARBARA COUNTY

On the Coast Highway between Wignmore and Zaca, a distance of 4 miles, the road is being reconstructed with a 36-foot roadbed and a 20-foot Portland cement concrete pavement. Placing of pavement is progressing. The Cornwall Construction Company is the contractor.

On the Cuyama lateral the road is being oiled from Buckhorn Canyon to the second crossing of the Cuyama River. The Gilmore Oil Company is the contractor.

On the Coast Highway from the Elwood overhead to Goleta, and from Carpinteria to the Rincon cut-off, the shoulders are being oiled. The Bradley Truck Company is the contractor.

Bids will be opened on June 11 for the grading and surfacing with oiled crushed gravel or stone of the Cuyama lateral from the third crossing of the Cuyama River to the Kern County line, a distance of about 26.2 miles. A portion of this project is located in San Luis Obispo County.

SANTA CLARA COUNTY

Contract of the Hanrahan Company for grading and paving from San Francisco Creek through the towns of Palo Alto and Mayfield to San Antonio road, a distance of 4.1 miles, has passed the preparatory stages and paving operations are to be commenced

immediately. This project calls for graded roadbed 56 feet in width with 40 feet width of pavement Portland cement concrete and asphalt concrete for the first 2.2 miles, being that part through the towns, the balance being a graded roadway width of 50 feet with 30 feet width of pavement.

Right of way is being widened to 100 feet throughout and, due to the urban nature of the territory through which this project passes, it calls for the solving of many complicated problems.

Paving operations are being started at the south end of the project.

The present construction is an important link on Route 1, "El Camino Real," between San Francisco and San Jose.

The 4.9 miles section of this highway adjoining the present project on the south has been advertised, bids being called for on June 11, 1930.

SANTA CRUZ COUNTY

Contractor Jack Casson, working with state maintenance forces, has just completed the application of a light fuel oil seal coat on Route 42 on Saratoga Summit to and through California Redwood Park, a distance of 23 miles.

VENTURA COUNTY

A contract has been awarded to California Road Oil Service for oiling shoulders from Camarillo to Ventura and from Ventura to Seacliff. It is expected that this contract will be completed by July 1st.

YUBA COUNTY

A 20-foot Portland cement concrete pavement on partly new alignment through Wheatland has been contracted for by C. W. Wood. Minor drainage structures and grading recently begun are to precede the pouring of the concrete pavement. Rock borders, 3 feet wide on each side of the pavement, will be constructed after the concrete is all poured. It is contemplated that the entire project will be completed by next August.

LIST OF HIGHWAY BIDS

For Month of May

ALPINE COUNTY—Oiling 8.6 miles between Hangmans Bridge and Woodfords. Dist. X, Rt. 23, Secs. C. D. Basalt Rock Co., Napa, \$3,312. Contract awarded to Skeels & Graham Co., Roseville, \$3,264.

DEL NORTE COUNTY—Between Smith River and Patricks Creek, 15.2 miles to be surfaced with untreated gravel or stone. Dist. I, Rt. 1, Secs. C. D. Tieslau Bros., Berkeley, \$39,217; Hemstreet & Bell, Marysville, \$40,810. Contract awarded to Smith Bros., Eureka, \$32,650.

COLUSA COUNTY—Between Williams and Maxwell, 8.3 miles to be graded. Dist. III, Rt. 7, Secs. B, C. Lord & Bishop, Sacramento, \$85,504; M. J. Bevanda, Stockton, \$69,500; Isbell Construction Co., Fresno, \$89,377; T. M. Morgan Paving Co., Los Angeles, \$74,944; Kennedy-Bayles Construction Co., Biggs, \$71,052; A. Teichert & Son, Sacramento, \$78,-

918; Geo. Pollock Co., Sacramento, \$74,736; The Utah Construction Co., San Francisco, \$62,297; Hemstreet & Bell, Marysville, \$72,735; C. W. Wood, Stockton, \$68,650; J. P. Holland, Inc., San Francisco, \$87,871; Yglesias Bros., Inc., San Diego, \$74,595. Contract awarded to Frederickson & Watson Const. Co., Oakland, \$58,269.

COLUSA-GLENN COUNTIES—Between Hunter's Creek and $\frac{1}{2}$ mile north of county boundary line, constructing 1.9 miles drainage ditch. Dist. III, Rt. 7, Secs. C, A. Hemstreet & Bell, Marysville, \$8,091; Freeman & Murch, Willows, \$6,906; J. R. Reeves, Sacramento, \$8,004; J. P. Holland, Inc., San Francisco, \$7,703; Frederickson-Watson, Oakland, \$9,379; M. J. Treaster, Sacramento, \$6,666. Contract awarded to Lilly, Willard & Biasotti, Stockton, \$6,421.50.

HUMBOLDT COUNTY—At Scotia and between Fortuna and Loleta, 4.3 miles to be graded and paved with Portland cement concrete. Dist. I, Rt. 1, Secs. E, G. Engelhart Paving and Construction Co., Eureka, \$158,653; M. J. Bevanda, Stockton, \$159,352; C. W. Wood, Stockton, \$166,209; N. M. Ball, Porterville, \$165,498. Contract awarded to J. V. Galbraith, Petaluma, \$148,707.40.

HUMBOLDT COUNTY—Between Loleta and 2 miles north of Beatrice, 5.2 miles to be surfaced with river run gravel, of which 2.6 miles is to be graded. Dist. I, Rt. 1, Sec. G. Geo. Pollock Co., Sacramento, \$69,155; W. C. Colley, Berkeley, \$64,723; Hemstreet & Bell, Marysville, \$69,698; Engelhart Paving and Construction Co., Eureka, \$71,200; Larsen Bros., Galt, \$74,859; Jasper-Stacy Co., San Francisco, \$79,952; C. W. Wood, Stockton, \$63,409; E. C. Coats, Sacramento, \$59,200. Contract awarded to J. P. Holland, Inc., San Francisco, \$51,480.70.

LASSEN-SIERRA COUNTIES—Between 2 miles west of Milford and state line, 52.2 miles to be oiled with heavy fuel oil furnished and applied as dust layer. Dist. II, Rt. 29, Secs. A, D, E, F. Basalt Rock Co., Napa, \$12,652. Contract awarded to Jack Casson, Hayward, \$12,594.

MENDOCINO COUNTY—Near Longvale and Long Valley Creek Bridge, furnishing and stockpiling untreated crushed gravel or stone surfacing and screenings. Dist. I, Rt. 1, Sec. G. Hemstreet & Bell, Marysville, \$9,750.

MONO COUNTY—Between the summit of Sherwin Hill and Devil's Punch Bowl, 24 miles furnishing and applying heavy fuel oil as dust layer. Dist. IX, Rt. 23, Secs. B, C, D, E. California Road Oil Service, Wilmington, \$17,149; Basalt Rock Co., Inc., Napa, \$13,289; Gilmore Oil Co., Los Angeles, \$14,558; G. M. Duntley, Los Angeles, \$16,264; Ben F. Dupuy, Los Angeles, \$17,058. Contract awarded to Leonard C. Pulley, Long Beach, \$11,464.63.

MONO COUNTY—Between Devil's Punch Bowl and Leevining and Ft. Bridgeport, 16.3 miles to have furnishing and applying of heavy fuel oil as dust layer. Dist. IX, Rt. 23, Secs. F, G, I. G. M. Duntley, Los Angeles, \$11,981; Gilmore Oil Company, Ltd., Los Angeles, \$11,681; California Road Oil Service, Wilmington, \$12,017; Basalt Rock Company, \$10,596. Contract awarded to Leonard C. Pulley, Long Beach, \$8,987.40.

MONTEREY COUNTY—Timber bridge across Alder Creek, about 29 miles north of San Simeon, consisting of sixteen 19-foot spans on frame bents with concrete pedestals. Dist. V, Rt. 56, Sec. A. H. C. Whitty, \$25,495; M. B. McGowan, San Francisco, \$25,880; Smith Bros., Eureka, \$27,510; R. B. Mc-

Kenzie, Red Bluff, \$24,346; Granite Construction, Watsonville, \$25,598; Theo. M. Maino, \$26,801. Contract awarded to Dean Construction Co., Berkeley, \$24,246.

RIVERSIDE COUNTY—Between Indio and Oasis, furnishing and spreading fuel oil on shoulders for about 8.5 miles. Dist. VIII, Rt. 26, Sec. F. Leonard C. Pulley, Long Beach, \$7,713; G. M. Duntley, Los Angeles, \$8,355; California Road Oil Service Co., Los Angeles, \$8,527; Basalt Rock Co., Inc., Napa, \$9,169; Ben F. Dupuy, Los Angeles, \$9,384. Contract awarded to Gilmore Oil Co., Ltd., Los Angeles, \$7,670.15.

SAN BERNARDINO COUNTY—Bridge across Mojave River, 3 miles north of Victorville, consisting of one 270-ft. through steel truss span, five 51-ft. concrete girder spans and one 48-ft. concrete girder span on concrete piers and bents. Dist. VIII, Rt. 31, Sec. D. Torson Const. Co., Long Beach, \$149,122; Carpenter Bros., Beverly Hills, \$131,806; H. W. Rohl Co., Los Angeles, \$136,203; Lynch-Cannon Engineering Co., Los Angeles, \$143,664; Gist & Bell, Arcadia, \$144,908; Rocca & Caletti, San Rafael, \$126,704; Lord & Bishop, Sacramento, \$152,698; Whipple Engr. Co., Monrovia, \$132,300. Contract awarded to J. F. Knapp, Oakland, \$118,460.50.

SAN BERNARDINO COUNTY—Between Fawn-skin and county road, 7 miles to have furnished and spread fuel oil on roadway. Dist. VIII, Rt. 43, Sec. D. Ben F. Dupuy, Los Angeles, \$2,478; G. M. Duntley, Los Angeles, \$2,836. Contract awarded to Gilmore Oil Co., Ltd., Los Angeles, \$2,283.44.

SAN BERNARDINO COUNTY—At Mojave River, 0.8 of a mile to be graded, approach to new bridge. Dist. VIII, Rt. 31, Sec. D. J. F. Knapp, Oakland, \$21,891; Triangle Rock and Gravel Co., San Bernardino, \$16,149; Bert Calvert, Los Angeles, \$18,630; General Engineering Corp., Ltd., Los Angeles, \$28,187. Contract awarded to C. G. Willis & Sons, Inc., Los Angeles, \$15,019.

SAN DIEGO COUNTY—Between San Onofre and San Clemente, 0.9 of a mile to be graded and paved with Portland cement concrete. Dist. VII, Rt. 2, Sec. D. Watson & Sutton, San Diego, \$41,314; Robinson, Roberts Co., Los Angeles, \$46,963; Sander Pearson, Santa Monica, \$41,255; Bruce Bros., Inc., Huntington Beach, \$42,125; R. E. Hazard Const. Co., \$46,961; Maceo Const. Co., Clearwater, \$38,675; Bert Calvert, Los Angeles, \$40,582. Contract awarded to Matich Bros., Elsinore, \$38,118.80.

SAN JOAQUIN COUNTY—Between Lodi and $\frac{1}{4}$ mile north of Mokelumne River, 0.7 of a mile to be graded and surfaced with untreated crushed gravel. Dist. X, Rt. 4, Sec. C. J. P. Holland, Inc., San Francisco, \$28,840; Frederickson & Watson Const. Co., Oakland, \$23,718; C. W. Wood, Stockton, \$25,263; Lilly, Willard & Biasotti, Stockton, \$22,327; T. M. Morgan Paving Co., Los Angeles, \$26,118; A. Teichert & Son, Sacramento, \$26,441; Larsen Bros., Galt, \$28,309; Pereira & Reed, Tracy, \$29,744; W. C. Colley, Berkeley, \$34,545. Contract awarded to D. McDonald, Sacramento, \$22,147.10.

SAN JOAQUIN COUNTY—Bridge across Mokelumne River near Lodi, consisting of 3 54-ft. reinforced concrete girder spans on concrete piers with pile foundations and 35 19-ft. timber approach spans with concrete deck on pile bents. Dist. X, Rt. 4, Sec. C. Ward Engineering Co., San Francisco, \$92,552; Healey-Tibbitts Const. Co., San Francisco, \$110,781; M. B. McGowan, San Francisco, \$96,644; A. W. Kitchen, San Francisco, \$113,509; Jacobs & Pattiani, Oakland, \$88,703; Lord & Bishop, Sacramento, \$94,-

822; Bodenhamer Const. Co., San Diego, \$105,201; The Utah Const. Co., San Francisco, \$103,732; Butte Construction Co., San Francisco, \$103,249; Fredrickson & Watson, Oakland, \$89,297. Contract awarded to J. S. Metzger & Son, Stockton, \$84,379.50.

WATER APPLICATIONS AND PERMITS

Permits to appropriate water issued by the Department of Public Works, Division of Water Resources, during the month of May, 1930.

INYO COUNTY—Permit 3470, Application 6368. Issued to Pacific Sulphur Corp., Bishop, May 7, 1930, for 0.11 c.f.s. from Lost Chance Springs in Sec. 2, T. 8 S., R. 39 E., M. D., for mining, milling and domestic. Water will not be returned to stream.

TUOLUMNE COUNTY—Permit 3471, Application 6541. Issued to Joseph Brown, Chinese Camp, May 12, 1930, for 0.25 c.f.s. from Smarts Gulch in Sec. 18, T. 1 S., R. 15 E., M. D., for domestic and stock watering. Estimated cost \$550.

HUMBOLDT COUNTY—Permit 3472, Application 6429. Issued to C. M. Salyer, Salyer, May 15, 1930, for 125 c.f.s. from Campbell Creek in Sec. 20, T. 6 N., R. 5 E., H. M., for mining. Estimated cost \$81,000.

SAN BERNARDINO COUNTY—Permit 3473, Application 6566. Issued to Christian Baumann, Phelan, May 19, 1930, for 0.035 c.f.s. from 4 unnamed springs in Sec. 31, T. 4 N., R. 7 W., S. B. M., for domestic and recreational. Estimated cost \$2,500.

LOS ANGELES COUNTY—Permit 3474, Application 6520. Issued to Candido Herrero, San Fernando, May 20, 1930, for 0.937 c.f.s. from Muerte Canyon (underground water) in Sec. 34, T. 3 N., R. 14 W., S. B., for irrigation and domestic on one acre. Estimated cost \$2,600.

LOS ANGELES COUNTY—Permit 3475, Application 6565. Issued to I. A. Sharp, Palmdale, May 20, 1930, for 0.025 c.f.s. from Deer Spring in Sec. 14, T. 6 N., R. 14 W., S. B., for irrigation and domestic on 2 acres. Estimated cost \$425.

DEL NORTE COUNTY—Permit 3476, Application 6567. Issued to Frank Symms, Crescent City, May 21, 1930, for 0.01 c.f.s. from unnamed creek in Sec. 30, T. 17 N., R. 2 E., H. M., for domestic purposes. Estimated cost \$200.

EL DORADO COUNTY—Permit 3477, Application 6549. Issued to L. T. Butts, Placerville, May 23, 1930, for 0.12 c.f.s. from Emigrant Ravine Creek in Sec. 5, T. 10 N., R. 11 E., M. D., for irrigation on 10 acres. Estimated cost \$500.

AMADOR COUNTY—Permit 3478, Application 6576. Issued to E. T. Bamert, Clements, May 23, 1930, for 1.25 c.f.s. from Mokelumne River in Sec. 4, T. 4 N., R. 9 E., M. D. M., for irrigation on 100 acres. Estimated cost \$4,000.

CONTRA COSTA COUNTY—Permit 3479, Application 6587. Issued to Henry R. Vail, Oakland, May 24, 1930, for 37 c.f.s. from Old River, Dredger Cut and Italian Slough in Secs. 6, 7, 18, T. 1 S., R. 4 E., M. D. B. & M.; Sec. 13, T. 1 S., R. 3 E., M. D. B. & M., for irrigation on 2359.90 acres. Estimated cost \$10,000.

LOS ANGELES COUNTY—Permit 3480, Application 5406. Issued to Big Rock Ranch Co., Los Angeles, May 28, 1930, for 6000 acre-feet per annum from Big Rock Creek, surface and underground, in Secs. 6, 8, T. 4 N., R. 9 W., S. B. M., for irrigation and domestic on 2520 acres. Estimated cost \$150,000.

EL DORADO COUNTY—Permit 3481, Application 6383. Issued to Pacific Gas and Electric Co., San Francisco, May 28, 1930, for 15 c.f.s. from Alder Creek in Sec. 36, T. 11 N., R. 14 E., M. D. M., for power purposes. Estimated cost \$25,000.

SAN JOAQUIN COUNTY—Permit 3482, Application 6588. Issued to American Trust Co., San Francisco, May 28, 1930, for 1.75 c.f.s. from Stanislaus River in Sec. 21, T. 2 S., R. 8 E., M. D. M., for irrigation in 140 acres. Estimated cost \$2,500.

SAN JOAQUIN COUNTY—Permit 3483, Application 6529. Issued to H. R. Russell, Modesto, May 28, 1930, for 1.91 c.f.s. from drainage or waste ditch of Oakdale Irrigation district draining through natural depression

in Sec. 17, T. 1 S., R. 9 E., M. D. M., for irrigation on 153 acres. Estimated cost \$50.

INYO COUNTY—Permit 3484, Application 4214. Issued to Burnham Chemical Co., Westend, May 29, 1930, for 0.42 c.f.s. from 2 springs in Sec. 22, T. 23 S., R. 42 E., M. D. M., for domestic and mining. Estimated cost \$50,000.

INYO COUNTY—Permit 3485, Application 4498. Issued to Burnham Chemical Co., Westend, May 29, 1930, for 0.09 c.f.s. from Homewood Spring in Sec. 31, T. 23 S., R. 43 E., M. D. M., for domestic and mining. Estimated cost \$35,000.

INYO COUNTY—Permit 3486, Application 5955. Issued to Burnham Chemical Co., Westend, May 29, 1930, for 0.065 c.f.s. from 2 springs and 12 underground water developments in Parsons and Burnett Canyon in Secs. 32, 33, 34, T. 23 S., R. 42 E., M. D. M., for domestic and mining. Estimated cost \$10,000.

INYO COUNTY—Permit 3487, Application 5932. Issued to American Potash and Chemical Corp., Trona, May 29, 1930, for 0.0337 c.f.s. from Avalon Springs in Sec. 1, T. 24 S., R. 42 E., M. D. M., for industrial, domestic and mining. Estimated cost \$10,800.

INYO COUNTY—Permit 3488, Application 5933. Issued to American Potash and Chemical Corp., Trona, May 29, 1930, for 0.11 c.f.s. from Avalon Wash in Sec. 1, T. 24 S., R. 42 E., M. D. M., for industrial, domestic and mining. Estimated cost \$360.

INYO COUNTY—Permit 3489, Application 5934. Issued to American Potash and Chemical Corp., Trona, May 29, 1930, for 0.11 c.f.s. from Pot Hole Spring in Sec. 12, T. 24 S., R. 42 E., M. D. M., for industrial, domestic and mining. Estimated cost \$840.

INYO COUNTY—Permit 3490, Application 4973. Issued to Engineers Exploration Corp., Los Angeles, May 31, 1930, for 0.06 c.f.s. from Bainter Spring in Sec. 18, T. 24 S., R. 43 E., M. D. M., for domestic and mining. Estimated cost \$1,500.

INYO COUNTY—Permit 3491, Application 5998. Issued to Nellie E. Dean, Pasadena, May 31, 1930, for 0.25 c.f.s. from Sweepstakes Spring in Sec. 26, T. 23 S., R. 42 E., M. D. M., for mining and domestic. Estimated cost \$2,000.

Applications for permit to appropriate water filed with the State Department of Public Works, Division of Water Resources, during the month of May, 1930.

MOJAVE COUNTY—Application 6665. Cedarville Civic Club, c/o Mrs. Ray Hill, president, Cedarville, for 0.75 c.f.s. from Quail Creek Spring tributary to Deep Creek to be diverted in Sec. 2, T. 42 N., R. 15 E., M. D. M., for domestic and municipal purposes. Estimated cost \$10,000.

TRINITY COUNTY—Application 6666. Morris Group Gold Mining Company, c/o H. W. Brannan, Burnt Ranch, for 10 c.f.s. from Clark Creek tributary to Etterman Creek, South Fork Trinity River, to be diverted in Sec. 20, T. 4 N., R. 7 E., H. B. M., for mining and domestic purposes. Estimated cost \$2,500.

SAN DIEGO COUNTY—Application 6667. Hallam C. Stone, Box 584, El Cajon, for 0.5 c.f.s. from Campo Creek, also underground water tributary to Tecate River to be diverted in Sec. 19, T. 18 S., R. 5 E., S. B. M., for irrigation and domestic purposes on 70 acres. Estimated cost \$5,000.

EL DORADO COUNTY—Application 6668. A. Carlson, Camino, for 0.5 c.f.s. from waste and seepage water tributary to North Canyon, tributary to South Fork American River, to be diverted in Sec. 6, T. 10 N., R. 12 E., M. D. M., for irrigation and domestic purposes on 70 acres. Estimated cost \$2,000.

SAN BERNARDINO COUNTY—Application 6669. Geneva Catherine Baxter, Victorville, Lucerne Valley, for 0.26 or approximately 10 1/2 miners inches from Deep Creek Canyon and six unnamed springs tributary to Mojave Desert to be diverted in Secs. 16 and 10, T. 3 N., R. 1 W., S. B. M., for irrigation and domestic purposes on 20 acres.

SUTTER COUNTY—Application 6670. H. S. Fasig and W. H. Saylor, Knights Landing, for 3.46 c.f.s. from Sacramento River tributary to Suisun Bay to be diverted in Sec. 14, T. 13 N., R. 1 E., M. D. M., for irrigation purposes on 276.81 acres. Estimated cost \$4,000.

BUTTE COUNTY—Application 6671. Charles M. Lee, Rt. 1, Box 197 A, Oroville, for .5 c.f.s. from Cottonwood Creek tributary to Sacramento River to be diverted in Sec. 33, T. 20 N., R. 3 E., M. D. M., for domestic and recreational purposes. Estimated cost \$25.

COLUSA COUNTY—Application 6672. Colusa Development Co., a corporation, c/o Thos. Rutledge, Colusa, for 9.87 c.f.s. from Sacramento River tributary to Suisun Bay to be diverted in Sec. 26, T. 14 N., R. 1 E., M. D. M., for irrigation and domestic purposes on 787.7 acres. Estimated cost \$20,000.

RIVERSIDE COUNTY—Application 6673. Motor Transit Terminal Corp., 1005 S. Mateo St. Los Angeles, for 0.75 c.f.s. from a pond for irrigation purposes on 30 acres. Estimated cost \$200.

MONO COUNTY—Application 6674. L. L. Alauzet, 3925 W. 23d St., Los Angeles, for 200 gallons per day from Lower Rock Creek tributary to Owens River to be diverted in Sec. 33, T. 4 S., R. 30 E., M. D. M., for domestic purposes. Estimated cost \$250.

SIERRA COUNTY—Application 6675. Charles E. Herron, c/o Geo. F. Taylor, Downieville, for 25 c.f.s. from Goddard Creek tributary to North Fork of Yuba River to be diverted in Sec. 9, T. 20 N., R. 10 E., M. D. M., for mining purposes.

SAN BERNARDINO COUNTY—Application 6676. The Mojave River Irrigation District, c/o Meserve, Munger, Hughes & Robertson, 615 Richfield Bldg., Los Angeles, for 30,000 acre-feet per annum from Deep Creek and West Fork Mojave River tributary to Mojave River to be diverted in Secs. 17 and 18, T. 3 N., R. 3 W., S. B. M., for irrigation purposes on 26,875.36 acres.

MODOC COUNTY—Application 6677. Russell M. Bushey, Canby, for .12 c.f.s. from unnamed stream tributary to Pit River watershed to be diverted in Sec. 7, T. 41 N., R. 9 E., M. D. M., for irrigation and domestic purposes on 10 acres. Estimated cost \$5.

SACRAMENTO COUNTY—Application 6678. G. H. Moreland, Rt. 6, Box 4320, Sacramento, for 0.3 c.f.s. from Dry Creek tributary to Sacramento River to be diverted in Sec. 32, T. 10 N., R. 5 E., M. D. M., for irrigation purposes on 24.4 acres. Estimated cost \$500.

EL DORADO COUNTY—Application 6679. Sierra Camps, Inc., Frank Kleeberger, president, of University of California, Berkeley, for 0.1 c.f.s. from Palston Creek tributary to Upper Echo Lake to be diverted in Sec. 34, T. 12 N., R. 17 E., M. D. M., for recreational and domestic use. Estimated cost \$200.

EL DORADO COUNTY—Application 6680. H. V. Madden, Placerville, for .25 c.f.s. and 8 acre-feet per annum from Emigrant Ravine tributary to Hangtown Creek and South Fork American River to be diverted in Sec. 4, T. 10 N., R. 11 E., M. D. M., for irrigation purposes on 35 acres. Estimated cost \$2,000.

MODOC COUNTY—Application 6681. C. C. Jones, Cedarville, for 1.63 c.f.s. from Steamboat Creek tributary to Middle Alkali Lake to be diverted in Sec. 10, T. 41 N., R. 16 E., M. D. M., for irrigation purposes on 130 acres.

LAKE COUNTY—Application 6682. Martin Judge, Jr., and Company, Crocker First National Bank Bldg., San Francisco, for 250 c.f.s. and 175,000 acre-feet per annum from North Fork Cache Creek tributary to Cash Creek to be diverted in Sec. 4, T. 14 N., R. 6 W., M. D. M., for industrial and domestic purposes. Estimated cost \$3,000,000.

LAKE COUNTY—Application 6683. Martin Judge, Jr., and Company, Crocker First National Bank Bldg., San Francisco, for 175,000 acre-feet per annum from North Fork of Cache Creek tributary to Cache Creek to be diverted in Sec. 4, T. 14 N., R. 6 W., M. D. M., for irrigation purposes on 50,000 acres. Estimated cost \$1,000,000.

FRESNO COUNTY—Application 6684. Sherley DeVine, Dunlap, for .01 c.f.s. from an unnamed spring tributary to Mill Creek, thence Kings River, to be diverted in Sec. 4, T. 14 S., R. 27 E., M. D. M., for irrigation and domestic purposes on 1 acre. Estimated cost \$250.

EL DORADO COUNTY—Application 6685. J. S. Goldie, 1500 39th St., Sacramento, for 400 gallons per day from an unnamed creek tributary to South Fork of American River, to be diverted in Sec. 19, T. 11 N., R. 16 E., M. D. M., for domestic purposes. Estimated cost \$200.

MONO COUNTY—Application 6686. Clifford E. Brodie, 750 Central Ave., Los Angeles, for 200 gallons per day from Rock Creek tributary to Owens River, for domestic purposes. Estimated cost \$175.

SAN BERNARDINO COUNTY—Application 6687. Stanley Visel, 145 N. Broadway, Suite 200, Los Angeles, for 446 gallons per day from an unnamed spring to be diverted in Sec. 9, T. 2 N., R. 3 W., S. B. M., for domestic purposes. Estimated cost \$300.

MONO COUNTY—Application 6688. E. A. Montgomery, c/o Fred R. Smith, Bishop, for 0.065 c.f.s. from

an unnamed spring tributary to an unnamed watershed, thence Mammoth Valley, thence Owens River, to be diverted in Sec. 11, T. 3 S., R. 31 E., M. D. M., for mining, milling and domestic purposes.

NEVADA COUNTY—Application 6689. South Yuba Company, Ltd., 552 Holbrook Bldg., San Francisco, for 50 c.f.s. from South Yuba River tributary to Yuba River to be diverted in Sec. 8, T. 17 N., R. 11 E., M. D. M., for mining purposes. Estimated cost \$10,000.

DAM APPLICATIONS, APPROVALS AND PLANS

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources, during the month of May, 1930.

NEVADA COUNTY—Lake Olympia Dam No. 213. Thurston & Beaulieu, Grass Valley, owner; concrete, 5½ feet above streambed. Situated on no stream in Sec. 24, T. 16 N., R. 8 E., M. D. M., for storage purposes for recreation use. Estimated cost \$5,000.

PLUMAS COUNTY—Greenbower Dam No. 280. H. J. Greenbower, Meadow Valley, owner; rock and earth, 25 feet above streambed. Situated on dry gully tributary to Middle Fork Feather River in Sec. 6, T. 22 N., R. 7 E., M. D. M., for storage purposes for debris use. Estimated cost \$1,585.

LASSEN COUNTY—Coon Dam No. 249. W. W. Long, Johnstownville, owner; earth and rock, 6 feet above streambed with a storage capacity of 150 acre-feet. Situated on Coon Creek tributary to Horse Lake in T. 33 N., R. 13 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$3,000.

LASSEN COUNTY—Fredonia Dam No. 249-2. John K. Long, Susanville, owner; earth, 21 feet above streambed with a storage capacity of 300 acre-feet. Situated on creek tributary to Pine Creek in T. 33 N., R. 13 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$1,800.

LASSEN COUNTY—Branham Dam No. 249-3. W. W. Long, Johnstownville, owner; earth, 20 feet above streambed with a storage capacity of 600 acre-feet. Situated on Branham Creek tributary to Horse Lake in T. 33 N., R. 13 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$2,000.

MONO COUNTY—Black Reservoir No. 533. Schacht & Seitelmeier, Gardnerville, owners; earth, 15 feet above streambed with a storage capacity of 250 acre-feet. Situated on Black Creek tributary to West Walker River, located in Sec. 29, T. 6 N., R. 23 E., M. D. M., for storage purposes and irrigation use.

LASSEN COUNTY—Mitchell Dam No. 243. David S. Mitchell, Susanville, owner; earth, 8 feet above streambed with a storage capacity of 65 acre-feet. Situated on no stream in Sec. 13, T. 35 N., R. 11 E., M. D. M., for storage and diversion purposes for irrigation and stock use. Estimated cost \$750.

SAN DIEGO COUNTY—Miles Dam No. 843. Harriet S. Miles, Grossmont, owner; earth, capacity of 1½ acre-feet. Situated on flume, for storage purposes for irrigation use.

MERCED COUNTY—Crocker Diversion Dam No. 58. Merced Irrigation District, Merced, owner; concrete, 12 feet above streambed. Situated on Merced River in Sec. 7, T. 5 S., R. 15 E., M. D. M., for diversion purposes for irrigation use. Estimated cost \$71,660.

LASSEN COUNTY—Nelson Dam No. 231—F. S. Benedict, Likely, Modoc County, owner; earth, 10 feet above streambed with a storage capacity of 460 acre-feet, situated on Dry Creek tributary to Pit River in Sec. 24, T. 38 N., R. 12 E., M. D. M., for storage purposes for irrigation and stock water use.

MONO COUNTY—Upper Twin Lake Dam No. 521. C. E., J. H. and L. S. Day, Bridgeport, owners; rock fill, 8½ feet above streambed with a storage capacity of 2800 acre-feet. Situated on Robinson Creek tributary to East Walker River, for storage purposes, for irrigation, stock and domestic use.

MONO COUNTY—Lower Twin Lake Dam No. 521-2. Hunewill, Plymouth Land and Stock Co., Simpson & Day, Bridgeport, owners; rock fill, 20 feet above streambed with a storage capacity of 4000 acre-feet. Situated on Robinson Creek tributary to East Walker

River, for storage purposes, for irrigation, stock and domestic use.

VENTURA COUNTY—Lake Eleanor Dam No. 765-2, Elsie L. Canterbury, Hollywood, owner; arch, 30 feet above streambed with a storage capacity of 104 acre-feet. Situated on Eleanor Creek tributary to Triunfo in Sec. 27, T. 1 N., R. 19 W., S. B. M., for storage purposes for recreation use.

EL DORADO COUNTY—Diamond Reservoir No. 462-2, Diamond Ridge Water Co., Diamond Springs, owner; earth and rock, 14 feet above streambed with a storage capacity of 10 acre-feet. Situated on ditch in Sec. 25, T. 10 N., R. 10 E., M. D. M., for storage purposes for irrigation use.

MERCED COUNTY—Yosemite Lake Dam No. 58-3, Merced Irrigation District, Merced, owner; earth, 45.8 feet above streambed with a storage capacity of 7000 acre-feet. Situated on main canal in Sec. 33, T. 6 S., R. 14 E., M. D. M., for storage purposes for irrigation. Estimated cost \$165,000.

Application for approval of Plans and specifications for the repair or alteration of dams filed with the State Department of Public Works, Division of Water Resources, during the month of May, 1930.

INYO COUNTY—Hillside Dam No. 100, Hillside Water Co., Riverside, owner; rock, in Sec. 15, T. 9 S., R. 31 E., M. D. M., install new face.

NEVADA COUNTY—Fuller Lake Dam No. 97-21, Pacific Gas and Electric Co., San Francisco, owner; earth. Situated on Jordan Creek tributary to South Fork Yuba River in Sec. 17, T. 17 N., R. 12 E., M. D. M., new outlet; granite slab on upstream face.

Plans and specifications for the construction or enlargement of dams approved by the State Department of Public Works, Division of Water Resources, during the month of May, 1930.

SAN DIEGO COUNTY—Mary Joe Dam No. 841-2, H. F. Schnell, San Diego, California, owner; arch, 28 feet above streambed with a storage capacity of 135 acre-feet. Situated on Skye Valley Creek tributary to Pine Creek in Sec. 2, T. 17 S., R. 3 E., S. B. M., for storage purposes for irrigation and recreation use. Estimated cost \$30,000.

LOS ANGELES COUNTY—Mulholland Dam No. 6-17, City of Los Angeles, Los Angeles, owner; gravity arch. Situated in Weld Canyon. Estimated cost \$293,488.

Plans and specifications for the repair or alteration of dams approved by the State Department of Public Works, Division of Water Resources, during the month of May, 1930.

INYO COUNTY—Hillside Dam No. 100, Hillside Water Company, Riverside, owner; rock fill. Situated on South Fork Bishop Creek tributary to Owens River in Sec. 15, T. 9 S., R. 31 E., M. D. M., install new face.

TRAFFIC OFFICERS GO TO SCHOOL

(Continued from page 1.)

a special corps of cooks, assistant cooks and waiters hired for the occasion.

Stringent rules governing the conduct of the students were made and adhered to rigidly. No officer was permitted to leave the grounds without permission and every man was required to attend all classes.

The studies at the school included a score of important subjects, all bearing on the work of the traffic officer, such as accident prevention, efficiency, clearing highways, directing traffic, making reports, courtesy to the public, court procedure, arrests, etc.

Several special lecturers came in at various times for special subjects. Harry Huston, at-

torney for the Division of Motor Vehicles, addressed the school on one occasion on certain phases of the Motor Vehicle Act. Justice of the peace H. P. Andrews, on another occasion, lectured on court procedure.

Daily lessons in jiu jitsu were given by Tommy Burns, a master of the intricate Japanese art. Dr. D. F. Dozier gave daily instruction in first aid.

The school was fortunate at its opening period in having the services of Inspector William H. White, a former colonel in the United States Army, to supervise the close order drills and other phases of military work.

General instruction was given by inspectors Ralph Yoder, Elmer Steinmeyer and M. C. McKee. Inspectors Victor W. Killick, Ed P. Williams, Will R. Sharkey, Jr., George Moynahan, Edward P. Cook and others acted as part-time instructors.

UNIFORM TRAFFIC LAWS TERMED PROBLEM FOR STATES AND CITIES

(Continued from page 12.)

"This subject is one of vital concern to all of us and touches the well-being of the whole people. As such it calls for concerted action not only by governmental authorities of all the states and all the municipalities, but by the national associations and organizations through which the public interest, not to say the public responsibility, is expressed.

"The conference itself is an avowal of this singleness of purpose and of public responsibility. Its conclusions represent the best thought and judgment available brought to focus upon the many aspects of the traffic problem.

ACCOMPLISHMENT RESTS WITH THE STATE

"This is an accomplishment of no little magnitude, but it is the beginning, not the end of your endeavor. The task that remains is to put your conclusions into effect, to apply the solutions upon which you have agreed.

"How is this to be done? It is not for federal government to undertake to carry out your recommendations. That can not be done without violence to our fundamental political principles and the genius of our institutions. It is the proper function and desire of the federal government to assist the states and municipalities in carrying out the purposes of the conference, but not to encroach upon the authority which rightfully belongs to them.

"The task rests primarily with the states. The responsibility is theirs. I think the deliberations of the conference are a convincing guaranty that they will have the earnest support of the organizations and associations which have been represented here.

"Finally the success of this important undertaking rests with the public, the individual citizens whose welfare is the end sought by this gathering.

"May I bespeak for your efforts this necessary individual cooperation and express my own personal appreciation of the highly important work you have done?"

I know a woman who was so down-in-the-mouth, she had her face lifted.

California Highways and Public Works

IN THE YOSEMITE VALLEY

Official Journal of the Department of Public Works
JULY-AUG. State of California 1930

A Report on State Highways

By B. B. MEEK, Director of the Department of Public Works

ON June 30, 1930, the first year of the second biennium (extending from July 1, 1929, to June 30, 1931) of the present state highway administration came to its close. The time seems opportune to make a report on the progress of state highway affairs.

Since January 1, 1927, contracts have been let for major improvements upon over 2100 miles of the State highway system. The program has been by far the largest in the history of the State highway system. Counties and communities have been and are rapidly being given the highways that their development requires.

The one-cent gasoline tax for new highway construction has more than justified itself. Since May 26, 1927, when Governor Young signed this measure, 652 miles of entirely new highway have been built from funds provided by it.

OVERHEAD COSTS REDUCED

Overhead costs have been progressively reduced from 5 per cent when the present administration took charge of affairs to 3 per cent.

HIGHWAY PROGRAM ADVANCED TO MEET EMPLOYMENT NEED

Just how immediate has been the response of the State of California to the needs of public work in a period of depression is evidenced by the fact that on July 16, 1930, 80 per cent of the state's highway program for the present biennium (with eleven months of the biennium yet to come) is either completed, under contract or now being advertised for bids.

The care that has been exercised to secure the equitable distribution of these funds is shown by the fact that this figure represents 80 per cent of the budget allotment for work in the southern counties and 80 per cent in the northern counties.

BUDGET SYSTEM CREATES RESERVOIR OF PROJECTS

Through the carefully planned-in-advance building program that follows as a necessary result of the budget system, engineering on highway projects, both in the field and office, has been carried sufficiently ahead of actual

construction that a reservoir of available highway projects was created, which has been heavily drawn upon to assist both in the relief of unemployment and to better marketing conditions for materials and supplies needed in highway work.

PLANNING SYSTEM EXTENDED TO TEN YEARS

The benefit derived from planning highway work in two-year periods has been so thoroughly established that the California Highway Commission and the Department of Public Works are now compiling a report based upon a study of the probable traffic needs of California for a ten-year period. This study will prove of inestimable value to those in charge of administering state highway affairs, and should save the people of the state many millions of dollars in the ultimate cost of the state system.

SAFETY BEING BUILT INTO STATE HIGHWAYS

No state in the Union has a more ambitious program for building safety into its roads than is found in the California highways now being built or brought up to modern standards of alignment, design and construction.

Dangerous railroad grade crossings are being progressively eliminated at a rate which promises in a very few years to entirely free the state highway system of railroad grade crossings.

THREE CONTRIBUTIONS TO HIGHWAY POLICIES

It may be of interest to note that the four years that will close with the end of the present calendar year have seen three outstanding contributions to the administration of state highway affairs. These may be summarized as follows:

First, the resumption of new construction on the state highway system through the adoption of the one-cent gasoline tax measure;

Second, the application of the budget system to state highway expenditures, through which the public is informed of the manner in which it is proposed to spend state highway money in advance of and not after such expenditure;

Third, the adoption for the first time of a definite and orderly policy to govern extensions to the state highway system.

Synopsis of Report on Orderly Additions to State Highway System

Made to Governor C. C. Young in accordance with Assembly Concurrent Resolution No. 16, relative to the orderly addition of new roads to the state highway system, after engineering and economic studies by the California Highway Commission and the Department of Public Works.

Recommendation for the inclusion of twenty-two additional highways into the state highway system were made to Governor C. C. Young on July 24th by B. B. Meek, Director of the Department of Public Works, and the members of the California Highway Commission.

The report follows a fifteen months study of proposed extensions to the state highway system, a study ordered by the last legislature in a joint resolution of the Senate and the Assembly, unanimously adopted by both houses. This resolution directed that the report should be completed and transmitted to the Governor by August 1st.

Under the terms of the joint legislative resolution, all new highways recommended for inclusion in the state system were confined to roads that could qualify in at least one of three classes. These classes were:

1. Roads now carrying a large volume of state traffic;
2. Roads affording relief to heavy traffic on present state highways;
3. Roads serving as important interstate highway connections.

The legislative resolution also directed that the additional mileage recommended for inclusion in the state system should be limited to from 10 to 12 per cent of the 6590 miles now in the state system. It further directed the progressive equalization of the existing disparity in secondary highway mileage between the northern and southern counties (secondary highway mileage of the north is 1778 miles and that of the south 525 miles) by the addition of not less than three or four miles in the south to one mile in the north, without change, however, in the present equal allocation of secondary highway money as between the north and the south.

Under the rules laid down by the legislature, Director Meek and the California Highway Commission have recommended the inclusion of 804 miles of roads into the state system. This constitutes 12 per cent of the present state highway mileage. The mandate of the legislature relative to the distribution of these roads is also followed in that the ratio of mileage is 3.7 miles in the south to one mile in the north.

Governor Young stated today that he would recommend to the coming legislature that the report be adopted by that body. Ralph W. Bull, chairman of the California Highway Commission, stated on behalf of that body, that the California Highway Commission would avail itself of the right, granted to it by the legislative resolution, to include in the highway budget now being prepared provision for the betterment of the roads recommended for inclusion in the state system.

The roads that this report recommends that the coming legislature include in the state highway system are as follows:

IMPORTANT INTERSTATE CONNECTIONS

1. *Mecca-Blythe Highway connections.* (a) To the Arizona state line. The present state highway terminates at Blythe, 4 miles from the Arizona line. It is proposed to include this section in the state system, thus establishing a connection with the Arizona state highway system at the Colorado river. This project lies in Riverside County.

(b) Western terminus of present road to San Bernardino-El Centro Highway. The western end of this road also was without connection with the state highway system. It is recommended that 19.5 miles be added to the system connecting this road on the west with the San Bernardino-El Centro highway. This section lies in Riverside County.

2. *From a point on the present state highway near El Centro to Calexico on the Mexican border.* The northern terminus of this road is near the junction of three state highway routes and lies in the center of the intensely cultivated Imperial Valley Irrigation District. The southern terminus is an important

entrance from California to Mexico. The length of the road is 8.5 miles, all in Imperial County.

3. *Oasis to the Nevada state line.* The state highway (Route 63) from Big Pine to Oasis was added to the state system in the \$40,000,000 highway bond act. Terminating the route at Oasis, 2½ miles short of the state line, was obviously an oversight as the road was intended to afford a connection between the California highway system and that of Nevada. The addition of this section to the state system affords the desired connection and corrects an obvious error. The mileage lies in Mono County.

4. *National City to the United States-Mexico international boundary.* There is no state highway south of San Diego to the international boundary. The traffic between these points, a large percentage of which is state and international in character, is carried over a county road. It is believed that the international connection on the California side should be a state highway. The road down the Mexican coast now extends far, and will undoubtedly be continued much farther. The road classifies for inclusion both on its volume of state traffic and as an international road connection of importance. The length is 10 miles, all in San Diego County.

5. *Bishop to the Nevada state line via Montgomery Pass.* This road is of importance as an interstate connection which utilizes a mountain pass, the superiority of which has been established both by studies of the California and the Nevada state highway commissions. During the winter months it is the most direct winter route between southern California and Nevada. Nevada has been awaiting action by California in making a permanent adoption of the route before undertaking any large program of improvement on its side of the line. The road is 38 miles in length and lies in Inyo and Mono counties.

6. *Alturas to the Oregon line.* This road will connect the California state highway system with an improved highway built by Oregon to the California state line at New Pine Creek. It affords the only state highway connection between California and eastern Oregon. The road will constitute a link in the Yellowstone cut-off and will serve through its connections the various recreational highways in north-eastern California. The road lies in Modoc County and is 34 miles in length.

7. *Quincy to the Nevada state line.* This road forms a connection between the Feather River lateral and the Nevada state highway system. Without this connection full utilization can not be had of the all-year road up the Feather River. The highway from Quincy to Beckwith is being built from U. S. Forest funds and is nearing completion.

Lack of county funds will prevent further improvement between Beckwith and the Nevada state line. The length of the road is 58 miles. It lies in Plumas and Lassen counties.

8. *A connection from the Pacific Highway near Weed to the Oregon state line.* This route forms a connection between the Pacific Highway in California and improved Oregon roads which pass through Klamath Falls and points north thereof. The road classifies for state inclusion as an interstate connection of commercial and recreational importance and as an advantageous alternative and relief highway to the northern part of the state. It is now being built as a joint highway district. The road lies in Siskiyou County.

HIGHWAYS NOW CARRYING A LARGE VOLUME OF STATE TRAFFIC

1. *American Canyon Highway.* This road will make a state connection from the Sacramento, Yuba, Napa and Suisun Valley state highway near Cordelia

to state highway Route 14 in Contra Costa County. Traffic at present takes the county road through Vallejo to Napa junction. This latter road is 5 miles longer than the proposed route and has many railway crossings which will be eliminated by the relocation. The proposed road qualifies for state inclusion because it will be the logical routing supplanting a county highway which now carries a very large percentage of state traffic. The road is 14 miles in length and lies in Solano, Napa and Contra Costa counties.

2. *Walnut Creek to Oakland.* Alameda and Contra Costa counties have organized a joint highway district for the construction of a public highway and tunnel to supersede the present inadequate tunnel road in Alameda County and improve the Contra Costa County road from the tunnel to Walnut Creek. Travel on the present road shows less than 5 per cent local traffic. With the completion of the new tunnel the percentage of local travel to the total volume will be even less. It is proposed that the state take over the portion of this project which lies in Contra Costa County between the tunnel and Walnut Creek, a distance of 9.6 miles.

3. *A highway from Los Angeles to a connection with the San Bernardino-El Centro state highway near Colton.* This route is one of the intermediate routes in the territory bounded on the west by Los Angeles and on the east by San Bernardino and Riverside counties. It follows, in large part, county roads exceptionally well located. Traffic studies plainly show that the character of the travel is such that the importance of including it in the state system is self-evident. The length of this highway is 42.5 miles. The road lies in Los Angeles and San Bernardino counties.

4. *The Jack Rabbit Trail.* The county highway between Riverside and Beaumont, commonly referred to as the Jack Rabbit Trail, is used by many as a short cut between state highways. State traffic now constitutes 69 per cent of the travel on the road. The road is 19.5 miles long and is situated in Riverside County.

5. *Riverside to San Diego (Inland Route).* The Inland Route from Riverside to San Diego is an old established county routing. Riverside and San Diego counties have paved this route, making a serviceable road for light travel. Traffic counts show a very high percentage of state traffic on this highway. Its length is 95 miles, all in Riverside and San Diego counties.

6. *Pomona to Temecula.* The general course of this route shows that it establishes a very direct cut to the Elsinore Lake district and to the Inland Route from the Pomona territory. Traffic count shows that state traffic on this route runs as high as 82 per cent. It qualifies for inclusion in the state system both by reason of its present large state traffic and because of the relief that it would afford to the Coast Route. The road is 56 miles in length and is situated in Los Angeles and Riverside counties.

7. *Cambria to San Luis Obispo.* This road affords a connection between the Coast Route at San Luis Obispo and the Carmel-San Simeon highway at Cambria. The present connection between these two highways is a county road. The completion of the Carmel-San Simeon highway will throw a large volume of state traffic over this road and for this reason the inclusion of this connecting link between two state highways is recommended. The road is 36 miles in length and lies in San Luis Obispo County.

8. *Pomona to the Coast Highway near Fullerton via Brea Canyon.* This road is an established short cut between the territory east of Los Angeles and the beaches and area south of that city, and ultimately will provide a desirable route for truck traffic to the coast. Through traffic now predominates on the road, intercounty and state traffic constituting about 76 per

(Continued on page 27.)

Protection Against the Forces of Nature in California Highway Construction

By C. S. POPE, Construction Engineer, California Division of Highways *

THIS paper deals with some of the more unusual elements from which it is necessary to protect highways in the western states such as floods, cloud-bursts, sea waves, moving sand dunes, and earthquakes.

FLOODS

Floods may be of the type caused by the normal rise of large rivers due to rainfall or by sudden floods in normally dry streams due to cloud-bursts or heavy rainfall. In either case, the protection of highways against destruction is an important problem.

Some of the methods of protection which have been developed in this state include the construction of brush and wire fences, mats composed of wire mesh and gravel, deflecting

Deflecting jetty made of piling.

WAVE ACTION

Protective structures for sea waves take the form of booms anchored to piles, heavy random riprap, hand placed riprap, sheet piling of wood or concrete or other bulkheads, groynes of wood or steel, jetties, wave breakers, and slope paving, and sea walls.

SAND DUNES

Protection against moving dunes is generally obtained by a study of their habits and movements. Some may be avoided by a change of location, others by a raise of grade, and others may be removed by wind action or with the use of equipment.

EARTHQUAKES

So far as we have observed, there is no known cure for earthquakes except good construction which includes the use of a suitable number of expansion joints in concrete paving, the clearing of all hillsides of hanging

Slope paving and masonry walls.

jetties of stone or piling, and wire mesh, deflecting tetrahedrons of steel or reinforced concrete, sacked concrete riprap, hand laid stone riprap, random riprap, stone filled wire baskets, and slope paving.

CLOUD-BURSTS

Protective structures against cloud-bursts may consist either of a system of dips in pavements providing overflow over aprons and cut-off walls, or may be provided by a system of channels and deflecting dykes designed to pick up the broad but heavy flow occasioned by cloud-bursts and conducting the same through channels over which trestles have been constructed.

Protecting banks by brush and wire fence.

* A paper delivered before the American Society of Civil Engineers at its spring meeting in Sacramento.

Concrete cells.

rock, and solid construction of all fills in earthquake country.

FLOODS

Since a great many of our more destructive floods occur in arid regions and are accompanied by the transportation of considerable amounts of sand which not only prevent solid structures from being used but make them useless for the reason that stream beds are filled up and changed, there has been considerable use of structures of a type which are easily replaced.

BRUSH AND WIRE FENCING

A popular type of protection is the brush and wire fence dyke, which is constructed of two rows of galvanized iron pipe on which wire or fencing is fixed to retain the brush filler which is placed between the rows of fencing. The brush is weighted down with stones to insure its settlement into any washouts which might occur. There has been developed a very definite system of installation of this type of fencing.

STONE FILLED WIRE MATS

A second common practice is the construction of slope mats of wire mesh and cobbles. The slope is first dressed to an even surface and on it is laid a section of wire mesh. A

coating of cobbles 6 or 8 inches thick is laid on the wire mesh and a second wire mesh panel is wired down on top of the cobbles. This construction gives a flexible mat which will, to a certain extent, follow any undulations which may occur due to washouts. It has been extensively used in storm protection work in Los Angeles County, but not to any great extent by the highway organization.

JETTIES

Deflecting jetties constructed of piles with wire mesh nailed to them were at one time considered the most satisfactory type of stream protection, but, at the present time,

Sacked concrete.

Tetrahedrons that saved the highway in the St. Francis flood.

their use is confined largely to the northern part of the state where the character of the stream bed is usually more stable than is found in the south. When properly constructed, they prevent bank erosion and are of considerable value.

TETRAHEDRONS

Where the character of the detritus carried by the stream is rather light, such as the Colorado River silt or fine sand, the use of skeleton tetrahedrons of steel or concrete has been found very effective for stream deflection. These tetrahedrons are placed in line

at the location where bank erosion is taking place, completely closing the break, and they are usually anchored with cables to insure their being maintained in position. Their function is to interrupt the flow of the stream in such a manner as to cause silt to deposit in the eddies set up by the obstruction, and their use has been followed by very successful results in many locations. Those used on the Colorado River by private interests were constructed from steel rails 30 feet in length and were used successfully in deflecting this

Wind channels cut in sand dunes.

large stream where other means had not been successful.

On highway work a row of tetrahedrons which had been placed to deflect the stream on the Santa Clara River was the means of saving a considerable section of highway during the St. Francis dam disaster.

SACKED CONCRETE

In locations where large rock was not available, the state has used a considerable amount of sacked concrete placed as riprap in critical locations.

STONE FILLED STEEL BASKETS

In somewhat the same territory, we have also installed, under plans made by the Bureau of Public Roads, metal baskets having a volume of about $1\frac{1}{2}$ to $2\frac{1}{2}$ cubic yards which were filled with stone and placed by means of suitable equipment as bank protection.

SLOPE PAVING

Slope paving has been extensively constructed either by hand placing suitable stone or by constructing slope walls of concrete 4 inches to 6 inches in thickness which extended a sufficient depth below stream bed to be safe. On many streams the use of random riprap of considerable weight has been advantageous as a method of protection.

CLOUD-BURSTS

One of the most unusual problems we have

to face is the protection against cloud-bursts. Without having complete data on the subject, it is nevertheless the opinion of some of our engineers that these cloud-bursts occur in approximately the same areas within a reasonable range. Since in many localities the hills and mountains are entirely denuded of any verdure which would retard the flow of water the volumes of water to be handled are very large and the run-off very rapid. The water often appears without previous intimation that a cloud-burst had occurred. The first knowledge which the observer has of the approaching danger is the appearance of a wall of water and mud sweeping down the canyon. The method pursued in the past has been to construct paved dips across all locations where the profile indicated that cloud-burst run-offs were usual. This, however, proved unsatisfactory in many cases because of extreme scour which occurred at the over-flow aprons. It seemed practically impossible to check the velocity of the water either by cut-off walls or water cushions.

DEBRIS CONES

The usual formation in sections where cloud-bursts are frequent show the presence of flat debris cones issuing from the canyons or other sources from which the water comes and spreading out fan-wise into the lower lands.

Dykes to protect desert roads.

Taking advantage of this condition, the state has adopted the system formerly used by the Santa Fe Railway in constructing pick-up channels or dykes along the line of the cones in such a manner as to secure greater velocity in the channels than is afforded by the general slope of the country. The channels, of course, must be located close enough to the highway to intercept any considerable amounts of water. The results so far obtained have been extremely satisfactory in restraining all of the water from crossing the highways except at certain designated points, where wooden

Receiving Tourists to California

By P. T. POAGE, Assistant Architect

FOR MANY years the State of California, through its Department of Agriculture, has watched and studied the effect of plant pests in other states and in foreign countries. To prevent the disastrous inroad of such pests as the Cotton Boll Weevil, the Mediterranean Fruit Fly, and the Alfalfa Weevil, into this state, a careful quarantine service has been maintained with inspection

stations at all entrances into the state. Millions of dollars are being saved annually through the prevention of such catastrophes as the recent fruit fly epidemic in Florida. Shortly after taking office, Governor Young recognized that the state had both an opportunity

and an obligation to fulfill in this service—an opportunity to create in the mind of the incoming stranger a favorable first impression of California; an obligation to treat the tourist with the utmost courtesy, by explaining carefully the reason for the inspection, and by making the inspection courteously with entire absence of arbitrary authority.

It was apparent that the desired type of service could not be given without more adequate facilities. Thus, at Fort Yuma, California (sometimes known as Winterhaven) immediately across the Colorado River west of Yuma, Arizona, we find, now under construction, the first of California's "Super-Service Stations." This station is being constructed jointly by the Department of Agriculture and the Division of Motor Vehicles, so that in addition to the quarantine inspection, registration of automobiles bearing licenses from other states will be handled, and a general information service will be made available to the traveler.

The selection of a site is of prime importance. No side road which would permit bypassing the station may be permitted to intersect the main highway between the station and the border. At Fort Yuma this has forced the selection of a restricted and difficult site requiring heavy cut and fill, and all but crowding onto the state highway right of way. Nevertheless, when completed there will be adequate room for parking and for handling all of the traffic which may be expected for some time to come.

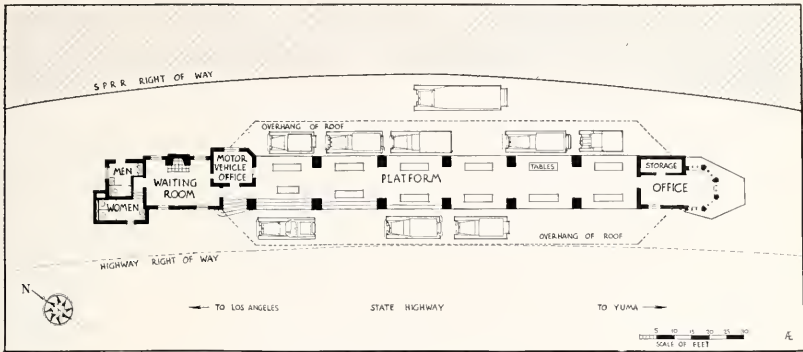

The building will be long and low, reminiscent of the desert in which it is located. At the east end the horizontal feeling is broken by a tower forming an accent to attract the attention of the motorist. Under the tower is located the office of the agricultural inspectors arranged with windows giving full view of the highway in the direction of the border. This office opens onto a long concrete platform which will accommodate twelve cars lined up on the two sides. A wide tile road

P. T. POAGE

General view of State Plant Quarantine Inspection Station at Fort Yuma.

Layout of Border Station at Fort Yuma.

supported on steel trusses covers the platform and extends entirely over the cars on either side so that inspection may be carried on in the shade.

At the west end of the platform are quarters for the Motor Vehicle offices, a rest room for the public, and comfort stations for men and women. The rest room has a fireplace on one side and will afford a homelike comfort to the weary tourist while waiting for inspection.

The building walls will be of hollow cement brick, whitewashed to resemble the native adobe brick. The roofs will be covered with an insulating material, which, with the hollow walls will afford a maximum of comfort on the warm summer days of the desert.

Ice cold drinking water will be provided by an electrical refrigerating unit, conveniently located on the platform.

The construction of this station is a major step in the program for a gradual improvement of all border stations. When completed, this summer, California will be able to extend to its guests a real "Super-Service."

WELL, WHY NOT?

Identity of the young lady is withheld, but the memory of her answer lingers on with the instructor conducting a science course at a high school. One of the requirements in the written quiz was: "Define a bolt and nut and explain the difference, if any." The girl wrote:

"A bolt is a thing like a stick of hard metal such as iron with a square bunch at one end and a lot of scratching wound around the other end. A nut is similar to the bolt only just the opposite, being a hole in a little chunk of iron sawed off short, with wrinkles around the inside of the hole."

The startled professor marked that one with a large "A."

State Shows Big Increase in Auto Registrations

Additional evidence that California is the "white spot" of America in business was given in figures compiled by the Division of Motor Vehicles showing that motor vehicle registrations in the state gained more than 6 per cent during the first five months of 1930 over the same period for the previous year.

The net gain in vehicles was 110,828, the total in fee-paid registrations for the five-months period being 1,937,535, as compared with 1,826,707 for the previous year.

The division expects to equal the total for 1929 early in July when registration of many vehicles, held back for various reasons, will have been made.

At the present rate, the percentage of increase for 1930 over 1929 will be far greater than 1929 over 1928.

The gain in passenger cars for the five-month period was 95,071.

Registrations for the five-month period ending May 31st were reported as follows: Passenger cars, 1,804,331; solid tire trucks, 14,322; pneumatic tire trucks, 71,781; solid tire trailers, 8635; pneumatic tire trailers, 30,630; motoreycles, 7836.

Registration fees collected by the division for the period totaled \$8,620,756.

INSTALLMENT PLAN

Young Man—How much do I pay for a marriage license?

Clerk—Five dollars down and your entire salary each week for the rest of your life.

The Golden State Highway

By E. E. WALLACE, District Engineer *

THE PORTION of the California state highway between Los Angeles and Sacramento which traverses the central portion of the state and which is designated as U. S. Route No. 99, is popularly known as the "Golden State Highway."

This is the main artery for all central California travel and is supplemented by more than a dozen main laterals connecting with the centers of population and with various recreational areas, including three national parks. It traverses the San Joaquin and a portion of the Sacramento valleys, providing access to hundreds of thousands of acres of intensively irrigated and cultivated lands, and to vast oil fields. The valley produces great tonnages of supplies, considerable portions of which are hauled over this highway. New recreational territories are being opened in the Sierra region. The Kings River Canyon Highway is one of the larger projects of this kind.

The development of the "Golden State Highway" has been an interesting and important part of the growth of California.

To the early Spaniards and pioneers this was then the Great Interior Desert of California and because of its vastness and lack of transportation facilities, it was a thing to be avoided.

The first settlement of consequence was established at Visalia about 1835. Later, because of the discovery of gold in the Mother Lode country, numerous settlements developed along the pony express trail, which had been located in the foothill country on the easterly side of the valley in order to avoid the overflow lands farther to the west.

With the rush for gold and the accompanying development of agriculture and industries, the Fremont Trail was the next traffic development. This trail connected many of the old mining towns on the Mother Lode and gradually extended to other new developments.

A railroad was then built through the center of this great valley. Wagon roads were constructed paralleling the tracks and crossing them frequently and these same roads

Golden State Highway south of Bakersfield.

were the beginning of the present "Golden State Highway."

The automobile gradually displaced the horsedrawn vehicles and with this displacement the demand for better highways has grown more rapidly than finances could be provided.

These wagon roads were gradually widened and surfaced but the use of the automobile developed even more rapidly than the highways. It is of interest to note some traffic census figures which were taken in the vicinity of Fresno during 1913 in comparison with our traffic count at the same location last July.

Year	Horse drawn vehicles	Automobiles	Trucks
1923-----	657	451	21
1929-----	2	7978	727

Such development demands wider rights of way, higher standards of alignment, elimi-

Old store at Tattletown, said to have been patronized by Mark Twain. This is on the Mother Lode Highway, which is served by the Golden State Highway.

* Between Sacramento and Turlock, the Golden State Highway lies in District Ten, R. E. Pierce, District Engineer; between Turlock and Lebec in District Six, E. E. Wallace, District Engineer; and between Lebec and Los Angeles in District Seven, S. V. Cortelyou, District Engineer. Data relative to the Golden State Highway in Districts Seven and Ten was furnished Mr. Wallace by District Engineers Pierce and Cortelyou.

Subway at Califa in Merced County.

nation of railroad grade crossings, more substantial structures and much more modern types of pavement.

By concentrating all available finances on U. S. Highway No. 99, the State Highway Commission has accomplished much towards providing a modern highway which is adequately handling the traffic, but on which much is yet to be done in order to keep pace with the rapidly increasing traffic.

The original pavement on this route was only 15 feet wide and 4 inches thick. This has been resurfaced and widened to at least 20 feet until at the present time only about 30 miles out of the original 360 remain of the old narrow pavement.

FROM SACRAMENTO TO TURLOCK

The Golden State Highway from Sacramento to Turlock is the main north and south artery through the valley from which branch roads lead to the historic Mother Lode region and the famed recreational areas of the Sierra Nevada Mountains. At Salida the Sonora lateral leaves the Golden State Highway and

New trestle over Cosumnes overflow in Sacramento County.

about 10 miles west of Sonora the scenic Big Oak Flat road branches off reaching Yosemite Valley from the north and tying into the Tioga road, which lateral crosses the Sierra Nevada over Tioga Pass at an elevation of 10,000 feet.

The Sonora lateral meets the historic Mother Lode Highway at Sonora and continues through heavily forested country of great scenic interest and finally crosses the summit through Sonora Pass at an elevation of 9624 feet.

At Lodi the San Andreas lateral reaches the Golden State Highway and connects with the Mother Lode Highway at San Andreas, being the route through the historic Angels Camp and continues to the Calaveras Big Trees, over the Sierra Nevada at Ebbetts Pass and into the scenic Alpine County.

North of Galt at Twin City the Jackson lateral leaves the Golden State Highway,

Bridal Veil Falls in the Yosemite Valley.

crosses the Mother Lode Highway at Jackson and continues past Silver Lake and Carson Pass. It crosses Carson Pass, which is famed as the point where Fremont crossed the mountains under the guidance of Kit Carson during the winter of 1844, and thence continues into Alpine County. The Mother Lode Highway extends from Auburn to Sonora and passes through many historic places such as Plymouth, Drytown, Amador City, Center Creek, Jackson, Mokelumne Hill, San Andreas, Angels Camp, Jack Ass Hill (made famous by Mark Twain's book "Roughing It"), Tuttletown and Sonora.

During the past few years many improvements have been made on the Golden State Highway, both in the matter of resurfacing, widening, and in the improvement of alignment. Between Manteca and Stockton the original route via French Camp was relinquished to the county, the state taking over a new route via Hogan and Mariposa roads. Considerable mileage of Portland cement

concrete paving, both north and south of Stockton, is planned for the next biennium work. Four concrete bridges are now under construction and approximately seven miles of concrete pavement in this vicinity.

North of Lodi contracts have been awarded for bridge and approaches to the Mokelumne River. In the vicinity of Arno, between Stockton and Sacramento, a line change eliminated a very poor portion of county road location. This is scheduled for cement concrete paving.

By July 1, 1933, it is expected that the entire Golden State Highway between Sacramento and Turlock will be widened and paved with a high standard 20-foot pavement.

FROM TURLOCK TO LEBEC

Between Turlock and Lebec the Golden State Highway is the main north and south artery through the San Joaquin Valley. There are numerous connecting laterals which lead to national parks in the high Sierras to the east and over the Coast Range and join the coast route on the west. Route 18, the Yosemite lateral, leaves the Golden State

Grading operations on the Newhall alternate line.

Highway at Merced and continues easterly and northerly via Mariposa and the Merced River Canyon. The Pacheco Pass lateral intersects the Golden State Highway at Califa and provides the most direct connection from the central San Joaquin Valley to coast points. At Fresno a county road leading easterly to General Grant Park forms the connection with State Highway Route 41, which is now being constructed as a future route into the Kings River Canyon.

The Sierra-to-Sea lateral crosses the Golden State Highway about one mile south of Goshen Junction. It connects with the coast route on the west and leads to Sequoia National Park on the east.

Route 33 provides a coast connection at Famoso, being a point on the Golden State Highway about 20 miles north of Bakersfield.

Highway tree planting in Stanislaus County.

At Bakersfield the Golden State Highway connects with Route 57, which proceeds easterly through the Kern River Canyon, crossing Walker Pass and intersecting the highway east of the Sierra Nevadas at Freeman, a point north of Mojave. About 20 miles south of Bakersfield, Route 57 leads westerly, passing a short distance north of Wheeler Ridge and leading to the oil fields and westerly through Maricopa, over Cholame Pass, to connect with the coast route.

RECENT IMPROVEMENTS

The Golden State Highway is rapidly being improved to a much higher standard than the old 15-foot by 4-inch concrete pavement of which only 30 miles now remain between Turlock and Lebec. The outstanding recent improvements include a 20-foot cement concrete and 20-foot asphaltic concrete paving between Berenda and the north line of Madera County, the cost of which, including the Califa subway, was approximately \$350,000. Two railroad grade crossings were eliminated in this improvement by locating west of the Southern Pacific and constructing a combined underpass for Routes 4 and 32 at Califa.

Line change on present Ridge Route.

Brake Testing Activities

By ANDREW J. FORD, Inspector at Large, in Charge of Bureau of Brakes and Commercial Vehicles

BRAKE testing has become a part of the regular weekly duty of members of the California Highway Patrol and is proceeding in an orderly manner all over the state.

Thus far the campaign has not gone far beyond the "courtesy" stage. It is rapidly reaching the point, however, where actual citations will be issued to motorists whose brakes can not comply with the standards set up by the motor vehicle act.

ANDREW J. FORD.

During the last three months officers have stopped approximately 85,000 cars and examined the brakes. Of these between 10 and 12 per cent were found to be driving with brakes that did not meet the requirements of the law.

This does not represent the actual percentage of poor brakes among all cars operating inasmuch as the officers only stopped a small percentage of the cars on the roads to test their brakes in order to avoid holding up traffic. It is believed that the actual percentage of all the cars operating on the road is much less.

The brake testing campaign has been conducted without any lessening of other activities of the patrol. In most of the counties it has been the custom to set aside certain hours in the week to devote to this work.

The public has shown a marked appreciation of the need of good brakes and has cooperated well. Many have come to the patrol voluntarily and requested that their brakes be examined. Motorists stopped along the highways for the purpose of checking their brakes have, almost without exception, submitted to the tests without grumbling and have been courteous to the officers. Great care has been taken to impress the motorist that good brakes are necessary for his own

safety. Officers have taken care also to impress him with the fact that the state authorities do not care where he has his brakes repaired provided, that after the adjustments are made, the brakes will test up to the requirements of the law.

Along with the actual field work of inspecting brakes has gone the work of checking applications received from all parts of the state for designation as official brake testing stations.

Considerable misinformation was disseminated regarding the state's attitude on this matter which was corrected before the work progressed far. Among other things, the patrol administration has sought to impress the public that it is not recommending, suggesting or prohibiting any type of brake testing or adjusting machine or equipment and has no interest in the various persons who have applied for such designation except to see that they are honest and competent.

In designating such testing stations, the patrol has kept in mind the reputation of the applicant as a business man, the ability of the men employed to do the adjusting, the location of the garage, shop or service station, the demand for such stations in the community and similar qualifications.

Approximately 900 establishments have been designated as official stations to date. These designations were made after a careful personal check by the patrol. Approximately 2000 mechanics have been authorized as adjusters.

In carrying on our brake testing program, emphasis is being laid on the fact that the motorist is not required to have a brake certificate to drive a motor vehicle. It is only after his brakes have been tested and found not to comply with the law that he is required to have his brakes adjusted or repaired and to produce evidence that he has done so.

A motorist who has been cited for defective brakes may secure adjustment at an official brake testing station. He will receive from that station a certificate which he can mail with his citation card to the patrol officer in order to clear his record. If the motorist has his brake adjustment work done at a place other than an official brake testing station, he may satisfy the citation by appearing

(Continued on page 29.)

Important Progress on East Bay Highway

COLONEL JNO. H. SKEGGS, District Engineer

THAT section of state highway between Oakland and San Jose officially designated as State Highway, Route 5, was originally a county road known as the "Mountain road." With its adoption into the state highway system it has gradually assumed the importance to Oakland, San Jose and east bay territory which the Peninsula Highway bears to San Francisco, San Jose and peninsula territory.

The first improvements by the state on this important section of highway were made in 1915, at which time the standard from Hayward to San Jose was an 18-foot width pavement on a 24- to 30-foot graded roadway. The 5-mile section between Oakland city limits and Hayward was taken over by the state from the county already paved 24 feet wide.

By 1924 this highway had assumed such importance that a general program of widening and reconstruction to conform to the rapidly increasing traffic demands of the time, was adopted. Under this widening program the 3.8 miles between Milpitas and Coyote Creek was constructed that year.

In 1928 the 4.3-mile section between Warm Spring and Milpitas was widened in like manner to 30-foot paved width.

The most recent section of this major plan, the 8.7 miles between Hayward and Niles was completed in May of this year. This project called for widening the present right of way from its former width of 40 to 60 feet to a full 100-foot width throughout. Owing to the heavy urban settlements south of Hayward, where the property for 2 miles on both sides had been subdivided into city lots, right of way negotiations call for not only the purchase of highway frontage property, but included much construction in moving and rehabilitating the many residences and light commercial buildings involved. The balance of this section skirts the cultivated hills on the east with an intensively farmed valley floor, extending west to the bay. Right of way problems consisted of some 215 property negotiations in addition to moving and reconstructing about 80 buildings.

Three line changes were made on this section, one of which was more in the nature of a shift made necessary to avoid encroaching upon Holy Sepulchre Cemetery in widening right of way. A second line change bettered

alignment for approximately one quarter of a mile, and was more or less determined by right of way controls. The most important change was that made in the approach from the north to the Niles underpass, where a practically blind reverse curve entrance was eliminated.

Construction consisted of widening, in general on the east side only with an 11-foot width of 8-inch to 10-inch thickness of concrete, and resurfacing the old original 18-foot concrete pavement and 1 foot of the new concrete with a minimum thickness of 3 inches of asphalt concrete. On line changes or slight grade changes three 10-foot strips of 8-inch to 10-inch thickness of concrete were placed. However, where line change involved widening to variable width, 7-inch to 9-inch concrete was placed and 3-inch minimum thickness asphalt concrete 30-foot width or more to cover old and new concrete.

The project thus involved approximately $1\frac{1}{2}$ miles full width surfaced with asphalt concrete, including one-half mile through the business portion of Niles, $1\frac{1}{2}$ miles of 30-foot width concrete, and 6.1 miles of surfacing existing pavement with asphalt concrete and widening on the east with Portland cement concrete. Graded roadbed width is 47 feet with 6-foot shoulder on the east and 11- to 12-foot shoulder on the west preparatory to widening on that side in the future to an ultimate 40-foot paved width centering the 100-foot right of way.

The completion of this project is another step in the progress of the major plan of widening and resurfacing upon the best economic engineering alignment possible between Oakland and San Jose. Not only is this consistent with the traffic demands of this rapidly developing east bay territory, but design has been made with a vision of future construction requirements. Increased visibility has been secured at all intersecting roads and driveways, for this is a fast highway. The wide west shoulder gives the effect of a four-lane highway tending to diminish traffic hazards.

This section of highway holds a particularly important position with respect to east bay communities due to the excellently paved connections at many points leading to both the transbay bridges. Northbound travel is

(Continued on page 23.)

Salvaging Water Waste in the Los Angeles Coastal Basin

✓ ✓ ✓ ✓ ✓ ✓

THE state-wide water resources investigation authorized by the 1929 legislature is being vigorously pressed through the cooperative efforts of three state and federal agencies, namely, Hoover-Young Commission on California Water Resources, Joint Legislative Water Resources Committee, and the Department of Public Works. Comprehensive engineering investigations are under way in nearly all sections of the state as follows:

One phase of the investigation of particular importance has to do with salvaging present water waste in the South Coastal basin of Los Angeles. This basin occupies an area 90 miles from west to east at its greatest length and 50 miles north and south at its greatest width. It contains 57 incorporated cities, numerous urban communities not incorporated and 2200 square miles of irrigable land or land suitable for residential development. About 2,800,000 people live in this basin or 50 per cent of the population of the state, although the area is less than one and four-tenths per cent of the total area of the state and only seven-tenths of one per cent of the water supply is found here. Population and irrigated area are rapidly increasing.

It should be noted that only seven-tenths of one per cent of the water supplies of the state are found in this region. To amplify the local supply, the City of Los Angeles has constructed its aqueduct for 250 miles to bring in Owens Valley water from the north and now proposes to extend this to Mono Basin still further north in order to reach additional supplies. The Metropolitan Water District is actively proceeding with its Colorado River project to bring in 1500 second feet. Despite the fact that it has been necessary to bring in these supplements from outside, local waters still go to waste in times of flood. There is also a constantly increasing discharge of sewage water into the ocean.

MANY ORGANIZATIONS ACTIVE IN WORK

Many organizations are working to the end of saving local wastes. Los Angeles County

Flood Control District is active in the San Gabriel and Los Angeles River watersheds with the dual purpose of salvage of waste and protection from floods. Orange County Flood Control District has laid out a similar program for Orange County. The Tri-Counties Conservation Association is actively engaged in conservation in the upper Santa Ana watershed. Many water companies, both singly and in groups, have made or are making their contribution to this end. But the matter is complex and the object costly to achieve. Many agencies for research and investigation have been busy on the matter for several years past securing data useful and necessary to final consummation of the salvage of local wastes. The U. S. Geological Survey is measuring stream flow from mountains and waste into the ocean. The U. S. Division of Agricultural Engineering is determining wastes of water by uneconomic plant life and contributions to the supply from rainfall on the valley floors. It is also beginning work looking toward increase in efficiency of spreading water on gravel cones. The U. S. Forest Service is organized to protect the watershed and is doing experimental work looking toward increase in efficiency of watershed cover. The City of Los Angeles is investigating the use of sewage water in industry and agriculture. The State Division of Water Resources has done a great deal of investigational work in gathering and analyzing data to determine amounts of waste, possibility of salvage and utilization of the underground reservoirs to better advantage.

PHYSICAL ASPECTS OF THE PROBLEM

The physical situation may be briefly reviewed: The region is supplied by three stream systems, Los Angeles, San Gabriel, and Santa Ana rivers. About 90 per cent of the water supply is secured from underground reservoirs which have captured and held a part of the wild and sudden floods of the region. The area separates into 29 more or

less definitely delimited underground reservoirs, each one of which is tied in with others so that what is done in one toward water supply affects, perhaps, several others. Each one of these is an individual study which must be combined with the whole to reach an answer. Any attempts at salvage resolve themselves finally into attempt at adding to the natural supply of one or more of these underground reservoirs and utilizing them to better advantage. The water plane in practically all of these has been falling for many years past. Into some, even, salt water is penetrating from the ocean. Water is being pumped from below sea level in 162 square miles of the Coastal Plain, according to recent surveys. Salvage of local waste will be available to some and not to others. An important step in investigation will be the determination of shortage in each basin if such exists, source of water available for it, and the effect of development in one basin on the supply to another.

Local wastes occur by floods, by outflow of sewage into the ocean and by evaporation from a high water plane. Only those flood wastes which originate above a reservoir site can be salvaged unless spreading works can be developed which will function in flood times. Salvage of flood waste and of sewage is a matter of public effort, but salvage of water evaporated from seeped lands may not be. It depends on the particular situation. In most cases reclamation of seeped lands will merely result in their cultivation. In other words a useful draft will be substituted for a waste but on the same land. It may not affect the general situation.

WASTES POSSIBLE OF SALVAGE

Only those wastes which it is believed possible to salvage in whole or in part are listed below. Estimates are as follows:

AVERAGE ANNUAL WASTE			
<i>Estimate of Flood Waste Possible to Salvage:</i>			
Los Angeles River	10,000	acre-feet	
San Gabriel River.....	62,000	acre-feet	
Santa Ana River.....	33,000	acre-feet	
	105,000	acre-feet	33%
<i>Measured Sewage Waste:</i>			
Los Angeles and south and west	155,000	acre-feet	
Santa Ana outfall.....	6,000	acre-feet	
	161,000	acre-feet	50%
<i>Estimate of Waste from Seeped Lands:</i>			
Los Angeles River.....	Small		
San Gabriel River.....	10,000	acre-feet	
Santa Ana River.....	45,000	acre-feet	
	55,000	acre-feet	17%
Grand total	321,000	acre-feet	100%

There is also a possibility of salvaging water originating from rain on the valley floor. Present information is not sufficient to determine whether this can be done or to estimate the amount which can be salvaged in this way.

As before stated, plans for salvage of waste flood water are made and actual construction is being actively prosecuted by the Los Angeles County Flood Control District. Plans for salvage have also been made by Orange County Flood Control District. Utilization of other wastes is a matter of study.

EIGHTEEN PHASES OF SALVAGE STUDY

The several lines of investigation which are thought to be necessary are outlined in the following statement. It should not be inferred from the fact that a particular line of investigation is not mentioned that nothing is being done in that line. In fact much work may be in progress. It is merely desired in this memorandum to outline all lines of endeavor which at present appear desirable in order that the matter may be fully presented:

1. Determination of erosion and silting rates, and survey of methods and areas for disposition of such materials.
2. Survey of additional reservoir sites both in mountain and valley.
3. Survey of check dam possibilities and benefits.
4. Investigations to increase efficiency of watershed vegetation.
5. Investigation and survey of spreading works.
6. Investigation of penetration of rainfall on valley floor to water plane.
7. Investigation of noneconomic use of water by plant life.
8. Determination of flood waste into ocean, its quantity and origin.
9. Stream gaging—additional program.
10. Investigation of underground waste into ocean.
11. Investigation of sewage waste into ocean and its utilization.
12. Investigation of intrusion of salt water from ocean and other sources into underground basins.
13. Investigation of shortages in each underground basin of the 29 in the region.
14. Investigation looking toward increased efficiency of operation of underground reservoirs.
15. Investigation of quality of water, both local and imported.

East Sierras Highway Work Is Praised.

District Engineer F. G. Somner has received the following letter from Geo. M. Wills, general superintendent of the Southern Sierras Power Company:

In connection with my responsibility with the power company, I am required to make frequent trips over the northern end of our system. I begin to travel on the state highway in the vicinity of Inyokern and continue into Mono Basin in the course of my visit to the different hydro plants. Traveling conditions have so greatly improved in the last few years that I wish to take this opportunity of expressing appreciation of the fine work which is being done by the organization over which you have supervision. The work which is being done appears to be of a very high order from an engineering standpoint and the greatest consideration appears to be given to the traveling public while the construction is going on. It occurred to me at the time of my recent trip to Bishop, that the least I could do would be to send you this word of appreciation.

Helpful Highway "Cops" Commended.

Under the heading "Helpful Highway 'Cops'—They Give Assistance as Well as Tags," the Oakland *Post Enquirer* publishes the following editorial:

It isn't a strange and unusual sight these days along the California highways to see a state highway patrolman helping some poor motorist out of difficulty instead of getting him into difficulty with the traffic court.

If you break the law, the motorcycle cop is just as ready as ever to arrest you—only he is apt to do it a little more politely and graciously than in other days.

But if you break your car, or if you run short of gasoline or oil, he is ready to HELP you.

The other day, along the highway between Oakland and Sacramento, there were many speed cops on their white motorcycles. It was a holiday, and they were out in full force. They didn't seem to be very busy arresting people, but they did seem to be busy helping people—carrying a quart of oil, a can of gasoline to a stranded driver, giving a little friendly assistance and advice to lady drivers changing tires by the roadside.

You may say they aren't PAID for doing these things, and that is true.

Nevertheless, this kind of courtesy from the speed

cops probably DOES pay. It creates a more friendly feeling, gives motorists the idea that the state highway patrol is on the road to help them, not merely to pester them.

When Eugene Biscailuz took charge of the state highway patrol a year or so ago he said he would try to improve the relations between the motoring public and the speed cops—and he seems to have done a good job.

Highway Crews to Aid Road Beautifiers.

District Engineer Gibson is quoted as follows in the Santa Barbara *News*.

"If the people who plant flowers and shrubs along the highway, and their number is increasing," said Gibson while on a visit in Santa Barbara, "will notify the highway commission where these plantings have been made, state crews will not only protect the plantings but they will keep down the weed growth and do all in their power to make the plantings thrive. This is an order from the commission and will be carried out wherever the engineers in charge have information upon which to give instruction to his working crews."

Gibson said that the hollyhocks on Cuesta grade in San Luis Obispo County which have won much praise this year were so protected and weeded by state highway crews this spring. Hollyhocks are particularly recommended by the state commission for roadside planting because they bloom throughout the summer, do not die down and become a fire menace and reseed abundantly and widely.

Director Declares Polo Sport Not Social Event.

This from the dispatches of the United Press:

Bert B. Meek, director of the state department of public works, is a polo addict—in fact it is his hobby. But no one knew anything about it until recently, when Meek was reported as participating in a game between two teams in Sacramento. Asked why he had kept it a secret for so long, the public works director said: "Until you newspapermen recognized that polo was a he-man game and took mention of it off the society page and put it on the sporting page, where it belongs, I just kept my activities under cover. I don't mind seeing my name on the sport page in this connection, but I won't stand for it in the society column."

Narrow Gauge Railroad Has First Auto Crash.

The Sacramento *Bee* publishes the following dispatch from Grass Valley:

Despite the fact that the Nevada County Narrow Gauge Railroad has numerous grade crossings, crossing accidents up to yesterday had been nil since the advent of the automobile. At the Kress Summit crossing yesterday, however, an automobile driven by Mrs. Fred Bierwagen was struck and badly damaged. Mrs. Bierwagen abandoned the machine when it stalled on the rails and a train was heard approaching from around a curve.

The engineer of the train was able to reduce the speed to such an extent that the machine escaped destruction.

* * * * *

Heavy Winter Travel on Mother Lode Highway.

This is from the Stockton *Record*:

Put this one down in your collection of "Believe it or Not."

Week-end travel to the Mother Lode during the winter is nearly 2000 per cent greater than in the summer time.

H. H. Briggs, president of the Central Valley Council of the State Chamber of Commerce, estimates that winter travel is 20 per cent greater; E. E. Ginn, publicity director for winter sports committee, placed it at 200 per cent, and figures of the State Department of Public Works indicate a difference of 2000 per cent.

Here are the figures—judge for yourself: On a Sunday in the summer of 1929 a total of 120 automobiles passed over the Sonora-Mono Pass road, and on a Sunday last winter more than 2000 cars were checked on the same road. That shows a margin of nearly 2000 per cent.

Of course, winter travel in the mountains is usually confined to Sundays, while summer travel is constant throughout the week.

* * * * *

Redlands Highway Beautification Program.

A letter of appreciation from the Redlands Chamber of Commerce to the State Highway Department, carrying thanks of the district for the planting of palms along the Colton avenue highway, today brought reply from C. H. Purcell, State Highway Engineer, highly complimentary to the Redlands chamber, says the Redlands *Facts*. That organization, he maintains, is responsible for the beautification program.

Mr. Purcell writes as follows to Secretary Isham:

"Please accept my thanks for your letter of May 16 expressing appreciation of our efforts in the final planting accomplished by your community on the road entering Redlands.

We are very much interested in the beautification of our roads, and, while we can not initiate the original plantings, we do assume their maintenance after the first year.

I am very sure your efforts will be amply repaid by the appreciation of the motoring public."

The beautification program for this road was launched a year ago by H. Earl Cromas, chairman of the beautification committee of the local chamber. A conference was called in Redlands to which came representatives of civic organizations from Orange, Riverside and San Bernardino counties, and several members of the state highway commission. At that conference pledges of cooperation for planting of highways throughout the southland were made. The Colton avenue plan is among the first to be tackled. Later the Chamber of Commerce hopes to continue the work along the Ocean to Ocean highway between this city and Beaumont.

* * * * *

Good Road Building Now Permanent Investment.

This editorial is from the Los Angeles *Examiner*:

It has cost California millions of dollars to realign and relocate roads which were unwisely built.

It is very satisfying, however, to know that in the last several years the Department of Public Works, which is building our highways now, is locating them so well as to preclude any further expense excepting upkeep and widening as the traffic grows heavier.

Such careful attention means that our road money is a permanent investment, paying dividends to future generations of Californians, as well as to ourselves.

* * * * *

Highway Hoodlums to Be Punished.

The *Indio News* published the following article:

Traffic officers, deputy sheriffs and officials of the State Highway Commission are out to get a gang of hoodlums who have been stealing and destroying lanterns and barriers in the district where oiled shoulders are being placed on the state highway.

Within the past week more than fifty lanterns have been shot full of holes in the district under construction, thus endangering the lives of the traveling public. One lot of about 20 were brought to Indio and dumped on a vacant lot. Many barriers showing where dirt is piled have been deliberately tipped over.

The offenders are facing a stiff jail sentence if apprehended.

NEW YORK—The Lake Champlain bridge between this state and Vermont is proving an indispensable traffic facility judged by the numbers of automobiles and pedestrians which are using it daily.

PENNSYLVANIA—Paved surfaces tested by the "roughometer" in 1929 proved much smoother than those similarly tested in any previous year. Of 532 miles tested 276 reached the standard "excellent," a gain of 111 per cent.

NORTH DAKOTA—Traffic counts conducted on North Dakota highways show that year-around volume is more uniform on farm-market roads at right angles to railroads than on through highways that parallel the railroads.

WATER RESOURCES INVESTIGATIONS

MOJAVE RIVER INVESTIGATION

The principal field work for the season was concluded by June 1st and the results of the work are now being analyzed in the office. All records of the old Arrowhead Lake Water Company are being reanalyzed and will be made public in the final report. These have previously been inaccessible and are of considerable value.

SANTA ANA INVESTIGATION

A committee representing the Cucamonga and Pomona basins was appointed at a mass meeting of representatives of water users to cooperate with the state in investigation of flood control and conservation of Cucamonga, San Antonio, Deer and Day creeks. This committee is functioning efficiently and three meetings have been held.

On Lytle Creek a similar committee was appointed after a mass meeting of Lytle Creek water users at Rialto and one meeting has been held with this committee. This committee is acting in an advisory capacity to the state on these matters.

Some work is being undertaken on the small creeks from Twin City Creek and Lytle Creek which threaten the city of San Bernardino.

Complete analysis of flows in Santa Ana and Mill Creek is being made and also in Lytle Creek so far as possible, to determine whether reservoirs on these streams are justified.

LOS ANGELES BASIN INVESTIGATION

The report previously made by the division to the Los Angeles County Conservation Association was endorsed by the association in executive meeting. Representatives of the association are now making efforts to get the work financed and are preparing to interest the entire basin in the progress of the work when it is started. The matter of a definite program has been outlined by the association for this purpose.

VENTURA COUNTY INVESTIGATION

This investigation was continued on a routine basis during the month. A committee of water users met with the supervisors in regard to securing an appropriation to continue the work during the season 1930-31 on the same basis as heretofore and such support was pledged by the supervisors. The estimated cost of this investigation was \$15,000 per year to be met by equal appropriations from the state and from the county. In making up the budget of the division sufficient funds were included to carry the work forward during the season 1930-31 because it was apparent at

that time that investigation would have to run at least a year longer than estimated because of unfavorable weather conditions during the time of investigation which has made it impossible to get data which are entirely conclusive.

NAPA INVESTIGATIONS

Regular measurements were taken in Napa River and Conn Creek on May 5, 10, 19 and 25, and a special series of measurements was made on Conn Creek on May 11 for the purpose of determining the location and amount of losses and accretions between the dam site and the gaging station.

SANTA CLARA INVESTIGATIONS

Available data in the office of F. H. Tibbetts, consulting engineer, has been obtained with respect to wells common both to the present investigation and that made by Tibbetts and Kieffer in 1920. All wells of the present investigation have been located upon a map and the elevation of ground surface has been obtained for practically all of them.

On June 2d a meeting was held at Gilroy with representatives of water users in cities in the Morgan Hill-Gilroy area. This area is a northern valley of the Pajaro River system and is a continuation of the Santa Clara Valley. The water plane has been dropping alarmingly of late years and irrigation use of water is increasing very rapidly. The interests of these people also conflict with the interests of the Santa Clara Valley to some extent in the use of the waters of Coyote Creek. The meeting was well attended and a great amount of interest and apprehension over water supply is apparent. They were interested in being informed as to different phases of water law of the state and hope to get an appropriation for investigation of the water situation. They were advised that funds are not now available for such an investigation and that the usual practice was for the state to contribute half of the money needed for investigation if local interests would match state funds. They are now proceeding to organization and expect to request that the investigation be taken up at the next legislature.

They were informed by Senator Jones that his conception of the state-wide plan was that areas such as this could expect help in bringing in outside water supply only after they themselves had developed local sources.

PIT RIVER INVESTIGATION

Routine field work was continued throughout the month on this investigation.

SAN JOAQUIN VALLEY INVESTIGATION

Ground Water Investigation: Maps delineating the ground water level in Kern County area for the years 1920 and 1924 to 1929, inclusive, have been completed.

Similar maps for the three years of record covering the area from Kern County north to Madera County are about 50 per cent completed. Additional well observation records have been transcribed, bringing the total number of records up to 4900. A tabulation of intraseasonal fluctuations, high to low, have been completed for the period of record; four units in Kern County and in the Alta, Consolidated and Fresno Irrigation districts. A map has been prepared showing the concentration of pumping plants in the Fresno district.

Land Classification: Classification of minor foothill areas on the Merced, Tuolumne, Stanislaus, Calaveras and Mokelumne River has been completed.

Water Supply Studies: Five studies were made on the San Joaquin River to determine the irrigation yield from that stream utilizing only the waters that are now attached to the grass lands for capacities of diversion canal varying from 1500 to 3000 second-feet.

Main Supply Canals: A meeting of the Engineering Advisory Committee on the San Joaquin Valley investigations was held on June 12th followed by a field trip on the 13th and 14th. The purpose of the meeting was to review different proposed schemes of exporting water from the Sacramento and the San Joaquin Delta to Mendota on the San Joaquin River.

SACRAMENTO VALLEY INVESTIGATION

Water Supply: Tabulations setting forth the full natural run-off and the run-off as would be ultimately impaired by upstream use have been prepared for all the major streams in the Sacramento Basin. Preliminary estimates of the irrigation yields of the Kennett Reservoir on the Sacramento River, Oroville Reservoir on the Feather River, Upper and Lower Narrows Reservoir on the Yuba River, Camp Far West Reservoir on the Bear River, Monticello Reservoir on Putah Creek and Millsite Reservoir on Stony Creek have been made for an estimated maximum deficiency of a perfect seasonal supply.

Water Requirements: Data are being collected and compiled in conjunction with the land classification for the purpose of estimating ultimate water requirements in the Sacramento River Basin. These estimates correlated with the irrigation yields from the reservoirs on the various streams will determine the water surplus, if any, to the ultimate needs of the Sacramento River Basin.

Exploration Work at Kennett Dam Site: Topographic surveys of the Upper Narrows and Coloma dam sites have been completed during the past month. Exploration work at the Kennett dam site is progressing rapidly under the direction of the U. S. Army engineers.

SALINITY INVESTIGATION

Office work on salinity investigations during the past month has been continued on the preparation of final maps, diagrams, tables and compilations for the report. The analytical studies on the relations of salinity to tidal action and stream flow are practically completed, and the report of the results of these analytical studies is under preparation.

Field work on salinity investigations has been confined to the maintenance of the regular salinity observation stations and the automatic tide gage stations.

SALT WATER BARRIER INVESTIGATIONS

Work was continued during the past month on the field surveys of industries, public water supplies, industrial water front structures and agricultural development. The industrial survey, together with that of the public water supplies and industrial water front

structures is largely completed. Surveys have been made of 120 industries in the area extending from Brentwood and Isleton on the east to Richmond on the south and west. Of these, questionnaires have been completed on 65 and the remaining number have been completed except for final executive approval from head offices of the various companies. Sixteen public water supply systems have been surveyed and complete data obtained on 14. Surveys have been made on 221 industrial water front structures and data completed on about 75 per cent of this number. Work on the survey of the agricultural development, especially the reclamation features in the delta of the Sacramento and San Joaquin rivers has continued during the month in cooperation with Mr. George A. Atherton and other representatives of the delta reclamation districts.

The special studies on the geology of the various proposed sites of the salt water barrier have been continued in consultation with our Consulting Geologist, Prof. C. F. Tolman of Stanford University. In addition, another special study has been started during the month on evaporation and transpiration in the bay and delta area; this work is being done under the direction of Mr. Charles H. Lee, Consulting Engineer of San Francisco.

The cooperative work on the investigation by other state departments and the federal government has continued during the past month, including the intensive investigation of the U. S. Army Engineers on the problems of navigation and flood control, tidal and silt studies, and the studies of sewage and industrial waste pollution by the State Department of Public Health, and studies of the possible utilization of the barrier as a highway crossing by the Division of Highways.

MISCELLANEOUS INVESTIGATIONS AND ACTIVITIES

A report on water supply for a women's prison in Britte Valley has been completed and submitted to the Director of Finance and to the committee in charge of the work of selecting a prison site.

Considerable time has been spent in the preparation of a bibliography, history and resume of all cooperative investigations (engineering) in which the state has been interested since 1900. In addition, an outline of present cooperative projects is being made to show statutory authorization, appropriations, contracts or agreements, description of projects, supervision and reports, and budgets and accounting. This work is still in progress.

The collection and compilation of data for a report on Sacramento River riparian lands and use of water on them both for normal and flood flow conditions has been completed.

HOOVER-YOUNG COMMISSION

The seventh meeting of the Joint Legislative Water Committee and the Hoover-Young Commission convened at Hotel Oakland, Oakland, on June 10, 1930, with an excellent attendance by members of both the legislative committee and the commission. There were present in addition numerous interested individuals from the public.

Assemblyman Wm. P. Jost, chairman of the Legislative Fish and Game Committee, requested the support of the committee and commission for increased state and federal appropriations for migratory game refuges. He also presented and filed proposal and recommendation of the Wild Life Development League for Manley S. Harris, president.

Mr. Jas. P. Burke of Visalia submitted data showing increase of areas affected by receding ground water

levels in the San Joaquin Valley, and described the water situation as it affected the four northern San Joaquin Valley counties. Copies of his brief with maps submitted by the San Joaquin Counties Water Committee were filed with the commission and legislative committee.

Mr. H. F. Ormsby, secretary of the California Development Association, submitted a proposal that a representative be recommended to attend for California at the Salt Lake Conference of 11 western states to be held June 26-30, 1930. After a consideration of the request, it was decided that the commission should not be represented, but a motion was adopted instructing the secretary to communicate with the State Chamber of Commerce regarding the desirability of the chamber sending a delegate or delegation to the Salt Lake City conference.

A communication from Mr. Fred G. Stevenot, Director of Natural Resources, requested an appearance before the committee and commission at some future hearing, the date to be set at the convenience of the committee and commission.

Mr. V. S. Barber appeared for the Mining Association, stating that possibly they may later request a hearing on the "Relation of the state-wide plan to hydraulic mining."

SNOW SURVEYS

Work in this connection during the past month has been confined chiefly to office computations. All 1930 snow survey notes and computations were checked and results tabulated in proper form for later analysis. Tabulation of all available snow survey data for previous years has been completed. Curves and diagrams are in course of preparation for use in studying the relation between snow, precipitation, temperature, and run-off for each basin. In the field, certain courses in the Feather Basin have been relocated as shown to be necessary by the 1930 surveys. Supplies and equipment have been brought in for storage from certain of the shelter cabins now accessible by auto. Surveys were made in the latter part of May at the Mount Shasta course (elevation 8000) and at Kaiser Pass course (elevation 9200) in the San Joaquin Basin. These showed a melting of the April 1st pack of 27 per cent for the Shasta course and 69 per cent for the Kaiser Pass course.

SACRAMENTO-SAN JOAQUIN WATER SUPERVISOR

The regular field work is in progress with three engineers handling all measurements of stream flow and return flow and recording all diversions in the Sacramento-San Joaquin area. A fourth man is dividing his time between field and office work in bringing all necessary mapping, tabulations, files, etc., up to date. In studies of the San Joaquin Valley return water it appeared that more data were needed on the return in the early and late parts of the irrigation season. For this reason the San Joaquin return water measurements were started earlier this year and all gages were installed and in operation before June 1st.

On the investigation of the delta consumptive use of water (cooperative with Division of Agricultural Engineering, U. S. Department of Agriculture) one engineer is resident at King Island and gives full time to the work. Supervision is given by Major

Stout from the Berkeley office of the U. S. Department of Agriculture, who is also preparing a detailed and final office report on the delta consumptive use of water. This report is due in August and it is expected that the present season will see the completion of the delta investigation.

The field work of the salinity investigation has been continued with the maintenance of regular salinity observations at twenty-seven stations and sampling of drainage water at seven stations. Maintenance of the nine new stations established late in February in the north San Pablo Bay area has been continued. The encroachment of the salinity as the summer advances will be carefully observed by the establishment of all stations required to properly record the upstream movement. Six tide gages are being maintained by the Water Supervisor's force and fifteen by cooperating agencies.

On June 10th the discharge of the Sacramento River at Sacramento was 10,900 second-feet and the San Joaquin River near Vernalis was flowing 3600 second-feet, making a combined flow of 14,500 second-feet. The corresponding Sacramento, San Joaquin and combined discharges on June 10, 1929, were 7360, 3670, and 11,030 second-feet, respectively.

Bulletin No. 23, Report of the Water Supervisor for the five years, 1924 to 1928, should be received from the printer and be available for distribution early in August.

IRRIGATION, WATER STORAGE DISTRICTS

During the present month visits of inspection have been made to the following districts in connection with their construction progress, water supply, financing and economic problems:

Ladera Irrigation District	Riverside County
Fallbrook Irrigation District	San Diego County
Vista Irrigation District	San Diego County
La Mesa, Lemon Grove and Spring Valley Irrigation District	San Diego County
Palmdale Irrigation District	Los Angeles County
Little Rock Irrigation District	Los Angeles County
La Canada Irrigation District	Los Angeles County
Merced Irrigation District	Merced County
Hollister Irrigation District	San Benito County
So. San Joaquin Irrigation District	San Joaquin County
Linden Irrigation District	San Joaquin County
Richvale Irrigation District	Butte County

Under date of June 17, the State Engineer reported unfavorably to the Board of Supervisors of Butte County in the matter of the formation of the proposed Rio Seco Irrigation District, comprising approximately 8000 acres of land located in Butte County.

The State Engineer has reported favorably to the California Bond Certification Commission upon request of the El Camino Irrigation District for validation of \$7,000 par value of their bonds and authority for the sale of these bonds, and approval of an expenditure of \$7,000 for the purchase and installation of well equipment required in the development of the project.

The request of the Linden Irrigation District for authority to proceed with a bond election in the amount of \$140,000, the funds from the sale of which are to be expended in the development of an irrigation supply, is now under consideration of the State Engineer.

DAMS

Applications Received for Approval of Plans and Specifications for Construction or Enlargement:

Dam	County	Owner	Estimated cost
*Bear Gulch	San Mateo	Bear Gulch Water Company	\$73,000 00
**Renbow	Humboldt	Renbow Power Company	45,600 00
**Webber	Creek El Dorado	El Dorado Irrigation Dist.	300,000 00

An increased activity in dam construction is evidenced by this list of applications. The largest new project coming before the office during this period is that of the El Dorado Irrigation District, which proposes to build an earthfill dam on Webber Creek to replace their former structure. The new dam will be nearly 150 feet in height and have a storage capacity of 6000 acre-feet. This will materially increase their present storage and provide for the growing demands of this locality.

Plans were received and approved for repair and alteration of the following dams:

Dam	County	Owner
Hillside	Inyo	Hillside Water Company
Fuller Lake	Nevada	Pacific Gas and Electric Company

Orders authorizing use have been issued pending completion and issuance of approval for the following dams:

Dam	County	Owner
Salt Springs	Amador & Calaveras	Pacific Gas and Electric Company
Lyons	Tuolumne	Pacific Gas and Electric Company

Mulholland Report:

On November 15, 1929, the city of Los Angeles filed application for approval of the Mulholland Dam. Because of the widespread discussion of the safety of this structure, its location with respect to Hollywood and the many technical features involved, the State Engineer appointed a consulting board to advise on the technical considerations of the structure.

The final report of the board was received on April 18, 1930. On April 22, the city filed a new application, in lieu of the one made in November, for approval of certain proposed changes in Mulholland Dam: namely, to construct a spillway 35 feet lower than the present spillway, to construct an extensive earth and rock fill adjoining the downstream face of the dam, and to provide openings in the dam to limit the quantity of water that can be stored. These proposed changes, not requiring additional geologic information, the State Engineer requested the engineer members of the board to review and report upon the engineering features of the plan accompanying the new application.

Based upon the findings of the Consulting Board, supplemented by the report of the engineer members of the board, the State Engineer on May 6, 1930, approved the application filed by the city for modification and betterment of the existing structure.

The findings of the board may be best stated by quoting from the conclusions of the two reports. Concerning the existing structure the board concludes as follows: "In accordance with its purpose, the board has based its opinion entirely on engineering and geologic data and considerations. A favorable location in Weid Canyon was selected for this dam, and the precautions taken in construction were sufficient to meet the actual engineering needs. Although the foundation rock is affected by small fault slips, its physical condition is otherwise good, and there is no reason to expect that it will deteriorate appreciably due to the

conditions imposed by water storage. In the opinion of the board, therefore, the Mulholland dam is safe."

Concerning the proposed alterations the engineer members of the board state, "The proposed embankment of mixed rock and earth, efficiently drained, placed against the downstream face of the Hollywood Dam to elevation 715 feet will increase the safety of the dam."

FLOOD CONTROL AND RECLAMATION

MAINTENANCE OF SACRAMENTO AND SAN JOAQUIN DRAINAGE DISTRICT

Flood control project maintenance work during this period has been mostly routine and consisted of repairs to structures, cutting weeds, making fire breaks and irrigating willows. No construction is under way.

Two dragline excavators have been engaged in cleaning the canals of the drainage system. One dragline excavator completed its work on June 11 and the work of the other machine will be completed in a few days.

FLOOD CONTROL PROJECT MAINTENANCE, BANK PROTECTION

The work of bank protection on the right bank of the Sacramento River near Princeton in cooperation with Reclamation District No. 2047, consisting of two tree current retards, has been completed at a cost of \$6,000.

Bids were opened on June 5 for the construction of a sand fill and river levee pavement at Isleton, in cooperation with the Division of Highways. The low bid was submitted by O. G. Richtie of San Jose and the contract has been awarded to him at a price of \$7,208.65.

Arrangements have been made for the repair and enlargement of six tree current retards on the right bank of the Sacramento River at Hamilton Bend, near Colusa, in cooperation with Reclamation District No. 2047, at a cost of \$7,000.

Arrangements are being made for additional bank protection work on the San Joaquin River at Tom Paine Slough in cooperation with the California Irrigated farms, to cost \$600.

SACRAMENTO FLOOD CONTROL PROJECT

Timber clearing work in the Sutter By-pass has continued with a force of approximately seventy men, and two camps are in operation. All of the money available for this work out of the Joint Navigation and Flood Control Project Fund for this fiscal year will be expended by July 1. Surveys of the area cleared are being made and mapped.

Of the five contracts for clearing timber in the Feather River overflow near Marysville one is completed and the others are well toward completion, except in some portions of the area where it is at present overflowed with water.

A number of reports on applications have been prepared for the Reclamation Board, and one meeting of the board was attended by the Deputy in Charge of Flood Control and Reclamation. The Deputy in Charge of Flood Control and Reclamation also attended two meetings of the Construction Committee of the Flood Control Association.

RUSSIAN RIVER JETTY

The construction of the timber and pile portion of the jetty has continued throughout the period with a

*Enlargement.
**Construction

force of eleven men, and an additional force of five men operating the quarry and railroad depositing rock along the structure. The timber portion of the jetty has now been extended approximately 240 feet this spring, and it is planned to extend it 60 feet further. The channel through the bar is now open along the north side of the jetty.

NAVARRO RIVER JETTY

Bids were opened on June 5 for the construction of a rock jetty at the mouth of the Navarro River in Mendocino County and the low bid was submitted by Christie and Allen of San Francisco and Fort Bragg. The contract has been awarded to this firm at a price of \$4,575. Construction work will be commenced in a few days.

WATER RIGHTS

During the month of May there were 25 applications to appropriate water received, 13 canceled, and 22 approved. Fourteen permits were revoked and three licenses issued.

ADJUDICATIONS

Shasta River (Siskiyou County): The Long Bell Lumber Company's exception relative to water rights on Beaghan and Boles creeks was heard in the superior court of Siskiyou County on June 13, 1930. This was the final hearing on the exceptions filed in the Shasta River adjudication proceedings. The entire proceedings are now before the superior court awaiting the court's decree.

Whiteriver River (San Bernardino and Riverside Counties): Still pending in the superior court of Riverside County awaiting developments in regard to the proposed All American Canal from Colorado River.

North Cow Creek (Shasta County): Submission of referee's final report still being withheld pending negotiations now in progress towards settlement of one of the important issues.

Oak Run Creek (Shasta County): Case still pending in superior court of Shasta County awaiting the entry of a decree in the North Cow Creek case.

Clover Creek (Shasta County): Case still pending in the superior court of Shasta County awaiting the court's pleasure in placing it on the calendar.

Butte Creek (Siskiyou County): Case still pending in the superior court of Siskiyou County awaiting action by the parties involved.

Los Alamos Creek (Santa Barbara County): Action by referee being deferred awaiting the outcome of the circulation of a stipulation for consent judgment among the parties involved.

Davis Creek (Modoc County): A stipulation for consent judgment is being circulated among the parties who were not present at the water users' meeting held at Davis Creek on March 18th.

Mill Creek (Modoc County): The trial schedule of distribution proposed by the Division of Water Resources was administered by a water master throughout the month.

Deep Creek (Modoc County): The field investigation of water supply and use of water was continued throughout the month. The plane table survey of the irrigated lands which was commenced on May 6th, was completed on May 24th.

Franklin Creek (Modoc County): The case of *C. E. Crowder vs. P. Indart et al.* involving the deter-

mination of the water rights of Franklin Creek, Modoc County, was referred to the division by the superior court of Modoc County by order of reference dated June 10, 1930.

WATER DISTRIBUTION

Davis, Emerson, Mill, Owl and Soldier Creeks (Modoc County): Water master service on these streams was continued throughout the month.

Little Shasta River (Siskiyou County): Water master service on this stream was continued throughout the month.

Pit River (Modoc and Lassen Counties): Supervision over diversions from Pit River in Big Valley was continued throughout the month by the resident engineer on the Pit River investigation. The Big Valley Water Users Committee met with the resident engineer on May 31st. General river conditions were discussed and plans outlined for the following month's distribution.

Hat and Burney Creeks (Shasta County): Water master service on these streams was continued throughout the month.

North Cow, Oak Run and Clover Creeks (Shasta County): Water master service was commenced on these streams for the 1930 season on June 1st and involves the distribution of water to approximately 2900 acres of land.

IMPORTANT PROGRESS ON EAST BAY HIGHWAY

(Continued from page 14.)

afforded quick access to San Francisco via the San Francisco Bay bridge and the Bayshore Highway. Southbound traffic enjoys equally good connections with the Dumbarton Bridge leading to Palo Alto and adjacent peninsula territory.

Construction costs of this section between Hayward and Niles were approximately \$352,000, exclusive of engineering. The Hanrahan Company of San Francisco were the contractors. W. A. Rice was the resident engineer.

The trouble with
Our traffic rules
Is they're no good
At stopping fools.
—The Cincinnati Enquirer.

"Really, I can't play golf," the sweet young thing said. "I don't even know how to hold the caddy."
—Drexler.

"There's something wrong. This gear shift doesn't work."

"That isn't the gear shift, Jack. It's—er—it's my knee."

A colored agent was summoned before the insurance commissioner.

"Do you know," said the commissioner, "that you can't sell life insurance without a state license?"

"Boss," said the darkey, "you suah said a non'-ful, I doue learned I couldn't sell it, but I didn't know the reason."

PROTECTION AGAINST FORCES OF NATURE IN CALIFORNIA HIGHWAY CONSTRUCTION

(Continued from page 7.)

trestles are constructed along the highway for the passage of streams.

DYKES

In open valley locations where the cones are not so well defined or act only as feeders, it has been necessary to construct extensive dyke systems and to conduct the water under the highway by means of large culverts or trestle structures.

SEA PROTECTION

The sea has been a constant menace to construction in many localities but it is quite usual that highways may be located where this danger is averted. However, in a number of places considerable sections of highway have been located along the sea and it has been necessary to provide structures for its protection.

RIPRAP

Random riprap with the majority of stones weighing not less than five tons has been used to some extent on highway work, but the type of equipment makes the handling of heavy stones extremely difficult. This situation arose in connection with certain work in southern California along the rocky coast north of Santa Monica.

CONCRETE CELLS

It was decided that since large rock could not be handled at the site of the work that concrete boxes or cells should be constructed which could be lowered into place and afterwards filled with concrete to increase their weight. The shore line at this location consisted of rocky bluffs with a steep slope into deep water. It was possible to place the concrete cells along the low tide line but owing to the heavy run of the sea, it would have been impossible to have built slope walls without some protection. Accordingly, such leveling and draining as was possible was done at low tide and the concrete cells were then sunk into place on the prepared foundation and were filled with concrete and heavy stone between tides. Behind the protection of the concrete cells it was then possible to excavate for the construction of a toe wall on which the reinforced concrete slope wall could be placed. This slope wall was made 9 inches in thickness, heavily reinforced and was capped by a wave deflecting section intended to throw

the waves back on themselves. Previous to placing the slope paving, a bedding of stone was roughly laid on the earth slopes. The work could only be done during periods of calm weather and on this account was handled by day labor. It has now survived a number of heavy storms and the protective work may be said to be a success.

SHEET PILING

The use of sheet piling on state work has never met with much success and it has not been used extensively in sea protection.

GROYNES

Groynes have been extensively used along the south coast and the beach has been restored in many locations by their use. The state construction usually contemplates the use of wooden structures but some of the private beach owners have used steel sheet piling with considerable success. These structures are usually placed at slightly less than right angles to the drift of the current, carry sand and are placed at approximate high tide elevation. The most successful are built of two lines of sheeting properly braced and filled with rock.

SEA WALLS

In one or two locations, the state has constructed heavy sea walls of monolithic concrete of sufficient strength to withstand the action of the heaviest waves. These have been built with the usual throw back design of top which has proved effective wherever tried.

SAND DUNES

In a number of locations in this state we have been faced with the problem of control or elimination of sand dunes which have constituted not only a serious burden on our maintenance but have been extremely dangerous to traffic. It is quite usual for a sand storm to, within a few hours, place a dune across the highway several feet in depth which would require constant labor to remove. On one particular dune the state had an annual expense of about \$7,000 for keeping the road clear over a section of a few hundred feet. A study of the habits of dunes and their movements made over a number of years demonstrated that they could be conquered if proper means were used. It was found that in many given localities the majority of the dunes moved in a certain direction and attained a height which was seldom exceeded. By the construction of a high grade line over the worst section of dune, the engineer entirely eliminated all dangerous drifting and we now have a road which is clear at all times.

In another location a study of the dune indicated that it could be removed by wind action by cutting channels at suitable locations. This work was done and the dune was removed at a cost of a few hundred dollars and the removal of similar dunes has since been accomplished by the same method at a very low expense to the state.

EARTHQUAKES

As you are, no doubt, aware, certain parts of California are visited by earthquakes from time to time and these offer an unusual problem to the highway engineer. Some of us are of the belief that a number of our concrete highways have been shattered by these disturbances and we believe that the construction of proper expansion joints will eliminate this danger. We have also found it necessary to construct our fills in earthquake country to the greatest solidity and also to clean up slopes so that there are no hanging rocks in any location. On one of our jobs we suffered a loss due to combined earthquake and cloudburst of over \$30,000 in one storm which brought down enormous boulders on a section of highway some eight miles in length. During the Santa Barbara earthquake, we found that our highway had been shaken from side to side until there was a gap some four inches wide along each side of the highway in the vicinity of Santa Barbara. The highway had also buckled at a number of locations and had settled at bridge abutments. Generally speaking, however, the danger due to earthquakes is not serious so far as highways are concerned.

The foregoing outline of the problems which have been overcome by the engineers of the Division of Highways indicate only a few of the very interesting and important problems which they are given to solve in the routine course of highway construction.

A fraternity had sent its curtains to be laundered. It was the second day that the house had stood unveiled. One morning the following note arrived from a sorority across the street:

"Dear Sirs: May we suggest that you procure curtains for windows? We do not care for a course in anatomy."

The chap who left his shaving to read the note answered:

"Dear Girls: The course is optional."

"Has anyone ever been lost in crossing here?" asked a timid woman who had hired a boatman to ferry her across the river.

"No'm," was the reply, "Mah brother was drown'd heah las' week but they foun' him the nex' day."

Overheard as a somewhat flustered young thing descended from the sedan: "Say, Mayme, I see you been on the rumple seat."—*Boston Herald*.

A LEGAL RIDDLE

Udoxes contracted to instruct Harmonius in rhetoric. The arrangement was that Harmonius should pay a fee in two installments. The first was to be paid at once. The second was conditional on Harmonius succeeding in his first case; should he lose, then he could consider his instruction poor and the second installment canceled. He paid the first installment and was duly instructed, but failed altogether to practice. Becoming impatient at the delay, after two years had passed Udoxes sued him for the balance of the fee. He argued thus: "If I win this suit, then Harmonius must—by judgment—pay me. If I lose it, then he will have won his first suit and will still have to pay me." It seemed that he was in an unsailable position. Harmonius, however, argued otherwise. "If Udoxes wins the suit against me, then I shall have lost my first suit and need not pay him. If, on the other hand, I win the case, then by judgment of the court I need not pay him."

History does not relate the result of the suit.—*London Times*.

VACATION TIME

Warm days comin' back again,
Song birds singin' in de lane,
Sly ole turtle on de rock
Got his little eyes half cock
At ole 'gator crawlin out
On de bank to move about.
Warm day sun's a-shinin' hot—
Orter work, but 'druther not—
'Druther lay right down an' sleep
In de clover sweet an' deep.
Sky looks sich a pretty blue,
Cow gives sich a lazy moo.
Bees go buzzin' lazy by.
I kain't work, suh, ef I try.
Got to hit de woodland track—
Wid warm days a-comin' back.

—*Florida Times-Union*.

MICHIGAN—This state will be one of the first to establish an organized system of marking county highways in such manner that they will "key in" with the state system of numbering.

MASSACHUSETTS—A by-pass in Andover and North Andover to route traffic away from the main street is being contributed by a number of public-spirited citizens who are making a gift of the land required and are bearing the cost of engineering work involved.

QUEBEC—The coming winter will see many of Quebec's highways open to year-round traffic for the first time as the economic necessity of all-year motor communication is being realized.

"Gosh," exclaimed the young doctor, looking at that car he was thinking, thinking, thinking, of buying, "the mere sight of it sets up violent cardiac disturbances, superinduces dryness of the palate, epiglottis and larynx, brings on symptoms of vertigo and raises the diastolic blood pressure 20 centimeters."

Officer Seizes Severed Jugular; Saves Auto Victim

An almost superhuman bit of first-aid work by State Traffic Officer Chris Reed may have saved the life of Mrs. Helen Emrie, wife of the trainer for the Agua Caliente stables, whose jugular vein was severed in an automobile crash three miles south of Chula Vista, says a recent issue of the *San Diego Union*.

In the same crash two veteran jockeys, Eddie Taplin and Walter Martin, were less seriously injured.

Mrs. Emrie was thrown through the windshield in a collision between two cars, and her throat was cut literally from ear to ear. The jugular vein was severed, and there were lacerations of the forehead and temple.

STOPS BLOOD

Reed, who was first to arrive on the scene, gathered the spouting jugular between his fingers and pressed until he had stopped the blood. He held the severed vein while Mrs. Emrie was lifted into an ambulance and he held on during the six-mile race to the Paradise Valley sanitarium.

There, it was said, she has an even chance for recovery. Dr. A. D. Butterfield, after more than an hour's work in patching the severed vein, said that Mrs. Emrie would almost certainly have died had Reed not resorted to heroic emergency treatment.

Later news reported that Mrs. Emrie was fully recovering.

Heed Warning Sign "Men at Work"

J. N. Byers, while working on the state highway south of Madera, was struck by an automobile and suffered injuries from which he died the same evening. This unfortunate accident occurred on Saturday, July 12th. Another maintenance employee, M. Reta, was also severely injured, but will recover.

Both of these men were employed in spreading gravel on newly oiled patches on the pavement. "Men at Work" signs were displayed and the state truck carrying the screenings was standing in front of the men. Despite these precautions, the car crashed into the men, caromed from the rear of the truck, carried Mr. Byers 75 feet across the road and then collided with a tree.

Purcell is Named on International Highway Committee

State Highway Engineer C. H. Purcell has been appointed a member of a new committee organized by the American Association of State Highway Officials and to be known as the Committee on International Highway Relations. The chief purpose of this committee is to cooperate with the adjoining nations on all roads being constructed, meeting at the borders. These roads will be known as national highways without designation and no particular road will be given a title, as for instance—Pan American Highway, or Canadian-United States Highway. In this connection, several points of entry have already been designated by agreement with the Mexican officials and the officers of the association. It is hoped that definite agreements may also be secured with the provinces of Canada.

COMPLETE NUMBERING OF U. S. HIGHWAY ROUTES IN 1930

Reports received by the Bureau of Public Roads, U. S. Department of Agriculture, indicate that the work of erecting the standard markers for numbered routes in the United States System of Highways will be practically complete at the end of the construction period of 1930. The system was adopted less than five years ago by state highway departments, and comprises approximately 97,000 miles of the most important highways of the nation. Practically all of these routes are also in the federal-aid highway system.

All east and west highways, as well as their branches, have even numbers; all those running north and south with their branch lines have odd numbers.

Cop: Lady, don't you know this is a safety zone?
Woman Driver (in difficulties): Of course—that's why I drove in here.—*Missouri Pacific Magazine*.

A forest of 10,000 young trees was recently planted near Bolton, New York, in honor of the late Stephen T. Mather, former director of the National Parks Service. The trees, white pines, were furnished by the New York Conservation Department.

The driver, a girl 16 years of age, collapsed from the shock, necessitating her removal to a hospital. The motoring public can show no greater appreciation of the efforts of the maintenance crews to maintain the state roads in first-class condition than by careful driving and avoidance of injury to the men who daily risk their lives to contribute to the comfort of the motorist.

SYNOPSIS OF REPORT ON ADDITIONS TO STATE HIGHWAY SYSTEM

(Continued from page 4.)

cent of the total travel. The road is 15.5 miles in length and lies in Los Angeles and Orange counties.

HIGHWAYS AFFORDING RELIEF TO HEAVY TRAFFIC ON PRESENT STATE ROADS

1. *A highway from Lancaster to a connection with the San Bernardino-Nevada state line highway (Route 31) near Cajon.* This route will make possible a short cut from San Bernardino to the San Joaquin Valley or to the East Sierra highways that extend through Owens Valley and up into Tahoe and Nevada. This cut-off offers advantages in avoidance of congested areas which will develop a volume of traffic more than that necessary to justify construction and maintenance costs. The road is 49 miles long and is situated in Los Angeles and San Bernardino counties.

2. *Castaic Junction to a connection with the Coast Highway near Ventura.* This road qualifies for inclusion in the state system both by reason of the relief it affords alternative state highways and the volume of state traffic now using it. It is at present a well traveled county highway following the Santa Clara River drainage. Its length is 39.5 miles and it lies in Los Angeles and Ventura counties.

3. *A highway from the southern terminus of the San Bernardino County to Bear Lake highway (Route 43) to Newport Beach via the Santa Ana Canyon.* This route forms a logical unit of the state system without likelihood of being supplanted by parallel service of equal value. It also qualifies because of the large volume of state travel that it now carries. It connects state highways serving San Bernardino, Redlands and Riverside and the coast. By this route, traffic avoids the inconvenience and congestion of the longer and busier highways. Its length is 63 miles. It lies in San Bernardino, Riverside and Orange counties.

4. *An extension of the Arroyo Seco state highway (Route 61) from Red Box to a connection with the Azusa to Pine Flats highway (Route 62) near Big Pine Flat.* This road qualifies because of the relief that it will afford for congested state highways of a recreational character and as a necessary addition to make fully available the expenditures on the important Arroyo Seco recreational highway. It lies in Los Angeles County and is 37 miles in length.

5. *Mojave to Bakersfield via Tehachapi Pass.* This road forms an important through route between the San Joaquin Valley and a wide area south and east of the Tehachapi Mountains. It connects the Valley Route (Route 4) with the state highway running north and south between the San Fernando Valley and Owens Valley (Route 23). At Mojave it connects with the state highway which leads east to interstate connections via the Arrowhead Trail and the National Old Trail routes, and is the most direct route to central and northern California for eastern travel over these latter routes. It forms a passage over the Tehachapi range, supplementing and relieving the Ridge Route. It is 60 miles in length and lies in Kern County.

6. *A highway from Santa Barbara to a connection with the Coast Highway near Zaca via San Marcos Pass.* This is an alternative to the Coast Highway north of Santa Barbara, shortening the distance by 10 miles. It is recommended for inclusion in the state system as a first unit of a parallel route to the present coast road to be eventually extended. Its attractive scenic features and shorter distance will attract a large amount of traffic. It is 38 miles in length and lies in Santa Barbara County.

GOVERNOR YOUNG'S STATEMENT

Commenting upon the report, Governor Young had the following to say:

"I feel that this report formulates a policy and establishes a precedent that will govern future additions to the state highway system upon their ability to qualify as of state importance. Previously expert study has followed the addition of roads to the state system. Now we are studying the roads before they are made state highways.

"This is the third major construction that the present administration and the legislature have made to the state highway system. The other two are first, financing new highway construction by the one-cent gasoline tax, and second, the application of the budget to state highway expenditures. The budget gives notice to the public in advance of the expenditure of highway funds, just where and how it is proposed to make expenditures. It is this program coupled with funds from the gasoline tax that has made it possible for the state highway authorities to increase highway work in the splendid manner that they have during a period of unemployment.

"The establishment of a policy assuring orderly and proper extensions to the state highway system solves the last of the major problems connected with our state roads. It means that California can continue the wonderful stride at which its state highway system is now being completed, that the expansion of the system will be along proper lines and that this state should continue to enjoy the reputation for fine highways that has contributed so much both to its growth and the enjoyment of its people."

MASSACHUSETTS—To insure uniformity in the design, location and operation of traffic signals, the Department of Public Works has recently taken over complete statewide control of these signals.

NATIONAL—Announcement, early in May that the Red Cross will establish and maintain first-aid stations along the highways, is a step forward in mitigating the disastrous results of our huge annual automobile accident toll.

NEBRASKA—Interstate traffic on Nebraska's through highways has increased more than 63 per cent since 1926 when the daily average noted at eleven stations was 226.5 vehicles.

NEW YORK—Methods first employed by John A. Roebling in 1854 are being used today in spinning the aerial cables of the 3000-foot suspension bridge being constructed across the Hudson River at Poughkeepsie.

PENNSYLVANIA—Exterior decoration on the new state highway building at Harrisburg recognizes the roles played by men and machinery in modern road building. The archives show road machinery—tractors and rollers—and a survey party.

WYOMING—At the end of the present construction season Wyoming highways will have 311 miles of oiled surface. Two million gallons of oil, to be purchased from local refineries, will be used this year.

First Mr. Blank—How do you find the roads on your recent automobile trip?

Second Mr. Blank—Well, the roads they named after that President, Mr. Lincoln, they were fine, but the roads they named after the Frenchman, Mr. Detour, they were terrible.

THE GOLDEN STATE HIGHWAY

(Continued from page 12.)

At the point where the Golden State Highway crosses the San Joaquin River north of Herndon an improvement was completed last year which eliminated two main line crossings of the Southern Pacific Railroad and considerable poor alignment. This was accomplished by rerouting west of the Southern Pacific, between Herndon and Tharsa, and constructing a new modern bridge over the San Joaquin River. The cost of this improvement was slightly less than \$300,000. Besides eliminating the dangerous grade crossings, the alignment was greatly improved and the distance shortened approximately 900 feet in a total distance of less than 2 miles.

South of Fresno an improvement is planned including resurfacing and widening pavement to a width of 30 feet from Pancher Creek to Fowler, and resurfacing and widening to 30 feet from Fowler to Fowler Switch canal, a total length of 7½ miles. Bids for this work were opened on May 25th.

WORK IN TULARE AND KERN COUNTIES

In Tulare County from Kingsburg to Goshen, the existing pavement is the old 15-foot by 4-inch concrete base. It is expected that the Golden State Highway through this locality will be improved to 20-foot pavement in the next biennium. With the exception of 8 miles from Tulare to Tipton, the remainder of the Golden State Highway in Tulare County is now improved to a high standard 20-foot pavement. The old sharp curvature around railroad reservations and entering and leaving cities, has been eliminated on these new improvements by use of large radius curves. Improvements in this locality during 1929 and 1930 have required an expenditure of approximately \$540,000.

In Kern County the Golden State Highway is now improved to a 20-foot pavement with the exception of approximately 5 miles north of Bakersfield. South of Bakersfield, approaching the Tehachapi Mountains, is a 17-mile length of highway which is entirely without curvature. The contiguous land is barren and dry, but the highway is bordered on both sides by a row of trees which were planted many years ago and have been given constant attention to promote their growth. At the end of the 17-mile tangent at a point known as the Grapevine Station, the road begins the ascent of the Grapevine Grade, reaching a summit about 3 miles south of Lebec in Los Angeles County.

IMPROVING THE GRAPEVINE GRADE

Plans for improvement of the Grapevine Grade contemplate a standard of alignment and grade which will be equivalent to that being used for relocation of the old Ridge route. Much of the existing curvature will be eliminated by relocation and the 10-mile distance reduced about 1 mile.

Plans for improvement contemplate the widening of all existing 15-foot pavement to a new 20-foot width and high standard alignment during the next biennium, which will close July 1, 1933.

FROM LEBEC TO LOS ANGELES

Through Los Angeles County the Golden State Highway is also known as the "Ridge road" due to the fact that it follows in great part between Lebec and a point north of Saugus the higher ridges.

Prior to the beginning of state highway work under the California Highway Commission in 1912, all travel to Los Angeles from the great San Joaquin Valley had to go by way of the Tehachapi route or the

Fort Tejon-Antelope Valley route through Lancaster and Palmdale by way of the Mint Canyon road.

One of the first studies of the Commission was to determine upon the location of a shorter, more direct route into Los Angeles to take care of the even then rapidly increasing volume of traffic from the San Joaquin Valley. Preliminary surveys showed a feasible route from Fort Tejon over what is now known as the Ridge route (Golden State Highway), being about 50 miles shorter between Los Angeles and Bakersfield than the existing Mint Canyon route.

The Pacific Light and Power Company and the General Petroleum Company were then constructing their high power transmission lines and pipe lines in the general location selected for the new Ridge route, and had built narrow construction roads with very sharp curves and steep grades to enable them to deliver supplies, materials and equipment for their construction work. These roads, although entirely unsuitable and unsafe for public use, were of great assistance to the state in establishing survey party camps, and to the state highway contractors in getting in supplies and equipment for the construction of the new highway.

ROAD COMPLETED IN 1919

Grading on this road was begun in 1913 and the original paving finally completed in 1919. The Ridge road, from the bottom of the hill at Castaic post office to the Neenach road north of Sandbergs, 29.56 miles in length, had 671 curves with a total curvature of approximately 35,600 degrees. Of these curves, 261 were of 100-foot radius or less. None of the grades on this Ridge road exceeded 6 per cent, but there were nearly 4 miles of the maximum 6 per cent grade. With the great increase in traffic, including a considerable percentage of slow moving trucks and trailers hauling very heavy loads, the road as originally constructed became inadequate to handle the travel, and the hazard to travel was greatly increased by automobiles trying to pass these slow moving loads on the narrow roadway with so many sharp curves with so small a clear sight distance.

The Highway Commission appropriated funds for the improvement of this road, to reduce this hazard and to facilitate travel by grading on the inside of blind curves and widening the roadbed at dangerous locations. This work has been carried on continuously since it first started at a cost of over \$400,000, and has resulted in greatly facilitating the safer movement of travel. Except for this work, the conditions on this road, the main highway connection between southern and central California, would have become intolerable long ago.

HUGE DAILY TRAVEL

However, the topographical conditions are such that it is impracticable to ever bring the existing Golden State Highway up to the modern standards required for the main highway connection between two rapidly developing empires such as we have in southern California and central and northern California.

Present traffic over the Ridge road, as shown by recent traffic counts, amounts to approximately 3400 vehicles per day on Sundays and 2400 on week days, with a steady growth of traffic from year to year.

THE "ALTERNATE" ROUTE

For the past few years studies and preliminary surveys have been made to find the most direct and practicable route across these mountains, and a location has been made between Castaic school and Gorman, which will be 7.3 miles shorter, and will elim-

inate 1280 feet of adverse grade. It eliminates three summits on the present ridge which cause trouble in heavy snow storms, and has only about 7500 degrees of curvature, or approximately one-fifth of that on the original Ridge road. No curve on the new road will have a radius less than 1000 feet, whereas there were many on the original road with a radius of only 70 feet.

The road will be an expensive one to build, but on account of its great shortening of the distance and with the heavy travel steadily increasing, will more than pay for itself in a short time.

FIRST CONTRACT LET

A contract has recently been awarded for the construction of the first 7 miles of this new route of the Golden State Highway northerly from Castaic school. This is the largest grading contract yet awarded in this district, and probably one of the largest in the state. The estimated grading quantities on this contract are 1,230,000 cubic yards of roadway excavation and 8,530,000 station yards of overhaul. The allotment for this one contract alone is over \$603,000. This first section is being graded 40 feet wide.

The grading on the next section, 5.2 miles long, will be started as soon as funds are available; probably at the beginning of the next biennium.

The present Ridge road from Castaic school to Gormans will be taken over by Los Angeles County and maintained as a county road immediately upon the completion and opening to travel of the new relocated Ridge road.

Minor line changes are proposed between Castaic Junction and one mile northerly, including a relocation across Castaic Creek, which will require the construction of a new bridge. The cost of this improvement is estimated at approximately \$100,000. There will be no great shortening in distance, but considerable improvement in alignment.

NEWHALL TUNNEL ELIMINATION

Another improvement in the old road that is nearly completed is the relocation of the highway between Los Angeles city limits and the Santa Clara River. This realignment eliminates the Newhall Tunnel, which for years has been the "bottleneck" on this portion of the road. This tunnel was built by Los Angeles County about 20 years ago in the early days of the county highway work, and eliminated the old narrow Fremont Pass road with its 28 per cent grade. There is no tunnel on this new road, the saddle being crossed by an open cut nearly 130 feet deep on the center line of the road and about 185 feet deep on the high side.

The new alignment saves approximately one mile in distance, and is on a high type of alignment and grade, thus making a considerable saving in the running time for travel between Los Angeles and Bakersfield, and also between Los Angeles and the easterly end of the Santa Clara Valley. This improvement 8½ miles long has been graded 46 feet wide, and a 30-foot Portland cement concrete pavement will be opened to travel about the middle of July. The cost of this improvement will be nearly \$750,000.

The old Newhall Tunnel road through Newhall and Saugus will still be maintained by the state as a part of the Mint Canyon road, and within the next two or three years the construction of a second tunnel paralleling the existing tunnel is planned so as to adequately take care of the heavy travel on this road.

SANTA CLARA RIVER BRIDGE

The old bridge on the Ridge road over the Santa Clara River, which was built by Los Angeles County

CALIFORNIA SPEEDS

ROAD PROGRAM FAR

BEYOND U. S. AVERAGE

Highway construction throughout the country has been speeded up fully 100 per cent in 1930 as compared with the first three months of 1929, according to the Automobile Club of Southern California, which bases the statement on reports from the governors of 35 states, sent to Secretary of Commerce Lamont. Contracts awarded for the first three months of 1930 amounted to \$114,101,383 as compared with \$50,910,133 for the same period of 1929, a net increase of more than 124 per cent. California increased 181 per cent.

BRAKE TESTING ACTIVITIES

(Continued from page 13.)

before the state patrol officers at the place designated in the citation, together with his car, for a second test. If the second test shows his brakes to be efficient he may thus clear his record.

Motorists are required to comply with section 94 of the Motor Vehicle Act setting up definite standards for brakes. The tests are made with a decelerometer.

It is not the intention of the patrol to be harsh or arbitrary in the matter of brakes. Rather, we hope by persistent enforcement to educate the motorist to the necessity of having his brakes inspected regularly and frequently.

Section 94 of the Motor Vehicle Act makes it unlawful to operate a motor vehicle unless it can be brought to a stop when traveling at given speed in a given distance. The table of speeds and distances set up in the act is as follows:

Miles per hour	Stopping distance
10-----	9.3
15-----	20.8
20-----	37
25-----	58
30-----	83.3

W. E. Glendinning has resigned his position as director of tree planting for the State Highway Commission and has purchased a mercantile business in Fresno. His resignation became effective July 1.

in 1916, was washed out at the time of the flood resulting from the failure of the San Francisco Dam. A new modern bridge over the Santa Clara River and an overhead crossing over the Montalvo branch of the Southern Pacific Railroad were constructed on the alignment of the Newhall cut-off last year.

LIST OF HIGHWAY BIDS AND AWARDS

For Month of June

AMADOR, EL DORADO COUNTIES—Timber bridge across Cosumnes River about 10 miles south of El Dorado. Consist 1-120' through tr. sp. on concrete piers and 9-19' approach spans on fr. bents with concrete pedestals and approximately 14 miles roadway to grade and surface with untreated crushed gravel or stone. Dist. X, Rt. 65, Sec. A, C. M. B. McGowan, San Francisco, \$32,191. Contract awarded to C. E. Force, Piedmont, \$21,795.

BUTTE COUNTY—Between Bardees Creek and Pulga, about 1.8 miles long to be graded. Dist. II, Route 21, Sec. C. The Utah Construction Co., San Francisco, \$293,280; R. H. Travers, Los Angeles, \$372,446; J. G. Donovan & Son, Los Angeles, \$401,622; H. H. Boomer, San Francisco, \$396,802; E. C. Coats, Sacramento, \$359,367; J. F. Shea Co., San Francisco, \$344,087. Contract awarded to Granfield, Farrar and Carlin, San Francisco, \$248,528.

DEL NORTE COUNTY—In Del Norte County in vicinity of the head of Richardson Creek about 0.5 mile to be graded. Dist. I, Route 1, Sec. A, J. E. Johnston, Stockton, \$15,269; Hemstreet & Bell, Marysville, \$13,559; Smith Bros., Eureka, \$13,712. Contract awarded to Englehart Paving and Construction Co., Eureka, \$11,417.

FRESNO AND KINGS COUNTIES—Between Coalinga and Hanford about 45 miles in length, light fuel oil to be applied to shoulders. Dist. VI, Route 10, Secs. D, E, F, B, C. G. M. Duntley, Los Angeles, \$15,834; Gilmore Oil Co., Ltd., Los Angeles, \$18,322; California Road Oil Service Co., Wilmington, \$19,227. Contract awarded to Stewart & Nuss, Inc., Fresno, \$14,363.

IMPERIAL COUNTY—Between Holtville and Sand Hills, about 1.5 miles to have furnished and spreading fuel oil on shoulders. Dist. VIII, Rt. 27, Sec. A. Contract awarded to G. M. Duntley of Los Angeles, \$1,685.72.

KERN COUNTY—Between Grapevine and Delano, and between 7.7 miles and 2.7 miles west of Maricopa, about 69.1 miles of oiling. Dist. VI, Rts. 4 and 57. Fred W. Nighbert, Bakersfield, \$10,195; Gilmore Oil Co., Los Angeles, \$9,821; California Road Oil Service Co., Wilmington, \$10,479. Contract awarded to G. M. Duntley, Los Angeles, \$8,235.

LOS ANGELES COUNTY—Between Citrus Ave. and Glendora 1 mile to be paved with asphaltic concrete. Dist. VII, Rt. 9, Sec. H. P. J. P. J. Akmadzieh, Los Angeles, \$50,115. Contract awarded to Griffith Company of Los Angeles, \$36,319.50.

LASSEN AND MODOC COUNTIES—Between Hillside and Alturas, about 57.2 miles long, furnishing and applying heavy fuel oil. Dist. II, Rt. 28, Sec. A, B. Contract awarded to D. McDonald, Sacramento, \$21,509.45.

MARIN COUNTY—Between San Rafael and Alto, 4.4 miles to be surfaced with bituminous macadam. Dist. IV, Rt. 1, Sec. C, M. J. Bevanda, Stockton, \$104,189; Fredrickson & Watson, Oakland, \$108,780; A. Teichert & Son, Sacramento, \$117,121; C. W. Wood, Stockton, \$98,607; Heavey-Moore Co., Oakland, \$11,570; Arrs-Knapp Co., Oakland, \$114,825. Contract awarded to Granfield, Farrar and Carlin, San Francisco, \$94,892.50.

MONTEREY COUNTY—Bridge across Salinas River at Bradley, consisting of six 140-ft. steel deck truss spans, concrete deck on concrete piers with pile foundations; and eighteen 45-ft. reinforced concrete girder spans on concrete bents with pile foundations. Dist. V, Rt. 2, Sec. I. Rocca & Calletti, San Rafael, \$257,380; R. H. Travers, Los Angeles, \$262,915; Ward Engineering Co., San Francisco, \$268,897; J. F. Knapp, Oakland, \$269,216; Geo. Pollock Co., Sacramento, \$265,328; Siems-Helmers, Inc., San Francisco, \$308,146; Jasper-Stacy Co., San Francisco, \$336,178; Healy-Tibbitts Const. Co., San Francisco, \$314,267; M. B. McGowan, San Francisco, \$267,967. Contract awarded to H. E. Doering, Yreka, \$256,563.

NEVADA COUNTY—Overhead crossing over the S. P. tracks near Yuba Pass on the Victory Highway. Dist. III, Rt. 37, Sec. A. Lindgren & Swinerton, Inc., Sacramento, \$59,458; Ward Engineering Co., San Francisco, \$59,308; M. G. McGowan, San Francisco, \$60,593; T. E. Connolly, San Francisco, \$65,564. Contract awarded to Bodenhamer Construction Co., San Diego, \$55,751.75.

NEVADA COUNTY—Reinforced concrete bridge across the South Fork of the Yuba River near Indian Springs on the Victory Highway. Dist. III, Rt. 37, Sec. A. Ward Engineering Co., San Francisco, \$17,355; M. B. McGowan, San Francisco, \$16,740; T. E. Connolly, San Francisco, \$18,110. Contract awarded to Alturas Construction Co., Sacramento, \$13,935.

PLACER COUNTY—Subway crossing under the S. P. R. R. tracks near Emigrant Gap, Victory Highway. Dist. III, Rt. 37, Sec. E. Ward Engineering Co., San Francisco, \$58,891; T. E. Connolly, San Francisco, \$61,764. Contract awarded to Lord & Bishop, Sacramento, \$57,816.

NEVADA-PLACER COUNTY—Between South Fork of the Yuba River and Soda Springs, about 10.8 miles to be surfaced with crusher run base and untreated crushed gravel or stone. Dist. III, Rt. 37, Sec. A, F, B. Hein Bros. and Basalt Rock Co., Petaluma, \$238,715; A. Teichert & Son, Sacramento, \$211,633; Isbell Const. Co., Fresno, \$245,786; Geo. Pollock Co., Sacramento, \$227,558; Charles Harlowe, Jr., Oakland, \$164,398; J. P. Holland, Inc., San Francisco, \$220,524; Englehart Paving Co., Eureka, \$205,246. Contract awarded to Hemstreet & Bell, Marysville, \$157,089.

RIVERSIDE COUNTY—Between Whitewater River Bridge and Indio about 29 miles long, furnishing and applying heavy fuel oil to shoulders. Dist. VIII, Rt. 26, Secs. D, E. Gilmore Oil Co., Los Angeles, \$45,934; G. M. Duntley, Los Angeles, \$43,261. Contract awarded to California Road Oil Service Co., Wilmington, \$42,167.44.

SAN BERNARDINO COUNTY—Between Cronese and E. boundary, 71.8 miles furnishing and applying heavy fuel oil. Dist. VIII, Rt. 31, Secs. J, K, L, M, N. P. California Road Oil Service Co., Wilmington, \$24,501; G. M. Duntley, Los Angeles, \$28,979. Awarded to Gilmore Oil Co., Ltd., Los Angeles, \$18,484.95.

SAN JOAQUIN COUNTY—Between South Banta Road and East Banta Road, 1.9 miles to be graded and paved with asphalt concrete. Dist. X, Rt. 5, Sec. B. C. W. Wood, Stockton, \$58,484; J. E. Johnson, Stockton, \$57,688; Valley Paving and Const., Visalia, \$56,508. Contract awarded to Heavey-Moore Co., Oakland, \$51,144.30.

SAN JOAQUIN COUNTY—Between French Camp and Stockton, 1.8 miles grading and surfacing with crushed gravel or stone, untreated. Dist. X, Rt. 4, Sec. B. Fredrickson & Watson Const. Co., Oakland,

\$50,248; Gannon and McCarty, Stockton, \$53,629; George Pollock Co., Sacramento, \$43,201; C. W. Wood, Stockton, \$46,183; D. McDonald, Sacramento, \$54,086; Kennedy-Bayles Const. Co., Biggs, \$64,030; A. Teichert & Son, Sacramento, \$55,881; Pereira & Reed, Tracy, \$47,144; Lilly, Willard & Biasotti, Stockton, \$43,055; R. G. Le Tournear, Stockton, \$49,465. Contract awarded to Larsen Bros., Galt, \$42,828.90.

SAN JOAQUIN COUNTY—Between Honston School and Forest Lake, 3.3 miles to be graded and widened with Portland cement concrete and crusher run base. Dist. X, Rt. 4, Sec. D. C. W. Wood, Stockton, \$38,960; T. M. Morgan Paving Co., Los Angeles, \$43,487; Heafey-Moore Co., Oakland, \$49,592. Contract awarded to Larsen Bros., Galt, \$38,726.65.

SAN LUIS OBISPO COUNTY—Between Estrella River and Sacramento Ranch, about 5.9 miles to have seal coat applied to existing bituminous surfacing. Dist. V, Rt. 33, Sec. B. A. Teichert & Son, Sacramento, \$5,780; M. J. Bevanda, San Luis Obispo, \$6,998. Contract awarded to Granite Construction Co., Watsonville, \$5,744.

SANTA CLARA COUNTY—Between San Antonio Ave. and Sunnyvale, 4.9 miles to be graded and paved with Portland cement concrete and asphalt concrete. Dist. IV, Rt. 2, Sec. A. N. M. Ball, Porterville, \$210,045; A. J. Raisch, San Jose, \$209,771; Union Paving Co., San Francisco, \$208,986; Central California Roads Co., Oakland, \$233,386. Contract awarded to Hanrahan Co., San Francisco, \$204,904.10.

SANTA CRUZ COUNTY—Between Waterman Switchback and Saratoga Gap, 2.6 miles to be graded and surfaced with bituminous treated waterbound macadam. Dist. IV, Rt. 42, Sec. A. M. J. Bevanda, Stockton, \$156,052; W. A. Dantonville, Salinas, \$178,033; Granfield, Farrar & Carlin, San Francisco, \$157,201; J. P. Holland, Inc., San Francisco, \$139,641; C. R. Johnson, San Francisco, \$166,729; R. H. Travers, Los Angeles, \$144,043; Geo. Pollock Co., Sacramento, \$167,064; Kennedy-Bayles Const. Co., \$179,893; Arris-Knapp Co., Oakland, \$153,484. E. C. Coats, Sacramento, \$130,258. Contract awarded to O. A. Lindberg, Stockton, \$127,229.10.

SHASTA COUNTY—Bridge across Salt Creek, consisting of one 60' pony truss span on concrete piers and six 19' approach spans on frame bents with concrete pedestals. Dist. II, Rt. 28, Sec. A. Alturas Const. Co., Sacramento, \$14,111; C. Emil Force, Piedmont, \$14,921; H. C. Whitty, Sanger, \$15,244; Smith Bros. Co., Eureka, \$14,539; J. P. Brennan, Redding, \$13,439; Contract awarded to R. B. McKenzie, Red Bluff, \$12,544.70.

SHASTA AND LASSEN COUNTIES—Between Fall River Mills and Big Valley, about 17.9 miles in length to be graded and surfaced with untreated crushed gravel or stone. Dist. II, Rt. 28, Sec. E. A. Granfield, Farrar & Carlin, San Francisco, \$351,531. Isbell Construction Co., Fresno, \$339,938; Jasper & Stacy Co., San Francisco, \$234,039. Contract awarded to Mathews Construction Co., Sacramento, \$278,250.80.

SHASTA AND TRINITY COUNTIES—Between Tower House and Greenhorn, 5.2 miles; between Ashers and Montgomery Creek, 12.3 miles; between Haynes Ranch and Fall River, 24.1 miles; between Grass Valley Creek and Weaverville about 17.1 miles—furnishing and applying heavy fuel oil to roadbed. Dist. II, Rts. 20 and 28, Secs. A, B, D and A, B, J. A. Casson, Hayward, \$20,080; D. McDonald, Sacramento, \$20,582. Contract awarded to Basalt Rock Co., Inc., Napa, \$19,126.20.

SISKIYOU COUNTY—Between Shasta River and Walker a distance of about 21 miles, heavy fuel oil to be furnished and applied as dust layer. Dist. II, Rt. 46, Sec. D. Contract awarded to Basalt Rock Co., Napa, \$6,547.20.

SONOMA COUNTY—Between Boltane and Shellville, 3.9 miles furnishing and applying asphaltic road oil. Dist. IV, Rt. 51, Sec. B. Geo. French, Jr., Stockton, \$2,420; Basalt Rock Co., Inc., Napa, \$2,550. Awarded to A. Teichert & Son, Sacramento, \$2,280.

SONOMA AND MENDOCINO COUNTIES—Between Cloverdale and Hopland, 12.5 miles to be furnished and applied with asphaltic road oil. Dist. IV, Rt. 1, Sec. A. Basalt Rock Co., Napa, \$7,350; Highway Builder, Ltd., San Anselmo, \$7,650. Contract awarded to A. Teichert & Son, Sacramento, \$6,975.

TEHAMA, PLUMAS AND LASSEN COUNTIES—Between Dales and Coppervale, 51.1 miles heavy fuel oil to be furnished and applied as dust layer. Dist. II, Rt. 29, Secs. A, B, C and A. Basalt Rock Co., Inc., Napa, \$14,250; D. McDonald, Sacramento, \$15,983. Contract awarded to A. Teichert & Son, Inc., Sacramento, Cal., \$13,727.50.

TEHAMA AND SHASTA COUNTIES—Between 1 mile south of Cottonwood and Cottonwood, an under-grade crossing and 0.9 of a mile roadway graded and paved with Portland cement concrete. Dist. II, Rt. 3, Sec. C. A. Fredrickson & Watson Const. Co., Oakland, \$149,565; Ward Engineering Co., San Francisco, \$136,006; Dunn & Baker, Klamath Falls, \$150,134; Jasper-Stacy Co., San Francisco, \$152,783; Rocca and Caletti, San Rafael, \$139,050; Lindgren & Swinerton, Sacramento, \$200,943. Contract awarded to C. W. Wood, Stockton, \$135,058.

TULARE, MADERA, FRESNO AND KINGS COUNTIES—Various portions amounting to 102.6 miles light fuel oil to be furnished and applied to shoulders. Dist. VI, Rts. 4 and 10. Visalia Transfer & Storage Co., Visalia, \$12,012; Gilmore Oil Co., Los Angeles, \$13,446; California Road Oil Service Co., Wilmington, \$13,695. Contract awarded to G. M. Duntley, Los Angeles, \$11,620.

WATER APPLICATIONS AND PERMITS

Applications for permit to appropriate water filed with the State Department of Public Works Division of Water Resources during the month of June, 1930.

TRINITY COUNTY—Application 6690. C. M. Salyer, c/o C. A. Paulsen, Weaverville, Cal., for 25 c.f.s. from Hawkins Creek tributary to Trinity River to be diverted in Sec. 15, T. 6 N., R. 6 E., H. M., for mining and domestic purposes. Estimated cost \$5,000.

PLUMAS COUNTY—Application 6691. J. W. McKay and Merritt J. Reid, Meadow Valley, Cal., for 13,000 gallons per day from Deadwood Creek tributary to Spanish Creek to be diverted in Sec. 29, T. 24 N., R. 8 E., M. D. M., for mining and domestic purposes. Estimated cost \$200.

MONO COUNTY—Application 6692. Henry Heyman, 222 West 25th St., Long Beach, Cal., for 200 gallons per day from Rock Creek tributary to Owens River to be diverted in Sec. 33, T. 4 S., R. 30 E., M. D. M., for domestic purposes. Estimated cost \$300.

MODOC COUNTY—Application 6693. Robert O. Fink, Cedarville, Cal., for 0.62 c.f.s., from Thomas Creek tributary to North Fork Pit River to be diverted in Sec. 28, T. 43 N., R. 15 E., M. D. M., for irrigation

and domestic purposes on 50 acres. Estimated cost \$50.

HUMBOLDT COUNTY—Application 6694 Chas. E. Snider & Walter Wilson, c/o Chas. E. Snider, 812 Mills Bldg., San Francisco, Cal., for 300 c.f.s., from Slate Creek tributary to Klamaath River to be diverted in Sec. 7, T. 10 N., R. 5 E., H. M., for mining purposes. Estimated cost \$50,710.

SAN BERNARDINO COUNTY—Application 6695. Robert S. Irwin, Lucerne Valley, Cal., for 0.5 c.f.s., from 2 unnamed springs tributary to unnamed waterway, thence Mojave Desert to be diverted in Sec. 10, T. 3 N., R. 1 W., S. B. M., for irrigation and domestic purposes on 40 acres. Estimated cost \$3,600.

COLUSA COUNTY—Application 6696. J. W. Browning, c/o Thos. Rutledge, Colusa, Cal., for 5.95 c.f.s. from Sacramento River tributary to Suisun Bay to be diverted in Sec. 6, T. 14 N., R. 1 E., M. D. M., for irrigation purposes on 476.2 acres. Estimated cost \$6,690.

BUTTE COUNTY—Application 6697. H. N. Dalley, c/o Polk & Robinson, Chico, Cal., for 2.0 c.f.s., from Middle Butte Creek tributary to Sacramento River to be diverted in Sec. 34, T. 23 N., R. 3 E., M. D. M., for mining and domestic purposes. Estimated cost \$500.

SISKIYOU COUNTY—Application 6698. Fred J. Blakeley, c/o Butler, Van Dyke, Desmond and Harris, Attorneys, P. O. Box 1114, Sacramento, Cal., for 25 c.f.s., and 4000 acre-feet per annum from Elliott Creek tributary to Applegate River to be diverted in Sec. 24, T. 48 N., R. 10 W., M. D. M., for irrigation and domestic purposes. Estimated cost \$30,000.

BUTTE COUNTY—Application 6699. Harvey C. Adams, Chico, Cal., for 7.5 c.f.s. from Drainage Ditch from Drainage District No. 2, tributary to Butte Creek and Sacramento River to be diverted in Sec. 27, T. 19 N., R. 1 E., M. D. M., for irrigation purposes, 700 acres. Estimated cost \$1,500.

BUTTE COUNTY—Application 6700. Harvey C. Adams, Chico, Cal., for 3 c.f.s., from Drainage Ditch from Drainage District No. 2, tributary to Butte Creek and Sacramento River to be diverted in Sec. 28, T. 19 N., R. 1 E., M. D. M., for irrigation purposes on 120 acres.

NEVADA COUNTY—Application 6701. Nevada Irrigation District, c/o Fred H. Tibbetts, Chief Engineer, 1320 Alaska Commercial Bldg., San Francisco, Cal., for (1) 15 c.f.s., from (1) Fall Creek, (2) S. Fork Fall Creek tributary to South Fork Yuba River to be diverted in Sec. (1a) 36, T. 18 N., R. 11 E., M. D. M., Sec. (1b) 6, T. 17 N., R. 12 E., M. D. M., for power purposes. Estimated cost \$450,000.

NEVADA COUNTY—Application 6702. Nevada Irrigation District, c/o Fred H. Tibbetts, Chief Engineer, 1320 Alaska Commercial Bldg., San Francisco, Cal., for (1) 15 c.f.s., and (2) 5 c.f.s., from (1) Fall Creek, (2) S. Fork Fall Creek tributary to be diverted in Sec. (1a) 36, T. 18 N., R. 11 E., M. D. M., Sec. (1b) and (2) 6, T. 17 N., R. 12 E., M. D. M., for irrigation purposes on 167,789 acres. Estimated cost \$450,000.

SHASTA COUNTY—Application 6703. Lambert Dost, 3835 S. Vermont Ave., Los Angeles, Cal., for 0.25 c.f.s. from 2 unnamed springs and unnamed creek tributary to Churn Creek, thence Sacramento River to be diverted in Sec. 12, T. 32 N., R. 5 W., M. D. M., for domestic and irrigation purposes on 20 acres.

LAKE COUNTY—Application 6704. Martin Judge, Jr., & Co., Crocker First Nat'l Bank Bldg., San Francisco, Cal., for 250 c.f.s., and 175,000 acre-feet per annum from North Fork Cache Creek tributary to Cache Creek to be diverted in Sec. 4, T. 14 N., R. 6 W., M. D. M., for industrial and domestic purposes. Estimated cost \$3,000,000.

LAKE COUNTY—Application 6705. Martin Judge, Jr., & Co., Crocker First Nat'l Bank Bldg., San Francisco, Cal., for 175,000 acre-feet per annum from North Fork of Cache Creek tributary to Cache Creek to be diverted in Sec. 4, T. 14 N., R. 6 W., M. D. M., for irrigation on 50,000 acres. Estimated cost \$1,000,000.

SAN BERNARDINO COUNTY—Application 6706. George Tillitt, Highland, Cal., for 0.003 (or approx. 1950 gallons per day) from unnamed spring tributary to Green Valley Creek, thence Deep Creek, thence Mojave River to be diverted in Sec. 23, T. 2 N., R. 2 W., S. B. M., for domestic purposes. Estimated cost \$560.

ALAMEDA COUNTY—Application 6707. East Bay Municipal Utility District, c/o T. P. Wittschen, Atty., 1406 Latham Square Bldg., Oakland, Cal., for 42 c.f.s. and 41,436 acre-feet per annum from San Leandro, Kiser, Redwood, Moraya, Kings, Reiley's and Perez Creek tributary to San Leandro Bay to be diverted in Sec. 6, T. 2 S., R. 2 W., M. D. M., for municipal purposes. Estimated cost \$1,377,000.

VENTURA COUNTY—Application 6708. W. S. Dunshee, Edward M. & John L. Selby, Ventura, Cal., for 100 acre-feet per annum from Cayote Creek tributary to Ventura River to be diverted in Sec. 15, T. 4 N., R. 24 W., S. B. M., for recreational and domestic purposes. Estimated cost \$50,710.

VENTURA COUNTY—Application 6709. Edward M. & John L. Selby, R. D. No. 1, Ventura, Cal., for 0.067 c.f.s. from Mountain Spring tributary to North Fork Cayote Creek, thence Cayote Creek, thence Ventura River to be diverted in Sec. 15, T. 4 N., R. 24 W., S. B. B. & M., for domestic purposes. Estimated cost \$2,000.

GLENN COUNTY—Application 6710. Eugene K. REYNOLDS, Elk Creek, Cal., for 0.06 c.f.s., from Stony Creek tributary to Sacramento River to be diverted in Sec. 27, T. 21 N., R. 6 W., M. D. M., for irrigation 6 A. purposes. Estimated cost \$250.

STANISLAUS AND MERCED COUNTIES—Application 6711. Turlock Irrigation District, c/o R. V. Merkle, Chief Engineer, 117 West Main St., Turlock, Cal., for 800 c.f.s. from Tuolumne River tributary to San Joaquin River to be diverted in Sec. 16, T. 3 S., R. 14 E., M. D. M., for irrigation purposes.

SAN JOAQUIN COUNTY—Application 6712. Frank Piccardi, Carlo Morzone, Angelo Calcagno and C. Farani, 109 E. Weber St., Stockton, Cal., c/o L. B. Raab, for 0.92 c.f.s. from San Joaquin River tributary to Suisun Bay to be diverted in Sec. 5, T. 1 S., R. 8 E., M. D. M., for irrigation and domestic purposes on 73.7 acres. Estimated cost \$30,000.

INYO COUNTY—Application 6713. Ada Norris, P. O. Box 2, Trona, Cal., for 0.50 c.f.s., from Spring in Pleasant Canyon tributary to Panamint Valley Watershed to be diverted in Sec. 12, T. 22 S., R. 44 E., M. D. M., for mining and domestic purposes.

SAN BERNARDINO COUNTY—Application 6714. Mary Francis Bird, B Bar B Ranch, Victorville, Cal., for 0.25 c.f.s., from Ruby Springs, Ruby Canyon tributary to Mojave Desert to be diverted in Sec. 5, T. 3 N., R. 1 W., S. B. M., for irrigation and domestic purposes on 15 acres. Estimated cost \$20.

SHASTA COUNTY—Application 6715. J. J. Vokal et al., c/o Mr. Roscoe J. Anderson, Suite 25, P. O. Building, Redding, Cal., for 7 c.f.s., from Olney Creek including foreign and natural flow tributary to Sacramento River to be diverted in Sec. 27 of Rancho Bueno Ventura, P. B. Reading Grant, for power purposes. Estimated cost \$250.

SHASTA COUNTY—Application 6716. J. J. Vokal et al., c/o Mr. Roscoe J. Anderson, Suite 25, P. O. Building, Redding, Cal., for 0.50 c.f.s., from Olney Creek including foreign and natural flow tributary to Sacramento River to be diverted in Sec. 27 of Rancho Bueno Ventura, P. B. Reading Grant, for irrigation and domestic purposes. Estimated cost \$250.

Permits to appropriate water issued by the Department of Public Works, Division of Water Resources during the month of June, 1930.

SAN BERNARDINO COUNTY—Permit 3492, Application 6435. Issued to J. F. Gore, Beverly Hills, Cal., June 5, 1930, for 0.1 c.f.s. from unnamed spring in Sec. 26, T. 1 N., R. 3 W., S. B. M., for irrigation on 40 acres. Estimated cost \$750.

TRINITY COUNTY—Permit 3493, Application 6564. Issued to A. J. Norcott and W. H. Dudley, Burnt Ranch, Cal., June 5, 1930, for 0.48 c.f.s. from unnamed spring in Sec. 34, T. 6 N., R. 6 E., M. D. M., for mining, water to be returned to Trinity River. Estimated cost \$500.

INYO COUNTY—Permit 3494, Application 6599. Issued to J. F. Chrysler and P. H. Cook, Lone Pine, Cal., June 6, 1930, for 0.025 c.f.s. from Carrol Creek in Sec. 31, T. 16 S., R. 36 E., M. D. M., for irrigation and domestic use on 20 acres. Estimated cost \$300.

INYO COUNTY—Permit 3495, Application 5073. Issued to H. W. Eichbaum, Avalon, Cal., June 19, 1930, for 0.008 c.f.s. from Lower Spring in Emigrant Canyon in Sec. 29, T. 17 S., R. 44 E., M. D. M., for domestic use. Estimated cost \$150.

INYO COUNTY—Permit 3496, Application 5336. Issued to H. W. Eichbaum, Darwin, Cal., June 19, 1930, for 0.001 c.f.s. from unnamed seepage water in Sec. 30, T. 16 S., R. 45 E., M. D. M., for domestic use. Estimated cost \$3,000.

DEL NORTE COUNTY—Permit 3497, Application 6453. Issued to E. F. Raymond, Crescent City, Cal., June 21, 1930, for 5 c.f.s. from Patrick's Creek in Sec. 2, T. 17 N., R. 3 E., H. M., for power. Estimated cost \$1,500.

EL DORADO COUNTY—Permit 3498, Application 6556. Issued to Arthur E. Rasor, c/o A. J. Harder, Atty., 518 Ochsen Bldg., Sacramento, Cal., June 23, 1930, for 34.2 acre-feet per annum from Rock Creek in Sec. 34, Lot 1, T. 13 N., R. 11 E., M. D. M., for mining. Estimated cost \$2,000.

EL DORADO COUNTY—Permit 3499, Application 6557. Issued to Arthur E. Rasor, c/o A. J. Harder, Atty., 518 Ochsen Bldg., Sacramento, Cal., June 23, 1930, for 34.2 acre-feet per annum from Rock Creek in Sec. 34, Lot 1, T. 13 N., R. 11 E., M. D. M., for irrigation of 10 acres. Estimated cost \$2,000.

EL DORADO COUNTY—Permit 3500, Application 6558. Issued to Arthur E. Rasor, c/o A. J. Harder, Atty., 518 Ochsen Bldg., Sacramento, Cal., June 23, 1930, for 34.2 acre-feet per annum from Rock Creek in Sec. 34, Lot 1, T. 13 N., R. 11 E., M. D. M., for Recreational and Domestic. Estimated cost \$2,000.

INYO COUNTY—Permit 3501, Application 5286. Issued to J. Irving Crowell, R. F. D. No. 1, Box 60, Van Nuys, Cal., June 24, 1930, for 0.025 c.f.s. from Keane Springs in SE $\frac{1}{4}$ projected Sec. 6, T. 30 N., R. 1 E., for mining, milling and domestic. Estimated cost \$7,000.

SUTTER COUNTY—Permit 3502, Application 6664. Issued to James R. Sutter Cranmore, Sutter Co., Cal., June 24, 1930, for 1.94 c.f.s. from Sacramento River in NE $\frac{1}{4}$ NE $\frac{1}{4}$, Sec. 14, T. 13 N., R. 1 E., M. D. M., for irrigation 154.967 acres. Estimated cost \$5,000.

RIVERSIDE COUNTY—Permit 3503, Application 4752. Issued to Palm Valley Water Co., c/o C. L. McFarland, Atty., Suite 3, 4 & 5, Evans Block, Riverside, Cal., June 25, 1930, for 1.5 c.f.s. from Snow Creek, in NW $\frac{1}{4}$ NW $\frac{1}{4}$, Sec. 33, T. 3 S., R. 3 E., S. B. M., for domestic use. Estimated cost \$81,000.

SISKIYOU COUNTY—Permit 3504, Application 6436. Issued to Charles Wilton Pay, 4131 Lincoln Ave., Oakland, Cal., June 25, 1930, for 3.0 c.f.s. from Mill Creek in SE $\frac{1}{4}$ NE $\frac{1}{4}$, Sec. 25, T. 18 N., R. 6 E., H. M., for mining and domestic use. Estimated cost \$75.

SONOMA COUNTY—Permit 3505, Application 6512. Issued to Joe M. Fernandez, Ed. 490, Sonoma, Cal., June 26, 1930, for 0.22 c.f.s. from Sonoma Creek in SW $\frac{1}{4}$ SE $\frac{1}{4}$, Sec. 13, T. 5 N., R. 6 W., M. D. M., for irrigation. Estimated cost \$825.

MONO COUNTY—Permit 3506, Application 6129. Issued to Thomas H. McKee, Bishop, Cal., June 26, 1930, for 3000 gallons per day from unnamed spring in SW $\frac{1}{4}$ NE $\frac{1}{4}$, Sec. 14, T. 2 S., R. 26 E., M. D. M., for domestic use. Estimated cost \$350.

TUOLUMNE COUNTY—Permit 3507, Application 6129. Issued to Sierra and S. F. Power Co., c/o P. M. Downing, Ist V. P. and G. M., P. G. & E. Co., 245 Market St., San Francisco, Cal., June 27, 1930, for 5360 acre-feet per annum from South Fork Stanislaus River in SE $\frac{1}{4}$ SW $\frac{1}{4}$, Sec. 24, T. 3 N., R. 16 E., M. D. M., for power (3382 T. H. P.). Estimated cost \$380,000.

TUOLUMNE COUNTY—Permit 3508, Application 6130. Issued to Sierra and S. F. Power Co., c/o P. M. Downing, Ist V. P. and G. M., P. G. & E. Co., 245 Market St., San Francisco, Cal., June 27, 1930, for 5360 acre-feet per annum from S. Fork Stanislaus River in SE $\frac{1}{4}$ SW $\frac{1}{4}$, Sec. 24, T. 3 N., R. 16 E., M. D. M., for irrigation and domestic, 3500 acres. Estimated cost \$380,000.

PLACER COUNTY—Permit 3509, Application 6540. Issued to Mrs. Eva Harness and R. Longley, Loomis, Cal., June 28, 1930, for 0.26 c.f.s. from Secret Ravine in SE $\frac{1}{4}$ SW $\frac{1}{4}$, Sec. 10, T. 11 N., R. 7 E., M. D. M., for irrigation, 37 acres. Estimated cost \$850.

DAM APPLICATIONS, APPROVALS AND PLANS

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources during the month of June, 1930.

SAN MATEO AND SANTA CLARA COUNTIES—Lagunita Dam No. 614-3. Leland Stanford Jr. University, Stanford University, California, owner; earth-fill, 31 feet high with a storage capacity of 260 acre-feet, situated on no stream tributary to San Francisco Bay in Sec. 10, T. 6 S., R. 3 W., M. D. M., for storage purposes for irrigation and recreation use.

YUBA COUNTY—St. Louis Dam No. 331. Loftus Blue Lead Mines Company, Los Angeles, California, owner; arch, 55 feet above streambed, situated on State Creek tributary to North Fork of Yuba River in Sec. 11, T. 20 N., R. 8 E., M. D. M., for storage purposes for debris use. Estimated cost \$45,000.

SIERRA COUNTY—Huntington Flat A & B Dams Nos. 331-2. Loftus Blue Lead Mines Co., Los Angeles, California, owner; earthfill, 15 feet in height with storage capacity of 60 acre-feet, situated on no stream in Sec. 7, T. 21 N., R. 10 E., M. D. M., for storage purposes for mining use.

SIERRA COUNTY—Mose Emery Dam No. 331-3. Loftus Blue Lead Mines Company, Los Angeles, California, owner; earthfill, 20 feet above streambed with a storage capacity of 8 acre-feet, situated on a gulch tributary to Cedar Grove Ravine in Sec. 12, T. 21 N., R. 9 E., M. D. M., for storage purposes for mining use.

SIERRA COUNTY—Gardner's Point Dam No. 331-4. Loftus Blue Lead Mines Company, Los Angeles, California, owner; earthfill, 7 feet high with a storage capacity of 60 acre-feet, situated on no stream in Sec. 13, T. 21 N., R. 9 E., M. D. M., for storage purposes for mining use.

SACRAMENTO COUNTY—Alder Creek Dam No. 453. Natomas Company, Sacramento, California, owner; earthfill, 12 feet above streambed with a storage capacity of 8 acre-feet, situated on Alder Creek tributary to American River in Sec. 15, T. 9 N., R. 7 E., M. D. M., for storage purposes for irrigation use.

PLUMAS COUNTY—Eureka Lake Dam No. 283. Plumas Eureka Corporation, Johnsville, California, owner; earthfill, 20 feet above streambed with a storage capacity of 400 acre-feet, situated on no stream tributary to Jamison Creek in Sec. 23, T. 22 N., R. 11 E., M. D. M., for storage purposes for power and mining use.

SAN DIEGO COUNTY—Harrison Dam No. 844. R. E. Harrison, San Diego, California, owner; earthfill, 14 feet above streambed, situated on McCain Creek in Sec. 22, T. 17 S., R. 7 E., S. B. M., for storage purposes for recreation use. Estimated cost \$2,500.

RIVERSIDE COUNTY—Stansbury Dam No. 819. Corona Heights Water Company, Los Angeles, California, owner; earthfill, situated on a pipe line tributary to no stream, located in Lot 316, Corona Heights for storage purposes for domestic and irrigation use.

SIERRA COUNTY—Lower Spencer Lake Dam No. 298. William Hood, Berkeley, California, owner; earth and rock fill, 24 feet above streambed with a storage capacity of 300 acre-feet, situated on Lower Spencer Lake tributary to Yuba River for storage purposes for power use.

SIERRA COUNTY—Upper Spencer Lake Dam No. 298-2. William Hood, Berkeley, California, owner; rock and earth fill, 4 feet above streambed with a storage capacity of 25 acre-feet, situated on Upper Spencer Lake, tributary to Yuba River for storage purposes for power use.

SAN MATEO COUNTY—Burlingame Dam No. 611. Pacific Water Company, San Mateo, California, owner; earthfill, 50 feet above streambed with a storage capacity of 91 acre-feet, situated on a dry creek, tributary to San Francisco Bay, located in San Mateo Rancho for storage and diversion purposes. Estimated cost \$30,000.

SAN MATEO COUNTY—Cowell Dam No. 615—I. M. H. E. & S. H. Cowell, San Francisco, California, owners; earthfill, 30 feet above streambed, situated on Denison Creek tributary to Pacific Ocean, located on Rancho Canal de Tierra for storage purposes for irrigation use.

MONTEREY COUNTY—Black Rock Creek Dam No. 643. Monterey Game and Stock Association, Monterey, California, owner; earth and rock fill, 30 feet above streambed with a storage capacity of 30 acre-feet, situated on North Fork of Black Rock Creek tributary to Carmel River in Sec. 32, T. 17 S., R. 2 E., M. D. M., for storage purposes for recreation use. Estimated cost \$23,000.

ORANGE COUNTY—North Lambert Dam No. 793A. The Irvine Company, Tustin, California, owner; earth-fill dam, 12 feet above streambed with a storage capacity of 200 acre-feet situated on no stream, located in Lot 368, Irvine's subdivision for storage purposes for irrigation use. Estimated cost \$4,400.

ORANGE COUNTY—South Lambert Dam No. 793B. The Irvine Company, Tustin, California, owner; earthfill, 112 feet above streambed with a storage capacity of 200 acre-feet, situated on no stream, located in Lot 368 of Irvine's subdivision for storage purposes for irrigation use. Estimated cost \$3400.

CALAVERAS COUNTY—Moosehead Dam No. 493—Franklin Baldwin, Los Angeles California, owner;

arch, 23 feet above streambed with a storage capacity of 120 acre-feet, situated on McKinney's Creek tributary to Calaveritas Creek in Sec. 14, T. 4 N., R. 13 E., M. D. M., for storage purposes, for debris use. Estimated cost \$8,500.

SIERRA COUNTY—Poverty Hill Dam No. 296. J. M. Stiles, Shreveport, Louisiana, owner; earthenfill, 17 feet high with a storage capacity of 200 acre-feet, situated on no stream in T. 20, R. 9 E., M. D. M., for storage purposes for mining use.

SIERRA COUNTY—Cleveland Reservoir Dam No. 296-2. W. P. Stiles, Shreveport, Louisiana, owner; earthenfill, 13 feet above streambed with a storage capacity of 150 acre-feet, situated on Rock Creek tributary to Canyon Creek in T. 20 N., R. 9 E., M. D. M., for storage purposes for mining use.

SIERRA COUNTY—Fairplay, Upper Dam No. 296-3. W. P. Stiles, Shreveport, Louisiana, owner; earthenfill, 20 feet above streambed with a storage capacity of 50 acre-feet, situated on no stream in T. 20 N., R. 9 E., M. D. M., for storage purposes for mining use.

SIERRA COUNTY—Fairplay, Lower Dam No. 296-4. W. P. Stiles, Shreveport, Louisiana, owner; earthenfill, 18 feet above streambed with a storage capacity of 12 acre-feet, situated on no stream in T. 20 N., R. 9 E., M. D. M., for storage purposes for mining use.

NAPA COUNTY—Napa Upper No. 3 Dam No. 1-9. Napa State Hospital, Inola, California, owner; earthenfill, 32 feet above streambed with a storage capacity of 10 acre-feet, situated on unnamed canyon in T. 5 N., R. 4 W., M. D. M., for storage purposes for irrigation use.

SIERRA COUNTY—Gold Run Dam No. 297. Judson Estate Company, San Francisco, California, owner; earthenfill, 20 feet above streambed with a storage capacity of 20 acre-feet, situated on Gold Run tributary to Slate Creek and Yuba River in Sec. 29, T. 20 N., R. 9 E., M. D. M., for storage purposes for mining use.

MENDOCINO COUNTY—Mendocino Lower Dam No. 1-2. Mendocino State Hospital, Talmage, California, owner; concrete, 16 feet above streambed, situated on South Mill Creek, tributary to Russian River in Sec. 25, for storage purposes for domestic use.

LOS ANGELES COUNTY—Clear Creek Dam No. 32-17. Los Angeles County Flood Control District, Los Angeles, California, owner; arch, 20½ feet above streambed, situated on Clear Creek tributary to Big Tujunga Creek in Sec. 1, T. 2 N., R. 13 W., S. B. M., for storage purposes for domestic use.

LOS ANGELES COUNTY—Lower Big Dalton Dam No. 32-18. Los Angeles County Flood Control District, Los Angeles, California, owner; concrete, 52 feet above streambed with a storage capacity of 31½ acre-feet situated on Big Dalton Creek tributary to Walnut Creek in Sec. 15, T. 1 N., R. 9 W., S. B. M., for storage purposes for flood control and debris use.

Applications for approval of plans and specifications for the construction or enlargement of dams filed with the State Department of Public Works, Division of Water Resources during the month of June, 1930.

SAN MATEO COUNTY—Bear Gulch Dam No. 613. Bear Gulch Water Company, Menlo Park, California, owner; clayfill, 56 feet above streambed with a storage capacity of 672 acre-feet situated in depression in hills west of Menlo Park in T. 6 S., R. 4 W., M. D. M., for storage purposes for domestic use. Estimated cost \$73,000. Fees paid \$730.

HUMBOLDT COUNTY—Benbow Dam No. 106. Benbow Power Company, Benbow, California, owner; Ambursen, 17½ feet above streambed with a storage capacity of 78 acre-feet situated on South Fork of Eel River tributary to Eel River in Sec. 36, T. 4 S., R. 3 E., H. M., for storage purposes for power use. Estimated cost \$45,000. Fees paid \$450.

EL DORADO COUNTY—Webber Creek Dam No. 53-3. El Dorado Irrigation District, Placerville, California, owner; earthenfill, 147 feet above streambed with a storage capacity of 6000 acre-feet, situated on Webber Creek tributary to American River in Sec. 18, T. 10 N., R. 12 E., M. D. M., for storage and diversion purposes for irrigation use. Estimated cost \$300,000. Fees paid \$2,000.

MODOC COUNTY—Long Branch Canyon Dam No. 159. J. Householder, Davis Creek, California, owner; earth and rock fill, 12 feet above streambed with a storage capacity of 400 acre-feet, situated on Long Branch Canyon tributary to Goose Lake in Sec. 26,

T. 47 N., R. 12 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$1000. Fees paid \$20.

Plans and specifications for the repair or alteration of dams filed by the State Department of Public Works, Division of Water Resources during the month of June, 1930.

NEVADA COUNTY—Fuller Lake Dam No. 97-21. Pacific Gas and Electric Company, San Francisco, California, owner; earthenfill, situated on Jordan Creek tributary to South Fork of Yuba River in Sec. 17, T. 17 N., R. 12 E., M. D. M. Nature of repairs: New outlet; gunite slab on upstream face.

SAN MATEO COUNTY—Emerald Lake No. 1, Lower Dam No. 612. Emerald Lake Country Club, San Mateo, California, owner; earthenfill, situated in a small valley tributary to Redwood Creek, located 2½ miles southwest of Redwood City. Nature of repairs: Earth fill on downstream face and install new spillway.

SAN MATEO COUNTY—Emerald Lake No. 3 Dam No. 612-2. Leonard & Holt, San Francisco, California, owner; earthenfill, situated on no creek, located 2½ miles west of Redwood City. Nature of replace: Install water tight core.

PLANS APPROVED

Plans and specifications for the construction or enlargement of dams approved by the State Department of Public Works, Division of Water Resources during the month of June, 1930.

SAN MATEO COUNTY—Bear Gulch Dam No. 613. Bear Gulch Water Company, Menlo Park, California, owner; rolled clay, 56 feet above streambed with a storage capacity of 672 acre-feet, situated in a depression in hills west of Menlo Park, located in Rancho Alameda de Los Pulgas for storage purposes for domestic use. Estimated cost \$73,000.

EL DORADO COUNTY—Webber Creek Dam No. 53-3. El Dorado Irrigation District, Placerville, California, owner; earthenfill, 147 feet above streambed with a storage capacity of 6000 acre-feet, situated on Webber Creek tributary to American River in Sec. 18, T. 10 N., R. 12 E., M. D. M., for storage and diversion purposes for irrigation use. Estimated cost \$300,000.

AMADOR COUNTY—Allen Dam No. 1-12. Preston School of Industry, Waterman, California, owner; reinforced concrete, 21 feet above streambed with a storage capacity of 2½ acre-feet situated on Downes Ditch in Sec. 27, T. 6 N., R. 10 E., M. D. M., for storage purposes for domestic use. Estimated cost \$10,120.

Plans and specifications for the repair or alteration of dams approved by the State Department of Public Works, Division of Water Resources during the month of June, 1930.

NEVADA COUNTY—Fuller Dam No. 97-21. Pacific Gas and Electric Company, San Francisco, California, owner; earthenfill, situated on Jordan Creek tributary to South Fork of Yuba River in Sec. 17, T. 17 N., R. 12 E., M. D. M. New outlet pipe and gate; gunite upstream face.

SAN MATEO COUNTY—Emerald Lake No. 1 Dam No. 612. Emerald Lake Country Club, Redwood City, California, owner; earthenfill, situated on a small valley tributary to Redwood Creek, located 2½ miles southwest of Redwood City. Nature of repairs: Make earth fill on downstream side; install 30-inch pipe for spillway.

SAN MATEO COUNTY—Emerald Lake No. 2 Dam No. 612-2. Leonard & Holt, San Francisco, California, owner; earthenfill, located 2½ miles west of Redwood City.

MONTEREY COUNTY—Black Rock Dam No. 643. Monterey Game and Stock Association, Monterey, California, owner; earth and rock fill, situated on North Fork of Black Rock Creek tributary to San Clemente Creek in Sec. 32, T. 17 S., R. 2 E., M. D. M. Nature of repairs: Repair drain pipe.

TENNESSEE—Completion of State Highway No. 100 will provide a shorter route between Nashville and Memphis and will tap the largest area in the state lying five miles from an existing trunk highway.

HIGHWAY PATROL APPOINTMENTS

For Month of June

The following officers have been appointed members of the California Highway Patrol in the following counties:

HUMBOLDT COUNTY—Thaddeus J. Donarin; Albert A. Nickols; Harold R. Down.

MONTEREY COUNTY—A. W. Martin, Jr.; Whitmer R. McGregor; Chas. E. Garcia.

SHASTA COUNTY—Raymond Larison; Marion P. Howard.

BUTTE COUNTY—Wm. J. Bathurst, Jr.

SAN LUIS OBISPO COUNTY—Jesse L. Urey; Cecil C. Dempsey.

COLUSA COUNTY—Archie G. Matzka; Jean Schilling Thayer.

EL DORADO COUNTY—R. P. Cornelison, Thomas V. Eisenhuth.

SAN JOAQUIN COUNTY—Merrill K. Harper.

ARCHITECTURAL AWARDS

For Month of June

PRESTON SCHOOL OF INDUSTRY, Ione: Contract for installation of refrigerating system, Refectory Building, awarded to Parker Ice Machine Company of San Francisco, \$7,992.

BORDER STATION at Fort Yuma: Contract for construction of same for use of Department of Agriculture and Division of Motor Vehicles awarded to Holland Construction Company of San Diego, \$18,734.

FOLSOM STATE PRISON: Contract for installation of passenger elevator in new Hospital Building awarded to Spencer Elevator Company of San Francisco, \$3,095.

CALIFORNIA SCHOOL FOR DEAF, Berkeley: Contract for wrecking Strauss Hall awarded to Symon Brothers of Oakland, \$2,500.

VETERANS HOME, Yountville: Contract for construction Guard House awarded to Gaubert Brothers of Oakland, \$15,750.

STOCKTON STATE HOSPITAL: Contract for construction of Crematory Furnace awarded to JNJ Firebrick Construction Company of San Francisco for \$1,888.

Against total exports of 835,527 motor vehicles from the United States and Canada there were but 750 motor vehicles imported into the United States during 1929.

FOILED THE COPS

"Coming home the other night at three o'clock our headlights burned out on us."

"How did you get home without getting arrested?"

"We just drove at full speed and all the cops thought we were bootleggers."

SALVAGING WATER WASTE IN

LOS ANGELES COASTAL BASIN

(Continued from page 16.)

16. Investigation of locations for best utilization of water imported by Metropolitan Water District.

17. Study of organization for financing and distributing benefits.

18. Study of legal phases.

It will be seen that the work which is being done or which may be done toward salvage resolves itself into two general phases.

In one, actual construction is the main feature and the result will be immediate salvage of waste. In the other, research for a term of years is necessary to arrive at the more elusive wastes and the best methods of utilizing all wastes and imported waters.

OTHER PHASES OF INVESTIGATION

The various other phases of the water study of California are continuing.

DAM APPROVALS AND PERMITS

To date 673 applications have been filed with the Department for approval of existing dams and dams under construction.

OTHER ACTIVITIES DURING MONTH

There were the usual activities during the month in connection with flood control and reclamation, bank protection, adjudication of water rights, compilation of data secured by snow surveys, irrigation district matters, etc.

IRRIGATION AND RECLAMATION FINANCING

A meeting of the California Irrigation and Reclamation Financing and Refinancing Commission was held in the offices of the Attorney General at Sacramento on July 18th at 10 a.m. The following members of the commission were in attendance: Will C. Wood, Superintendent of Banks, chairman; Edward Hyatt, State Engineer, secretary; Charles L. Childers, attorney, Imperial Irrigation District, El Centro; Fred W. Kiesel, president California National Bank, Sacramento; Charles E. MacLean, vice president Anglo and London-Paris National Bank, San Francisco; U. S. Webb, Attorney General.

This meeting was called particularly for the purpose of hearing from those actively interested in reclamation districts and to consider the financial problems of these districts, especially those in the Sacramento Valley. The next meeting of the commission will be held in Stockton on Thursday, August 28th, at 10 a.m.

The red light is the place where you catch up with the driver who passed you at fifty miles an hour eight or nine blocks down the line.—Detroit News.

Mid-summer Traffic Census on State Highways Shows Normal Increase

By T. H. DENNIS, Maintenance Engineer

THE semiannual traffic count of the Division of Highways was taken July 13th and 14th between the hours of 6 a.m. and 10 p.m. each day throughout the state highway system. For purposes of analysis, the vehicles are segregated by hourly periods under the following classifications: California automobiles, foreign automobiles, light trucks, heavy trucks, trailers, buses and horse-drawn vehicles.

A comparison of the July, 1930, count with that of July, 1929, shows the following increases:

	For Sunday per cent	For Monday per cent
Main north and south routes.....	7.3	12.6
Laterals between inland and coast routes.....	6.4	8.1
Interstate connections.....	13.8	17.0
Recreational routes.....	5.0	8.5
Average all routes.....	7.3	11.6

The gain or loss on a particular route expressed in percentage may show a considerable variation from the record of the previous year. This is especially noticeable on some of the shorter routes and may be accounted for, in the main, by the fact that construction operations may have interfered with normal traffic either last year or during the recent count. Other local influences such as local celebrations, etc., may cause a marked difference if the count happens to come at that time.

Gain or loss in traffic volume expressed as a percentage of the July, 1929, count for all state highway routes, is as follows:

Rt. No.	Description	Sunday		Monday	
		gain	loss	gain	loss
		per cent	per cent	per cent	per cent
1	Sausalito-Oregon Line.....	8.3		8.9	
2	San Francisco-San Diego.....	4.4		1.3	
3	Sacramento-Oregon Line.....	34.2		45.5	
4	Sacramento-Los Angeles.....	8.2		17.0

The California Institution for Women

By GEO. B. McDOUGALL, State Architect

AT THE present time in this state about 120 women felons, vagrants, and misdemeanants are detained in what is known as the Women's Building at the State Prison at San Quentin, in Marin County, and are under the same management and control as the more than 4000 male prisoners incarcerated there.

GEO. B. McDOUGALL.

These 120 women occupy the entire capacity of the Women's Building and the number of women is increasing. There is practically no opportunity whatever at San Quentin for outdoor work of any kind.

Responsive to the vision of Governor Young and to his recognition of the fact that

women law violators should be detained under different conditions and entirely separate from male prisoners, the legislature of 1927 passed an act creating a commission of five members, the majority to be women, to investigate and report its findings to the Governor prior to the meeting of the 1929 legislature. This commission recommended that a separate institution for women be established on a site to be selected and suggested a method of management and control.

The legislature of 1929, with the approval of the Governor, accepted the commission's recommendation and passed an act creating a separate institution for women to be under the management and control of a board of trustees of five members, three to be women, and also appropriated \$475,000 to purchase a site and start construction of necessary buildings.

Soon after this act became effective, Governor Young appointed the following trustees: Mrs. Ernest Wallace of Alhambra, chairman; Mrs. Everett B. Latham of Los Angeles, Mrs. Ingram B. Sloeum of San Francisco, Mr. Fred D. Parr of San Francisco, and Mr. J. Frank Burke of Santa Ana. This board and chairman constitute the Division of Women's Prisons, which is one of the divisions of the State Department of Penology over which Mr. James A. Johnston presides as director. Mrs. Wallace as chairman of the board of trustees is chief of the division.

After examination of numerous suggested sites in various parts of the state, a piece of land in Cummings Valley in the southern part of Kern County, nine miles from Tehachapi, and containing 1682 acres, has been selected by the trustees and acquired by the state as the site for the new institution. Before its final selection this site was carefully examined as to the location, transportation facilities, climate, character of soil, the water supply, available building areas, and farming possibilities, and was found to be satisfactory. It may properly be said to be one of the best sites which the state has considered in the light of requirements of the California Institution for Women. The location is isolated both geographically and in relation to the main highway giving access to it, and for such an institution this isolation is especially desirable. Transportation will be by the Southern Pacific Railroad to Tehachapi and by automobile travel over excellent highways from Bakersfield and to Los Angeles. The elevation above sea level is about 4000 feet, and the climate is not excessively warm in the summer nor very cold in the winter. When the main highway from Los Angeles to the San Joaquin Valley, known as the Ridge Route, has been closed in the winter on account of snow, this highway between Bakersfield and Los Angeles by way of Tehachapi and Mint Canyon has been used as a detour.

The major portion of this site is comparatively level and available for use either as building site or for farming and truck gardening. The soil is rich and capable of producing a large variety of products.

There are several water wells on the property and an adequate supply of water of fine quality can be developed from additional wells

Airplane view of site near Tehachapi for California Institution for Women.

as required for both domestic use and irrigation.

As soon as the site was selected, and in keeping with Governor Young's forward-looking program of building construction for all the state's institutions, the Division of Architecture at the request of the board of trustees put a party of surveyors into the field to determine the contours of the ground, and started the study of a tentative plot plan to show the suggested development of the entire site for an ultimate institution to accommodate about 500 inmates and about 100 employees.

This plot plan, also preliminary sketches for particular buildings, have already had consideration by the board of trustees. When finally approved this plot plan will constitute a basis for determining upon a tentative 10-year building construction program beginning with the current biennium.

Work has already started on the repair and alteration of the old farm house on the property to make it available for a temporary office of the institution during building construction and for quarters of a man and his wife who will act as caretakers, and for accommodation for the members of the board of

trustees and for the state officials having business at the site. Working drawings and specifications as required for taking bids on the permanent structures to be built with the 1929 appropriation should be ready so that permanent construction work can start at the site by the end of the present year, 1930. This will permit of the occupancy of the institution by the women now detained at San Quentin sometime during the latter half of the year 1931, thus releasing the present Women's Building at the State Prison at San Quentin for use as a hospital for that institution.

The particular site on the property to be used for the main group of buildings is in the shape of a basin, surrounded almost entirely by a range of hills, and the buildings so located will be seen to excellent advantage and will be effectively protected from prevailing winds. While there will be a unit for detaining inmates who may not yet have learned the wisdom of maintaining good behavior, the majority of the inmates will be housed in cottages having a capacity of about 50 each. These cottages will be self-contained homes, each having its own living room, dining room, and kitchen. Small separate sleeping rooms

will be provided for most of the inmates, together with small dormitory sleeping porches with small private dressing cubicles. Two employees, a matron, and one assistant will be housed in each cottage in order to insure complete control and safety in management. Thus, these cottages will each be a home for those living in it and as far as possible in a building housing a family of 50 will have the qualities required to promote home life. The architecture of these cottages both outside and inside, also the landscaping about them, will be in keeping with this idea.

In addition to the detention unit and cottages, there will be a receiving and hospital building and administration building, an education building, possibly a chapel, an open air assembly building, industrial buildings, garages, warehouse, commissary and laundry buildings, and a group of farm buildings.

This new women's prison, so called, is not intended as a punitive institution but a corrective one "to provide custody, care, protection, industrial, vocational, and other training and reformatory help for women confined therein." The purpose is to rehabilitate women convicted of felonies, female vagrants, and narcotic misdemeanants.

There will be plenty of outdoor work which will tend to maintain good health in the inmates and the board of trustees is authorized in its discretion to compensate them, any accumulations resulting to be held for the benefits of the particular inmate or forwarded to her dependents as the board may decide.

It is the intention of the board of trustees that the institution shall be an asset to the community surrounding it.

The superintendent is to be a woman and all other employees, as far as practicable, are to be women.

THE FIRST AUTOMOBILE

Who had the first automobile in the world?

The first automobile which actually ran, which incidentally was steam propelled, was built in France between 1760 and 1770 by Captain Nicholas Joseph Cugnot, history declares.

The first gasoline-operated automobile in America was Charles Duryea's "Buggyaut" which came out in 1892. Henry Ford's first car followed in 1893, and in 1894 Elwood Haynes' historic automobile was brought before the public eye.

In 1892, history states, an electric automobile built by William Morris of Des Moines, Iowa, was sold to a Chicago citizen.

Highway building under the spur of modern transportation and rapid development of both urban and rural localities, is a never-ending task. And as a result as well as a cause, California is an ever-growing state.—*Corcoran Journal*.

Traffic Officers Have Perilous Job

THE hazardous character of the California traffic officer's job is evidenced in a report by Eugene W. Biscailuz, superintendent of the California Highway Patrol, showing three officers killed and sixty-nine injured in performance of their duty within the last eighteen months.

Two of the fatalities occurred in the Kern County squad, Officers Howard C. Garlinger and L. W. Hogan dying in highway crashes. The third was Officer Leland Bond of San Mateo County.

The sixty-nine counted as injured include only those who were off duty long enough to draw compensation and does not include scores of sprained legs, battered hands, lacerated faces, etc., which traffic officers come to regard as a part of the daily grand of watching the roads.

Biscailuz said many of the injuries are of an extremely serious nature, one officer having been off duty for eighteen months. Broken legs and arms, incurred in dashes after speed-maddened motorists, are of frequent occurrence.

The average number of men killed annually is three while the number killed or seriously hurt annually over a period of years has been close to 25 per cent of the entire personnel of the patrol.

Traffic officers find it difficult to secure life insurance except at exorbitant rates because of the extremely high hazard involved. Through an arrangement worked out with the State Compensation Insurance Fund, however, injured officers received \$25 a week after the first week while off duty and the families of officers killed on duty receive a like amount until the sum of \$5,000 has been paid.

In addition, the officers have protected themselves to a degree by benefit funds set up by their own associations.

In the hope of minimizing the death toll in the patrol, orders have been given that motorcycles be discarded for automobiles by men operating on night patrols or in wet weather.

In the modern household practically everything is operated by switches except the children.—*Arkansas Gazette*.

Doctor (after bringing victim to)—How did you happen to take that poison? Didn't you read the sign on the bottle? It said "Poison."

Ebenezer—Yassah, but Ah didn't believe it.

Doctor—Why not?

Ebenezer—'Cause right underneath it was a sign dat said, "Lye."—*The Pathfinder*.

Report on Five Seasons' Study of Sacramento-San Joaquin Water Area

By HARLOWE M. STAFFORD, Sacramento-San Joaquin Water Supervisor

BULLETIN No. 23 of the Division of Water Resources comprising the Sacramento-San Joaquin Water Supervisor reports for the five-year period 1924 to 1928, inclusive, has recently been published by the State Engineer and will soon be released for distribution.

HARLOWE M. STAFFORD.

The publication of this bulletin marks the completion of five seasons' work under the Water Supervisor Plan in the Sacramento-San Joaquin territory. This work had its inception in the unusually short water year of 1924. Its immediate status was that of an emergency measure effected by the water users themselves to tide

over the critical situation of that year. However there was an underlying and more fundamental conception that, by its inauguration, a definite and necessary step was being taken toward the ultimate solution of the water difficulties in the territory involved. Of first importance in that solution comes conservation, both by careful use of existing natural flow and by storage of flood flows. But to attain effective conservation there must be an authoritative, orderly and equitable distribution of the water supply to those entitled to receive it. Such distribution requires as a basis either an adjudication of water rights or a mutual agreement and stipulation, either temporary or permanent, among the water users. In working out an adjudication or mutual agreement there are certain facts and data which are indispensable, namely, the records of the diversions and uses of water, and the pertinent hydrographic data on stream flow, return flow, duty of water, etc.

In the Sacramento-San Joaquin area there has been no adjudication of rights and due

to the complicated nature of the situation it would appear that the ultimate distribution of water may be most satisfactorily based upon mutual stipulation, perhaps temporary at first but ripening to permanent adjustment and agreement, similar to the outstanding example on Kings River.

In preparing the way for this solution, then, the value of the work commenced in 1924 and continued to date is evident. Through the office of the Water Supervisor of the Division of Water Resources, all diversions of water have been measured, the stream flow and return flow have been recorded and duty of water and salinity investigations pursued. The results of this work have been reported annually in mimeograph form but for purposes of preservation and wider distribution, as well as to afford an opportunity for review, comparisons, summarizations, and such analyses as may be made, it is felt they should be brought together in a printed publication, and that is the purpose of this bulletin.

WASTE AVOIDED

In addition to the engineering investigation, collection of records, etc., the office of Water Supervisor has been of service in effecting conservation and waste prevention measures in the seasons of low flow. In respect to this and to actual stream administration the water supply of two seasons, 1924 and 1926, has been such as to urgently require the efforts that have been made and in the seasons of 1925, 1927 and 1928, the urgency has not been so great. As the work in each season has progressed, however, the water users, both upstream and in the delta, have become better acquainted with the methods adopted and in doing so have more readily extended their cooperation. A practical demonstration has been made that with each water user doing his reasonable share or perhaps making some sacrifice, situations which otherwise might prove critical, may be successfully relieved, thereby effecting the maximum benefit to the greater portion of the territory involved. With a more intimate knowledge of the Water Supervisor procedure on the part of the water users, and with the addition to the record each year of the valuable facts as to

the use of water, stream flow, etc., the Division of Water Resources through the Water Supervisor becomes more and more prepared and ready to initiate (upon short notice in case of water shortage) some schedule or plan to be mutually agreed upon by the water users, for the most equitable and efficient administration of the water.

HISTORY OF WORK

The water situation on the Sacramento and lower San Joaquin rivers and in the Sacramento-San Joaquin delta is one that has become well known throughout the state, and published Bulletins No. 3 and No. 4 of the former Division of Water Rights have described in detail the particular conditions and events in 1924 which lead to the inception of the Sacramento-San Joaquin Water Supervisor work in that year. Bulletin No. 3 is a record of the proceedings of the first Sacramento-San Joaquin River Problems Conference held in January, 1924, and Bulletin No. 4 reports the transactions and papers of the second conference which met in December, 1924, and presents the Water Supervisor's report for the 1924 season. The first conference resulted in the appointment of a committee known as "The Permanent Committee of the Sacramento-San Joaquin River Problems Conference," and through the efforts of this committee working with the Division of Water Rights, the office of Water Supervisor was established by that division, "to bring about the greatest possible conservation of water and to commence the collection of the records of use of water, stream flow and other engineering data necessary in the ultimate attainment of a solution to the water problems." The necessary funds for the conduct of the work in 1924 were raised, through the efforts of the permanent committee, almost entirely by voluntary local subscription. Since 1924, however, the work has been carried on under state appropriation.

THE SITUATION

In the Sacramento-San Joaquin territory from Redding at the upper and of the valley on the north to Vernalis and lower San Joaquin River points on the south the present water requirements may be grouped as follows:

(1) Irrigation.—Above the city of Sacramento, for approximately 90,000 acres of rice and 140,000 acres of general crops on the Sacramento River itself and 50,000 acres of rice and 45,000 acres of general crops on its tributaries. Below Sacramento, in the 425,000-acre delta region, for an area of nearly

300,000 acres of general crops irrigated annually, and on the uplands bordering the delta for about 65,000 acres of general crops.

(2) Navigation.—Requires sufficient flow in the Sacramento River for 125 miles above Sacramento to permit the passage of freight steamers. The federal government has stated that a flow of about 3500 second-feet is needed to properly care for this requirement.

(3) Salinity Control.—Requires a flow to the delta sufficient to protect that area from the encroachment of salt water from San Francisco Bay. A bulletin is shortly to be published covering the salinity investigations to date and more particularly the intensive investigation of 1929-30. This will show the exact flow requirements to accomplish salinity control in the delta, but a tentative figure of probably not less than 4000 second-feet for the combined flow to the delta of the Sacramento and San Joaquin rivers is indicated.

With an almost unbroken succession of years of subnormal stream flow since 1916, the full satisfaction of these water requirements has been impossible and in 1920, 1924 and 1926, but particularly in 1924, the situation was acute. This is brought out more vividly by a comparison of the river flow at Red Bluff and the irrigation draft. For example, in 1926, the average discharge of the Sacramento River at Red Bluff, July to September, inclusive, was 3140 second-feet, and in the same period the average irrigation draft, Redding to Sacramento, was 3210 second-feet. In the month of July, 1926, the Red Bluff flow was 3190 second-feet and the irrigation draft was 4220 second-feet, segregated to 1208 second-feet under old appropriative rights (initiated prior to the Water Commission Act, 1914), 2690 second-feet appropriative rights under the Water Commission Act, and 322 second-feet presumably riparian or unknown old appropriative rights. Compare, in turn, these data with the facts that ultimate use, Sacramento to Redding, of appropriative rights under permits already granted by the Division of Water Resources, will probably amount to 4000 second-feet and that there is a total maximum use to date of 2000 second-feet under old appropriative and riparian claims on the same stretch of river.

ALLEVIATING FACTORS

Fortunately, for the present, use through appropriative rights initiated under the Water Commission Act has not reached full development, and, due to rotation and idle lands, full use under all riparian and old appropriative rights does not occur simultaneously. Another and most important

Slurry Base Construction on Desert Roads

By C. S. POPE, M. Am. Soc. C. E., Construction Engineer, Division of Highways

IN THE construction of crusher run bases on desert road construction, the problem of the economical use of water in binding such bases has led to a type of construction on the California highways which we have designated as the slurry base construction.

Essentially, this method consists of plant production of a concrete or slurry composed of crushed rock graded from 2½-inch to dust and containing about 15 per cent of material passing the 200 mesh which has a cementing value. The method of production is as follows:

Material for the base is obtained usually from pits or talus slopes and is crushed to the proper size in a crushing plant of ample capacity. If necessary, fine material is added to bring the 200-mesh material up to the requirements of the specifications. In order to secure accurate composition of the mixture, the material is often screened and remixed by a belt system and then passed to a mixer either of the pug mill type or revolving drum. The mixer shown in the illustrations is the revolving drum type. The aggregate and dust are weighed out with some care or are proportioned by volume, and the water is added in an amount of about 9 gallons per ton of aggregate. It is then mixed for a period of 30 seconds and when dumped has a consistency of damp concrete. The distribution of aggregate is complete and uniform and when the material is hauled to the road, it may be spread without segregation. Spreading is done by means of one-man graders or by the use of a caterpillar and blade, depending

Mixing slurry base in drum mixer.

upon the quantity to be handled. After the material has been bladed to a smooth surface, it is drenched with water to the extent of about 3½ gallons per square yard and rolled with a 10-ton roller. The appearance of the base with fine cementing slush brought out by the roller suggested the term slurry base. The resulting base is allowed to bake hard, and if the materials are properly selected, the result is an astonishingly firm foundation. The base is kept sufficiently damp to protect it from raveling and is usually covered within 24 hours by an oil-mixed surfacing from 3 to 4 inches in compacted thickness.

The method has shown a great saving in the amount of water to be used and gives a base which is far better than could be obtained by simply spreading the mixed aggregate and sprinkling and rolling in the usual way. Such bases are obtained at a cost of about \$1.80 per ton and in favorable locations, no doubt, this cost could be decreased.

The success of the method has been so pronounced that it is being used on a considerable mileage of desert roads at the present time.

Rolling slurry base with macadam roller.

Conkling Author With Baker of Book On Water and Uses

HAROLD CONKLING, deputy in charge of water rights, of the Division of Water Resources, Department of Public Works, is joint author of a new book, "Water Supply and Utilization." Associated with him in the authorship is Donald M. Baker, consulting engineer.

The new volume is described by John Wiley and Sons, Inc., of New York publishers, as "An outline of hydrology from the viewpoint of the arid section of the United States together with an outline of water law and its administration

HAROLD CONKLING.

as it has been developed in the arid states," and continuing the announcement says:

"This book may be considered as a handbook on water supply. While the material is of universal application it has a western background. It contains a broad outline, a mass of specialized information on hydrology, water development and water law in the western states. It is the only text treating the subject from the arid region standpoint. It contains, also, a thorough consideration of water law as it has been evolved and developed to suit peculiar conditions in the west.

"The book will serve not only as a text for students but will be of great value to engineers, attorneys, bankers and public officials in the western states who are interested in water development and wish to enlarge their knowledge of its principles and practice. It will interest also similar groups everywhere who are interested in water supply and its comprehensive utilization."

The book contains:

Introduction

The Long History of the Use of Water

Climatology

Precipitation

Measurement of Precipitation

Disposition of Precipitation

Evaporation

Evaporation of Moisture from Soils

Transpiration

Streamflow and Runoff

Flood Flows

Methods of Forecasting Streamflow

Water Rights in Surface Streams

Riparian Rights

Doctrine of Appropriation

Miscellaneous

State Water Codes

Statutory Provisions

Determination of Available Water Supply

Supply from Normal Flow

Available Supply from Storage

Groundwater Hydrology

General Principles of Occurrence of Groundwater

Occurrence of Groundwater in Rocks

Influence of Rock Structures upon Groundwater Springs

Groundwater in Alluvial Deposits

Movement of Underground Waters

Yield of Groundwater

Water Rights in Underground Water

Purposes for Which Water is Utilized

Use for Irrigation

Domestic and Municipal Supplies

Conflict and Correlation Between Uses of Water

Administration of Streams

Adjudication of Existing Rights

Statutory Provisions Relative to Adjudications

Distribution of Water

Valuation of Water Rights

Methods of Valuation

Quality of Water

Harold Conkling served eleven years with the U. S. Reclamation Bureau on investigation of steam developments throughout practically the entire west, acting as special advisory hydraulic engineer from headquarters office. For six years he was engineer with the Division of Water Rights for the State of California on special investigation of magnitude and as advisor on hydro power and large irrigation projects. Later, for a period of two years, he was Chief of the Division of Water Rights, administering the water law of California. He is now Deputy State Engineer of California.

Donald M. Baker, is a graduate in civil engineering from the University of California. He served three and one-half years with the U. S. Indian Irrigation Service on water development in the southwestern states. For seven years he was hydraulic engineer with the State Water Commission of California. For the past five years he has been a consulting engineer, specializing in water development.

All ye who intend purchasing canines hearken and abide by the following:

For ye bean lovers—Boston.

For ye tobacco chewers—Spitz.

For ye bald heads—Hairless hounds.

For ye interpreters of Hamlet—Great Dane.

For ye lazy persons—Police.

For ye penniless—Mutt.

WASHINGTON, D. C.—Reports received from state highway departments and compiled by the Bureau of Public Roads, indicate that state and local authorities plan to spend \$1,601,167,455 for highway improvements during 1930.

State Highway Patrol Aids Motorists; Services Cover a Most Varied Field

THE WIDE range of activities of the California Highway Patrol are indicated by letters received from the traveling public, telling of work done and assistance given by officers of the Patrol. Excerpts from the following letters will be of interest:

The Civil Service Board of Oakland writes to thank the Department of Public Works for assistance given that board in conducting a practical test for auto truck drivers for employment by the city. Officers C. Ralph, E. J. Dias and A. Lawson of the California Highway Patrol were assigned to help the city in conducting this test. The Civil Service Board writes as follows: "There were seventy-three candidates who took the test, which was a very comprehensive and practical one. Your officers made the rating on each man and the test was completed in two hours time. The snappy and efficient manner in which these officers performed the duties assigned to them speaks very highly for your organization."

AIDS IN ACCIDENT

F. F. Smith & Company, Inc., of Sacramento writes that one of its cars was in a collision near Antioch. The driver of its car was injured and the driver of the other car killed. The letter continues: "This is the first experience we have had with the Highway Patrol, and we wish to take this opportunity of expressing our appreciation of the splendid service rendered and the courtesy extended to our man. The officers who had charge at the site of the accident were Inspector Brown, Officer Sloat and Officer Dewarn, and another officer whose name we did not procure. We wish you would extend our sincere thanks and appreciation for the assistance they rendered."

COURTEOUS CORRECTION

Edwin T. Blake of San Francisco writes as follows:

"On Saturday, at 11:20 a.m. about two miles north of Sausalito I was stopped by one of the traffic officers for cutting in too quickly after passing a truck. I was wholly unaware that I had done anything that would endanger my life or that of anyone else, but I defer wholly to the judgment of the traffic officer

whose view of the occurrence from the side lines was much better than mine from the driver's seat.

"I wish to most highly commend the traffic officer for his courtesy and consideration and the care with which he explained the dangers in passing other vehicles on that rather narrow and crooked highway. Unfortunately I did not make a note of the officer's number.

"I have been driving a car for 28 years during which time I have covered some half million miles and this is the first time that I have been called upon to show my driver's license or had my number taken.

"I hope that I can keep my name from invading your department records for another half million miles."

AIDED IN FIRE FIGHTING

Edwin F. Smith, Forest Supervisor of Placerville, writes to express appreciation for the cooperation given his organization in the suppression of a forest fire in his district.

WHEN HELP WAS NEEDED

Gertrude Cugin of Santa Barbara writes as follows: "A woman friend and myself were in sore need of masculine strength for a change in tires, owing to a bad puncture near the Cabrillo Pavilion. Your two officers in a car bearing license No. E-5808 and one of them with a Captain's badge with No. 51 on it, gave us most efficient and courteous assistance. Such men make one proud of our State Highway Patrol service."

FELON ARRESTED

John H. Thieler writes from Chester, Plumas County telling of assistance given in capturing a man wanted for an attempted murder. His letter follows:

"I wish to call your attention to an exceptional service rendered by one of the men of your department. About 12 o'clock midnight on Saturday, I appealed to Officer Tom Birmingham for help in apprehending a man, who had attempted to commit murder, giving the officer a description of the automobile owned by the suspected felon.

"Birmingham immediately communicated with the sheriff of Plumas County reporting the details of the attempted felony, and after patrolling the vicinity continuously through the night he arrested Hatton Bruce, an itinerant lumber worker. While en route to Quincy on Sunday morning to turn Bruce over to Sheriff Braden, the man escaped from custody. All passing cars on the highway were stopped by the officer and instructions given not to pick up any man on foot. After a search of nine hours Bruce was retaken and lodged in the county jail at Quincy, charged with attempted murder.

"Because of these facts, I wish to compliment your department for making efficient police service possible, in isolated mountain towns; and further to commend to you personally, Officer Tom Birmingham of your department, who worked through without relief from the time the crime was reported to him, until 2 a.m. of the following morning."

CROWDS CARED FOR

The Sierra Valley Smith Club writes to thank the Department for assistance given by Inspector White, Captain Blake and Officer Fonta at the annual Swiss celebration at Loyalton, Sierra County, on August 19th. The letter states that the large crowd attending the celebration was handled in a manner most satisfactory both to the officials in charge of the celebration and to the public.

ASSISTANCE TO WOUNDED

W. J. Giffillan of San Francisco writes as follows:

"My wife was seriously cut, in a crash, on the causeway, near Sacramento, on July 26th. Traffic Captain H. R. Jacobs rendered valuable service in obtaining my wife's transportation to the hospital and in helping secure for my sister-in-law, Mrs. Brackman, the information which she would require.

"Traffic Officer W. D. Cassleman cleared the way and escorted the machine carrying my wife to Sacramento."

AUTOMOBILE SAVED

Larry Gott of San Jose writes that Captain R. S. Ryder and Officer White of Ukiah observed his automobile on fire, before he had noticed the fact, and extinguished it with their pyrenes before it had done any great damage.

ARMY ASSISTED

Lt. Col. H. H. Morehead, 251st Coast Artillery, Fort MacArthur, San Pedro, writes as follows:

"The undersigned desires to express the appreciation of the officers and men of the regiment to you for the courtesy extended by allowing your traffic officers to assist the movement of our truck column to the Field Training Camp at Fort MacArthur on August 2, 1930.

"The officers, Geo. Stimson, No. 180, and Lloyd Grooner, No. 175, were courteous, efficient, and a credit to your department.

"The Santa Ana Office, Orange County, is to be commended for the manner in which the affair was handled."

GAS THIEVES CAUGHT

W. H. Hollingsworth of Ignacio tells of assistance given by the Patrol in capturing gas thieves. He writes:

"Through your office I wish to thank our Marin County night patrol, officers Monteverde and Carbine, for the efficient manner in which they caught the three young men who broke into our gas pumps and stole gas.

"Without the aid of the night patrol, the thieves would never have been caught, and you are to be

congratulated upon having two such officers as Monteverde and Carbine."

BEREAVED PARENTS FOUND

Mr. and Mrs. George Danielson of McCloud tell of service given to them by the Siskiyou Patrol at a time when their son was fatally injured on the Klamath lateral. The letter follows:

"We wish you to know of the wonderful aid given us by the Siskiyou County contingent of the State Highway Patrol last Friday, July 4th. Our son, Carl, was fatally injured on the Klamath River Highway and at the time we were traveling in southern Oregon.

"Traffic Officer E. N. Belanger, of McCloud, immediately set about to locate us and called his fellow officers to assist. We were finally located at Klamath Falls. On our arrival at the state line on the Pacific Highway we were met and transferred to an official car and taken with all possible despatch to the Siskiyou General Hospital at Yreka. Your officers rendered this act of human kindness on a holiday when their services were taxed to the utmost.

"We can not adequately express the high esteem in which we hold such outstanding service. We feel that the State of California can well be proud of its efficient Highway Patrol."

INDIO AIDED

L. A. Pawley of Indio, Riverside County, extends thanks to the Department in the following letter:

"Just recently the city of Indio was unfortunately visited by a very serious fire. It might have been much more serious had it not been for the singular service rendered by two of your officers, Mr. George Baker, No. 185, and Mr. Ora E. Townsend, No. 363.

"It therefore gives us pleasure to call to your attention this fact for they are indeed justly entitled to recognition for the exceptional services they rendered at a time when they were seriously needed."

OTHER LETTERS

There are numerous letters from motorists extending thanks to the Department of Public Works for aid given by traffic officers in making repairs to tires and to assisting owners of machines who are having mechanical trouble. There are also many letters from organizations expressing thanks for aid given by members of the Patrol in handling crowds at picnics and parades. A number of letters from persons to whom tags have been given for traffic violations or who were warned of such violations express thanks for the courteous manner in which the officers performed their duties.

No man's world is any bigger than the man himself. That which his eye can see, his ear can hear, his heart can feel, make up for him the universe. For no man has anything he can't use.

What good is money to Hottentot, or a magnificent picture to an idiot?

The whole world for you lies under your own hat, and it is just as large and just as varied as your own mind will let it become.—Salescraft.

New Menace to Highway Develops in Oil Field

Sink near roadside in the Maricopa oil fields

THIS sink occurred in the Santa Maria to Freeman State Highway where it passes into the easterly fringe of the Maricopa Oil Fields. The surface of the highway sagged from 18 inches to 24 inches, where it was crossed by a crack some 60 feet long. The hole in the foreground caved in, as shown, after water, impounded beside the highway, had found a subterranean outlet, at that portion of the crack. Clay washed into this depression. The picture shows the characteristic cracking of this wash clay, due to excessive shrinkage while drying.

Several sinks have been found in this general vicinity, one having entrapped oil, flowing along surface drains. This oil could be seen standing some five feet below the surface. In one instance 1600 barrels of oil was drained out of an oil well sump through the opening of such a crack. Generally the sink is surrounded by successive circles of cracks indicating settlement toward a common center. Various theories are put forward to explain the occurrence of these cracks and sinks, but no definite conclusions have been reached.

Maybe So, Mr. Somner,
But It Sounds Somewhat
Like An Alibi To Us

It is not every man who can appreciate a joke on himself. Mr. F. G. Somner, District Engineer of District Nine, Division of Highways, tells this one.

A family in one of the desert highway camps had a young daughter who was to enter school at Bishop. Mr. Somner offered to take the child to town in his sedan to which the mother gladly consented. Soon above the purr of the motor the clucking and cawing of a hen attracted his attention. Glancing at his young passenger he remarked:

"Was that you? You're quite an imitator!"

The child nodded, smiled demurely, but said nothing.

But the clucking, continuing at intervals, soon ceased to be amusing. Mr. Somner grew somewhat annoyed, then worried, fearing some nervous affliction. The child did not seem ill though rather fidgety under his sharp and anxious glances. So rather than take chances he speeded up to Independence, secured a sleeping draught on the advice of the druggist, and hurried on to home of the child's aunt in Bishop with the parting injunction to call a physician immediately.

With what relief he drove to his residence! But on stopping the car, he suddenly seemed to hear that sound again. What had come over him? Was it all just imagination * * * the heat * * * or was he ill himself? He reached in the rear compartment for his bag. Something in a burlap sack stirred and startled him * * * and clucked much more distinctly. The grateful mother had slipped in a surprise present for Sunday dinner, a fat, frightened but perfectly healthy hen.

NEW AND OLD METHODS IN STATE HIGHWAY BUILDING

- (a) Oil macadam in poor condition, induced by inadequate subsurfacing drainage, chemically and physically adverse subbase (native soil), and volume and unit weight of the pavement was designed far in excess of what the pavement was designed for.
- (b) 12-inches of pit-run gravel blanketing the new adobe embankment and on which is to be placed a modern reinforced P. C. C. pavement, 20 feet wide. New roadbed adequately drained, built 23 feet higher than old roadbed, to safeguard against possible flooding to which old road was occasionally subjected, and on a 100-foot right of way, permitting, thereby, widening of pavement when increased volume of traffic dictates the need.

Progress on State Highway System

MAJOR PROJECTS COMPLETED, UNDERWAY AND ADVERTISED AS REPORTED
TO GOVERNOR'S COUNCIL ON AUGUST 28th

C. H. PURCELL, Chief of Division of Highways.

During the past month, contracts have been awarded, work advertised, and plans and specifications commenced as shown in the following table:

Work placed under contract.....	\$2,676,000
Work pending and advertised.....	1,350,000
Total	\$4,026,000

PROJECTS COMPLETED

Work which has been completed and opened to public use during the past period includes the following projects of importance:

NEWHALL ALTERNATE

Of the greatest interest to motorists of southern California is the completion of the "Newhall Alternate," This 8.5 miles of new State Highway in Los Angeles County extends over a new alignment of the Los Angeles to Sacramento artery, south of the Ridge Route, via Weldon Canyon. It connects San Fernando Road, near the city limits of Los Angeles with the Ridge Route at the Santa Clara River, and it diverts the Ridge Route traffic from the old alignment through the Newhall Tunnel, thus relieving the congestion at this point, which has been a great detriment to fast moving traffic. This new construction consists of a graded roadbed 46 feet wide upon which has been placed a Portland cement concrete pavement 30 feet wide. The total cost of constructing this wide stretch of highway amounted to \$271,100.

ARROYO SECO PROJECT

The grading of the first sector of the new "Arroyo Seco Road," which will eventually climb from the canyon to the ridges in the rough country north of Pasadena opening up additional recreational areas, is completed from La Canada to 2.5 miles northerly. This 24-foot roadbed has been cut from the walls of the arroyo, and the use of a large amount of reinforced concrete cribbing was necessary to hold the bank on the steep mountain slopes. The second sector of this project is now under construction carrying the road to 4 miles north of La Canada. Two bridges, one, a large reinforced concrete arch across La Canada Canyon, and the other a concrete girder across Slide Canyon are now under construction. The grading cost of the first sector was \$275,100.

SALINAS RIVER BRIDGE

One of the larger bridges on the Coast Route from Los Angeles to San Francisco has just been completed across the Salinas River at San Ardo in Monterey County. This structure, erected at a cost of \$107,392, is composed of ten 100-foot steel deck truss spans and seventeen 37-foot reinforced concrete girder spans. It replaced the old county bridge, which was

only 15 feet wide, built in 1907 and which was in very poor condition, being dangerous for the traffic and loads which a structure on this important route is called upon to carry.

BAY SHORE HIGHWAY IMPROVEMENT

Grading and placing a bituminous macadam surface has been completed on the most northerly section of the new Bay Shore Highway in San Mateo County. This project extends from the southerly city limits of San Francisco on San Bruno Ave. to Grand Ave. on South San Francisco. The graded roadbed varies from 62.5 feet to 125 feet in width and in crossing the low lying marsh lands the heaviest grading in the State Highway System was encountered, vast amounts of fill being necessary to build up the roadbed. This section of this San Francisco to San Jose highway will eliminate the use of the old crooked and narrow road built many years ago by the county. It connects at the southerly end with section from South San Francisco to Burlingame which is now being paved. The cost of the 3.5 miles from San Francisco to South San Francisco was \$1,435,062.

REDWOOD HIGHWAY OVERHEAD

A 236-foot steel overhead crossing with timber approaches, across the tracks of the Northwestern Pacific Railroad at Forbes Station in Marin County has just been completed. This structure is a unit in the recent relocation of the popular Redwood Highway north of San Rafael. The new alignment eliminates the necessity of using the old crooked road which climbed the hill over the tunnel of the railroad. This new grade separation was constructed at a cost of \$17,300.

PROJECTS ON WHICH BIDS WERE OPENED

Some of the more important bids received during the past four weeks include the following:

SAN DIEGO-EL CENTRO LATERAL

On the San Diego-El Centro lateral, heavy fuel oil is to be applied to the newly graded roadbed on the relocation of this route between La Posta and the Tecate Divide in San Diego County. This work will complete the reconstruction of this important southern California highway to modern standards of width, alignment and grade over the entire distance from San Diego to El Centro. The cost of oiling this 8½ miles will be \$14,000.

ROSE CANYON CUT-OFF

The relocation of main route between Los Angeles and San Diego which lies within the city limits of San Diego, and is referred to as the "Rose Canyon

"Cut-off" will be paved with a Portland cement concrete pavement 30 feet wide. This new routing extends from Balboa avenue to Torrey Pines Road, a distance of 5.4 miles, and will shorten the distance over the existing route, via La Jolla, by 4.5 miles. The grading of this alignment and the construction of a 210-foot reinforced concrete bridge were completed a month ago. The total cost of this relocation will be \$330,000.

COAST BOULEVARD IMPROVEMENT

In Los Angeles and Orange counties three projects will greatly improve the Coast Boulevard from Long Beach to Sunset Beach where they will join the work, now in progress, widening this heavily traveled route as far south as Newport Beach. With the cooperation of the city of Long Beach the road is to be constructed on new alignment from Hathaway avenue to connect with the present boulevard at Seal Beach. The roadbed will be 60 and 100 feet wide over this portion and the Portland cement concrete pavement 40 feet wide. The second project consists of the construction of a 400-foot reinforced concrete girder bridge across the San Gabriel River on this new routing. The third project, from Seal Beach to Sunset Beach, calls for widening the roadbed to the full extent of the right of way and widening the existing 20-foot concrete pavement to 30 feet. This widened roadbed will give much needed parking space to the many motorists who come to the beaches from metropolitan Los Angeles. The total cost of these improvements will be \$467,200.

DESERT HIGHWAYS BETTERMENT

The steady improvement of the desert highways in southern California is noted by the opening of bids for two projects east of San Bernardino. Over 16 miles of the Mecca to Blythe lateral in Riverside County and 9.5 miles of the Los Angeles to Salt Lake Road in San Bernardino County.

Both projects call for the construction of a 36-foot graded roadbed and the placing of an oil treated crushed rock surfacing 20 feet wide, with adequate drainage systems consisting of ditches and dikes constructed parallel to the highway to direct flood waters from desert storms into proper channels, thereby protecting the highway roadbed. The improvement in Riverside County will extend from Desert Center to 9.5 miles west of Hopkins Well and will cost \$280,100. This road has been constructed to modern standards over the 32 miles west of Blythe and the present project will carry this improvement to Desert Center, giving a surfaced road for nearly 50 miles west of Blythe. The improvement of the road in San Bernardino County will extend from Dunn to the Cronise Valley and will cost \$200,700. Of the 193 miles of this route from San Bernardino to the state line, near Jean, Nevada, 108 miles has been graded and surfaced to present day standards of desert road construction and the present improvement will carry these standards easterly to the Cronise Valley, leaving only 75 miles yet to be improved.

CUYAMA LATERAL WORK

Another project will be the improvement of 37.7 miles of the Cuyama lateral in Santa Barbara and San Luis Obispo counties. The work will extend from the second crossing of the Cuyama River to the Kern County line. This work will consist of straightening several curves, smoothing the present choppy gradient and surfacing the entire distance with 20 feet of oil treated crushed gravel or stone. The improvement will cost \$301,500. This road serves as an outlet to the coast for the Maricopa oil fields and

as a connecting link between the San Joaquin Valley and the Coast Route.

COAST ROUTE IMPROVEMENTS

Two improvements worthy of note are to be made on the Coast Route. The one, will be a reinforced concrete girder bridge composed of four 42½-foot spans, which will cost \$21,138. This structure will be built on a new alignment of this heavily traveled route across Nojoqui Creek 7.5 miles south of Zaca in Santa Barbara County. The new bridge will replace the existing narrow structure built many years ago by the county on an alignment which is decidedly dangerous to present high speed traffic. The other is the grading and paving of the three miles immediately north of San Luis Obispo. This improvement will pave with Portland cement concrete and will materially improve the alignment, by eliminating several blind curves, this section of the main artery from Los Angeles to San Francisco. This paving project will cost \$145,400.

MONO COUNTY PROJECT

At a cost of 176,200, 13 miles of the highway through the Walker River Canyon, in Mono County is to be graded to a roadbed width of 24 feet. This improvement will extend from Sonora Junction to Coleville. This road forms a part of the interstate highway connecting Reno, Nevada, with southern California via the Owens Valley. This work is the first of a series of projects to provide an improved highway for this recreational area of the Sierra Nevadas. More and more vacationists are using this route each year, as traffic passing from the Yosemite Valley via Tioga Pass, uses this road.

REDWOOD HIGHWAY

An improvement of special interest to the motorists of the bay area is noted by the opening of bids for the construction of a graded roadbed 36 and 56 feet wide and placing 20 feet of bituminous macadam surfacing from Belvedere Crossing to Tiburon in Marin County. The 4.5 miles from Belvedere Crossing to the Redwood Highway at Alto has been improved and is in very good condition. The present improvement, to cost \$62,700, is largely on new alignment and is designed to cross the tracks of the Northwestern Pacific Railroad via an overhead crossing which is proposed for construction in the near future. With the advent of increased ferry service from San Francisco to Tiburon this route will carry a considerable portion of the traffic using the Redwood Highway and will do much to alleviate the present congestion at the Sausalito terminal.

An improvement to another of California's scenic highways will be the widening and surfacing of three short sections of the road which extends from the Redwood Highway, north of Cloverdale, to the coast at Navarro Head. While this lateral is only 50 miles in length, it traverses an increasingly popular recreational section of the coast country, passing through the beautiful redwood groves of the Paul Dimmick Park. The expenditure on this improvement will be \$92,600.

The steady improvement of the ever popular Redwood Highway is shown by the construction of an overhead crossing 2.5 miles north of Beatrice in Humboldt County. It will consist of two 61'-7" through plate girder spans, one 40-foot steel beam span and 450 feet of timber approach trestle; the concrete piers and steel bents are to have pile foundations and the timber trestle will be constructed on pile bents. This structure will separate the grades of the main line of the Northwestern Pacific Railroad and the State Highway which is now under construction on the new

alignment between Laleta and the existing road some three miles north of Beatrice. This new alignment, including a subway at Laleta, which is now under construction, and the present overhead structure, will eliminate a very narrow and crooked section of the existing road as well as shorten the distance by 1.5 miles. This structure will be erected at a cost of \$52,800.

VICTORY HIGHWAY

Contracted to cost \$225,000 is an important improvement on the heavily traveled road from Sacramento to the high Sierras and Reno via Auburn. The work proposed consists of boring a tunnel, with a 30-foot roadway and 531 feet long, and constructing about one mile of approaches, through the hill and under the town of Newcastle, some 3 miles west of Auburn. This new location of the State Highway will eliminate the necessity of through traffic climbing the excessive grades at both the east and west entrances of Newcastle and passing through the congested area of the town and the existing narrow subway under the tracks of the Southern Pacific Railroad. The portions of the tunnel near the portals and beneath the Southern Pacific Company's tracks will be lined with reinforced concrete. The remaining portions will have timber lining. The placing of the ultimate Portland cement concrete pavement will be postponed until the fills in the approaches to the tunnel have fully settled, at which time the approaches and tunnel will be paved as a unit.

PACIFIC HIGHWAY

At Lincoln, in Placer County, nearly two miles of the Pacific Highway is to be graded and paved with 20 feet of Portland cement concrete. This project is on an improved alignment of the road through the town and includes the construction of two small bridges. This project, which will cost \$70,400, will close the gap in the pavement on this route, between Sacramento and Red Bluff.

WORK ADVERTISED

Work advertised for bids during the past month includes the following important projects:

CASTAIC CREEK BRIDGE

A reinforced concrete girder bridge consisting of seven 35-foot spans on concrete pile bents and concrete abutments with pile foundations and having a clear roadway width of 34 feet will be constructed across Castaic Creek on the Los Angeles to Bakersfield road in Los Angeles County. This new structure will be built on an improved alignment at this crossing and will replace the existing 8-span steel through girder bridge which was built by the county some 15 years ago on an inferior alignment.

BAY SHORE EXTENSION

The further improvement of the Bay Shore Highway is noted by the advertising for bids for the construction of a 60-foot graded roadbed on the sector from Redwood City to Willow Road. This important alternate route down the Peninsula is now graded and surfaced from San Bruno avenue in San Francisco to 5th avenue in San Mateo. The portion from 5th avenue, San Mateo, to Redwood City is now under construction and the present project will carry the Bay Shore Highway 4 miles nearer to San Jose. The termination of this project is Willow Road which is the main connection between the Coast Route and the Dumbarton Bridge across the bay.

County Reports on State Highway Projects

COLUSA COUNTY

Construction of 13 miles of new State Highway, between Bear Creek and 5 miles west of Williams, on the Ukiah-Tahoe Highway under contract by Le Tourneau, is practically completed on 4 miles of the Williams end of the work. The contractor has begun on the Bear Creek end of the work, and proposes to work east from there to connect with the completed 4 miles. Construction is ahead of schedule and will probably be completed prior to May, 1931, the date set for completion.

A 24-foot graded roadbed is to be built from Bear Creek to the mouth of Salt Creek Canyon and from there to the junction with the present highway a 36-foot graded roadbed is planned. Surfacing of this project is scheduled to begin prior to the middle of next year.

The work between Williams and Maxwell, consisting of construction of a 39-foot new grade alongside the present 15-foot concrete pavement, is being constructed ahead of schedule by Frederickson-Watson Construction Co., Contractor. The excavation of the drainage ditch, which is being done to afford material for roadway embankment, is completed. At the present rate of progress, the work will be finished by the latter part of September of this year.

EL DORADO COUNTY

Construction of a new roadbed between Bay View Rest and one mile north of Eagle Falls is under contract by Nate Lovelace. The mountainous country through which the route is projected necessitates a large volume of roadbed retaining wall. The wall is being constructed of selected material obtained along the work.

FRESNO COUNTY

The Peninsula Paving Company have begun paving on the contract for improvement between 3 miles south of Fresno and 3 miles south of Fowler.

GLENN COUNTY

The concrete paving project between Logandale and Willows, under contract by Basich Bros. Construction Co., was begun the latter part of May. The earth roadbed, and the pit-run gravel blanket course for the concrete pavement, is half finished. The contractor is placing pavement forms at the Willows end of the work, preparatory to placing the 20-foot wide Portland cement concrete pavement.

INYO COUNTY

Beginning at the southerly boundary of Inyo County, Route 23, Fred W. Nighbert has recently completed a 10-mile stretch of State Highway to Little Lake, from which point north he also has under construction an additional 4-mile stretch, which will be completed within the next two weeks. At this point a connection is made with the Allied Contractor's, Inc., contract, which extends 21 miles to Olancha, which when completed, will close the gap and give a continuous paved highway to the northerly boundary of Inyo County.

Other reports by counties will be found on page 22.

CALIFORNIA HIGHWAYS AND PUBLIC WORKS

Official journal of the Division of Highways of the Department of Public Works, State of California; published for the information of the members of the department and the citizens of California.

Editors of newspapers and others are privileged to use matter contained herein. Cuts will be gladly loaned upon request.

Address communications to California Highways and Public Works, P. O. Box 1103, Sacramento, California.

Vol. 8 SEPTEMBER, 1930 No. 9

1931 License Plate Form is Approved

The 1931 colors for automobile license plates will be exactly the same as this year except that they will be reversed.

Instead of black letters and numerals on an orange background, it was stated, orange letters will appear on a black background, just as they were in 1929.

Exhaustive tests for visibility, the division's announcement said, have proven beyond all doubt that these colors are the most satisfactory and that numbers may be read at a greater distance than with any other combination.

The only change in the general appearance of next year's plate will be the elimination of the dashes between numerals and letters. This will be done to improve the plate's appearance and will not decrease visibility.

The plates will be 13½ inches long and 6½ inches wide as provided by the Motor Vehicle Act. They will be manufactured of the same grade of 24-gauge steel.

The same combination of letters and numerals that has proven so satisfactory in the last two years will be used. The division announced that a maximum of 2,070,000 plates of not more than six characters may be issued with this arrangement.

A REAL WATER WAGON

Water tank of 6000 gallons capacity for compacting, by watering, newly placed roadway fills on the new state highway now being constructed between Bear Creek and five miles west of Williams on the Ukiah-Tahoe highway route.

"A RADIO MIX UP"

Submitted by a reader of Napa Grange Bulletin.

Following is the experience of a man who bought and installed a radio. He tuned in getting three stations on the same wave length. One was a minister, one a man telling the condition of the roads, and the third was a lecture on poultry. Here is what he heard:

The Old Testament tells us that baby chicks should detour one mile south of the salina and listen to the words of the prophets. Be careful in the selection of your eggs, and you will find hard-surfaced roads to Garden City. We find in Genesis that the roads are muddy just west of the hen house and clean straw is essential if you would save your soul. After passing through Marysville, turn north to Jericho.

Three wise men brought a large-size incubator on account of the bad detour. The baby chicks were troubled with pip and a bond issue is being talked of in the Holy City. Keep the feet clean and dry, live a life of righteousness and turn south one mile west of the school house. Much care should be taken in commanding the sun to stand still, as there is a wash-out on the bridge just south of Scotia, and the road to salvation is under repair, making it necessary for 70 degrees in the brood house at all times. After Garberville, unless you do those things the wrath of the Lord will cause the pin feathers to fall out.

Many are called, but few have any luck unless the gravel road between Rohnerville and Ferndale is mixed with feed. The Lord commanded Noah to build the ark just one mile west of Ukiah. It rained for forty days and forty nights and caused an eight-mile detour.

Just west of the brood house many tourists from the house of David are trying the Plymouth Rocks mixed with concrete and a desire to do right.

SHADE

By Theodosia Garrison

"The kindest thing God ever made,
His hand of very healing laid
Upon a fevered world, is shade.

His glorious company of trees
Throw out their mantles, and on these
The dust-stained wanderer finds ease.

Green temples, closed against the beat
Of noontime's blinding glare and heat,
Open to any pilgrim's feet.

The white road blisters in the sun:
Now, half the weary journey done
Enter and rest, O weary one!

And feel the dew of dawn still wet
Beneath thy feet, and so forget
The burning highway's ache and fret.

This is God's hospitality,
And whoso rests beneath a tree
Hath cause to thank Him gratefully."

Few women are color blind, except in the matter of distinguishing red and green traffic lights.—Florence (Ala.) *Herald*.

tions

IRRIGATION, WATER STORAGE DISTRICTS

In connection with the assembling and completion of data on water supply and other matters of interest to irrigation districts in California for the purpose of bringing Bulletin No. 21 up to date, the following irrigation districts were visited: Modesto, Turlock, Waterford, Oakdale, West Stanislaus, Merced, El Nido, Madera, Corcoran, Lakeland, Alta, Island No. 3, Alpaugh, Lindsay-Strathmore, Terra Bella, Vandalia, Fair Oaks, Citrus Heights, Carmichael, Camp Far West, Paradise, Deer Creek, Anderson-Cottonwood, El Camino, Glenn-Colusa, Jacinto, Princeton-Codora, Byron-Bethany, East Contra Costa.

An appraisal of the lands of the El Nido Irrigation District was made. Plans for proposed irrigation works for the district were submitted to the State Engineer for review.

As a result of the hearing held at Buttonwillow, Tulare County, on July 16, 1930, the State Engineer, on petition of landowners, issued an order for the exclusion of certain lands from the Buena Vista Water Storage District.

A petition was received by the State Engineer petitioning the exclusion of about 1300 acres of land from the Tulare Lake Basin Water Storage District, located in Kings County. The hearing on this petition for exclusion has been set for October 14, 1930.

Request for approval of a bond issue in amount of approximately \$135,000 has been submitted to the California Bond Certification Commission by the Directors of the El Nido Irrigation District.

The California Bond Certification Commission has approved the private sale of \$350,000 par value of bonds of the El Dorado Irrigation District at 94 per cent and has issued an expenditure order to the same district authorizing expenditures in amount of \$364,000 for the construction of the Webber Dam for storing approximately 9000 acre-feet of water.

DAMS

The activities of the Department have, during this period, been directed primarily to the completion of a preliminary examination of all existing dams, compilation and study of hydrographic data upon which to base wasteway requirements and the basic stress determination of masonry dams. Technical assistance has been rendered the Water Resources Investigation in the selection of typical sections for high gravity dams.

To date 690 applications have been filed with the Department for approval of existing dams and dams under construction.

Applications received for approval of plans and specifications for construction:

Dam	County	Owner	Estimated cost
Swanzy Lake	Solano	Calif.-Hawaiian Sugar Refining Company	\$66,000
Tiger Creek	Amador	Pacific Gas & Electric Company	350,000

The Swanzy Lake Dam is an earthen structure to be built as a regulating reservoir for use in the Sugar Company's water supply project.

Tiger Creek Dam is to be a slab and buttress type for use as a regulating and balancing reservoir in the P. G. & E.'s Electra system.

Applications received for approval of plans for repair or alteration.

Dam	County	Owner
Kelly Lake	Placer	Pacific Gas & Electric Company
Mell Pond	Modoc	Crane Creek Lumber Company
Meadow Lake	Alpine	Pacific Gas & Electric Company

Plans approved for repair or alteration.

Dam	County	Owner
Notre Dame	San Mateo	College of Notre Dame

Activities on dams built prior to August 14, 1929.

Preliminary inspections have now been made on practically all the dams in the state. The inspection reports are being digested and segregated.

Spillway requirements have been furnished through the Water Resources Investigations Department on all dams.

Office studies for determining the safety of design are nearing completion.

Geological examinations are being made of all major structures.

The results of the various activities are being combined and the department will soon be able to divide the dams into three main groups, i. e.:

1. Dams which can be approved.
2. Dams which need repairs or alterations.
3. Dams which require further study.

FLOOD CONTROL AND RECLAMATION

MAINTENANCE OF SACRAMENTO AND SAN JOAQUIN DRAINAGE DISTRICT

The work during this period in connection with flood control maintenance has been mostly routine, including miscellaneous repair work and irrigation of willows. In addition clearing of second growth timber has been

carried on in the by-passes. A total of twenty-eight men have been engaged in this work during the period.

FLOOD CONTROL PROJECT MAINTENANCE, BANK PROTECTION

The work of constructing a sandfill and payment at Isleton under contract by O. G. Ritchie will be completed by August 30.

Work is now under way on the installation of two current retards on the right bank of the Sacramento River on the Davis property, eleven miles above Colusa, to cost \$8,200, in cooperation with Reclamation District No. 2047.

Arrangements have been completed for the construction of three current retards on the Campbell and Dwyer Ranch two miles below Colusa in cooperation with the Sacramento River West Side Levee District. The total cost is \$7,632.

SACRAMENTO FLOOD CONTROL PROJECT

Approximately sixty-four men have been engaged during this period in clearing operations in the Sutter By-pass. The clearing work being done under five contracts in the Feather River Bottoms near Marysville is approximately 80 per cent completed.

On July 16 the Reclamation Board approved a program for new construction on the Sacramento Flood Control Project for the fiscal year 1930-31. This program was presented in a report submitted by a committee appointed by the Reclamation Board consisting of Stephen W. Downey, A. M. Barton, R. L. Jones, B. A. Etcheverry and F. C. Hermann, and has since been approved by the California Debris Commission. The program follows:

	U. S.	State	Local	Total
West Intercepting Canal, right of way.....		\$5,000	-----	\$5,000
Deficit, Starr Bend Levee.....	\$2,610	1,305	\$1,305	5,220
Deficit, Lake of the Woods, Levee.....	10,500	5,250	5,250	21,000
By-pass clearing.....	-----	36,500	-----	36,500
Removing old levees, Feather River.....	-----	7,500	-----	7,500
Controlling works at Nelson Bend, Feather River.....	5,000	5,000	-----	10,000
Feather River clearing, below Marysville.....	-----	5,000	-----	5,000
American and Sacramento R. clearing.....	-----	2,000	-----	2,000
West Yolo By-pass Levee: Liberty Farms.....	18,480	9,240	9,240	36,960
Sullivan and Roche.....	15,820	7,910	7,910	31,640
Reclamation Dist. No. 2068.....	12,840	6,420	6,420	25,680
Yolo By-pass, East Levee, Dist. 785.....	23,980	11,990	11,990	47,960
Feather R. Levee, Dist. 784.....	38,385	38,385	-----	76,770
Moulton Weir.....	64,580	33,500	-----	98,080
Reclamation Board administration.....	-----	25,000	-----	25,000
Totals.....	\$192,195	\$260,000	\$42,115	\$436,810

RUSSIAN RIVER JETTY

The work of depositing rock in the Russian River Jetty has been continued with a force of eight men operating the quarry and railroad. The jetty now extends approximately 300 feet from the shoreline and the channel through the bar is open along the north side of the jetty, having a depth of 10 feet at high water and a width of about 150 feet. There is no indication that this channel will be closed during the balance of the summer months. The present work will be continued for approximately three months longer.

NAVARRO RIVER JETTY

The construction of the rock jetty on the Navarro River under contract by Christie and Allen is approximately one-half completed and it is expected the whole work will be completed by October 30.

WATER RIGHTS

APPLICATIONS TO APPROPRIATE

Forty applications to appropriate water were received during the month of July, 14 applications were canceled and 27 were approved. Six permits were revoked, 4 licenses were issued and 1 license was revoked.

Applications received which were of more than ordinary interest are as follows: The application of Little Rock Creek Irrigation District to appropriate 3000 acre-feet from Little Rock Creek tributary to Antelope Valley in Los Angeles County. Estimated cost of project \$65,000. Applications of Fresno Irrigation District to appropriate from San Joaquin River in Fresno and Madera counties for irrigation and power purposes. Cost of project not stated. Applications of Pacific Gas & Electric Company to appropriate from Tiger Creek and Panther Creek, tributaries of Mokelumne River, for power purposes. Estimated cost of project \$40,000,000. Application of McGrath Brothers, D. C. Smith and S. A. McKeehan, et al, Meridian, California, to appropriate from Butte Slough in Sutter County for the irrigation of 5245 acres. Application of Bear Gulch Water Company to appropriate from San Francisco Creek in San Mateo County for municipal purposes. Estimated cost of project \$325,000. Applications of Sacramento Municipal Utility District to appropriate from Silver Creek tributary of American River in El Dorado County for municipal, domestic, irrigation and power purposes. Estimated cost of project \$26,500,000.

Permits issued which are of more than ordinary interest are those of M. J. and H. E. Newkom, Yuba City, California, to appropriate from Feather River at an estimated cost of \$13,570, and Fallbrook Irrigation District to appropriate from Santa Margarita River in San Diego County for irrigation and domestic purposes, 10,000 acres, at an estimated cost of \$1,400,000.

ADJUDICATIONS

Shasta River (Siskiyou County): Case pending in the Superior Court of Siskiyou County.

Whitewater River (San Bernardino and Riverside Counties): Still pending in the Superior Court of Riverside County awaiting developments in regard to the proposed All American Canal from Colorado River.

North Cow Creek (Shasta County): Submission of referee's final report still being withheld pending negotiations now in progress towards settlement of one of the important issues.

Oak Run Creek (Shasta County): Case still pending in Superior Court of Shasta County awaiting the entry of a decree in the North Cow Creek case.

Clover Creek (Shasta County): Case still pending in the Superior Court of Shasta County awaiting the court's pleasure in placing it on the calendar.

Butte Creek (Siskiyou County): Case still pending in the Superior Court of Siskiyou County awaiting action by the parties involved.

Los Altos Creek (Santa Barbara County): Action by referee being deferred awaiting the outcome of the circulation of a stipulation for consent judgment among the parties involved.

Davis Creek (Modoc County): Negotiations relative to a consent judgment still being carried on.

Mill Creek (Modoc County): The trial schedule of distribution proposed by the Division of Water Resources was administered by a water master throughout the month.

Deep Creek (Modoc County): The field investigation of water supply and use of water was continued throughout the month.

Franklin Creek (Modoc County): The field investigation of water supply and use of water was continued throughout the month.

WATER DISTRIBUTION

Little Shasta River (Siskiyou County): Water master service on this stream was continued throughout the month.

Pit River (Modoc and Lassen Counties): Supervision over diversions from Pit River in Big Valley was continued throughout the month by the resident engineer on the Pit River Investigation.

Hat and Burney Creeks (Shasta County): Water master service on these streams was continued throughout the month.

North Cove, Oak Run and Cloner Creeks (Shasta County): Water master service on these streams was continued throughout the month.

Davis, Emerson, Mill, Owl and Soldier Creeks (Modoc County): Water master service on these streams was continued throughout the month.

Lower Shasta River (Siskiyou County): Water master service was continued throughout the month.

West Fork of Carson River (Alpine County): Water master service was started on this stream for the 1930 season on July 21st.

SNOW SURVEYS

Office work in the past month has consisted in computations and preparation of diagrams in determining the relation between snow, precipitation, temperature, and run-off for the various basins. A statement of expenditures in the past year and budget for 1930-31 have also been completed.

In the field work two trips were made: one to Bear Valley in the Mokelumne basin to install a shelter for the equipment used on the Bear Ridge course, and the other to the Feather and Yuba basins to relocate the Lassen and Mount Stover courses, to establish a new course in Church Meadows near Gold Lake, to establish Jackson Meadow and relocate Findley Peak courses, and to arrange for a new precipitation observer at Downieville in the Yuba basin. The relocated Lassen course is adjacent to Lake Helen at an elevation of about 8100 feet.

In the surveys of the past winter and spring, the men encountered many varied, interesting, and at times hazardous experiences. Our attention has been called to the fact that certain of these might be of interest to include in the staff report. One incident in connection with the Sanislaus basin survey was of particular interest.

The snow course is located at Lake Alpine on the Ebbetts Pass road. Three men skied in leaving from Angels Camp and taking four days to reach the course. One man, who is the owner of a resort at Lake Alpine, was new to snow travel and hence the delay. Also, the men had to carry the provisions for the intermediate stops. The resort at Lake Alpine was previously stocked with food and bedding. On the way in the men found that someone had been breaking into cabins all along the road and when they reached Lake Alpine they found an occupant in their cabin making himself at home with their provisions and supplies. Although one of the men carried a gun, the occupant appeared too formidable to start a quarrel with which would necessarily have to last the entire time the men would be at the course.

Briefly, the snow surveyors jollied the trespasser along and finally persuaded him to accompany them, on one pretext or another, on the return to Angels Camp. There they succeeded in turning him over to the Sheriff and after he was safe behind the bars, the Sheriff told the surveyors that they had brought in an ex-convict.

SACRAMENTO-SAN JOAQUIN WATER SUPERVISOR

Regular field and office work comprising measurements of all diversions, stream flow, and return flow throughout the Sacramento-San Joaquin territory, has continued. Office work has included the preparation of maps of irrigated areas and new schedules for the salinity observers, showing for each the times for sampling during the next six months.

The salinity investigation has been continued by the maintenance of sampling at 37 bay and delta stations, and by establishing nine new stations as the salinity has advanced into the delta. The six tide gages have been maintained and in the past month three new gages were installed in the vicinity of Courtland to secure data in connection with the proposed diversion of Sacramento River water through Snodgrass Slough.

On August 6th the salinity in parts of chlorine per 100.000 was as follows: Bullshead Point 1290; O. and A. Ferry 430; Collinsville 400; Antioch 315; Jersey 75; Emmaton 74; Webb Pump 26; Rio Vista 10; Isleton 6. On the same date, the discharge of the Sacramento River at Sacramento was about 2500 second-feet, and the San Joaquin River near Vernalis was discharging 660 second-feet, making a combined flow to the delta of 3160 second feet. The corresponding Sacramento, San Joaquin, and the combined discharges on August 6, 1929, were 2740, 665 and 3405 second-feet, respectively.

WATER RESOURCES

SAN JOAQUIN VALLEY INVESTIGATION

Ground Water Investigation. Maps delineating the elevation of the ground water for the areas from Madera to Kern County have been completed for the years 1921 to 1929, inclusive. Maps have also been prepared showing the depth to ground water as of October 1, 1929 for all the wells in these same areas. Quantitative estimates have been made of the underground storage capacities of possible absorptive areas in the upper San Joaquin Valley.

Land Classification. Further field examinations are being made of the foothill and low mountain areas extending east of the San Joaquin Valley floor.

Irrigation Requirements. Month by month studies have been completed for each of the main stream basin divisions of the upper San Joaquin Valley showing irrigation requirements, yields from local supplies and requirements for imported water, utilizing underground as well as surface storage.

Water Supply. Detailed studies have been made to determine the yield of the San Joaquin River at Friant for exportation southward under various assumptions: 1. Utilizing only surplus water and waters adapted to this so-called "grass land." 2. Utilizing the entire flow of the stream.

San Joaquin Pumping Plan. Further studies have been made on plans for pumping water up the San Joaquin River to supply the irrigation demands below Mendota in exchange for San Joaquin River water.

Engineering Advisory Committee. A meeting was held on August 14 and 15 of the Engineering Advisory Committee on San Joaquin Valley investigations. The work completed during the past month was reviewed and plans were made for the investigation which will result in determination of a possible first unit in the San Joaquin Valley.

SACRAMENTO VALLEY INVESTIGATION

Water Supply. Estimates of the present impaired run-off of the American River at Auburn, Coloma and Folsom dam sites and the Yuba River at the Upper Narrows were completed. The run-off studies for the Trinity River were extended to cover the season of 1928-1929.

Irrigation Yield Studies. Irrigation yield studies were made for reservoirs on all the major streams of the Sacramento Basin including Kennett on the Sacramento River, Oroville on the Feather River, Narrows on the Yuba River, Camp Far West on the Bear River and Folsom, Auburn and Coloma reservoirs on the American River, assuming that the power head available at the dam would not be reduced to a point below one-half maximum. Further studies were made of the irrigation yield at Red Bluff on the Sacramento River with the Trinity River diversion operated in conjunction with the Kennett reservoir. Studies are now in progress to determine the economic installed capacity of power plants at the various reservoirs.

Irrigation Requirements. Estimates of the ultimate irrigation requirements in the Sacramento Valley have been completed. These estimates have been approved by the Engineering Advisory Committee. A study of the amount of return that would be available from the application of the irrigation water is being made together with its probable distribution through the year.

Flood Flow Studies. Studies of flood flows with their probabilities and concentrations have been continued through the month.

Cost Estimates. Sections to be used in estimating the costs of demand at the various sites together with unit costs of the principal items of construction have been approved by the Engineering Advisory Committee.

Geologic Reports. A geological investigation and report of the Iron Canyon and Kennett dam site were made by Dr. F. L. Ransome. A preliminary report on the geology of the Fairview dam site on the Trinity River has been completed by Dr. Louderback.

Exploration Work. A second exploration pit has been started at the Iron Canyon dam site during the past month and is now practically completed. The exploratory work at Kennett dam site has been continued. Up to the present time about 1400 feet have been driven under the direction of Colonel Robins.

American River Investigation. Sampling and testing of water at various stations on the American River has been continued throughout the month.

SALT WATER BARRIER INVESTIGATION

Field work on the survey of industrial development, public water supply systems and industrial water front structures was practically completed during the past month and work started on the compilation and analysis of the detailed data which have been gathered. Detailed surveys have been made on over 120 industries, 22 public water supply systems, and about 350 industrial water front structures, all within the area extending from Antioch and Rio Vista on the east to Richmond on the south and west. The economic studies of the industrial development are actively under way under the direction of the committee composed of:

Prof. W. E. Hotchkiss, Dean, Stanford Graduate School of Business, Chairman.

Prof. H. S. Grady, Dean, Graduate School of Business U. C.

A. D. Schindler, Consulting Engineer.

Professor George W. Dowrie, Consulting Economist of the Stanford Graduate School of Business, is engaged with this committee in making the detail economic studies, including the compilation and preparation of all data pertinent to the past and future growth and trend of industrial development in the bay region, and particularly the area affected by the barrier.

A large part of the work during the past month has been devoted to the preparation of basic data required for estimating the consumption of and demand for water from the proposed barrier lake, including all uses by industries, municipalities, agriculture and use of water by natural vegetation and by evaporation. Special studies on the important item of evaporation and transpiration have been largely completed. This has involved the gathering of all available records of evaporation and related meteorological data and intensive studies to determine the variation and distribution of evaporation as applied to various areas related to the several proposed barrier locations. Similar studies have also been under way and largely completed on transpiration from natural vegetation, especially the aquatic growths of tules and cat-tails and the native salt grass and salt marsh and fresh water vegetation. Detailed data on the consumptive use of water by crops within the delta region of the delta region of the Sacramento and San Joaquin rivers and the cropped areas have been determined and compiled. Field surveys were completed on the classification of the Suisun Bay marsh land area which forms what is hoped to be a rich potential agricultural area. In this connection, aerial photographs covering a large part of the area made by the U. S. Army Engineers on their cooperative investigations with the state have been of tremendous value. Soil surveys are also under way covering the Suisun Bay area and classification and soil surveys will also be immediately started in the San Pablo Bay marsh area.

Substantial progress has been made on the gathering of detailed data in regard to reclamation within the delta. Complete data has been obtained on a large number of the more important and larger reclamations. This data is of special importance in the study which must be made of the effect of the proposed barrier on the present reclaimed area within the delta, with special regard to the levees and the drainage and irrigation operations.

SALINITY INVESTIGATIONS

During the past month work has been continued on the preparation of final maps, diagrams, tables and other data for the report covering the results of field work and office studies on salinity investigations in the Sacramento-San Joaquin Delta and upper bay region. Final revised data is under preparation for the determination of the final relations which will be established as between stream flow, tidal action and variation of salinity within the tidal basin, and finally, the relation as to the amount of stream flow required for control of salinity at various points in the tidal basin.

Work in the field has included the maintenance of between 30 and 40 regular salinity observation stations covering the entire tidal basin from San Pablo Bay upstream through the delta and in addition the maintenance of automatic tide gage stations throughout the tidal basin.

Field work in connection with spreading works and flood control channels is virtually completed at this

time on San Antonio, Cucamonga, Deer, Day, City and Mill creeks and also the small creeks immediately north of the city of San Bernardino. Office computations were begun about thirty days ago and it is expected to have all of this work completed by September 15th. When this is done a complete system of spreading works and flood control works for the entire Santa Ana River and tributaries above Lower Santa Ana Canyon in Riverside and San Bernardino counties will have been laid out as part of the Water Resources Investigation. No work is being done in Orange County as that work was the subject of inquiry by Orange County Flood Control District and is being reexamined by a board of consulting engineers at the present time.

MOJAVE RIVER INVESTIGATION

No field work was done during the month but work of laying out a map of the basin was continued in the Sacramento office. This is being done from photographs of an aerial survey which gives an immense amount of detail and the resulting map will be very comprehensive and complete.

The Arrowhead Lake Company which owns Arrowhead Lake, a resort in the San Bernardino Mountains on a tributary of the Mojave River, furnished a large amount of data on run-off of some 16 tributaries of the Mojave which were susceptible of being diverted into Arrowhead Lake and also a large amount of data on run-off in the Mojave Valley. These data were gathered for the purpose of a lawsuit which was held many years ago between the water users of the Mojave River and the Arrowhead Company. The Arrowhead Company built the dam which makes Arrowhead Lake and proposed to divert the water which could be impounded behind the dam to the coast side of the mountains but was enjoined. Since that time and up to 1922, the company continued to maintain a great many of the gaging stations and rainfall stations. These data when analyzed will be very valuable for purposes of the report and will be also valuable from the general standpoint in getting the rainfall run-off relation in southern California mountains—something which has been needed for many years. Up to this time the Arrowhead Company has never made these data available except in general form but now has turned over to this office all original data. The expense of analyzing these has proven unexpectedly high because of the large amount of data but it is expected that the office will be well repaid when the work is completed.

SOUTH COASTAL BASIN INVESTIGATION

This is the investigation for which an emergency appropriation of \$10,000 was made by the Department of Finance about July 1st. Some progress was made in this. Because of the peculiar situation in southern California it is not advisable to proceed with a great amount of field work until the territory has been thoroughly organized. As there are a large number of agencies gathering data throughout the entire field and which will continue to gather and make them available for use by the state, it was thought advisable to form a committee consisting of the chief engineers and technical heads of the various organizations doing such work for the purpose of securing their advice and correlating their work. A meeting was held on July 29th which all attended and it was agreed that the best way to start this and inform the public as to what is being done now would be for each to write a short article of between two and three thousand words describing the work under his supervision and the aim of the research work. This matter is to be published as a bulletin of the state and marks the first step in coordinating the various activities

of the basin. Those forming the committee may be divided into four groups: sewage research workers and chief engineers, flood control district chief engineers, governmental research bodies and University of California research bodies. At the present time eight men are on the committee and it will probably be advisable to add to this.

It has been also found desirable to organize the people of South Coastal Basin in various committees in order to provide a medium through which field data can be obtained more readily and through which can be disseminated any information gathered by the state. This work was taken up and some committees organized. The Los Angeles County Conservation Association expects to aid materially in this, particularly on the west coast, south coast and San Gabriel Valley. Field and office work in obtaining capacities of the 29 underground reservoirs in the area was started August 7th.

SANTA CLARA VALLEY AND NAPA COUNTY INVESTIGATIONS

Office work in connection with these two investigations is proceeding in anticipation of completion of a progress report before the close of the year.

MISCELLANEOUS ACTIVITIES

LOCATING STEAM GAGING STATIONS

Field trips were taken with representatives from the U. S. Engineer's office and the Water Resources Branch of the U. S. Geological Survey for the establishment of stream gaging stations (with automatic recorders) on the Sacramento River at Verona, Thomas Creek near Paskenta, Middle Fork of the Feather River at Bidwell Bar, South Fork of the Feather near Enterprise, North Fork of the Yuba River below Goodyear Bar, Middle Fork of the Yuba below Freeman's Crossing, North Fork of the American River at Rattlesnake Bridge, and West Branch of the Feather River at Nelson's Bar. These are reconnaissance trips in the program for the location of some 18 new gaging stations and the installation of recorders at 18 old stations throughout the Sacramento-San Joaquin drainage basin in accordance with a federal-state cooperative agreement.

SHORE PROTECTION

A member of the State Engineer's office has been appointed on a committee to serve with interested agencies in the matter of beach protection immediately west of Santa Monica and along the Malibu Range. Other members of the committee are the representatives of the county of Los Angeles, city of Santa Monica, beach frontage owners and Division of Highways, State of California.

MOTOR VEHICLE DIVISION REPORTS

(To Governor's Council August 28th)

FRANK G. SNOOK, Chief

REGISTRATION DATA

As of August 1, the Division had registered 1,997,161 automobiles, solid and pneumatic trucks, motorcycles, and solid and pneumatic trailers.

3019 automobile dealers have been registered, 72 motorcycle dealers and 46 trailer dealers.

During the first seven months, 323,065 transfers have been handled.

As of August 1, the Division has collected a total of \$8,398,377.64 in motor vehicle fees.

In the month of July, 12,920 nonresident permits were issued, making a total for the year of 47,845.

HIGHWAY PATROL

The California Highway Patrol has been busily engaged during the past few months in their various activities, and the patrolmen have assisted in handling congested traffic in several communities during conventions and meetings. During the American Legion Convention approximately 60 men were brought to Sacramento to work with the local police detail in handling the Legion Parade. Their general appearance was splendid and their support was certainly appreciated by the Sacramento Police Department and the American Legion Parade Committee.

The Highway Patrol school has been transferred from the State Fair ground and is now located at Mather Field. They have been assigned a large barrack for housing the men, a separate one for the kitchen, and mess hall, and one hangar has been allotted them for whatever use necessary. It is felt that this arrangement will be very beneficial to the Patrol. The fourth class is expected to be called soon after September 1.

HEADLIGHT ADJUSTMENT ACTIVITIES

The Bureau of Lights has inaugurated a program for testing headlight stations and adjusters, as well as enforcing the provisions against the motorist. As of August 1, the Division has authorized 1125 official headlight adjusting stations, with approximately 4500 adjusters. Arrangements have been made to inspect all stations regularly each four months.

From April to July an examination was given to 3000 adjusters and it was found that periodical examinations of the adjusters, as well as the stations, will prove of great benefit to the motoring public. In many cases we found that old adjusters had not acquainted themselves with changes in the law, which was of vital importance to them. On July 1, the men working on a night patrol were instructed to spend at least one hour each night with the testing screen in testing lights. In those counties having night patrols, the day squads assist in a night raid once a week. In those counties without night patrols, the day squads conduct two raids each week. Under this new program, the enforcement work increased 93 per cent in July and June. In June, there were 9469 motorists stopped for test and 3864 arrested. In July, 18,258 were stopped and 6457 arrested. For the first seven months of 1930, 71,752 vehicles have been stopped and tested, and 29,442 arrests have been made.

BRAKE TESTING PROGRAM; TRUCKS ARE EXAMINED

The Bureau of Brakes and Commercial Vehicles has launched an extensive campaign during the past four months. Instructions were issued the patrolmen to stop at least one truck or more each day for a complete check of possible violations and this activity has resulted in a general "brushing up" along lines of enforcement that have been ignored in the past. The truck owners generally have taken heed and are equipping their trucks with the necessary safety appliances, such as mirrors, mechanical signals, and clearance lights, all of which are necessary to the safe operation of a truck, and tend to protect the other motorists on the road. This enforcement has also increased the number of trucks weighed, arrested for overloads, and bad rubber.

As of August 1, this Bureau has received 1439 applications for brake-testing stations of which 997

have been issued permits. The remaining 375 are pending or incomplete. Many of these have been issued permits during August. There has been 214 men authorized as official brake adjusters, as of August 1.

From April 1 to July 31, 4997 trucks have been stopped in the general checkup of which 1977 have been arrested for flagrant violations pertaining to destruction of roads. The remaining numbers have been warned and instructed in regard to proper equipment. This total does not include trucks stopped for defective lights or minor infractions.

Since April 1, the patrol has tested brakes on approximately 100,000 cars. It is gratifying the manner in which the public has taken to this work, and to date not a single complaint has been received regarding the manner in which these tests have been conducted.

AUGUST REPORT OF DIVISION OF ARCHITECTURE

(To Governor's Council, August 28th)

GEORGE B. McDUGALL, Chief

Work for which contracts were awarded during August-----	\$84,857
Projects on which bids are in but awards not yet made-----	1,327,994
Projects now out for bids-----	57,500

PROJECTS PLACED UNDER CONTRACT

List of projects for which contracts were awarded during the month of August, 1930.

Allen dam, Preston School of Industry; installing sprinkler system and piping system, Pacific Colony; sidewalks, Pacific Colony; general work, kitchen and commissary building, Whittier State School; plumbing, heating and ventilating work, kitchen and commissary building, Whittier State School; electrical work, kitchen and commissary building, Whittier State School; reconstructing retaining wall, San Francisco State Teachers College.

PROJECTS ON WHICH BIDS ARE PENDING

Bids were received on the following projects during the month of August but no award has as yet been made.

California State Building at Los Angeles: General work, \$639,000; plumbing work, \$47,673; heating work, \$33,383; ventilating work, \$16,850; electrical work, \$48,804; elevators, \$47,900; structural steel, \$128,775; granite work, \$199,385.

San Jose State Teachers College: Gymnasium Building: general work, \$114,836; electrical work, \$7,403; plumbing, heating and ventilating work, \$26,488.

San Diego State Teachers College: Service connections, \$17,407.

The car had come to a sudden standstill on a country road. The motorist descended, diagnosed the trouble, and then applied at a neighboring cottage for assistance.

"Pardon me," he said to the old woman who answered his knock, "do you by any chance possess any lubricating oil?"

The old woman shook her head.

"Any oil will do," said the motorist, hopefully: "castor oil, if you have any."

"I ain't got it," replied the old woman, "bnt I could fix you up with a dose of salts."

COUNTY REPORTS ON STATE HIGHWAY PROJECTS

(Continued from page 14.)

KERN COUNTY

The construction of the State Highway has been completed from Mojave north as far as Cinco, a distance of approximately 17 miles, where we encounter the George Herz Company contract. This contract is that portion of the State Highway under construction through the famous Red Rock Canyon, for a distance of some 15 miles, beyond which a completed State Highway is encountered for the following 20 miles, to the northerly boundary of Kern County, which means that when the George Herz Company completes its contract, which extends from Cinco to 7 miles north of Ricardo, Route 23 will have been paved throughout the length of Kern County.

A. Teichert and Son, Inc., started work August 7, 1930, which provided for 14 miles of oil-treated crushed rock surfacing on the Kern Canyon Highway, between Cottonwood Creek and Democrat Springs.

Shoulder oiling along Route 4 and 57 has been completed by C. M. Duntley, Contractor.

Completion of grading and surfacing between San Emidio Road and Route 4 is progressing steadily. V. R. Dennis Construction Company are the Contractors.

The Valley Paving and Construction Company are now starting macadam surfacing on their contract on Route 33, between the west line of Kern County and Junction Pumping Station, a distance of 15.5 miles. The contract will probably not be completed before February of next year, but when finished will eliminate the last unpaved portion of Route 33 in Kern County.

KINGS COUNTY

Shoulder oiling on Route 10 has been completed.

LAKE COUNTY

The approximate 6-mile section of armor coat surfacing between Upper Lake and Ukiah on the Blue Lakes section of Route 15 was completed by state forces in June. With work previously done, this puts this highway in an excellent condition for summer tourist travel from the Redwood Highway to the "Beautiful Lakes" region of California.

State forces have completed oil treating 10.6 miles of 20-foot wide crushed stone surfacing recently placed, by contract, on a new graded highway between Lucerne and Clear Lake Oaks.

Widening of the roadbed to 24 feet between Sweet Hollow Summit and Abbott Mine is complete.

From Abbott Mine to Bear Creek, Colusa County, the construction of a new 24-foot graded roadbed is one-third finished. Work is on schedule, and, at the present rate of progress will be completed by the early part of next year.

MADERA COUNTY

No major contract work in progress since completion of Califa line change. Shoulder oiling work has been completed.

MARIN COUNTY

The contract of Granfield, Farrar and Carlin for grading the 4.1-mile section of Route 1 on the Redwood Highway, between San Rafael and Alto was accepted June 16th by the Director.

Work was started on a surfacing contract for the same section by the same contractor on the tenth of June. This surfacing project calls for the placing of 6-inch crusher run base and 2-inch emulsified asphalt macadam 30 feet in width.

The reinforced concrete overhead structure at the Northwestern Pacific Railroad tracks at Greenbrae under contract with Siemer & Kendall and F. J. Main, has been completed.

The 150-foot steel truss span overhead crossing the Northwestern Pacific tracks at California Park on this section under contract with Frederickson and Watson Construction Company and Frederickson Bros. is complete with the exception of a little painting work yet to be done.

The bascule bridge under contract with the Butte Construction Company at Corte Madera Creek, Greenbrae has been completed with the exception of the bascule span, which is in process of erection. This structure, together with the surfacing contract of Granfield, Farrar and Carlin should be completed about the same time in August, allowing traffic to enjoy full use of the completed highway between Alto and San Rafael, with a shortened distance between these points of two and one-half miles.

The 1.8-mile section of the Redwood Highway north of San Rafael, also under contract to Granfield, Farrar and Carlin, was opened to traffic on July 26th; the overhead crossing to Forbes Station on this project, under contract to Rocca & Coletti, having been completed just previous to the finishing of the surfacing work. This project called for grading a 40-foot roadbed with 20-foot pavement for 1.3 miles and 50-foot roadbed with 20-foot pavement for 0.5 mile. Pavement over the compacted sections of roadbed being of concrete and over the newly graded portions of bituminous macadam. (See special article attached.)

Bids were taken on July 23d for constructing 1.3 miles of Route 52 between Alto and Tiburon. Graded roadbed will be from 36 to 56 feet in width with bituminous macadam surface 20 feet wide.

MARIN AND SONOMA COUNTIES

The contract of the Hanrahan Company for constructing the 11.9-mile section of Route 1, Redwood Highway, between Ignacio in Marin County and Petaluma in Sonoma County is nearing completion. The date set for the finishing of this work is the twenty-fifth of September. The contractor has consistently been up to or slightly ahead of his schedule in the progress of this work so it is expected that this will be fully completed by that time. All the grading work and the 9 miles of concrete pavement 20 feet in width called for under this contract has been completed and the bituminous macadam on the balance is well under way.

MENDOCINO COUNTY

The Basalt Rock Company, working with State Maintenance Forces completed the application of light fuel oil on 38 miles of State Highway, Route 48, McDonald-to-the-Sea, early in June. This highway carries heavy traffic on holidays and Sundays due to the beauties of the Navarro River, the Redwoods and State Park, which offers delightful camping grounds with fishing and swimming and other outdoor sports.

The application of armor coat to the 8 miles of Redwood Highway between Ukiah and Forsythe Creek was completed by State Maintenance Forces about the middle of July.

The placing of asphaltic road oil under contract with A. Teichert & Son of Sacramento for 12 miles of Redwood Highway between Cloverdale and Hopland for armor coat work, being handled by State Maintenance Forces, is nearing completion. This should be fully completed late in July.

MONO COUNTY

The State Highway extending from Mattly Ranch to Leevining, a distance of approximately two miles, is nearing completion by C. Miles, Contractor, which should be completed about the middle of August.

Approximately 12 miles of State Highway construction is being advertised for early letting between Sonora Junction and four miles south of Coleville. This portion of the State Highway follows the Walker River, which when completed, will add materially to the accessibility of the country east of the high Sierras.

District contracts have recently been completed for the oiling and road-mixing of about 40 miles of highway, upon which there has been no permanent construction. The first of these pieces extends from the summit of Sherwin Hill to Devil's Punch Bowl, 24 miles, the second extending from Devil's Punch Bowl to Leeving, which also includes a short stretch through the town of Bridgeport.

MONTEREY COUNTY

The bridge across the Salinas River on the Coast Highway at San Ardo is nearing completion. Ben C. Gerwick is the contractor under the supervision of the Bridge Department. The approaches to the bridge have been completed by Frederickson and Watson and Fredrickson Brothers, Contractors.

A contract has been awarded to H. E. Doering for the construction of a new bridge across the Salinas River on the Coast Highway at Bradley. This work is under the supervision of the Bridge Department.

On the San Simeon-Carmel Highway a timber bridge is being constructed across Alder Creek. The Dean Construction Company, Contractor, has established a camp near the site. The Bridge Department has supervision of this work.

Two convict camps are maintained on the San Simeon-Carmel Highway. Camp 15 at Salmon Creek has a crew of 90 men and Camp 18 at Little Sur has a crew of 70 men. Camp 15 is to be moved to Willow Creek during August and will thereafter be known as Camp 22. Surveys and plans are in progress between the two camps.

Surveys are in progress for relocating San Simeon-Carmel Highway from Rocky Creek to Carmel through Carmel Highlands.

NEVADA COUNTY

Grading and oil-treated stone surfacing between Nevada City and one mile west of Washington Road on the Ukiah-Tahoe Highway will be completed within another month. C. R. Adams has the contract for the work.

PLACER AND NEVADA COUNTIES

Grading of the highway between Airport and Soda Springs, a part of the Dutch Flat-Donner Lake wagon road, by T. E. Connolly, who has the contract for the first 9½ miles, and by Callahan Construction Co., Inc., who has the contract for the last 10½ miles, is being completed as rapidly as possible to permit the placing of crushed stone surfacing which has been contracted for on the entire length of the new grade.

SAN BENITO COUNTY

Surveys are in progress for the elimination of San Juan Grade between Salinas and San Juan Bautista. A careful study is being made to locate the line in a position that will preserve the natural beauty of Pineate Rocks along the route. About 10 miles of the road has been located. This project is located in San Benito and Monterey counties.

SAN LUIS OBISPO COUNTY

Very satisfactory progress is being made on the reconstruction of the Coast Highway between the Santa Maria River and Los Berros Creek. This is a 20-foot Portland cement concrete pavement on a 36-foot roadbed. Placing the pavement is complete. J. F. Knapp is contractor.

Plans are complete for the construction of a 20-foot concrete pavement across the bed of the Santa Maria River. This is a dry weather detour around the through steel truss bridge, one span of which collapsed on June 10th, 1930. The wrecked span will be replaced by a temporary trestle to carry traffic during high water.

Bids were received on July 23d on the reconstruction of the Coast Highway between San Luis Obispo and Cuesta Grade, a distance of about three miles.

On the Cholame Lateral a seal coat is being applied to the bituminous macadam surface between Estrella River and the Sacramento Ranch, a distance of about six miles. The Granite Rock Company is the contractor.

SAN MATEO COUNTY

The contract with the H. W. Rohl Company for grading and surfacing that section of the Bayshore Highway between the southerly city limits of San Francisco and the northerly city limits of the city of South San Francisco has been practically completed. The operations of this Contractor, however, have been extended by special arrangement to some grading and temporary surfacing within the city of South San Francisco on the adjoining section of this major highway. A heavy fill is being made in the vicinity of Linden avenue in order to give this fill the benefits of the compaction due to the winter rains and the carrying of the heavy traffic using this road. This work should be completed early in August.

The next important link of the Bayshore Highway between South San Francisco and Broadway, Burlingame, 5.2 miles, was recently awarded to the Basch Bros. Construction Company of Los Angeles. Work is to be commenced on this section of a 40-foot width concrete pavement early in August and should be completed before the first of the year.

The 7.3-mile section of the Bayshore Highway under grading contract to Frederickson & Watson Construction Company and Frederickson Bros., from San Mateo to Redwood Slough, Redwood City, is about 60 per cent complete. The Contractor on this work being about one month ahead of schedule. Progress on the hydraulic fill portion of this roadway has been a slightly retarding factor, but as this work is practically completed and unless unforeseen circumstances arise, this work should also be completed by the first of the year.

The adjoining section of Bayshore Highway to the south for grading from Redwood Slough to Willow Road, a distance of 4.1 miles, will be advertised for bids at an early date.

SANTA CLARA COUNTY

Work on the contract of the Hanrahan Company for grading and paving between Palo Alto and San Antonio Road, a distance of 4.1 miles is about half completed. Approximately two miles of paving full 30-foot width has been placed from Matadero Creek to San Antonio Road. This job has been consistently behind schedule but should be completed before the first of the year.

The center link of the major section of the Peninsula Highway from Palo Alto to Santa Clara, being 4.9 miles in length, between San Antonio Road and Sunnyvale has also been awarded to the Hanrahan Company. Work was started on this section late in June. This project calls for resurfacing the existing 20-foot pavement with asphalt concrete and widening with a 10-foot strip of concrete to a 30-foot paved width throughout on 50-foot graded roadbed within a 100-foot right-of-way. With the completion of this unit in early 1931 the public will enjoy the use of the widened, resurfaced 14-mile section between Palo Alto and Santa Clara on an alignment vastly superior to that which previously existed.

A 10.7-mile section of Route 32, the Pacheco Pass Highway, between San Felipe and Bell Station for grading and surfacing with bituminous macadam on a vastly improved alignment will be advertised in the early fall of this year. This project is an important link in the major plan for a fast highway between the San Joaquin Valley and the bay districts of California.

SANTA CRUZ COUNTY

A contract for grading and surfacing 2.7 miles of State Highway, Route 42, between Saratoga Gap and Waterman Switchback was awarded to O. A. Lindberg of Stockton in July, work being started about the middle of this same month. This project, which calls for 243,000 cubic yards of roadway excavation will greatly improve the alignment and shorten the dis-

tance of this beautiful section of roadway leading through the Redwoods from its connection with the Skyline Boulevard at Saratoga Summit to the California Redwood Park at Big Basin. The contract time limit has been set at January 14, 1931, so that the public will be fully enjoying the benefits of the coming holiday season.

SONOMA COUNTY

One mile of State Highway, Route 51, between Schellville and Sonoma and 2.9 miles between Sonoma and Beltrane has been surfaced with an armor coat, work being completed early in July. The furnishing and placing of asphaltic road oil was done under contract with A. Teichert & Son, of Sacramento. Furnishing and placing of all rock being done by State Maintenance Forces. This highway carries an extremely heavy summer traffic due to the many resorts and hot springs of Jack London's famous "Valley of the Moon."

TULARE COUNTY

No major projects in Tulare County since completion of the 26-foot A. C. widening and resurfacing between Pixley and Tipton, by the California Construction Company.

The paving, which involved 33,750 tons, was completed between April 7 and May 23. The contract was completed over two months in advance of the contract time.

Shoulder oiling on Routes 4 and 10 has been completed.

YOLO COUNTY

Construction is scheduled to soon begin for grading and paving with asphalt concrete 5.8 miles of State Highway between Williams and Maxwell. Bids for the work were received July 9.

YUBA COUNTY

A 20-foot Portland cement concrete pavement through Wheatland has been completed by C. W. Wood, the contractor. Minor drainage structures, and rock borders, are yet to be done before the contract is completed.

OPENING TO TRAFFIC A NEW SECTION OF THE REDWOOD HIGHWAY

An important link in the Redwood Highway of the State Highway System, just north of San Rafael, will be opened to traffic for the first time on Saturday morning, July 26th.

Although only 1.8 miles in length, this section of highway saves over one-third of a mile in distance over the previous location. It extends from the northerly city limits of San Rafael to a connection at Gallinas Creek with the recently constructed concrete pavement to Ignacio.

The present project is paved with Portland cement concrete and bituminous macadam 30 feet in width on a 50-foot width graded roadbed for the first one-half mile north of San Rafael, the balance being paved 20 feet in width on a 40-foot graded roadbed.

An overhead crossing structure over the Northwestern Pacific Railroad tracks is provided at Forbes, approximately one and one-half miles north of San Rafael.

This project is a part of the nearly completed major plan of relocation and widening of the Redwood Highway of that section between Sausalito and Santa Rosa, which will net an ultimate saving in distance of approximately 5 miles between these cities. This project is an outstanding one, with long sweeping curves, easy grades, elimination of railroad grade crossings and a minimum sight distance of 600 feet, so essential to the safety of the traveling public.

LIST OF HIGHWAY BIDS AND AWARDS

For July and August

COLUSA COUNTY—Reinforced concrete girder bridge across Bear Creek about 28 miles west of Williams consisting of seven 31-foot spans on concrete bents. Dist. III, Rt. 15, Sec. D. Geo. J. Ulrich Const. Co., Modesto, \$22,792; Whipple Engineering Co., Monrovia, \$28,400. Contract awarded to R. B. McKenzie, Red Bluff, \$19,966.

COLUSA COUNTY—Three concrete girder bridges across Salt Creek about 1 mile north of Williams, across Freshwater Creek, 13 miles north and across Green Valley Slough 4 miles north of Williams. Dist. III, Rt. 7, Sec. B. Geo. J. Ulrich Const. Co., Modesto, \$18,833; Whipple Engineering Co., Monrovia, \$26,532. Contract awarded to Fredrickson & Watson Const. Co., Oakland, \$18,127.

DEL NORTE COUNTY—Between southerly boundary and Wilson Creek, 12.7 miles to be surfaced with oil treated crushed gravel or stone. Dist. I, Rt. 1, Sec. A. Heafey Moore Co., Oakland, \$98,470; Hein Bros., Basalt Rock Co., Petaluma, \$100,523; M. J. Bayanda, Stockton, \$114,764; Enklehart Paving & Const. Co., Eureka, \$95,497; J. T. Holland, Inc., San Francisco, \$100,694. Contract awarded to Hemstreet & Bell, Marysville, \$88,405.50.

EL DORADO COUNTY—Between Fresh Pond and 3 of a mile east of Riverton on Placerville-Tahoe route, 6.2 miles bituminous surfacing treatment. Dist. III, Rt. 11, Secs. F-G. Finnell Co., Inc., Sacramento, \$8,720; A. Teichert & Son, Sacramento, \$8,226. Contract awarded to F. C. Adams, Angels Camp, \$5,994.

EL DORADO COUNTY—Reinforced concrete bridge across the So. Fork of the American River at Riverton. Dist. III, Rt. 11, Sec. F. Hector Williamson, Placerville, \$38,283; Geo. J. Ulrich Const. Co., Modesto, \$30,194; Finnell Co., Inc., Sacramento, \$34,436. Contract awarded to Ralph Hunter, Sacramento, \$25,106.90.

FRESNO COUNTY—Between Fowler switch canal and Fancher Creek, 7.6 miles to be graded and paved with asphalt concrete. Dist. VI, Rt. 4, Secs. A-B. A. Teichert & Son, Sacramento, \$296,668; Valley Paving Co., Visalia, \$280,594; Geo. R. Curtis Paving Co., Los Angeles, \$299,993; Steele Finley, Santa Ana, \$284,339. Contract awarded to Peninsula Paving Co., San Francisco, \$257,557.30.

HUMBOLDT COUNTY—Overhead crossing over Northwestern Pacific R. R., 23 miles north of Eatrice, Broadway Highway. Dist. I, Rt. 1, Sec. 3. Emil Force, Piedmont, \$66,961; Henry Padgett, Fields Landing, \$55,985; Smith Bros., Eureka, \$55,813; Mercer-Fraser Co., Eureka, \$51,693. Contract awarded to Fred J. Maurer & Son, Eureka, \$50,320.30.

HUMBOLDT COUNTY—Between $\frac{1}{2}$ mile south of Eureka and Eureka, 0.6 of a mile to be graded and paved with Portland cement. Dist. I, Rt. 1, Sec. G. Mercer-Fraser Co., Eureka, \$23,700; J. V. Galbraith, Petaluma, \$27,198. Contract awarded to Enklehart Paving Co., Eureka, \$22,043.

KERN COUNTY—Between 13 miles east of Cottonwood Creek and Democrat Springs, 13.9 miles of surfacing with oil treated gravel. Dist. VI, Rt. 57, Secs. F & G. P. Holland, Inc., San Francisco, \$14,814; G. W. Ellis, Los Angeles, \$144,240; Hartman Const. Co., Bakersfield, \$141,433. Contract awarded to A. Teichert & Son, Sacramento, \$141,335.

LOS ANGELES COUNTY—Between Castaic School and Santa Clara River, 4.3 miles to be widened with bituminous treated rock borders. Dist. VII, Rt. 4, Sec. A. Fred W. Nighbert, Bakersfield, \$21,105; Gibbons & Reed Co., Burlingame, \$18,225. Contract awarded to Southwest Paving Co., Los Angeles, \$16,425.

LOS ANGELES COUNTY—Between 1.3 miles and 13.9 miles north of Castaic School 12.6 miles, portions to be surfaced with bituminous macadam. Dist. VII, Rt. 4, Sec. B. Gibbons & Reed, Burlingame, \$139,420; McCray Co., Los Angeles, \$140,590; V. R. Dennis Const. Co., San Diego, \$184,020; G. W. Ellis, Los Angeles, \$145,390; Fred W. Nighbert, \$149,988. Contract awarded to Southwest Paving Co., Los Angeles, \$134,330.

MONO COUNTY—Between Mono Lake and the foot of Conway Grade, 8.8 miles furnishing and applying heavy fuel oil as dust layer. Dist. IX, Rt. 23, Sec. H. G. M. Duntley, Los Angeles, \$5,301; Gilmore Oil Co., Los Angeles, \$5,621; California Road Oil

Service Co., Wilmington, \$5,317. Contract awarded to Leonard C. Pulley, Long Beach, \$4,981.50.

NEVADA COUNTY—Between Boca and Iceland, 7820 lineal feet laminated timber guard rail. Dist. III, Rt. 38, Secs. A-B. Arthur Mitchell, Sacramento, \$6,842; Ralph Hunter, Sacramento, \$7,116; L. C. Seidel, Oakland, \$7,585; I. Greitzen & Son, Sacramento, \$7,741. Contract awarded to Geo. E. McDonald, Marysville, \$5,484.90.

PLACER COUNTY—Through Newcastle, 531 feet of tunnel and 1 mile of roadway approaches to be graded and surfaced with crusher run base treatment. Dist. III, Rt. 17, Sec. B. T. E. Connolly, San Francisco, \$298,132; Ward Engineering Co., San Francisco, \$272,996; Fisher & Bonny, San Francisco, \$260,352; George Pollock Co., Sacramento, \$249,999; J. G. Donovan & Son, Los Angeles, \$308,121; W. S. Mead, Oakland, \$241,627. Contract awarded to T. M. Morgan Paving Co., Los Angeles, \$209,755.25.

PLACER AND NEVADA COUNTIES—Between Airport and Yuba Pass on the Victory Highway 7.2 miles to be surfaced with crusher run base and untreated crushed gravel or stone. Dist. III, Rt. 37, Secs. B-A. A. Teichert & Son, Sacramento, \$129,367; T. E. Connolly, San Francisco, \$147,405; Hein Bros., Basalt Rock Co., Petaluma, \$151,915; Chas. Harlowe, Oakland, \$144,448. Contract awarded to Tieslau Brothers, Berkeley, \$122,807.60.

RIVERSIDE COUNTY—Between northerly boundary and 1 mile west of Beaumont, 6.2 miles of existing roadbed to be widened. Dist. VIII, Rt. 26, Sec. A. Match Bros., Elsinore, \$38,533; Gist & Bell, Arcadia, \$43,711; F. J. Akmadzich, Los Angeles, \$50,779; Monarch & Breen, Inc., San Diego, \$39,924; Watson & Sutton, San Diego, \$37,932. Contract awarded to Steele Finley, Santa Ana, \$34,402.

SACRAMENTO COUNTY—Between Twin Cities School and $\frac{1}{2}$ mile N.E. of Herald, 4.6 miles crushed gravel with bituminous surfacing 3 feet borders on each side of existing pavement. Dist. X, Rt. 34, Sec. B. J. R. Reeves, Sacramento, \$9,204; A. Teichert & Son, Sacramento, \$9,967; L. C. Seidel, Oakland, \$10,390; Pereira & Reed, Tracy, \$7,224.80.

SACRAMENTO COUNTY—Between 1 mile south of Arno and Cosumnes River, 2.6 miles to be graded and paved with Portland cement concrete. Dist. V, Rt. 4, Sec. A. C. W. Wood, Stockton, \$100,015; N. W. Ball, Porterville, \$96,164; Basich Bros., Const. Co., Los Angeles, \$103,303; T. M. Morgan Paving Co., Los Angeles, \$99,973; M. J. Bevanda, Stockton, \$129,602. Contract awarded to Fredrickson & Watson Const. Co., Oakland, \$89,029.30.

SAN BERNARDINO COUNTY—Between 6 miles east of Amboy and $\frac{1}{2}$ miles east of Essex, 28.7 miles to be graded and surfaced with oil treated crushed gravel or stone. Dist. VIII, Rt. 58, Sec. K-L. New Mexico Const. Co., Alburquerque, N. M., \$579,519; T. G. Donovan & Son, Los Angeles, \$669,790. Contract awarded to George Herz & Co., San Bernardino, \$507,402.95.

SAN DIEGO COUNTY—Between La Posta and Tecate Divide, 8.4 miles of heavy fuel oiling. Dist. VII, Rt. 12, Sec. P. V. R. Dennis Const. Co., \$15,510; Calif. Road Oil Co., Wilmington, \$15,329; Gilmore Oil Co., Los Angeles, \$15,171. Contract awarded to Leonard C. Pulley, Long Beach, \$13,366.80.

SAN DIEGO COUNTY—Between Viegas Creek and Pine Valley about 11.2 miles to be paved with Portland cement concrete. Dist. VII, Rt. 12, Sec. D. Will F. Peck Co., Los Angeles, \$387,382; Watson & Sutton, San Diego, \$373,600; Basich Brothers, Los Angeles, \$338,793; Jahn & Bressler, Los Angeles, \$240,226; Griffin Company, Los Angeles, \$340,782; R. E. Hazard Const. Co., San Diego, \$363,235; Wells & Bressler, Santa Ana, \$369,282; E. Paul Ford, East San Diego, \$340,677. Contract awarded to Sander Pearson, Santa Monica, \$338,287.

SAN JOAQUIN COUNTY—Between Forest Lake and northerly boundary, 1.4 miles to be graded and paved with asphalt concrete. Dist. X, Rt. 4, Sec. D. Heafey-Moore Co., Oakland, \$59,581; Valley Paving Co., Visalia, \$62,162; Clark & Henery Const. Co., San Francisco, \$57,457.90.

SAN LUIS OBISPO COUNTY—Oiling shoulders, Ascadero to Paso Robles. Dist. V, Rt. 2, Sec. B. M. J. Bevanda, \$4,439; V. R. Dennis Const. Co., San Diego, \$8,287; Irvin L. Ryder, San Jose, \$8,298; Steele Finley, Santa Ana, \$9,275; A. Teichert & Son, Sacramento, \$11,259. Contract awarded to Hartman Const. Co., Bakersfield, \$6,277.40.

SAN MATEO COUNTY—Between South San Francisco and Burlingame, 5.2 miles to be graded and paved with Portland cement concrete. Dist. IV, Rt. 68, Sec. B. Hanrahan Company, San Francisco, \$411,254; J. F. Knapp, Oakland, \$435,169; Eaton & Smith, San

Francisco, \$443,487; C. W. Wood, Stockton, \$475,338; Frederickson & Watson, Oakland, \$427,854; Jahn & Bressler, Los Angeles, \$437,963; N. M. Ball, Porterville, \$423,507; T. M. Morgan Paving Co., Los Angeles, \$413,314. Contract awarded to Basich Brothers Const. Co., Los Angeles, \$402,982.

SANTA BARBARA COUNTY—Constructing oil-rock shoulders between El Capitan Creek and 1 mile south of Tajiguas Creek, about 4 miles. Dist. V, Rt. 2, Sec. F & G. M. J. Bevanda, \$13,434; E. T. Carter, Santa Barbara, \$15,007. Contract awarded to Santa Maria Const. Co., Santa Maria, \$11,344.65.

SANTA BARBARA AND SAN LUIS OBISPO COUNTIES—Between the 2d crossing of the Cuyama River and the easterly boundary of San Luis Obispo County, 37.9 miles to be graded and surfaced with oil treated crushed gravel or stone. Dist. V, Rt. 57, Secs. B, C, D. M. J. Bevanda, Stockton, \$283,740; A. Teichert & Son, Sacramento, \$367,818; J. F. Holland, San Francisco, \$374,996; V. R. Dennis Const. Co., San Diego, \$358,693; H. W. Rohl Co., Los Angeles, \$354,342; Chas. U. Heuser, Glendale, \$359,891; Allied Contractors, Inc., Omaha, Nebr., \$458,969; G. W. Ellis, Los Angeles, \$312,880; Peninsula Paving Co., San Francisco, \$491,338; Irving L. Ryder, San Jose, \$315,557. Contract awarded to Lang Transportation Co., Los Angeles, \$261,612.90.

SISKIYOU COUNTY—Reinforced concrete bridge across Shasta River about 73 miles north of Yreka. Dist. II, Rt. 3, Sec. C. Pacific Bridge Co., Portland, Oregon, \$111,190; Ward Engineering Co., San Francisco, \$102,283; M. B. McGowan, San Francisco, \$103,977; Bodenhamer Const. Co., Sacramento, \$106,582. Contract awarded to Rocca & Calletti, San Rafael, \$97,884.

SISKIYOU COUNTY—Reinforced concrete girder bridge across Klamath River 10 miles north of Yreka. Dist. II, Rt. 3, Sec. C. Ward Engineering Co., San Francisco, \$80,538; Pacific Bridge Co., Portland, \$77,985. Contract awarded to Rocca & Calletti, San Rafael, \$77,779.

TRINITY COUNTY—Bridge across Trinity River near Douglas City. Dist. II, Rt. 20, Sec. E-A. M. E. McGowan, San Francisco, \$86,754; Fred J. Maurer & Son, Eureka, \$85,010; Rocca & Calletti, San Rafael, \$101,425. Contract awarded to Whipple Engineering Co., Monrovia, \$83,000.

YOLO COUNTY—Between Bretona & Dunnigan, 5.8 miles to be graded and paved with asphalt concrete. Dist. III, Rt. 7, Sec. C. Clark & Henery Const. Co., San Francisco, \$147,265; A. Teichert & Son, Sacramento, \$133,214; Heafey-Moore Co., Oakland, \$148,275; Valley Paving Co., Const. Co., Visalia, \$144,271. Contract awarded to Jones & King, Hayward, \$129,575.75.

ARCHITECTURAL AWARDS

For July and August

STATE FAIR GROUNDS, Sacramento—Construction cattle corrals, awarded to Guth & Fox of Sacramento, \$4,866.

FOLSOM STATE PRISON—Contract for sheet metal work on the Cell Block, Administration and Hospital Building, awarded to Frank Z. Ahl, Sacramento, \$5,994.

CALIFORNIA SCHOOL FOR BLIND, Berkeley—Contract for general work, Annex to School Building and Annex to Residence for Boys, awarded to Sorensen & Haggmark, San Francisco, \$45,700.

Contract for plumbing and heating work on the above awarded to Geo. A. Schuster of Oakland, \$5,262.

Contract for electric work on the above awarded to Geo. Woolf of Oakland, \$1,783.

PRESTON SCHOOL OF INDUSTRY, Ione—Contract for constructing Allen Dam awarded to Geo. French, Jr., of Stockton, \$14,300.

PACIFIC COLONY, Spadra—Contract for installing Sprinkler System and Piping System awarded to American Engineering Co. of Los Angeles, \$4,250.

Contract for sidewalks in above institution awarded to C. C. Cline of Upland, \$2,394.

WHITTIER STATE SCHOOL, Whittier—Contract for general work on Kitchen and Commissary Building awarded to Adolf G. Schmid of Santa Ana, \$53,260.

Contract for plumbing, heating and ventilating on the above awarded to F. B. Jones of Pasadena, \$8,178.

Contract for electrical work on the above awarded to R. R. Jones Electric Co., So. Pasadena, \$1,525.

(Continued on next page.)

REPORT ON FIVE SEASONS' STUDY OF SACRAMENTO- SAN JOAQUIN AREA

(Continued from page 6.)

factor in alleviating the shortage of water for navigation and for the delta is the return water; the water which has been diverted in excess of the actual requirements of the crops, and which, returning to the river, is again available for use.

WATER SUPERVISOR FUNCTION

The ultimate relief for the conditions as described lies, of course, in conservation by storage and the successive development as demanded of projects such as are being worked out for the conservation and utilization of the water resources of the Sacramento-San Joaquin Valley in connection with the State-Wide Water Resources Investigation. Prior to these developments, however, there is much that can and must be done in the way of conservation of the existing water supply and determination of water rights, or at least determination of the extent of water uses under the various water rights claimed.

SCOPE OF WORK

The work of the Water Supervisor is broadly divided between two fields: (1) the engineering investigation, measurements, collection of records and data, etc., and (2) the conservation efforts, waste prevention, and such administration of the stream flow, as shall fall within the jurisdiction of the Division of Water Resources or be mutually agreed upon by the water users.

THE ENGINEERING INVESTIGATION

This has comprised measurements and records of all diversions of water from the Sacramento, Feather, Yuba, American and lower San Joaquin rivers within the valley floor and above the delta; stream flow measurements throughout the territory, largely in cooperation with the Water Resources Branch, U. S. Geological Survey; measurements and records of waters returned

to the Sacramento and San Joaquin rivers; studies of the consumptive use of water on peat and sedimentary lands in the delta region in cooperation with the U. S. Department of Agriculture, Division of Agricultural Engineering, and the University of California Agricultural Experiment Station; an annual census of irrigated areas and crops under all diversions recorded throughout the delta; and investigation and study of the advance and retreat of salinity in the delta channels and upper bays.

CONSERVATION FEATURES

In connection with this phase of the Water Supervisor's work, the greater or lesser requirement for conservation measures in the seasons of 1924 to 1929, inclusive, is indicated in the following table which gives the run-off and minimum stream flow figures for those years.

Run-off and Minimum Flow 1924-1929

Year	Entire run-off to San Francisco Bay in per cent of normal	Minimum flow at Sacramento	In second-feet San Joaquin River near Vernalis
1924	27	705	391
1925	78	2,760	660
1926	55	1,330	565
1927	108	3,420	1,290
1928	75	2,510	840
1929	41	2,300	565

The most critical season was that of 1924, the driest year of record, and it was the impending crisis, evident as early as January of that year, which set in motion the steps to effect the necessary conservation through the River Problems Conference, its permanent committee and the Water Supervisor. Through the medium of a water users agreement the signers pledged themselves to exercise their respective rights to use of water in such a manner as to accomplish the maximum degree of water conservation and to at all times refrain from acting in any way to hinder or prevent the Water Supervisor in the execution of his work. On all of the larger projects, conservation officers were appointed to work with the supervisor in the detection and prevention of waste and valuable assistance was rendered in this connection. A report of the work in 1924 and the success attendant upon the measures effected in that season has been published in detail in Bulletin No. 4 and needs no elaboration here. Suffice it to say that when the most critical time came about the middle of July, and it seemed that portions of the delta area faced disaster due to the salinity encroachment, the appeal to up-river water users for further diversion reductions and the effective operation of the waste prevention and curtailment program proved suc-

ARCHITECTURAL AWARDS

(Continued from page 25.)

SAN FRANCISCO STATE TEACHERS COLLEGE—Contract for reconstructing retaining wall awarded to Mission Concrete Company of San Francisco for \$950.

SAN JOSE STATE TEACHERS COLLEGE—Contract for electrical work on Men's Gymnasium, awarded to Guilbert Bros. Electric Co., of San Jose, \$7,403.

Contract for plumbing, heating and ventilating work on the above awarded to Hateley & Hateley, Sacramento, \$26,488.

cessful, beyond all expectation, in meeting the situation.

In the 1925, 1927 and 1928 seasons the necessity for strenuous conservation measures was considerably lessened and the work in these seasons, therefore, was confined largely to the engineering investigation. There were, however, certain conservation efforts and actions demanded to greater or lesser extent in connection with such features as navigation and the gun clubs, in every year.

In 1926, as shown in the table, the seasonal run-off to San Francisco Bay was only 55 per cent of normal and although conditions were not as serious as in 1924 a considerable effort was required to effect the greatest water savings and relief for the up-river navigation and delta irrigation and salinity difficulties. The procedure was similar to that of 1924 and again the work was carried on almost entirely through appeals to the water users for waste prevention and reduction of diversions where possible. It is to be noted that in both 1924 and 1926 the conservation measures effected were purely voluntary and there was no enforcement of any particular schedule of water diversions agreed upon by the water users.

THE PERMANENT COMMITTEE

Emphasis should be given to the great value in the conservation work and in the entire investigation, of the Permanent Committee of the Sacramento-San Joaquin River Problems Conference. Since the first conference this committee has functioned actively and has proven to be a powerful influence in welding together the divergent interests involved, in bringing about constructive cooperative effort and in preventing litigation in the face of critical situations that have arisen. In this committee and the River Problems Conference there has been created a most fortunate medium for dealing with the problems involved; and at present, the committee, both as representing the water users and as consultant to the division, stands as the proper body to forward an administrative schedule for water distribution or any constructive plans of this nature for bettering the situation.

WATER USERS ORGANIZATIONS

In a territory as large as that of the Sacramento-San Joaquin, difficulty is encountered in making contact and dealing with such a large number of individual water users. However, in any program for conservation or in the development of a schedule for water allocation based upon mutual agreement, all should of course be included. The solution of

this difficulty would appear to be the formation of local water users associations, combining in each association those water users in a particular locality where there are local problems of common interest or where there is some particular situation which sets that locality apart from others. The Division of Water Resources, Water Supervisor and permanent committee, could then deal with these associations, thus reaching through them, with facility and dispatch, all of the water users. A step in this direction, resultant from the 1926 shortage for irrigation, was the action taken by districts and water companies on the Sacramento River in organizing the Knights Landing North Water Users Association. This association, as the name implies, includes all Sacramento River users north of Knights Landing. As stated in its constitution the purpose was to form an organization

* * * to the end that the low water flow of the river may be so used and conserved as to avoid friction and litigation among diverters
* * * and to work with the United States War Department in charge of navigation on the Sacramento River, the State Division of Water Resources, and the permanent committee of the Sacramento-San Joaquin River Problems Conference in all questions of policy regarding the use of water from the river.

Such an organization can greatly facilitate conservation work and all dealings with the water users within it, and the possibility and advantage of either the formation of similar associations or the reorganization of existing ones so that the entire Sacramento-San Joaquin territory would be covered, is worthy of consideration.

THE THRICE BLEST HIGHWAY

By PLATT YOUNG, in Georgia Highways Magazine

I drove along the crowded thoroughfare
Where busy marts of men in commerce there
Rich wares displayed, to tempt the asking eye
And bulging purse of chanceful passerby.
Each hurried throng upon some mission went
With happy those on simple pleasure bent.

I drove along the quiet country lane
Past promised fields of cotton, corn and grain,
Where neighbors knew that tiring, dull remorse
Dissolved at once in friendly intercourse;
Where some were wont to borrow, some to lend—
A godly interchange from friend to friend.

When next I sought the mountain's rugged crest
I found a mountain lake within a nest
Of lofty pines, while smiling overhead
A crescent moon its silver radiance spread.
Three things were mine to bless this common sod:
Swift commerce, friendship, and a glimpse of God.

Passenger (in speeding bus passing town): "This is rather a nice looking town, wasn't it?"

MID-SUMMER TRAFFIC CENSUS ON STATE HIGHWAYS SHOWS NORMAL INCREASE

ARIZONA—The Arizona Good Roads Association has approved a proposed amendment to the state constitution to provide a means of road financing and has urged that immediate steps be taken to put it before the voters of Arizona in the November general election.

An expert has figured it out that the electrical energy developed by five million persons, all talking at once, would keep just one incandescent light going. That helps to understand how little illumination comes from most conversations.—*Manchester Union*.

Surveying Under Difficulties

By A. D. HUNTING, Chief of Party

SOME of the difficulties that confront the surveyors of the state highways of California were recently revealed when an assignment came to survey the site for the east arch hinge of the bridge on the Feather River lateral at Pulga.

Upon arriving at the site of the proposed survey and looking over the prospect, the party was for a moment a trifle in doubt as to its ability to get just what was wanted. However, this was a case where the information must be obtained.

The portion of the site covered by the survey was that in the vicinity of the east arch hinge. This hinge falls upon the face of a cliff, approximately 100 feet high, varying in steepness from about a quarter to one slope to an overhang at one or two points. At the foot of the cliff is a ledge, sloping steeply toward the river. At the top of the cliff the hillside

continues on up abruptly enough to require a good deal of care in walking upon it.

The first problem to be solved was the method of obtaining the required data. As the centerline along the cliff is on a curve, whose beginning is inaccessible, the use of cross sections or profiles was discarded due to the difficulty in keeping readings on line. It was decided to locate the breaks in the ground and plot contours on a large horizontal scale. The small interval of two feet was used. From this map such profiles or sections as might be desired could be obtained. The accuracy desired and the large vertical angles that would be necessary rendered stadia unsatisfactory for the face of the cliff. However this method was used to some extent above the rim and at the bottom where readings could be taken nearly level. It was finally decided to take readings by direct

slope measurement with a 100-foot steel tape and vertical and horizontal angles.

Finding suitable points on which to set up the transit was in itself a problem. Four points were finally established and tied in to the centerline, one at the top of the cliff, one on the ledge at the bottom, one on a convenient razorback just south of the centerline, and one on a point of rock jutting out some 20 feet below the rim. This latter was in the shape of a rude triangle about four feet on a side and sloped too sharply toward the river for any comfort. When the instrument was set up, at first there appeared to be no room for the transitman. In getting down to the point on the ledge it was necessary to telescope the adjustable tripod legs and strap the instrument on the transitman's back, allowing him to descend over hand on a rope.

Two ropes were included in the equipment. One was

The transitman at work.

Getting down to the job.

an inch hemp about 125 feet long and the other a five-eighths inch line of about the same length. In devising means for the rodman to reach the various points on the cliff at which readings were desired, several methods were considered and discarded as too difficult or dangerous for the conditions encountered. A large amount of loose rock, in pieces from the size of a walnut to the size of a man's head, resting above the cliff and prone to fall on little or no provocation, rendered the work more hazardous. As many of these rocks as possible were kicked or rolled over the edge before beginning actual work. Great care was necessary throughout to avoid loosening others to fall on the man below.

Tying a man to the end of a rope and raising or lowering him would have been too awkward, and in this case impossible, as only one man was available to do the hoisting. Furthermore, a man's full weight on a rope sliding over the rock rim of the cliff might cut or fray the rope to breaking point or might loosen pieces of rock. On the other hand, the man who can climb or lower himself hand over hand on a rope for a hundred feet, pausing for frequent readings, belongs in a circus rather than on a survey party. Accordingly it was necessary to devise a means of supporting the rodman while giving shots or resting, as well as to guard him from slipping or from the possibility of a dislodged rock fragment stunning him or breaking his grip.

Finally both methods were used. An 8-inch pine tree above the rim served as the anchor for the large rope, which was hung over the cliff. The rodman tied the thong of the tape to the wrist, leaving both hands free, and raised or lowered himself hand over hand on this rope. The small rope was tied to him in such a manner that he was suspended upright in a form of rope eradle. The other end was passed through the ring in the end of an iron pin, conveniently set in a hole in the rock drilled by the crew who made core borings at the site. A turn or two of the small rope was then taken about the iron pin and used as a snub line. One man attended to this line, paying it out as the rodman descended or keeping all slack taken up as he ascended. When a point was reached by the rodman at which a reading was desired, or when he needed a rest, he signalled the snubber, who tightened up on the rope and held him until he was ready to move again. As the major irregularities in the face of the cliff were nearly vertical this method worked

How and Why Auto Accidents take Place Shown by Statistics

Drivers with two or more years of experience at the wheel figured in the greatest number of motor vehicle accidents in California during the first half of 1930 in statistics issued by the Division of Motor Vehicles.

The total number of accidents during the period was 14,213, resulting in the deaths of 1066 persons and the injury of 18,696. The experience of the drivers involved in the mishaps was listed as follows:

Two years or more, 12,673.
One to two years, 333.
Six to twelve months, 108.
Three to six months, 49.
Less than three months, 69.
Not stated, 8,272.

The "dangerous age" for motorists, according to the figures, is from 20 to 29 years, with 5296 drivers in that range topping the list, although somewhat offset by the fact that the age of the driver was not stated in 6014 cases. From 30 to 39 years came next with 3998 accidents, followed by 40 to 49 years in 2657 accidents; 50 years and over in 1908 cases; and the youngest class, 10 to 19 years, in 1631 instances.

In accidents for which the driver was definitely responsible leading causes were given as follows:

Did not have right of way, 3492 cases.
Exceeding speed limit, 2896.
Reckless driving, 1046.
Drove off roadway, 1004.
On wrong side of road, 943.
Skidding, 512.
Failed to signal, 165.
Cutting in, 161.
Car parked on roadway, 122.
Passing standing street car, 55.
Passing on curve or hill, 29.
Driving through safety zone, 25.
"Hit and run" cases, 534.

very well and more rapidly than would be expected. The rodman gave a series of readings from top to bottom, then moved over a few feet and gave another series as he climbed up. The only difficulty was in reaching the face beneath the overhanging portion. This was finally accomplished by swinging in and holding to a projection from the cliff.

By the methods described all the desired information was obtained with no mishaps other than stiff and sore muscles and voracious appetites.

Tahoe Ukiah Highway
East of Nevada City

The Hillside College at Santa Barbara

By ALFRED EICHLER, Architectural Designer

FOR picturesqueness of site and enchantment of outlook, Santa Barbara State Teachers College can hardly be excelled. On the steeply rising slope of Mission Ridge, a short distance from and overlooking the Old Mission, the college occupies several acres of irregular contour. The visitor's first view, on

ALFRED EICHLER.

arriving in the city, is a glimpse of delicately tinted stucco buildings nestling against a background of mauve mountains. A closer approach follows a winding drive up the mountain side through groves of tall eucalypti leading to what has been called the "Inspiration Point" of Santa Barbara. From the campus the city lies almost at one's feet: the glistening blue of the Pacific sweeps across the middle distance, dotted with the white of pleasure craft. Far on the horizon the rugged outlines of the channel islands peer dimly through the veil of the morning haze. In the immediate foreground lie the sentiment and historical association of the Old Mission. It is with this glorious aid of nature that the work of the Division of Architecture has been undertaken.

Of the seven state teachers colleges of California, all save two are situated upon level

or rolling ground. One of the hillside colleges is Santa Barbara.

It seems to be a matter that is generally understood that any group of buildings for a highly specialized purpose, such as a factory, a hospital or a school, should, by reason of utility and economy, be built upon level ground.

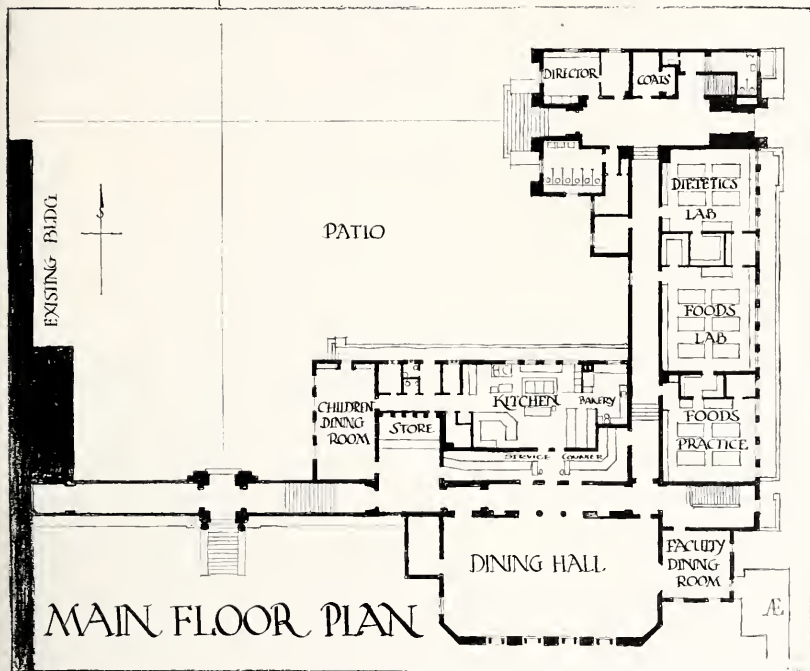

In years gone by, when these sites were acquired for what were then called the normal schools, no one had any idea of the way that these institutions would grow. Keeping pace with the population increase of the state, the small group of buildings of the Santa Barbara State Normal School has grown to be a teachers college with an attendance going into the thousands. Year by year new construction was initiated, to accommodate the growing number of students and to fill the needs of the advancing science of pedagogies. Finally, the time came when it was imperative to plan for the ultimate development of the college. It was found that the value of the plant already erected would require that the site be retained and future buildings correlated to the existing structures, all making a scientifically planned and harmonious whole.

It can not be denied that the layout of the modern educational institution is a complex affair with many ramifications in detail. The

An entrance, Ebbetts Hall of Domestic Arts.

Teachers College at Santa
Barbara and main floor
plan.

problem is increased in a considerable measure when the site is an inclined plane, a steep and rocky hillside such as is the described.

This most beautiful location, therefore, presents practical problems in planning and construction. These problems have been approached in a number of ways.

The initial college structure was erected in 1912, and was the nucleus of the institution.

For a long time it housed the entire student body. It was remodeled in 1929 to adapt it to newer conditions. As a site for this building a place on the hillside was leveled off, with sloping terraces on three sides. The plan of this building is, therefore, the same as it would be for a building on level ground. In the further development of the college in recent years, however, it was impossible to use the

same methods of planning, as that would involve leveling off the mountain side. It remained, in studying the plans for the recent undertakings, to obtain practical results by other means.

The Administration Building was completed in 1928. The location selected for it is gently sloping at the east end, where the administrative offices are situated, and drops steeply at the west end, which is occupied by the auditorium. The sloping floor of the auditorium follows the slope of the ground. The difference in floor levels of the building is taken up in the entrance lobby, which is in the center of the building. The college library is on the second floor over the offices, with a reading balcony from which one may take advantage of the expansive vista. Over the main entrance archway is an altorelieve commemorating in sculpture the earliest inhabitants of the region, the Mission Indians.

The Ebbetts Hall of Domestic Arts was completed in 1929. This is a structure with an unusually involved plan, the functions of which required exhaustive research. The building primarily takes care of the college dining hall and kitchen, the Domestic Science Department, and the model bungalow. In connection with the dining hall are the kitchen, children's dining room and faculty dining room, all arranged for cafeteria service. The Domestic Science Department occupies

THE NEW LA CANADA BRIDGE

The above view is that of La Canada arch bridge, built on the Arroyo Seco Highway, approximately one-half mile north of La Canada in Los Angeles County. The bridge was constructed by the Whipple Engineering Company. Its cost was \$31,900.

nine laboratories and a sewing balcony. A room in the primitive colonial style, paneled in pine, and with a cavernous fireplace, serves as an exhibit room for this department.

Ebbetts Hall of Domestic Arts, Santa Barbara State Teachers College.

The slope of the hillside here was uniform, permitting three distinct levels for the three functions of the building. The model bungalow is on the first floor, the kitchen and dining hall on the main floor and the Domestic Arts on the highest level.

The setback in terraces as required by the stepped plan of the Domestic Arts Building blends well with a Persian feeling. In the Garadagh Mountains in Persia the clustered habitations are noted as interesting examples of side hill architecture.

Plans are now being drawn for another unit, the Science Building, which is to be ready for occupancy in the fall of 1931. This structure will house the science laboratories and lecture rooms, with necessary adjuncts, and will be fully equipped in accordance with the latest scientific methods. The studies will be Zoology, Botany, Physiology, Bacteriology, Physics and Chemistry.

This building, while entirely independent of the Domestic Arts Building will be so grouped with it as to form a patio. This patio will be stepped up the hillside in a manner reminiscent of the walled gardens of Urumiah in northern Persia. The botanical and zoological specimens will be arranged in the gardens to give them an entrancingly lovely setting.

The mass of this group will set back in terraces as required by the exigencies of the site. On the highest floor a lecture room will open on a loggia looking far off to the shimmering sunlit sea. Despite all this attention to the esthetic, and reminiscent as it may be of the ziggurats, the building nevertheless will not fail in any detail to meet the highest standards of efficiency, durability and economy.

A comprehensive plan for the entire institution is now in process of preparation which will locate all future buildings and provide space for recreation and athletics. Thought will be given that the magnificent possibilities of site and vistas be used to the fullest advantage.

When Timur-el-leng, the Persian ruler, commissioned his architects, he allowed them "One month to plan; one year to build; riches the reward of success; death for failure." The mortality among architects was high in those days, and few were laden with precious stones and gold. A study of the works of these ancient builders of Persia is invaluable, on account of the similarity to the topography and to the sunny climate of Santa Barbara. They also show the result of much

ingenuity prompted by the architect's urge to retain his head.

A modified Spanish type of architecture has been chosen by the community of Santa Barbara as best expressing the spirit of the locality. The Persian inspiration fits well into this picture; indeed from certain photographs of old world buildings not even the initiated can distinguish the locality so generally does a common feeling run through the primitive architecture of the Southern countries. In this manner with a touch of the exotic, monotony is avoided and a note of interest and variety added to the development of the community of Santa Barbara.

PURCELL ASKED TO SPEAK TO WASHINGTON GATHERING

State Highway Engineer C. H. Purcell has been asked to address the annual meeting of the Washington State Good Roads Association. Mr. Purcell has been asked to outline the work that has been accomplished in California highways during his administration as State Highway Engineer. The meeting will be held in Wenatchee on November 21st, and is to be attended by Governor Hartley of Washington, the highway commission of Washington and practically all the members of the legislature of that state.

PENNSYLVANIA REDUCES NUMBER OF "STOP" SIGNALS

As a movement toward eliminating many "stop-go" signals, the Pennsylvania Highway Department has ordered removed all traffic control lights on state highway intersections with a peak load of less than 500 cars an hour, and where fewer than 125 cars an hour approach the intersection from the side roads.

This is according to information furnished the California Highway Commission by the Pennsylvania authorities. The latter contended that these signals delay traffic rather than regulate it in places where travel is light.

POLITE PLUMBER

The gentleman had sent for a plumber to fix an upstairs tap, and as he and his wife started downstairs they met the plumber coming up. The gentleman said:

"Before I go downstairs I would like to acquaint you with the trouble."

The plumber politely removed his hat and murmured:

"Pleased to meet you, m's'am."

The esteemed *Literary Digest* is worried lest long skirts will increase traffic accidents, because the women can't move with their accustomed freedom of limb, but we believe that hazards will be offset by the men having their minds set more on driving than formerly. —*Georgia Highways Magazine*.

The Kings River Highway

By R. L. BEUTHEL, District Office Engineer

STATE Highway Route 41, in Fresno County, is a development of a scenic route which had its inception many years ago under the former State Department of Engineering. This department made surveys and constructed a road which led from the north line of General Grant National Park in the high Sierras, to Hume and about four miles beyond to Lockwood Creek. A survey, its objective being the Kings River Canyon (located on the South Fork of the Kings River), was carried down to the Kings River by a devious alignment consisting primarily of curves and switchbacks. Judged by present

Dayder's Cave on Kings River Highway.

only, until the spring of 1929. A day labor convict camp was established in June of last year and construction on a modern standard has been in progress since that date.

The new route follows approximately the old road from the north line of General Grant National Park northerly to Cherry Gap, a distance of $1\frac{3}{4}$ miles. At this point the highest elevation on the Kings River road is reached, being 6790 feet above sea level.

Here the old road and the new divide, the

Limestone Cliff in which Boyden's Caves are located.

day standards such alignment would be pitifully inadequate but it should be remembered that motor transportation was decidedly in its infancy in 1908, and for some years following. Reference is made in the old survey notes of turnouts for teams and wagons and obviously the engineers were planning primarily for horse drawn traffic.

Chapter 232, Statutes of 1909, brought the Kings River road into the state highway system, and it has been under maintenance

Steam shovel at work.

old route following the east slope of Indian Creek and the new road proceeding northerly on the west slope passing three vistas of pine, fir and other varieties of trees. The road follows a descending grade with easy curves, and enchanting glimpses of the high Sierras are opened to view. Through Indian Basin are large stumps and other evidences of lumbering operations which ceased some years ago.

Northeast of Indian Basin stands the Boole tree (accessible by auto and about two miles

mately thirty free men constitute the maximum force which has been maintained to date. Two Diesel powered shovels, of one yard and $1\frac{1}{4}$ yard capacities, are the major items of equipment, and are supplemented by compressors, drills, trucks, graders, tractors, etc.

Leaving the camp the road continues along the west slope of Indian Creek for about half a mile, at which point the drainage basin of Indian Creek widens abruptly, forcing the location to turn northwesterly in order to secure support. Precipitous slopes require

Entrance to Kings River Canyon.

of trail), which is said to be larger than the General Grant tree in the National Park.

At the lower end of Indian Basin lies the construction camp which houses the force of convicts and free men engaging in building the new road. The camp site is quite attractive, having a plentiful supply of cold spring water, surrounded by large trees and sheltered from winds. A level spot in Indian Basin has provided a site for a baseball diamond on which games are played by teams organized from the camp inmates.

One hundred twenty convicts and approxi-

benching or shelving the roadbed or walls where the roadway is partly on fill. Very hard rock has been encountered which has materially slowed progress.

As the descent is made from camp, on grades varying from 5 per cent to 7 per cent, each turn brings into view, more clearly, the high peaks, some of which are over 13,000 feet in elevation, the canyon of the middle fork of the Kings River, and the precipitous sides of the river canyon. Realization of the immensity of the terrain is difficult of comprehension.

Where Everything is "Skookum"

By H. R. YOUNGBLOOD, Assistant Superintendent, California Highway Patrol

(This poem is reprinted from the September issue of *The National Motorist*.)

On a trip through the north
We motored this year,
As far as Vancouver,
And what names we did hear.

We went through the Redwoods,
Kept the coast all the way,
Then turned east at Bandon
Near the mouth of Coos Bay.

As we passed the Willamette
What names there we found,
When we crossed into Washington
And around Puget Sound.

Cathlamet and Kalama
Then came Chehalis,
Santiam, Wahkiakum,
Multnomah and Copalis.

Pe Ell and Palouse,
Yamhill and Suhomish,
Skagit and Skapoosie,
Wenatchee and Skykomish.

Chuckanut and Chilliwaek,
Cowlitz, Puyallup,
Toppenish, Moclip,
Tulip and Humptulip.

Anacortes, Kapowsin,
Nisqually, Capilano,
Kittitas, Chemainus,
Cle Elum, Kitsilano.

Clatsop and Satsop,
Mukilteo, Montesano,
Quinalt, Esquimalt,
Tenino and Nanaimo.

Then we passed through Issaquah,
Enunclaw, soon Willapa,
Skamania, Skamokawa,
Siskiyou and Suislaw.

Hoquiam and Cowitchan,
Okanogan, Shawnigan.

Toppenish we next did pass,
Cosmopolis and then Camas,
Stillaguamish, Steilacoom,
Umpqua and Sumas.

H. R. YOUNGBLOOD.

Callapoya, Santiam,
Coquille and Clackamas,
Lilliwap and Tillamook,
Enough queer names to fill a book.

We're glad to be at home again,
With easy names to say
Like Sausalito, San Joaquin,
Milpitas, San Jose.

Petaluma, Pescadero,
La Jolla and Mojave,
Why don't those places way up north
Have names that folks can savvy?

Government experts say you can buy more with a dollar now than you could this time last year, and what we hope is that they are now at work on a bulletin telling where to get the dollar.—*Macon Telegraph*.

"Hello, Bill, I haven't seen you for weeks! But what's wrong? You're lookin' seedy. Been ill?"

"No, I ain't been ill, it's work what's doin' the harm—work from eight in the mornin' till six at night, and only one hour off. Think of it!"

"Awful! And how long have you been there?"

"I ain't been there yet. I begin tomorrow."

—*Illinois Central Magazine*.

The Ideal Traffic Patrol Schedule

By VICTOR W. KILLICK, Statistician in charge of Bureau of Research, Statistics and Traffic Safety of the Division of Motor Vehicles

WHEN is a traffic officer needed most? Every chief of police and the Superintendent of the California Highway Patrol knows that motor vehicle accidents increase in some direct proportion to the congestion of vehicles on roads and streets.

Of course, it is relatively a simple matter to provide extra patrols for special occasions such as big ball games, parades and conventions when it is a foregone conclusion traffic congestion will be acute. But what about the every day habits of the average motorist? Is he not as much a creature of habit in his driving each day as he used to be when a mere pedestrian?

If so, perhaps, there may be some sort of fundamental law, or cause, underlying most traffic accidents, which, if it could be accurately understood, might serve a valuable purpose in determining exactly when the traffic cop is most needed—when he can do the most good.

The Research Bureau of the Division of Motor Vehicles undertook to study the matter. The problem was attacked from several angles. The plotting, in chart form, of the hours of occurrence of motor vehicle accidents gave the clue. This chart plainly shows that a very critically dangerous period for motorists definitely exists every day in the year for the six hours between 3 p.m. and 9 p.m. The indications are that this "critical period" operates as a law. It is a constant recurring condition. It is the same for 1928 as for 1929 and for the half of 1930.

All traffic officers in and about large cities know only too well that traffic congestion is always acute about 5 p.m. But relatively few executive officers of police departments realize that there exists a continuous period of six consecutive hours extending definitely from 3 p.m. to 9 p.m. when they should have

not only full strength patrols on duty but such patrols should be reinforced with extra men.

The research survey has clearly brought out the need of this action. It has shown that traffic accidents in the "critical period" are more than twice as frequent as at any other corresponding period of the day, not including the same hours.

The Research Bureau recommended an "ideal patrol schedule," particularly applicable in and about cities having population of 100,000, or more. It is in such cities, and in a zone not exceeding five miles therefrom, that 68 to 70 per cent of all traffic accidents involving injuries to persons arise.

The "ideal schedule" is a target—something for chiefs of police to "shoot" at. It may not be physically possible for all of them to literally carry it out, but it is based upon the theory that the closer they get to it the more certain we will be to witness a decline throughout the state in the number of accidents now occurring within the "critical period" hours.

The "ideal schedule" provides for three equal sized groups of patrol officers to be subdivided into four working crews. The first crew, a half strength crew, goes on duty from 1 a.m. to 3 a.m., is then off duty until 5.30 a.m. and continues until 11 a.m. Crew two, a full strength crew, starts its shift at 11 a.m., runs until 2 p.m., is off an hour and continues on duty until 8 p.m. Crew three, full strength, starts at 3 p.m., continues to 7 p.m., is off an hour and resumes duty from 8 p.m. to 12 p.m. Crew four, a half strength crew, is a reinforcing crew. It operates straight through for six hours from 3 p.m. to 9 p.m.

The schedule provides for day and night patrols throughout the twenty-four hours, excepting only a two-hour period in the early morning between 3.30 and 5.30 when traffic

TRAFFIC TOLL		
	1929	First six months 1930
Total Motor Vehicle Accidents.....	26,921	14,213
Total Fatal Accidents.....	2,047	971
Total Nonfatal Accidents.....	24,874	13,242
Number of Persons Killed.....	2,244	1,066
Number of Persons Injured.....	35,443	18,696

congestion is minimum. It provides for a patrol service of one and a half to two and a half times normal strength through the entire six-hour "critical period." During the three most dangerous hours of the day, as shown by the chart, between 5 p.m. and 8 p.m. the patrols are at maximum strength.

Chiefs of police in several cities to whom the study was presented have expressed emphatic appreciation of the suggestion. Some will apply the schedule literally. Others

are working out adjustments in their present schedules to get closer to the "ideal." During the current and coming months the Bureau of Research of the Division of Motor Vehicles will attempt to measure the effectiveness of the results of this suggestion statistically.

Tramp: I'm hungry. I got an awful headache.

Cook: What you need is lots of exercise. Why don't you take our axe and get at our wood pile?

Tramp: I ain't got no splitting headache.

California Autoists Pay Lower Car Fees Than in Other States

RESULTS of a nationwide economic survey announced here by the California Division of Motor Vehicles show Californians are paying less in fees for the privilege of operating motor vehicles than motorists of most of the other states and are enjoying superior advantages.

VICTOR W. KILLICK.

Of twenty-five states visited by Victor Killick, statistician and research engineer of the department, in making the survey, not one had a registration fee as low as the \$3 flat fee charged in California for registration of passenger vehicles.

Most of the states were found to be still employing the old horsepower rating system or scheduling their fees on a weight basis. Under these systems fees were found to range from \$8.80 for light vehicles to \$30 and \$40 for the larger and heavier types.

In one state the registration of a heavy vehicle used for commercial purposes was found to cost between \$450 and \$500 annually.

It was found that practically every state makes an annual charge to applicants for licenses to operate motor vehicles and some make a further charge for examination of such applicants. These fees were found to range between \$1 and \$2 a year, motorists of some eastern states paying a total as high as \$5,000,000 for such licenses and examinations.

California applicants for operators' licenses pay no fee whatever and are examined free of charge. Although the law requires that licenses be renewed every two years there is no charge for renewal, as in many states.

Killick learned that in one state motorists

ELK ALONG THE HIGHWAY

The above picture shows a herd of elk as photographed along the Tahoe-Ukiah Highway on Bear Creek in Colusa County.

whose licenses are revoked may obtain a hearing before the commissioner of motor vehicles only upon payment of a fee of \$5 in advance. In California every motorist is entitled to a hearing without cost.

The motorist registering a motor vehicle in California for the first time receives a title certificate (pink slip) without extra charge, if he be the legal owner and if he is not the certificate is mailed to the legal owner without added cost.

Many states were found by Killick to be exacting a fee of \$1 for this certificate. Fees for the transfer of ownership of cars were found to be from 60 to 100 per cent higher than in California.

California motorists paid an aggregate of some \$10,500,000 in 1929 for registering their cars. New York motorists, however, with only a few thousand more cars, paid \$38,250,000 for the same service while Pennsylvania motorists, with less cars, paid \$29,250,000.

All the states visited by Killick employ the gasoline tax. Twenty were found to have a

The Scenic Skyline Boulevard

By COLONEL JOHN H. SKEGGS, District Engineer

THE Skyline Boulevard, Route 55 of the state highway system, was primarily designed on a basis of utility; first, it was planned to serve the heavily settled urban territory south of San Francisco as a relief to the overburdened El Camino Real, or Peninsula Highway, for ingress and egress to and from the city of San Francisco; second, it offered facilities for a faster express route to the city of Santa Cruz and Monterey coast points by by-passing all the towns en route and avoiding the ensuing delay occasioned by congestion due to cross traffic and commercial settlements; third, it provided quick and easy access to the coast territory and the many resort sections on the west slope of the coast and Santa Cruz Mountains; and fourth, it served the intensively cultivated agricultural sections just outside of San Francisco and the stock and small fruit ranches through which the Skyline Boulevard passes further south, as a commercial road for transporting their products to market.

SHIFTING PANORAMA OF BEAUTY

Although basically the Skyline Boulevard is a road of utility it is also a highway of scenic beauty. Briefly stated, the scenic attractions of this splendid road in the forty-

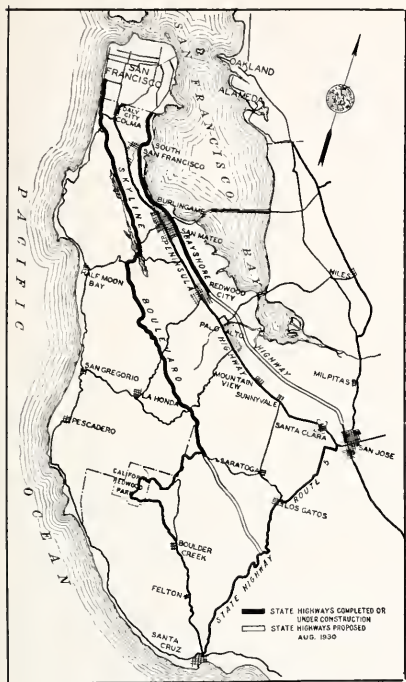

eight miles of state construction completed at the present time comprise four miles affording various views and glimpses of the ocean, one mile passing beautiful Merced Lake, fourteen miles in which Crystal Lake is the dominant scenic feature, twenty-four miles affording magnificent panoramas interspersed with brief glimpses of the valley and San Francisco Bay, and several miles passing through three different golf courses, where natural and artificial beauties are harmoniously blended.

APPROACH THROUGH SAN FRANCISCO HIGHLANDS

The approach to the Skyline Boulevard through the highlands of San Francisco is extremely pleasing. One mile from the end of Market street on Portola drive the first three-quarter-mile view is had of the bay to the southeast, after which the traveler proceeds through the pretty, green Twin Peaks residential district to the intersection of Junipero Serra and Sloat boulevards. Proceeding for two miles along the wide double Sloat Boulevard with the foliage of the Municipal Playground on the left, the intersection with the Great Highway and the beginning of the Skyline Boulevard is reached. Here the street car tracks tunnel

View of Crystal Lake as seen along the Skyline Boulevard.

Map showing the Skyline Boulevard.

under the large intersection, leaving it unhampered for automobile traffic.

GLIMPSES OF THE OCEAN

Progressing along the Skyline Boulevard the ocean may be viewed from near sea level either from the highway or from a spacious observation point on the right. A pleasing view of Fleishbaecker's large and happily crowded swimming pool is had, after which

The road over Crystal Lake.

the parked areas of Fort Funston on the right and Harding golf links on the left are traversed. An interesting short side trip into the golf links is here offered with branches of Merced Lake viewed first from one side, then the other, in enjoyable variety. For a distance of one mile from the entrance to Harding golf links, Merced Lake is seen through the trees and heavy foliage on the left, after which the climbing highway for another mile passes through the grounds of the Olympic Club golf course on either side with perfect harmony of artificial and natural beauty, from which section the ocean may be viewed on the right below. From here the ascending road passes through truck garden fields for several miles, where the first real magnificent view of the valley and San Francisco Bay is sighted directly ahead along the highway.

CRYSTAL SPRINGS LAKE

About ten miles out on the Skyline Boulevard the first fleeting glimpse of Crystal Springs Lake on the right is had, while a panorama of the bay is enjoyed at the same time on the left.

At fourteen miles on the highway the last panorama of the bay is snatched away as the motorist enters the grounds of the Crystal Springs Country Club, the golf course of which is enjoyed on the right for the next mile and a half. The ensuing three miles traverses the shores of Crystal Lake, the highway crossing directly over the interlocking concrete, earthquake-proof dam with its unique observation point and memorial to Schussler, its builder.

From the earth dam, which divides Crystal Lake into two parts, the highway climbs two miles to the Half Moon Bay road, where Crystal Lake, now far below, and a panorama of San Francisco Bay across the intervening hills can be viewed at the same time.

The next four miles of the ascending highway affords a glimpse first on the right of the Pacific Ocean, then a glimpse of Crystal Lake and the bay on the left, each view being withdrawn before the full import of the beauties shown can be realized, the last half mile of this section affording a wonderful, broad panorama of the bay and valley on one side, immediately followed by equally as imposing a view of the ocean on the other.

THROUGH THE FORESTS

At this point the motorist is suddenly relieved from wide views and plunges into the cool, refreshing shade of the timber with a teasing glimpse of the bay now and then

afforded through the trees on the east side of the highway. This five-mile stretch of road passes through a timber belt on Kings Mountain comparable to the heavy stands of Humboldt and Mendocino counties.

INSPIRATION POINT

Approximately thirty miles out, the traveler reaches Inspiration Point, from which place the entire valley and San Francisco Bay spread out below, with a background of mountains east and north of the bay, revealing Mount Tamalpais, Mount Diablo and Mount Hamilton.

The next seven miles of highway is a typical mountain road with fleeting though often unsatisfying glimpses of the bay and valley on the left, alternated with beautiful views of the Santa Cruz Mountains on the right, after which four and one-half miles along the east side of the ridge give an almost uninterrupted panorama of the bay and valley on the east. The mountains on the west are the dominant feature from here to Saratoga Gap through which, however, a framed picture of the valley on the left may be had.

THIRTEEN COUNTIES FROM ONE POINT

Three miles south of Saratoga Gap on the proposed but as yet unconstructed fourteen-mile section which connects with State Highway Route 5 between San Jose and Santa Cruz, Castle Rock Ridge, the highest point in the Santa Cruz Mountains, is reached, from the summit of which on a clear day thirteen counties, the Monterey coast and the Farallons can be seen at one and the same time. The government Rangers' station and observation point is located upon this mountain.

FAIRYLAND OF LIGHTS

The beauties of the Skyline Boulevard can not be fully appreciated by traveling it in one direction only. The trip from Saratoga Gap toward San Francisco is particularly impressive at night, with the thousands of twinkling lights throughout the valley and the illuminated transbay bridges, ferries, etc., in the bay, making impressions which are not easily forgotten.

THE BEAUTY OF THE FOG

Due to the fact that this highway is located along the summit of the mountains, particularly on the Santa Cruz end, fogs often occur far below the level of the road and especially on a moonlit night this presents a sight of such rare silvery beauty as to be incapable of description.

It is seldom that one highway combines the

beauties of the mountains, the sunsets of the desert, the fogs of the ocean, the panorama of a great historical bay and the magnificent urban valley of a large city in as many varying phases by daylight or starlight, and only those who travel it many times ever learn the full potency and charm of the scenic Skyline Boulevard.

EASY OF ACCESS

Although the distance from San Francisco's central business district to the Skyline Boulevard is greater than that to the Peninsula Highway, the latter, inside the city limits of San Francisco, has some three dozen cross traffic streets in a continuous busy commercial district. About one-third of these are equipped with "Stop and Go" signals. This is in contrast to the approach to the Skyline Boulevard by way of the wide Portola and Sloat boulevards, where cross traffic is almost negligible. Additional access is had to this important state boulevard from all parts of San Francisco through direct connections to Market street, Twin Peaks and Junipero Serra boulevards, Nineteenth avenue and the Great Highway along the ocean shore.

The Skyline Boulevard without becoming involved in cross traffic taps the Peninsula interurban territory with improved lateral roads at Colma, at San Bruno and at Millbrae, each two miles east of the highway; also at Burlingame and San Mateo, each four miles, and at Belmont five miles east. Woodside and Redwood City are served by two roads from the Skyline; Palo Alto, Mountain View and Los Altos also have a connecting road, and Saratoga, seven miles east of the Skyline Boulevard, is reached by an excellent county road recently brought to a higher standard, involving much heavy construction work.

The through route to Santa Cruz is accomplished at this time by a connection at Saratoga Gap, the present terminus of Skyline construction, with State Highway Route 42, which joins with excellently paved Santa Cruz County roads passing through the town of Boulder Creek and on to Santa Cruz.

WORK UNDER WAY

Upon completion of the fourteen-mile unit of the Skyline Boulevard between Saratoga Gap and Woodwardia upon State Highway Route 5 between San Jose and Santa Cruz, this improved condition will be accentuated and travel will proceed from the heart of San Francisco to Santa Cruz on a road of the highest standard at an uninterrupted rate of speed

(Continued on page 19.)

Traffic Stripe on California Highways

By T. H. DENNIS, Maintenance Engineer

DURING the year 1929 some 1800 miles of California state highways have been striped for the safety and convenience of traffic. The work was first initiated as a state-wide program in 1926, when a special crew was organized. In 1927 some 300 miles of traffic line was placed on curves and on the most heavily traveled routes. The work was extended in 1928 and the 1929 program is being repeated in 1930.

How the highway stripe is made.

Striping the highway makes mountain driving much safer.

It is planned to further extend this safety measure and estimates have been prepared to provide for striping 2200 miles of pavement or the equivalent of 3500 stripe miles annually for the 1931-1933 biennium.

PROMOTES SAFETY

It is felt that this safety measure more than justifies the considerable annual expenditure which is necessary. On unmarked roads many drivers feel that they are entitled to crowd to the center of the road, particularly on the more narrow, dangerous mountain

sections. For such drivers the white traffic line is a constant reminder to hold to their own side of the road and also relieves the tension of timid ones who may now watch the line instead of the edge of the pavement on the shoulder. Driving at night or in foggy weather is found to be much easier and safer with the guiding aid of the traffic line and all traffic is speeded up without increased hazard.

VALUE OF WHITE LINES

When the work first started a line six inches wide was placed, and white, orange and yellow paints were used at various points. The present standard line is four inches wide and white traffic lacquer is used exclusively. The white has better visibility at night and also as the line gets old. Lanes ten feet wide are standard, although 18-foot pavements are also striped. On the narrower pavements stripes are placed only on narrow bridges, on curves and other danger points. Stripes are placed along the pavement edges in foggy areas and also where the pavement edge is

Traffic lanes leading into a California city.

not well defined as on loose oiled shoulders where the similarity in color otherwise prevents the driver from determining the limit of the pavement, particularly at night.

HOW LINE IS PLACED

Where a new line is placed, care is taken to mark the line out ahead of the painting to insure a true uniform job. Small irregularities in the line are greatly magnified to the critical eye and the extra expense of this detail is well worth the effort.

Seven special crews are now assigned to the work. The usual crew consists of three men, a paint machine operator, a truck driver, and a helper who places and picks up flags used for protecting the line and also assists in mixing the lacquer.

The paint machine is a hand propelled spray outfit operated by compressed air. A screen side truck is provided for transportation of men and supplies.

QUALITY OF PAINT

In the early stages of the work, a white paint, made up according to state specifications, was used, but for the past two years commercial traffic lacquer has been used. Before purchases are made, samples are submitted by the vendors and tests are made in the laboratory, and results compared with similar tests on material which has previously given satisfactory results.

For best results, the white lacquer must furnish the maximum amount of opacity and visibility. It must dry rapidly so that traffic will not be inconvenienced or the pavement marked by machines tracking the line. It must be uniform, must provide a good film and spread, and it must be enduring.

Where a uniform edge of pavement is exposed or where longitudinal joints are in proper position, the line to be painted may be located by an outrigger attachment or the expansion joint followed. Generally, however, it is necessary to mark out the line in advance. This is accomplished by means of a one-half inch rope, about 300 feet in length, which is placed in the position desired by measuring from edge of pavement or by eye, as local conditions require. Spot marks are made with paint at intervals of two or three feet along this line. If the spot marks are too far apart the operator has difficulty in following them and an irregular line results.

GUARDING AGAINST TRAFFIC

Lacquer is purchased in five-gallon cans. It is mixed with thinner in the tank of the

spray machine, which holds eight gallons. The particular material used this season requires 3/10 gallon thinner to one gallon of lacquer to work through the machine. Air pressure used varies from 15 to 20 pounds. The machine is pushed by one man. The truck follows immediately behind, straddling the line as a protection to the machine operator. The other man in the crew sets a flag on the line at intervals of about 100 feet. These flags are supported by bent wire or small pipe stands with "X" bases.

When a tank of lacquer is run out, the operator and helper mix a new lot and the truck is sent back to pick up the flags. The lacquer dries in about ten minutes time after being spread. Even with the flags in place, it is difficult to keep machines off the line and it is usually necessary to secure aid from the local traffic officers to prevent tracking up the pavement. For marking line along the edge of pavement, an offset has been arranged to permit the machine to ride entirely on the pavement. It is not possible to secure a good line with one wheel on the shoulder.

About 12 gallons of lacquer and 3.6 gallons of lacquer thinner are required for each mile of 4-inch line. The average cost is \$40 per stripe mile. The lines are placed before the beginning of the winter season to secure maximum benefit. In general, a line is painted only once a year, although where traffic is heavy or conditions especially dangerous, the lines are renewed every six or eight months.

CALIFORNIA AUTOISTS PAY LOWER CAR FEES THAN IN OTHER STATES

(Continued from page 13.)

4-cent tax which is one cent higher than California. Nine have a 5-cent tax and three have a 6-cent tax.

In several states it was found gasoline taxes are diverted for general administration expenses or schools and other purposes, the motorist thus being compelled, as a class, to support various functions of government in addition to road construction.

The California motorist gets the full benefit of the gasoline tax inasmuch as all of it is spent on the highways.

OHIO—Fatalities due to automobile accidents in the state of Ohio increased 25 per cent during January and February, 1930, as compared with the same months for 1929, according to a report filed by the Chief of the Division of Vital Statistics with Dr. Charles A. Meal, Director of Health.

Vol. 8 OCTOBER, 1930 No. 10

Consulting Board Is Named to Advise on Pasadena Dam

The city of Pasadena, through its chief engineer, filed application with State Engineer Edward Hyatt, in accordance with the law governing the supervision of dams, on September 30, 1930, for approval of plans and specifications for construction of the Pine Canyon Dam to be built on the San Gabriel River. As provided for in this law, it is mandatory that the State Engineer cause an examination to be made of the site, review the plans and specifications, and approve or disapprove the application.

Because of the importance, magnitude and location of the proposed dam and the many involved technical features, the State Engineer has appointed a consulting board consisting of Chas. P. Berkey, Professor of Geology, Columbia University, New York City, N. Y.; Geo. D. Londerback, Professor of Geology, University of California; Ira A. Williams, Consulting Geologist, Portland, Oregon; J. L. Savage, Chief Designing Engineer, U. S. Bureau of Reclamation, Denver, Colorado; George A. Elliott, Consulting Engineer, San Francisco; and M. C. Hinderlider, State Engineer, Denver, Colorado, to investigate and report upon the safety features of the structure.

These nationally known consultants, possessing unquestioned ability and integrity, are preeminently qualified and widely experienced in their respective professions. They are to complete an intensive examination of the site of the proposed work and comprehensively review all technical phases of the proposed dam. The results of their investigation, together with their conclusions, will be embodied in a report to the State Engineer upon the safety features of the dam.

This board consists of the same members who last November reported to the state regarding the proposed Forks dam on the San Gabriel a few miles above the Pine Canyon site, and are therefore already generally familiar with San Gabriel area.

The Pine Canyon Dam will also be under the jurisdiction of the U. S. Forest Service, and the Federal Department through Mr. E. W. Kramer, Regional Engineer, will cooperate with the state in the investigation.

THE SCENIC SKYLINE BOULEVARD

(Continued from page 16.)

approaching the maximum allowed by state law.

Connections to the coast towns of Salada, Montara and Princeton are had from the Skyline Boulevard at a point approximately twelve miles from the Civic Center of San Francisco. Sixteen miles beyond this point the Half Moon Bay road, now under process of reconstruction and improvement by San Mateo County, affords connections to Half Moon Bay and Pescadero, on the west coast. Thirteen miles further on, the La Honda Road proceeds west to La Honda and San Gregorio. At Saratoga Gap there is a far more important connection via the Big Basin state road to California's largest state owned park, comprising 10,000 acres in the heart of the Santa Cruz Mountain redwoods, fifteen miles west.

The surpassing beauty of this mountain redwood section is fast becoming recognized as is evidenced by the heavy increase in the number of visitors to the park yearly; the past season as many as five thousand people visiting the park on holidays. Construction work now in progress between Saratoga Gap and Big Basin, due for completion in early 1931, is expected to further increase this number of visitors in the coming year.

The Skyline Boulevard passes through about seven miles of territory in the north end of San Mateo County which is devoted to intensive truck gardening, seeking San Francisco as a market and requiring almost daily use of the highway for a greater portion of the year. The many small stock ranchers and farmers south of this intensively cultivated section, although less in number, find the use of the highway equal in importance to that of the regions closer to the city.

NATIONAL.—Secretary of Commerce Lamont estimates that highway construction this year will afford employment for probably more than 500,000 men. This estimate is based on the return of construction contracts awarded in the various states.

California Association of Highway Patrolmen

By JOHN SANSONE, Secretary-Treasurer

THE California Association of Highway Patrolmen is an organization composed of bona fide traffic enforcement officers throughout the state and its various cities and municipalities. Today its roster shows 348 paid-up members, compared to the 21 motor

HENRY LIVINGSTON,
President, California Association of
Highway Patrolmen.

officers who organized the association in San Jose, California, on September 15, 1920. On June 15, 1929, the association was incorporated under the laws of the State of California as a nonprofit organization, acquiring state recognition and all legal rights of a corporate body.

The purpose of the association, primarily, is to devise ways and means of furthering the best interests of its members. Toward this end, a fund has been created out of which the sum of \$1,000 is paid to the widow, orphans, or dependents upon the death of a member. Traffic officers are classified by a majority of the old line insurance companies as being employed in an extra-hazardous occupation, and by reason of this fact, accident and life insurance policies for these men require the payment of a large premium. The association is at the present time carrying its own insurance, although plans for group insurance are in the offing. The only fees are the \$6 annual dues, and an assessment of \$2 whenever a member passes away. An initiation fee of \$10 is paid upon a member's being admitted into the association.

Prior to every legislative session, the association has gone on record as recommending the passage of certain proposed amendments to the motor vehicle regulations. This is another purpose for which it is organized, and since its members are engaged in the business

of enforcing motor vehicle laws, it naturally follows that the association is vitally interested in legislative enactments affecting such laws. It is reasonable to assert that traffic officers are highly qualified to decide whether proposed changes in the statutes, which have been thrashed in theory by the state legislators, are feasible in actual application. The position of the traffic officer was recognized by the California Safety Conference when the president of the association was elected to the board of directors of the conference, which was organized early in 1929 for the purpose of conducting educational campaigns among the motoring public and sponsoring favorable motor vehicle regulations. Due to a mutual interest in the solution of certain road problems, a splendid cooperation exists between state traffic officers and the personnel of the State Highway Commission. The board of directors of the California Association of Highway Patrolmen has seen fit to commend officially the Department of Public Works for

JOHN SANSONE,
Secretary-Treasurer, California Association of Highway Patrolmen.

its activities in aiding the motorist and in minimizing the number of automobile accidents.

The association meets as a body once a year in annual convention. It meets this year at the Hotel Del Monte for three days, October 21, 22 and 23. A lively program has already been prepared by the Convention Entertainment Committee, which includes sight-seeing trips, theater parties, and interesting athletic events not only for the members, but also for the wives and lady friends attending.

A board of directors is the governing body of the association. It meets occasionally at the call of the president, and its activities are communicated to each member by the Secretary-Treasurer through bulletins announcing the proceedings of the board. The officers, which also constitute the Board of Directors, are as follows: H. H. Livingston, Salinas, President; Frank J. Duncan, Merced, Past President; Charles Goff, San Francisco 1st Vice President; J. A. McCaleb, Los Angeles 2d Vice President; Miner Carter, Red Bluff, 3d Vice President; Otto Langer, San Diego, 4th Vice President; H. D. Cloughley, Sacramento, Director; John Sansone, San Jose, Secretary-Treasurer; and C. J. Boone, San Bernardino, Sergeant-at-Arms.

THE DESERT HIGHWAY

Conceived in the brain of man,
Constructed by man's toil,
Stretching across the desert waste,
A carpet of rock and oil.
Not a magic flying square,
Renowned in the fable of old,
But a satin ribbon of rock and oil,
By the hand of man unrolled.
Fable has turned to truth:
The rock with the oil smooth-bound;
What need to fly through the air,
When the "ribbon" is on the ground?

—Jos. E. Rich.

These pocket-handkerchief golf courses are bringing the game within reasonable bounds. We expect to hear any day of a player who has made eighteen holes in one.—*Boston Transcript*.

Sandy, who owned a theatre in Dundee, went to London to get some ideas for advertising.

While walking through the great city, he saw a notice outside a movie to the effect that all persons over 80 years of age would be admitted free.

"Just the thing," he told himself.

The following day Sandy returned to his native town and the first thing he did was to put a notice outside his own theatre which read:

"All persons over 80 years of age will be admitted free, if accompanied by their parents."—*Answers*.

THE KINGS RIVER HIGHWAY

(Continued from page 9.)

About seven miles from General Grant Park, the constructed road ceases and merges into preliminary work such as clearing, drilling, blasting and removal of material already blasted. Ahead of these activities the engineers are busily engaged in setting stakes to guide the construction forces. Further in advance is the location party of engineers occupied in collecting survey data for the location of the road. The work of this party would not attract anyone who is averse to strenuous physical effort as it consists of a hard hike in the morning from camp to the work over a makeshift trail or no trail at all—after climbing up steep hillsides—working along country steep and rocky or covered with thick brush, climbing up and down cliffs where ropes must be used for life lines and a return to camp which may be a hike of 30 minutes to two hours. A misstep in this country may easily result in a fatal fall. Rattlesnakes are encountered quite frequently.

Continuing along the west slopes of Indian Creek drainage the road will descend with good alignment to Ten Mile Creek and follow the latter creek to the junction of the Middle and South Forks of the Kings River, where it will turn easterly along the South Fork. After crossing Redwood Creek the location of the new road follows the south side of the river and approaches Horseshoe Bend. Here the river makes an "S" turn between almost vertical rock walls more than a thousand feet in height. Just what type of engineering expedient will be used at this point has not been decided, but the gorge should not fail to thrill the most jaded traveler.

Other points of interest will be seen, before the canyon proper is reached, one of the most interesting being Boyden's Caves. These are situated in a huge limestone cliff and are very spectacular. Before reaching the main canyon the road will descend to practically water level and enter the canyon. The canyon is a narrow valley with huge side walls replete with magnificent panoramas rivaling the world's most famous scenery. Recreational areas now accessible by trail only will be brought within the possibilities of week-end trips.

The road when finished to Copper Creek, in the canyon, will be approximately 38 miles in length.

VIRGINIA—A landscape engineer has been added to the staff of the department of highways.

Road Engineers From All Parts of World Meet at Washington

The United States, with its 600,000 miles of improved highways, is to serve as a "giant laboratory" for highway engineers and executives from all parts of the world.

The congress, first to be held in the Western Hemisphere, opened on October 6 in Washington, and will be followed by tours of delegates to various portions of the country for the inspection of highway and other conditions.

The purpose of the conference was recently outlined by Roy D. Chapin, president of the America Organizing Committee for the Sixth International Road Congress. He is quoted in the United States Daily as follows:

Fundamentally, these highway engineers are the vanguard of modern life. Upon the success of their efforts rests the opportunity of hundreds of millions of people to obtain for themselves new standards of living, new insight into the customs of their neighbors, new markets for the commodities they may produce.

As their work progresses, they will give new stability to government, new employment to vast hosts, new areas for you and me to explore with our families.

This matter of highway building is a very practical business. It requires inventive genius, thoughtful planning, sane administration, economic adjustments, financial arrangements, hard labor, and a certain schooling in the art of diplomacy. Only by a careful mixing of these ingredients does the taxpayer receive for his dollar, or its equivalent, the widest, longest and the best stretch of usable road.

CHANGES IN TWENTY-FIVE YEARS

Perhaps the simplest way in which to visualize the importance of this conference is to think back 15 or 25 years ago.

How far could you travel then over an improved road in the United States?

How long did it take you to go to nearby towns or farms over the highways?

How many of your friends had automobiles?

How many long trips had you taken?

The answer expressed statistically is that 25 years ago there were less than 25,000 automobiles. Now there are over 26,000,000 motor vehicles. Then only 155,000 miles of improved road existed in all the United States.

Of that road but 144 miles had a high type surface. Today there are more than 600,000 miles of improved highway and another 500,000 miles of usable dirt road.

Where we were then spending less than \$100,000,000 a year in our highway improvement, today we are spending more than \$1,500,000,000 annually. Our people want more roads than are being built.

Now you can travel from any county seat in the United States to any other over an improved road, and there is no community isolated.

No longer are our rural folk cut off from the cities and if we still have far to go, the sheer wealth made possible by this new form of transportation, we have provided ourselves with ample means to carry on without hardship to the individual.

Vast areas of the world outside of the United States and part of Europe are today in precisely the situation which faced our fiscal authorities and our highway engineers years ago.

EFFECT ON WORLD RELATIONS

The effect upon world relations can best be depicted by a few examples.

Ten of the leading engineers of China are attending the congress. They come to find ways and means of extending the 34,000 miles of road which China has today into the inland provinces as a first essential step in the campaign to prevent the starvation annually of millions of people subject to famine because of lack of transportation.

From our neighbors in the Latin Americas we have as guests leading highway administrators whose task it is to provide ways and means of traversing the pampas, piercing the jungles or crossing the high mountains of the Andes.

Already the countries of South and Central America are making great headway. Buses now run through the passes of the Andes between the Argentine and Chile. Uruguay has many miles of modern road.

A triweekly postal service links together the coastal towns of Peru formerly cut from all but an intermittent steamship service with no communication with one another.

Brazil is pushing its roads south to Uruguay and west to Bolivia.

Venezuela is actively at work on main highways, while the new president of Colombia is intent upon securing loans for main roads to open up vast resources of his country.

Chile has a fine program under way. Chilean engineers have been touring our western states as guests of their highway departments for the past week, studying roads there where mountain conditions are similar.

Ecuador, Bolivia and Paraguay are all deeply interested in opening up their storehouses of natural resources through roads.

In Central America an inter-American commission is already formed to study a road from Panama to the United States which will permit a free flow of traffic from north to south. Panama, Guatemala and Salvador all have their links well under way.

Our great neighbor to the south, Mexico, is vying with our friends in Canada in the development of main and lateral roads and travel to Mexico City over the highway is now an accomplished fact.

Japan, Indo-China, India, Nigeria, Libia, Algeria, Morocco, these are but a few of the nations or colonies of the world, which will have engineers in attendance at the Road Congress.

Australia is sending men from New South Wales, Queensland and Victoria. New Zealand and New Caledonia alike will be represented.

WATER RESOURCES INVESTIGATIONS

SACRAMENTO VALLEY INVESTIGATION

An office report on the relation of the seasonal return water to seasonal diversion and the monthly distribution of the return water, was completed during the period and sent to the members of the Engineering Advisory Committee.

Flood concentration studies were completed for the Sacramento Valley at the latitude of Sacramento for the Feather River Basin. Flood frequency curves have been developed for the major streams of the basin. Surveys were made for dam sites on the Sacramento River in the vicinity of Table Mountain. These sites are about fifteen miles above Red Bluff. Studies have been continued to determine the most desirable method of operating the Trinity River diversion in connection with the storage reservoirs on the upper Sacramento River. Studies have been made to determine the economic installed capacities for power plants at the major reservoir sites in the basin.

Exploration work at the Kennett dam site was completed by the U. S. Engineering Department during the period. Three tunnels were driven with an aggregate length of 1450 feet. Additional exploration work was done at the Iron Canyon dam site. The exploration tunnel was extended 10 feet and another one at second test pit was dug to a depth of about 20 feet. Exploration work is under way in cooperation with the U. S. Bureau of Reclamation at the Table Mountain dam site.

Dr. David Weeks of the College of Agriculture, University of California, has submitted a preliminary draft of his report on the rate of development of agricultural lands in California. This report will be reviewed by a special committee appointed by Dean Hutchinson and will be transmitted by him to the State Engineer.

Sampling and testing of water at various stations on the American River have been continued throughout the period.

SAN JOAQUIN VALLEY INVESTIGATION

Studies of the irrigation yield to obtain with storage regulation were made during the period covering the following streams and reservoir sites:

San Joaquin River at Friant reservoir site.
Fresno River at Windy Gap reservoir site.
Chowchilla River at Buchanan reservoir site.
Merced River at Exchequer site.
Tuolumne River at Don Pedro site.
Stanislaus River at Melones site.

Seven million acres of foothill land from the Cosumnes River south to Merced County bordering the San Joaquin Valley have been examined. Of this total area a gross area of 1,400,000 acres has been classified as agricultural. This work has proceeded as far south as Merced County and is being continued into Mariposa and Madera counties. A map has been prepared showing the extent of the agricultural land in the San Joaquin Basin and the area now under irrigation development. These areas are being used in connection with the ground water investigation. The inter-seasonal water table fluctuations has been calculated and compiled for the entire period of record for the Upper San Joaquin Valley. Maps of this area delineating lines of equal depth to ground water as of October, 1929, are about three-fourths completed. Additional study of ground water storage capacity and the feasibility of replenishing same was made, taking into account the location of certain areas of nonabsorptive soils as revealed by field investigation and geological examination.

A revised study has been completed of month by month supply and draft for the stream basins of the Upper San Joaquin Valley, showing the total demand for water, the utilization of the local supplies, the requirement for imported water and net accumulation effect upon the ground water storage conditions for the 40-year period, 1889-1929, assuming complete irrigation development in that region.

Professor Frank Adams has submitted a preliminary draft on the "Permissible Cost of Irrigation Water in Southern San Joaquin Valley." This report was reviewed by representatives of the San Joaquin Valley Committee and others at a conference held in Visalia, September 20th. It is being reviewed at the present time by the College of Agriculture Committee. Upon its approval, the report will be transmitted by Dean Hutchinson to the State Engineer.

A report on the power phases of the coordinated plan of water development of the Sacramento and San Joaquin valleys with special reference to pumping water up the San Joaquin Valley has been completed by Mr. Lester S. Ready, Consulting Engineer, San Francisco. The following subjects are covered in the report:

1. Growth of power market.
2. Ability to absorb output of the various units of the coordinated plan.
3. Value of power from power plants to be built in connection with water storage development.
 - (a) Cost of power from other hydroelectric plants.
 - (b) Wholesale price of power as indicated by existing contracts.
 - (c) Cost of power from steam electric plants.
4. Power required for pumping water up San Joaquin River.
5. Cost of power for pumping purposes.

WATER RESOURCES

SALT WATER BARRIER INVESTIGATION

Work on the salt water barrier investigation during the past month has largely been concentrated on the gathering and compilation of basic data required for the computation and determination of water supply, storage and consumptive demand from the proposed barrier lake. This work has included completion of field surveys of the Suisun and San Pablo Bay marsh areas to determine the classification as to crops, natural vegetation and culture and the nature and extent of present development, and the office compilation of the results of these surveys. The consumption of water by industries in the upper Bay region was completely compiled from the detailed information already obtained with the questionnaires used in the industrial survey. Other water demands required by the operation of the barrier and detailed data on water supply and storage volumes were compiled. The rates of consumptive use of water by crops and natural vegetation and evaporation were determined for all of the consumptive areas in the delta and marsh areas of Suisun and San Pablo bays. This was included in a special study and report rendered by Charles H. Lee, consulting engineer, of San Francisco, with regard to evaporation and transpiration losses from natural vegetation and the final compilation by the U. S. Department of Agriculture of the results of six years of intensive measurements of duty of water in the delta of the Sacramento and San Joaquin rivers. Computations were completed on this study for each of the three barrier sites; namely, Chippis Island, Dillon Point and San Pablo Point. The deficiency in supply over the demand for each month and year for the present consumptive demands and the supplementary water required to meet these deficiencies were computed for each of these sites, assuming water supply available as during the past ten years.

Rapid progress has been made during the past month in the studies being carried on by the Industrial Economics Committee of the relation of the proposed salt water barrier to industrial development in the upper San Francisco Bay area. The committee, consisting of Professor W. E. Hotchkiss, Dean of the Stanford Graduate School of Business as chairman; Professor H. S. Grady, Dean of the Graduate School of Business of the University of California, and Mr. A. D. Schindler, consulting engineer, of San Francisco, have met twice during the past month, considering in detail the results of special studies being conducted by Professor George W. Bowrie, consulting economist from the Stanford Graduate School of Business. In this connection the office staff has completed detailed analyses of the consumption and cost of water used by the present industries in the upper Bay area.

Special reports on geology of the region in which the proposed salt water barrier sites are located, by Professor Tolman, consulting Geologist of Stanford University, and the studies of sewage pollution and industrial waste in relation to redemption of water supplies from the proposed salt water barrier lake, by Mr. C. G. Gillespie, sanitary engineer of the State Board of Health, are nearing completion and it is expected that the reports will be available next month.

SALINITY INVESTIGATION

Office work on salinity investigations during the past month has been concentrated on the preparation of plates and data for the salinity report and the final

computations on the relation of the advance and retreat of salinity to stream flow and tidal action, leading to the determination of supplemental stream flow required for control of salinity. The studies on the variation of salinity as related to stream flow and tidal action have included determination of the consumptive use of water in the delta of the Sacramento and San Joaquin rivers by crops, natural vegetation and evaporation. This work was practically completed, involving the determination of the relation of the advance of salinity for various degrees of salinity and at various points in the delta channels to the net effective stream flow. From these relations the control flows required for preventing the advance of salinity will be determined. Work on the preparation of the plates for illustrating the report about 85 per cent completed by the end of the month.

Field work has continued on the maintenance of between 50 and 40 regular salinity observation stations over the entire tidal basin from San Pablo Bay to the upper reaches of the delta, and, in addition, automatic tide gage stations throughout the tidal basin.

SOUTH COASTAL BASIN INVESTIGATION

Work of determining the capacity of underground basins was begun and arrangements were made for putting on a larger force for this work. A meeting was called by the Los Angeles County Conservation Association in Los Angeles on September 10th with a view to promoting the formation of a committee of laymen for cooperation with this office in the investigation.

MOJAVE RIVER INVESTIGATION

Routine work proceeded during the month. Plans were made for determining the evapo-transpiration losses in the various basins of the Mojave River. It appears that this information will be necessary before an intelligent report can be made. This work will be handled by the U. S. Geological Survey and the U. S. Department of Agriculture, Division of Agricultural Engineering.

VENTURA COUNTY INVESTIGATION

Aside from the ordinary routine procedure of the investigation, work was begun on a special investigation of a reservoir site on Piru Creek. A relocation of the State highway to take the place of the Ridge Route is projected down this creek and passes through the reservoir site. The object of the special investigation is to determine whether this is the best reservoir site on the creek and whether it is necessary to conservation of the water of the creek. A report will be made to the Director at an early date.

SANTA CLARA VALLEY AND NAPA COUNTY INVESTIGATIONS

Office work in connection with these two investigations is proceeding in anticipation of completing a progress report before the close of the year.

PIT RIVER (MODOC AND LASSEN COUNTIES)

Routine field work was continued throughout the month.

MISCELLANEOUS INVESTIGATIONS AND ACTIVITIES

A report was completed on the work done to date in the investigation of the extent of and use of water on lands riparian to the Sacramento and American rivers and the extent of lands overflowed by these streams.

A regular inspection was made of the work being conducted in the Sacramento-San Joaquin Delta and in the Santa Ana Basin under the Cooperative Agreement with the U. S. Department of Agriculture, Divi-

sion of Agricultural Engineering, covering irrigation investigations.

HOOVER-YOUNG COMMISSION, LEGISLATIVE WATER COMMITTEE

The eighth meeting of the Joint Legislative Water Committee and the Hoover-Young Commission convened at Hotel Oakland, Oakland, on September 12 and 13, with all members of both bodies present.

Business was resumed after two months devoted to technical studies without formal hearings. The business transacted by both bodies to date was reviewed and rechecked.

Report of Mr. H. F. Ormsby was received and read covering transactions of the eleven Western States conference held at Salt Lake City during the month of June.

Lieutenant Colonel Robins, District Engineer, U. S. Engineers, reported on progress of the investigations under his direction.

Mr. E. W. Kramer, District Engineer, U. S. Department of Forestry, gave a verbal report on results of investigation of power rates, consumption and development.

Mr. C. A. Bissell, District Engineer, U. S. Reclamation Service, reported on the progress made in the investigation under his direction.

During the hearing State Engineer Edward Hyatt submitted technical data in connection with investigations of the state-wide plan and reviewed the activities of Division of Water Resources and its engineering advisory committees.

IRRIGATION, WATER STORAGE DISTRICTS AND BOND COMMISSION

Field work in connection with the assembling of data for the extension of Bulletin No. 21 has been completed, as also has the collection of data on the cost of water in California irrigation districts.

Office conferences have been held with representatives of the El Nido, Linden, El Dorado, Madera and Melano irrigation districts regarding the progress of these districts. A conference has also been held with proponents of the West Joaquin Irrigation District, an area of about 200,000 acres lying on the west side of the San Joaquin River and extending south from Crows Landing to Mendota. This area petitioned for organization in 1921 but failed to carry its organization plans to completion.

A petition was filed with the State Engineer requesting the exclusion of 319.2 acres of land from the Tulare Lake Basin Water Storage District, located in Kings County. Hearing on this petition has been set for October 14, 1930.

The California Bond Certification Commission has approved of the Linden Irrigation District proceeding with an election for a bond issue for the development of the district in amount of \$105,000. The California Bond Certification Commission has approved a rescission order on old work for the Woodbridge Irrigation District in amount of \$878 and authorized the district to expend this amount for new work which has recently been approved. The agreement between the Potter Valley Irrigation District and the Snow Mountain Water and Power Company covering the delivery of water to the district has been approved by the California Bond Certification Commission.

The horse took longer to get you there, but you didn't have to drive half-way back to hitch.—*Publishers Syndicate.*

DAMS

The activities of the Division have, during this period, been directed to completing a preliminary inspection of all dams now known to be under state jurisdiction, a study of the design of existing dams, a geological inspection of existing dams where deemed necessary, and constant supervision of dams under construction.

To date 700 applications have been filed for approval of existing dams; 46 applications for approval of plans for the construction or enlargement of dams, and 42 applications for approval of plans for repair or alteration of dams.

APPLICATIONS RECEIVED FOR APPROVAL OF PLANS AND SPECIFICATIONS FOR CONSTRUCTION OR ENLARGEMENT

Dam	County	Owner	Estimated cost
Kramer*	Lassen	G. L. Kramer	\$2,000
Alta San Rafael*	Los Angeles	Alta San Rafael Company	13,600
La Grange**	Stanislaus	Turlock and Modesto Irrigation District	7,500
Porter**	Modoc	Pearl F. Porter	750
Whittier Reservoir No. 4	Los Angeles	City of Whittier	65,000

*Construction.
**Enlargement.

APPLICATIONS RECEIVED FOR APPROVAL OF PLANS AND SPECIFICATIONS FOR REPAIRS OR ALTERATIONS

Sixteen such applications have been received during this period. The greatest number coming from Modoc County in response to the recommendations of our resident engineer in that locality.

PLANS APPROVED FOR CONSTRUCTION

Dam	Owner	County
Lake Madrone Dam	Geo. W. Mansfield & Duncan C. McCallum	Butte
Swanzy	Calif. & Hawaiian Sugar Refining Co.	Solano

PLANS APPROVED FOR REPAIRS OR ALTERATIONS

Eleven applications of this nature were approved by the State Engineer.

Order authorizing use of reservoir pending formal approval of the dam was issued to the city and county of San Francisco for the Moccasin Dam in Tuolumne County.

An office has been established in the Associated Realty Building in Los Angeles to take care of the eleven southern counties. The engineer in charge of this office, with the aid of an assistant, will supervise the construction of new dams. This will bring the department in closer contact with the southern part of the state and expedite decisions on various questions which arise on all construction jobs. They will also make an intensive study of all existing dams in that section with a view to issuance of certificates of approval at an early date.

SACRAMENTO-SAN JOAQUIN WATER SUPERVISOR

Regular field and office work comprising measurements of all diversions, stream flow, and return flow throughout the Sacramento-San Joaquin territory, has continued. Office work has included the preparation of mailing lists and mailing out of Bulletin No. 23 and the 1929 Annual Report and the preparation of maps of the irrigated areas under the diversions recorded.

In the field the engineers have begun the regular annual census of irrigated crops and areas and will be occupied on this for the major portion of the time up to November 1st.

The salinity investigation has been continued with the maintenance of six regular tide gage stations and sampling at 46 stations in the bay and delta area. The three tide gages which were installed temporarily in the vicinity of Courtland to secure data in connection with the proposed diversion of Sacramento River water through Snodgrass Slough have been discontinued as the desired data have been secured.

The following are comparative data for 1929 and 1930:

Salinity in parts of chlorine per 100,000

Station	Sept. 2, 1930	Sept. 2, 1929
Bullhead Point-----	1330	1340
O. & A. Ferry-----	800	720
Collinsville-----	570	680
Antioch-----	400	555
Jersey-----	160	365
Emmaton-----	146	255
Webb Pump-----	60	39
Rio Vista-----	20	67
Isleton-----	7	5

Discharge in second feet

Station	Sept. 2, 1930	Sept. 2, 1929
Sacramento River at Sacramento	3300	3200
San Joaquin River near Vernalis	1200	680
Combined Flow to Delta-----	4500	3880

SNOW SURVEYS

The last half of August was spent on office work in working up the data for Leevining and Rush Creek areas in the Mono Basin and Mammoth, Rock, Bishop, Big Pine and Cottonwood Creek areas in the Owens River Basin. The relation between snow survey and precipitation measurements and run-off for the few years that snow surveys have been made was determined and the actual run-off compared with what would have been the forecasts. This study indicated certain improvements in the work which might be made in the way of additional snow courses, etc., and in the first half of September, a field trip was made to go over the work with and suggest these improvements to the cooperating agencies, the Southern Sierras Power Company and city of Los Angeles. On the same trip the plans were perfected for the coming season's surveys in these two basins and in the Kings and Kern River Basins as well. The equipment used has been overhauled and is being redistributed.

WATER RIGHTS

APPLICATIONS TO APPROPRIATE

Twenty-eight applications to appropriate water were received during the month of August, 16 applications were canceled and 17 were approved; 4 licenses were issued.

Applications received during the month which were of more than ordinary interest are those from the city of Fresno seeking appropriations from the San Joaquin River for municipal water supply, irrigation, and power purposes at an estimated cost of \$1,000,000; and the application by R. D. Owen to appropriate from Arrowhead Lake, Mono County for power purposes, estimated cost \$50,000.

Among the permits issued was one to the Montague

Water Conservation District allowing an appropriation from Inconstance Creek, Siskiyou County for irrigation purposes, the estimated cost of the project being \$200,000.

ADJUDICATIONS

Shasta River (Siskiyou County): Case pending in the Superior Court of Siskiyou County.

Whitewater River (San Bernardino and Riverside Counties): Still pending in the Superior Court of Riverside County awaiting development in regard to the proposed All American Canal from Colorado River.

North Cow Creek (Shasta County): Submission of referee's final report still being withheld pending negotiations now in progress towards settlement of one of the important issues.

Oak Run Creek (Shasta County): Case still pending in Superior Court of Shasta County awaiting the entry of a decree in the North Cow Creek case.

Choror Creek (Shasta County): Case still pending in the Superior Court of Shasta County awaiting the court's pleasure in placing it on the calendar.

Butte Creek (Siskiyou County): Case still pending in the Superior Court of Siskiyou County awaiting action by the parties involved.

Los Alamos Creek (Santa Barbara County): Action by referee being deferred awaiting the outcome of the circulation of a stipulation for consent judgment among the parties involved.

Davis Creek (Modoc County): Negotiations relative to a consent judgment still being carried on.

Mill Creek (Modoc County): The trial schedule of distribution proposed by the Division of Water Resources was administered by a water master throughout the month.

Deep Creek (Modoc County): The field investigation of water supply and use of water was continued throughout the month.

Franklin Creek (Modoc County): The field investigation of water supply and use of water was continued throughout the month.

WATER DISTRIBUTION

Little Shasta River and Lower Shasta River (Siskiyou County), *Hat, Burney, North Cow, Oak Run and Choror creeks* (Shasta County), *Davis, Emerson, Mill, Owl and Soldier creeks* (Modoc County) and *West Fork of Carson River* (Alpine County). Water master service on these streams was continued throughout the month.

Pit River (Modoc and Lassen counties). Supervision over diversions from Pit River in Big Valley was continued throughout the month by the resident engineer on the Pit River investigation. The flow of the stream has receded to a point where only sufficient water is available for stock watering purposes.

FLOOD CONTROL AND RECLAMATION

MAINTENANCE OF SACRAMENTO AND SAN JOAQUIN DRAINAGE DISTRICT

The irrigation of willows planted for levee protection along the Sutter By-pass has been discontinued for the season. Routine maintenance work has been carried on and some clearing of second growth timber in the by-pass has been done. An average of twenty-five men have been engaged in this work during the period. The project in Sutter County is now in good order for the winter season.

FLOOD CONTROL PROJECT MAINTENANCE—BANK PROTECTION

The Ritchie contract for constructing pavement levee protection at Isleton was completed on August 28, 1930, at a total cost of \$7,250.

Two current retards have been completed on the Davis property on the Sacramento River eleven miles above Colusa, in cooperation with Reclamation District No. 2047, at a cost of \$6,200.

Three current retards have been completed on the Campbell and Dwyer ranch two miles below Colusa, and one current retard has been completed on the Cecil ranch four miles below Colusa, in cooperation with the Sacramento River West Side Levee District, at a total cost of \$10,600.

The bank protection repair work for Reclamation District No. 535 at Oak Hall Bend on the Sacramento River has been completed, with the placing of 600 tons of quarry rock.

Arrangements have been made to install two tree current retards on the left bank of the Sacramento River at Twenty-Mile Bend two miles below Meridian, in cooperation with Reclamation District No. 70 at a cost of \$4,100, work to start immediately. About 500 additional tons of quarry rock will be deposited on the Brannan Island protection, in cooperation with Reclamation District No. 2067. Work is being commenced at once on bank protection work on Twitchell Island, Andrus Island, and in the San Joaquin River at Tom Paine Slough.

SACRAMENTO FLOOD CONTROL PROJECT

An average of sixty-five men have been engaged during the period in clearing in the Sutter By-pass and two camps have been in operation. The clearing work in the Feather River bottoms near Marysville under five contracts is 95 per cent complete.

Surveys have been completed for the Bow levee at Nelson Bend, a unit of the flood control construction program, and the surveys of the areas cleared and to be cleared in the by-passes have continued. Considerable work has been done in connection with right of way matters relating to the new levees in the flood control construction program and in making arrangements for the work to proceed on the various construction units proposed.

The Deputy in Charge of Flood Control and Reclamation attended one meeting of the Reclamation Board and one meeting of the construction committee of the flood control association.

SANTA MARIA RIVER

A project for clearing the channel of the Santa Maria River of timber and brush near Guadalupe has been undertaken by this department in cooperation with Santa Barbara County for the purpose of rectifying the channel and providing a clear passage for flood waters.

The channel will be cleared for a length of six miles to a width of approximately 400 feet at a cost of \$6,000, of which the state will contribute \$2,000. It is expected that additional funds will be provided by other local interests to bring the total sum available up to at least \$10,000. The work will be done by day labor.

RUSSIAN RIVER JETTY

Eight men have been engaged in operating the railroad and quarry, depositing rock in the Russian River jetty. This work will continue for two months. The channel has remained open.

NAVARRO RIVER JETTY

It is expected that the rock jetty on the Navarro River, which is being constructed under contract by

Christie and Allen, will be completed by October 15, 1930. This work is being done for the Division of Fish and Game.

SEPTEMBER REPORT OF DIVISION OF MOTOR VEHICLES

FRANK SNOOK, Chief

STUDY IS MADE OF MOTOR VEHICLE ACCIDENTS

A research study on the hours of occurrence of motor vehicle accidents was made by the Bureau of Research, Statistics and Traffic Safety during the month. This study revealed that during the period of 3 p.m. and 9 p.m. daily, there is a continuing condition existing resulting in a maximum of accidents. The study brought out that from 68 per cent to 70 per cent of all motor vehicle accidents occur in or close to large municipalities.

Based on this study, an "ideal" traffic patrol schedule was worked out. This schedule differs from schedules now employed in many cities, although most large police departments approximate it. The study was submitted to the police chiefs of various cities for the purpose of informing them accurately upon the exact periods of peak traffic congestion. Many chiefs were surprised to learn the extent of the period and did not realize that maximum strength patrol should be continued up to as late as 9 p.m. This study was received with much appreciation and several chiefs have written their thanks to the Bureau. Dozens of highly complimentary letters have been received by the Bureau from persons in California and other states who have received the revised monthly statistical summary. These letters indicate that the Division has succeeded in presenting accident figures in a more simple and more readable form.

HIGHWAY PATROL ACTIVITIES

During the past month the Head of the Bureau of Traffic Enforcement has devoted his time chiefly to inspection work. During the month the officers and men in the Patrol drove 843,027 miles. During the State Fair a detail of 14 men were assigned to duties of directing traffic at the Fair Grounds.

Every county squad has increased their enforcement of light regulations during the past month. While August figures have not as yet been completed, we expect to show a considerable increase in the work over previous months. During August four new signals and six light devices were submitted to the Bureau for tests.

The Bureau of Brakes and Commercial Vehicles have continued their program of inspection and have received new equipment for the transportation of the equipment used in making brake tests which will make it possible to increase the number of brakes tested in all districts of the state.

So far this year 1549 applications have been received for official brake testing stations, of which 1077 have been approved. There are at present 2410 authorized adjusters. During the month 2010 trucks were tested, 1095 warned and 498 drivers of trucks were arrested.

OPERATORS' LICENSES

During the past month 32,753 operators' licenses were issued by the Division. This number is approximately 10 per cent less than in July.

COMPARATIVE FIGURES

The following comparative figures are as of September 1, 1930, as compared with September 1, 1929.

	1930	Increase or decrease as compared with 1929
Motor vehicle registrations	2,033,166	93,620 Increase
Automobile, truck and trailer dealers registrations	3,184	136 Decrease
Transfers	376,900	64,956 Decrease
Chauffeur's licenses	135,062	5,517 Increase
*Nonresident permits	56,886	5,969 Increase

*Figures cover first seven months of 1930 and 1929.

SEPTEMBER REPORT OF DIVISION OF ARCHITECTURE

GEO. McDONOUGH, Chief

During September, contracts were awarded upon projects at the San Diego State Teachers College and the Preston School of Industry. These projects show a value of \$67,441.

ROAD ENGINEERS FROM ALL PARTS OF WORLD MEET AT WASHINGTON

(Continued from page 22.)

As we turn to Continental Europe, every country has its engineers here. Great Britain has close to 100 of its leading highway administrators and men interested in highway transport as its representatives; France has some 50 men, Italy 30, Germany an equal number.

Czechoslovakia, Bulgaria, Greece, Belgium, The Netherlands and the Scandinavian countries with Poland and Yugoslavia are here with picked representatives, and so the list goes.

From them, we will hear the story of trails flung across the Arctic Circle, of roads built in the time of the Roman Empire, and through the days of Napoleon, now brought back into new service for modern-day traffic.

With them, we will discuss the problem of providing roads for new countries, of ways and means of finance, of accelerating the constantly increasing highway traffic in the congested areas of the great cities, whether it be London or Paris, Berlin, Brussels, Madrid, Shanghai, Tokio, Bagdad or Bombay.

The essential task of fitting highway transport into the jig-saw puzzle of other forms of transportation, rail, water and air, so as to establish a uniform, continuous and economic whole, will receive its due share of attention from the delegates.

UNIVERSAL SIGNALS PLANNED

With them we will discuss the development of common rules of the road, in order that the man who drives an automobile, whether he be in Palestine or Siberia, Malaya or Detroit, whether he speaks Japanese or Arabic, Italian or any other tongue, may know that the signs and signals mean the same thing so that he may proceed with safety. The aim is universal traffic signals, intelligible to all the world.

In this conference, we may speak a variety of tongues, but we have a great universal language—the language of the road.

Cliff Dwellers Are Found on Route of Proposed Highway

Two modern cliff dwellers, legal residents of Ventura County, were discovered inhabiting a hollow rock in a secluded settlement in the Santa Susana mountain section by the county officials while inspecting the route of a proposed highway in the Simi Valley.

High and dry in their rocky abode, the man and woman, who remain unidentified, have laid a cement floor, built a protecting wall over the large hole in the hard sandstone formation, and made two rooms of the enclosure by erecting a partition in the middle.

The wife, young and good looking, keeps "house," while her husband works as a garage mechanic near by at Chatsworth.

One of the rooms, into which the only door leads, is a combination kitchen and living room. The other is the bedroom. A stove-pipe leads from the stove to the point where the wooden partition joins the rock at the top, and wootens along up the face of the gigantic rock.

LAUGH

Build for yourself a strong box,

Fashion each part with care;

Fit it with hasp and padlock,

Put all your troubles there.

Hide therein all your failures,

And each bitter cup you quaff,

Look all your heartaches within it

Then sit on the lid and laugh.

Tell no one of its contents,

Never its secrets share;

Drop in your cares and worries,

Keep them forever there.

Hide them from sight so completely

The world will never dream half,

Fasten the top down securely

Then sit on the lid and laugh.—*Exchange.*

OREGON—Motorists in this state are protected in the use of drinking water by drinking fountains, artistically designed to conform with their surroundings, erected by the Oregon State Highway Commission, with signs announcing them 300 feet in each direction.

MEXICO—A new international highway to extend from Parel, Chihuahua, Mexico, to Ensenada, Lower California, Mexico, and connecting at Parel with a highway to Juarez, Mexico, opposite El Paso, has been announced by the Mexican Government. Work is already in progress on the first 60-mile unit south from Juarez.

Progress on State Highway System

MAJOR PROJECTS COMPLETED, UNDER WAY AND ADVERTISED AS REPORTED
TO GOVERNOR'S COUNCIL ON SEPTEMBER 24th

C. H. PURCELL, Chief of Division of Highways.

PROJECTS COMPLETED

Contracts completed from August 21st to September 22d include the following:

WORK IN IMPERIAL COUNTY

Two contracts for placing Portland cement concrete pavement, 20 feet wide, in the Imperial Valley have been accepted.

One was on a portion of the interstate highway which extends between Yuma, Arizona, and San Diego and Los Angeles. The work was done over that part of the road from El Centro to Holtville, a distance of 9 miles, and included the construction of wide side ditches and raising the grade of the highway to eliminate flooding of the road from irrigation overflow.

The other contract was on the main highway between El Centro and Los Angeles via San Bernardino. The 10.4 miles between Brawley and 4 miles west of Westmorland were included in the improvement. This project completes the concrete pavement between El Centro and San Bernardino making a more adequate roadway for the heavy produce trucking which this artery between the fertile Imperial Valley and metropolitan Los Angeles is called upon to carry.

These two improvements in Imperial County were completed at a cost of \$647,200.

FOOTHILL BOULEVARD

An important improvement on the Foothill Boulevard between Los Angeles and San Bernardino is completed by the widening of the reinforced concrete girder bridge across the San Gabriel River near Azusa. This 1000-foot structure was widened to a clear roadway width of 42 feet, thereby relieving the "bottleneck" which had been formed at this point by the widening to 40 feet of the pavement on both sides of the old narrow bridge. The cost of this widening amounted to \$92,500.

CREST DRIVE

Nearly two miles of the scenic Crest Drive in the mountains just to the north of San Bernardino have just been graded on a new alignment at a cost of \$111,500. This portion extends from the pass, between Waterman Canyon and Devils Canyon, down Waterman Canyon. Bids were opened this month for oiling both this section and that section from Running Springs to Squirrel Inn of this popular recreational highway. The grading just completed has brought to modern standards of mountain highway construction the worst section of the road from San Bernardino to Big Bear Lake.

WORK AT BEACHES

In Orange County, the Portland cement concrete pavement on the heavily traveled Coast Boulevard has been widened from 20 feet to 30 feet between Sunset Beach and Newport Beach, and the roadbed widened to the full width of the right of way. The unusually wide roadbed is designed to give much needed parking space for the traffic using this road through the southern California beaches. A similar project is just starting between Seal Beach and Sunset Beach, and also construction on a new alignment of that portion of the route from Long Beach to Seal Beach. The improvement just completed cost \$215,800.

VENTURA BOULEVARD

On Ventura Boulevard in Los Angeles County, the old Liberty Grade has been straightened and given a much easier grade. This roadbed and pavement relocation and construction is located about five miles north of Calabasas on the Los Angeles to San Francisco Coast Route. The cost was \$78,400 and covered a distance of 1.2 miles.

MOJAVE HIGHWAY PROJECT

The steady improvement of the Mojave to Bishop Highway is noted by the completion of the 3.7 miles in Inyo County between Little Lake and Coso Junction. Costing \$88,200, this road has been graded to the standard 36-foot roadbed and surfaced with 20 feet of oil treated rock on crusher run base. This section of desert road through the Owens Valley is closely paralleled by the Owens branch of the Southern Pacific and the Los Angeles Aqueduct. In order to build the highway at Little Lake, it was necessary for the state to relocate and construct the railroad's roadbed for a short distance.

COAST ROUTE BETTERMENTS

Nearly ten miles of the Coast Route between Los Angeles and San Francisco have been reconstructed from Atascadero to Paso Robles. The work, costing \$296,200, consisted of straightening, leveling and widening the old road. A standard 20-foot asphalt concrete pavement with 8-foot shoulders has replaced the old 15-foot Portland cement concrete pavement, bringing another stretch of this important arterial to the standards of a modern high-speed highway.

Costing \$244,800, one of the largest bridges on the Coast Route has just been erected across the Salinas River at San Ardo in Monterey County. The old bridge, which was only 15 feet wide, was built by the county in 1907 and had become dangerous for the loads and traffic it was called upon to carry. The new structure consists of ten 100-foot steel deck truss spans and seventeen 37-foot reinforced concrete girder spans.

REDWOOD HIGHWAY WORK

The progress of the construction of the Redwood Highway on the new alignment from Sausalito to San Rafael in Marin County is noted by the completion of the overhead crossing across the tracks of the Northwestern Pacific Railroad at California Park, just to the south of San Rafael. This structure consists of one 150-foot steel truss span on concrete piers, one 41-foot and one 28-foot steel beam spans on structural steel bents and 686 feet of timber trestle on pile and frame bents, providing a clear roadway width of 44 feet, 8 inches. The grading on the section of this new routing of the popular Redwood Highway from Alto to San Rafael was completed some two months ago and the surfacing is now being placed so that by the time of the completion of the grade separation and bridge now under construction, this section will be ready for use by the public.

MOTHER LODE PROJECTS

The improvement of the Mother Lode Highway, which extends through the heart of the mining district of California's early history, is always a matter of widespread interest. The section of this all-year mountain road in Calaveras County for a mile and a half north and south of Calaveritas Creek has just been graded and surfaced with oil treated crushed rock, and a reinforced concrete girder bridge 240 feet long has been built across Calaveritas Creek. This portion of the old, narrow and crooked road with its many sharp breaks in grade has been replaced by a modern mountain highway with large radius curves and easy grades. The road construction and bridge cost \$71,100.

VICTORY HIGHWAY

In Placer and Nevada counties, the grading of the new alignment of the Sacramento to Reno highway over the 10.5 miles from Indian Springs to Soda Springs has just been completed. The placing of untreated crushed rock surfacing over this and the adjoining section from Emigrant Gap to Yuba Pass is now under way. This improvement, the grading portion of which cost \$303,000, will be greatly appreciated by the thousands of tourists using this route to Lake Tahoe and other mountain resorts.

PACIFIC HIGHWAY

A small improvement, but one of importance in closing a gap in the pavement, has been completed through Wheatland in Yuba County. This work was a realignment of a portion of the Pacific Highway between Sacramento and the Oregon line. The new alignment has, by diagonal routing, eliminated the right angle turns in approaching and passing through the town. A standard 20-foot Portland cement concrete pavement on a 36-foot roadbed was constructed at a cost of \$37,300. A similar project on this route is now under way at Lincoln in Placer County which will complete the pavement between Sacramento and Red Bluff.

CONSTRUCTION BIDS

Bids on construction opened during the same period include the following:

CASTAIC BRIDGE

In Los Angeles County, a reinforced concrete girder bridge, composed of seven 35-foot spans on concrete pile bents and concrete abutments with pile foundations and having a roadway width of 34 feet, is to be

built across Castaic Creek on the Los Angeles-Sacramento artery south of the Ridge Route. This new structure will be built on a new alignment at this crossing of Castaic Creek and will replace the existing 8-span through girder bridge which was built by the county some 15 years ago on an inferior line. Bids for construction of the approaches were opened on October 1, 1930.

BAY SHORE HIGHWAY

Rapid construction of the Bay Shore Highway is evidenced by the succession of projects which have been started under way in the past few months. Bids were opened on September 3d for the construction of a 60-foot graded roadbed over the four miles from Redwood City to Willow Road in San Mateo County. This will mark another stride in carrying this important alternate route down the peninsula from San Francisco to San Jose. The termination of this project is Willow Road, which is the main connection between the Coast Route and the Dumbarton Bridge across the lower arm of the bay. In conjunction with the construction of this portion of this route will be the building of a subway under the tracks of the Southern Pacific Railroad's Dumbarton cutoff. This structure, however, will be built under a separate contract.

Two more projects on this route have also been advertised during the past four weeks. One calls for the paving with Portland cement concrete 40 feet wide from the northerly city limits of South San Francisco to the underpass under the Southern Pacific's main line tracks in South San Francisco, and the other will be the placing of a bituminous treated surface 42 feet wide on the recently constructed graded roadbed between San Mateo and Redwood City. This last project will give a graded and surfaced highway over the 20 miles from San Bruno avenue in San Francisco to Redwood City.

The total cost of these three projects will be approximately \$320,000.

MOTHER LODE BIDS

The further improvement of the Mother Lode Highway is noted by the opening of bids for the construction of the 4.3 miles from Amador City to Martell in Amador County. This improvement will connect with the recently constructed section from Drytown to Amador City and will pass through the interesting old mining town of Sutter Creek. The roadbed will be 24 feet wide and will be surfaced with 20 feet of untreated crushed gravel or stone. This rapid development of the Mother Lode Highway is opening to the tourist an all-year mountain road through a country rich in relics of early California history.

County Reports on State Highway Projects

COLUSA COUNTY

Grading of 13 miles of new state highway, between Bear Creek and five miles west of Williams, on the Ukiah-Tahoe Highway under contract by R. G. Le Tourneau, is progressing very satisfactorily. E. L. Evans is resident engineer in charge of the work, which is about 35 per cent complete.

Grading of 39-foot roadbed between Williams and Maxwell, under contract by Fredrickson-Watson Con-

struction Co., is progressing favorably. C. F. Woodin is resident engineer in charge of the work, which is about 82 per cent complete.

Proposals will be received September 24 for constructing a gravel subbase for ultimate Portland cement concrete between the above limits.

Proposals will be received October 1 for construction of property fence between Bear Creek and 8 miles west of Williams.

EL DORADO COUNTY

Construction of a new roadbed between Bay View Rest and one mile north of Eagle Falls is under contract by Nate Lovelace. The mountainous country through which the route is projected necessitates a large volume of roadbed retaining wall. The wall is being constructed of selected material obtained along the work. W. G. Timney is resident engineer in charge of the work, which is about 82 per cent complete. It is expected that the contract will be finished this year.

A contract for applying 6.2 miles of bituminous surface treatment between Fresh Pond and 3 miles east of Riverton was awarded to F. C. Adams of Angels Camp on August 19, 1930. The contractor is assembling a rock crushing plant at a local gravel pit, and expects to begin applying the treatment in a few days. J. G. Meyers has been appointed resident engineer.

Proposals were received September 24 for grading and surfacing 1.7 miles between Clark's Corner and Placerville. The work includes the construction of a reinforced concrete bridge across Hangtown Creek. The new construction will be over new right of way, using latest standard grade and alignment.

GLENN COUNTY

The concrete paving project between Logandale and Willows, under contract by Basich Bros. Construction Co., was begun the latter part of May. The pavement has been completed and very good performance for this type of work was obtained. The contractor laid 11,465 cubic yards of concrete in 28 days. The average daily output was about 417 cubic yards. The maximum amount placed a day was 450 cubic yards.

Very good test reports from the laboratory have been received and the finished surface is up to the standard for smoothness. E. J. L. Peterson is resident engineer in charge of the work, which is about 92 per cent complete.

LAKE COUNTY

From Abbott Mine to Bear Creek, Colusa County, the construction of a new 24-foot graded roadbed is one-third finished. Work is on schedule, and, at the present rate of progress, will be completed by the early part of next year. E. L. Evans is resident engineer in charge of the work.

MONTEREY COUNTY

The bridge across the Salinas River at San Ardo is complete. Ben C. Gerwick was the Contractor under the supervision of the Bridge Department.

Progress is being made on the bridge across the Salinas River at Bradley. H. E. Doering is the Contractor under the supervision of the Bridge Department.

The timber bridge across Alder Creek on the San Simeon-Carmel Highway has been completed. The Dean Construction Co. was the Contractor under the supervision of the Bridge Department.

Two convict camps are maintained on the San Simeon-Carmel Highway. Camp No. 22 at Willow Creek has a crew of eighty men, and Camp No. 18 at Little Sur has a crew of sixty men.

The new camp at Willow Creek is being beautified by convicts in their spare time, and is already one of the most attractive camps in the state. Free men's

quarters have been provided at Spruce Creek about three miles south of Willow Creek. Surveys and plans are in progress for extending the work of both camps.

PLACER COUNTY

Contractor N. M. Ball began grading and paving with Portland cement concrete through the town of Lincoln on August 13, 1930. A 36 to 50-foot grade, carrying a 20-foot pavement on improved alignment, will replace the present narrow 15-foot pavement. J. D. Greene is resident engineer and reports the work about 10 per cent complete. The anticipated date of completion is December 24, 1930.

A. Teichert and Son on September 10 completed the applying of a bituminous surface treatment between Roseville and Rocklin, under the supervision of Resident Engineer J. G. Meyers.

Construction began September 2, 1930, by the T. M. Morgan Paving Co. for the grading of a 36- and 48-foot roadbed and the driving of a highway tunnel that will eliminate from the highway system the present steep grade and crooked routing through the town Newcastle. Under this contract, the roadbed will be surfaced with oil treated crushed gravel or stone, and is designed to serve as a temporary traffic surface and as a base for the prepared Portland cement pavement that will be placed in the near future. James Trask has been appointed resident engineer. Work will be completed in May, 1931.

PLACER AND NEVADA COUNTIES

Grading of about 93 miles of highway between Airport and Indian Springs, a part of the Dutch Flat-Donner Lake wagon road, by T. E. Connolly, is being completed as rapidly as possible to permit the placing of crushed stone surfacing, which will be placed by Tieslau Bros. on the entire length of the new grade. R. A. Burns is resident engineer in charge of the work.

SAN BENITO COUNTY

Surveys are nearly complete for the elimination of the San Juan Grade between Salinas and the San Benito River. This line has been located in a position that will preserve the natural beauty of Pineate Rocks, along the route. The project is located in San Benito and Monterey counties.

SAN LUIS OBISPO COUNTY

Work is complete on the reconstruction of the Coast Highway between the Santa Maria River and Los Berros Creek. This is a 20-foot Portland cement concrete pavement on a 36-foot roadbed. J. F. Knapp was the Contractor.

Bids were received on October 8th for the construction of a 20-foot concrete pavement across the bed of the Santa Maria River. This is a dry weather detour around the through steel truss bridge, one span of which collapsed on June 10, 1930. The wrecked span will be replaced by a temporary trestle to carry traffic during high water.

On the Coast Highway, between San Luis Obispo and Cuesta Grade, the road is being reconstructed with a 36-foot roadbed and a 20-foot Portland cement concrete pavement. The Cornwall Construction Company is Contractor.

On the Cholame lateral, between the Sacramento Ranch and the Kern County line, a seal coat is being applied to the existing bituminous macadam. Fred Nightbert is the Contractor.

Plans have been prepared for the reconstruction of the Coast Highway between Paso Robles and the

Monterey County line, a distance of about ten miles.

Surveys are in progress for the reconstruction of the portion of the Carmel-San Simeon Highway from San Simeon to Cambria.

SANTA BARBARA COUNTY

Progress is being made on a reinforced concrete bridge across Nojoqui Creek on the Coast Highway. This is located about 1½ miles south of Buellton. Silveria and Robbins are the contractors under the supervision of the Bridge Department.

On the Cuyama lateral from the second crossing of the Cuyama River to the Kern County line, a distance of about thirty-eight miles, the road is being surfaced with crusher run base and oiled rock surface, twenty feet in width. The Lang Transportation Company is Contractor. A portion of this project is located in San Luis Obispo County.

Work is complete on the reconstruction of the Coast Highway between Zaca and Wigmore. The Cornwall Construction Co. was the Contractor.

YOLO COUNTY

Construction is in progress for grading and paving with asphalt concrete 5.8 miles of state highway between Bretona and Dunnigan. F. R. Baker is resident engineer.

YUBA COUNTY

A 20-foot Portland cement concrete pavement through Wheatland has been completed by C. W. Wood, the contractor. J. D. Green was resident engineer in charge of the work.

LIST OF HIGHWAY BIDS AND AWARDS

For September

BUTTE COUNTY—Between north city limits, Chico, and northerly county boundary, 5 miles pit run gravel borders. Dist. III, Rt. 3, Sec. D. Hemstreet & Bell, Marysville, \$6,000; Chas. A. Howard, Richmond, \$5,910; F. J. Chesson, Yuba City, \$6,000. Contract awarded to C. Mankel, Sacramento, \$4,470.

COLUSA COUNTY—Between Williams and Maxwell, 8.1 miles to be surfaced with a gravel base. Dist. III, Rt. 7, Sec. C. Basich Bros. Const. Co., Torrance, \$111,470; Fredrickson-Watson Const. Co., & Fredrickson Bros., Oakland, \$127,800; Lilly, Willard & Biasotti, Stockton, \$130,640; Clyde W. Wood, Stockton, \$113,600; J. C. Compton, McMinnville, Oregon, \$120,700; V. R. Dennis Const. Co., San Diego, \$102,240; A. Teichert & Son, Inc., Sacramento, \$130,460; C. Mankel, Sacramento, \$121,410; Hemstreet & Bell, Marysville, \$122,120; A. Frederick Anderson, Oakland, \$119,990. Contract awarded to D. McDonald, Sacramento, \$95,140.

COLUSA COUNTY—Between 1 mile south of Arbuckle and Geneva, 5 miles of pit run gravel borders. Dist. III, Rt. 7, Sec. A. Pereira & Reed, Tracy, \$6,180; A. Teichert & Son, Inc., Sacramento, \$6,720; Harms Bros., Galt, \$4,950; Hemstreet & Bell, Marysville, \$9,000; C. Mankel, Sacramento, \$5,580; Chas. A. Howard, Richmond, \$7,590; J. R. Reeves,

Sacramento, \$7,320; F. J. Chesson, Yuba City, \$5,130. Contract awarded to H. Sykes, Paterson, \$4,650.

EL DORADO COUNTY—Between Clark's corner and Placerville, about 1.7 miles to be graded and surfaced with untreated crushed gravel or stone. Dist. III, Rt. 11, Section C. W. H. Hanser, Oakland, \$94,512; Clark & Henery Const. Co., San Francisco, \$105,827; Contoules Const. Co., San Francisco, \$105,985; Larsen Bros., Galt, \$105,156; E. C. Coats, Sacramento, \$84,405; Granfield, Farrar & Carlin, San Francisco, \$100,171; Chlaris & Sutsos, San Francisco, \$92,463; George Polock Co., Sacramento, \$96,216; A. Teichert & Son, Inc., Sacramento, \$99,823; Adams Const. Co., Angels Camp, \$92,252; Finnell Co., Inc., Sacramento, \$120,302; J. M. De Luca, Oakland, \$104,551; Hemstreet & Bell, Marysville, \$90,825; Kern & Kibbe, San Francisco, \$98,403. Contract awarded to C. Emil Force, Piedmont, \$83,909.

LOS ANGELES COUNTY—Between Tunnel Station and Santa Clara River Bridge, 8.6 miles, heavy fuel oil to be furnished and applied to shoulders. Dist. VII, Rt. 4, Sec. F. Orange County Refining Co., Los Angeles, \$5,233; Square Oil Co., Inc., Los Angeles, \$5,348; Calif. Road Oil Service Co., Wilmington, \$5,462; Leonard C. Pulley, Long Beach, \$5,615; Gilmore Oil Co., Ltd., Los Angeles, \$61,112. Contract awarded to G. M. Duntley, Los Angeles, \$4,469.

LOS ANGELES COUNTY—Reinforced girder bridge across Castaic Creek about one-half mile north of Castaic Junction consisting of seven 35-foot spans on concrete pile bents and concrete abutments with pile foudns. Dist. VII, Rt. 4, Sec. A. M. H. Slocum, Pasadena, \$36,219; George J. Ulrich Const. Co., Modesto, \$35,695; Gist & Bell, Arcadia, \$35,800; R. R. Bishop, Long Beach, \$37,700; Byerts & Dunn, Los Angeles, \$38,643; R. H. Travers, Los Angeles, \$32,847; Oberg Bros., Los Angeles, \$32,166; A. R. Bodenhamer, Carpinteria, \$34,841. Contract awarded to Carpenters Bros., Inc., Beverly Hills, \$31,149.

MENDOCINO COUNTY—Erection and completion of a maintenance station at Ukiah. Dist. IV, Rt. 1, Sec. C. Chas. Swanfelt, Ukiah, \$14,554; McCarthy-Johannus, San Francisco, \$13,248; Crawford & Baker, Ukiah, \$16,781; Chas. W. Gibson, Ukiah, \$13,564; Spivock & Spivock, San Francisco, \$18,400; J. W. Cobby & Son, San Francisco, \$13,453. Contract awarded to Louis Halvorsen, Santa Rosa, \$13,166.

TRINITY COUNTY—Between westerly boundary and Burnt Ranch, about 0.8 mile to be graded. Dist. I, Rt. 20, Sec. C. W. C. Colley, Berkeley, \$36,774; Contoules Const. Co., San Francisco, \$44,098; Engelhart Paving & Const. Co., Eureka, \$37,980; Chigris & Sutsos, San Francisco, \$35,996; Finnell Co., Inc., Sacramento, \$59,800; Hemstreet & Bell, Marysville, \$32,017; J. M. De Luca, Oakland, \$43,070. Contract awarded to H. H. Boomer, San Francisco, \$31,476.

YOLO COUNTY—Between Cache Creek and Zamora, 5.9 miles of pit run gravel borders. Dist. III, Rt. 7, Sec. B. Pereira & Reed, Tracy, \$5,678; A. Teichert & Son, Inc., Sacramento, \$6,596; Hemstreet & Bell, Marysville, \$7,820; Chas. A. Howard, Richmond, \$5,610; C. Mankel, Sacramento, \$5,168; Chief Const. Co., Oakland, \$7,990; F. J. Chesson, Yuba City, \$4,624; J. R. Reeves, Sacramento, \$5,236; Leroy Kerr, Yolo, \$4,488. Contract awarded to Harms Bros., Galt, \$4,216.

Butler: "Sir, your wife has eloped in the car with the chauffeur!"

Doctor: "Dammit! Where will I find another like her; why I used to get twenty miles to the gallon out of the old crate."—Exchange.

ARCHITECTURAL AWARDS

For September

SAN DIEGO STATE TEACHERS COLLEGE—Contract for Electrical Service awarded to Electric Company of Los Angeles for \$8,844.

Contract for Service Connection awarded to W. H. Robinson of Los Angeles, \$25,676.

PRESTON SCHOOL OF INDUSTRY, Ione—Contract for General Work for Domestic Water Supply, awarded to Guth and Fox of Sacramento for \$8,376.

PACIFIC COLONY, Spadra—Contract for installation of Water Tube Boiler and Accessories, awarded to R. G. Meyler Corporation of Los Angeles for \$12,230.

WHITTIER STATE SCHOOL—Contract for installation of Water Tube Boiler and Accessories, awarded to R. G. Meyler Corporation of Los Angeles for \$13,170.

Correction—It was announced in the last issue that R. R. Jones Electric Company of South Pasadena was awarded contract for electrical work on the Kitchen and Commissary Buildings. This award has been made to the American Electric Construction Company of Los Angeles for \$2,714.

WATER APPLICATIONS AND PERMITS

Permits to appropriate water issued by the Department of Public Works, Division of Water Resources, during the month of September, 1930.

BUTTE COUNTY—Permit 3554, Application 6232. Issued to Division of Highways, Sacramento, September 5, 1930, for 0.025 c.f.s. from 2 unnamed springs in Sec. 24, T. 20 N., R. 4 E., M. D. M., for domestic purposes. Estimated cost \$150.

BUTTE COUNTY—Permit 3555, Application 6234. Issued to Division of Highways, Sacramento, September 5, 1930, for 0.025 c.f.s. from Cherokee Creek in Sec. 10, T. 19 N., R. 4 E., M. D. M., for domestic purposes. Estimated cost \$300.

LOS ANGELES COUNTY—Permit 3556, Application 6625. Issued to Geo. H. Lettau, Los Angeles, September 5, 1930, for 0.29 c.f.s. from seven unnamed springs, 1, 2, 3, 4, 5, 7 in Sec. 31, T. 6 N., R. 13 W., No. 6 in Sec. 1, T. 5 N., R. 14 W., S. B. M., for irrigation and domestic on 230 acres.

MONO COUNTY—Permit 3557, Application 6278. Issued to A. J. Warrington, Bridgeport, September 6, 1930, for 3 c.f.s. from Dog Creek in Sec. 16, T. 3 N., R. 25 E., M. D. M., for mining purposes. Estimated cost \$1,500.

SUTTER COUNTY—Permit 3558, Application 6248. Issued to C. Fred Holmes et al., Woodland, September 10, 1930, for 12.82 c.f.s. from East dredge cut of Sutter By-pass in Sec. 3, T. 12 N., R. 3 E., M. D. M., for irrigation on 725.67 acres. Estimated cost \$6,800.

SUTTER COUNTY—Permit 3559, Application 6531. Issued to C. Fred Holmes et al., Woodland, September 10, 1930, for 10 c.f.s. from East dredge cut Sutter By-pass in Sec. 19, T. 13 N., R. 3 E., and Sec. 3, T. 12 N., R. 3 E., M. D. M., for duck ponds.

SUTTER COUNTY—Permit 3560, Application 6582. Issued to C. Fred Holmes et al., Woodland, September 10, 1930, for 47.26 c.f.s. from East dredge cut of Sutter By-pass in Sec. 19, T. 13 N., R. 3 E., and Sec. 3, T. 12 N., R. 3 E., M. D. M., for irrigation on 1897.65 acres. Estimated cost \$15,000.

SIERRA COUNTY—Permit 3561, Application 6306.

Issued to G. de Bretteville, Venice, September 11, 1930, for 3 c.f.s. from 6 unnamed springs in Secs. 26 and 27, T. 21 N., R. 10 E., M. D. M., for mining purposes. Estimated cost \$250.

MONO COUNTY—Permit 3562, Application 6674. Issued to L. L. Alauzet, Los Angeles, September 15, 1930, for 200 g.p.d. from Rock Creek in Sec. 23, T. 4 S., R. 30 E., M. D. M., for domestic purposes. Estimated cost \$250.

SAN JOAQUIN COUNTY—Permit 3563, Application 6712. Issued to Frank Piccardo et al., Stockton, September 18, 1930, for 0.92 c.f.s. from San Joaquin River in Sec. 5, T. 1 S., R. 6 E., M. D. M., for irrigation and domestic purposes on 73.7 acres. Estimated cost \$3,000.

HUMBOLDT COUNTY—Permit 3564, Application 6524. Issued to F. A. Leach and F. D. Smith, Fortuna, September 18, 1930, for 0.54 c.f.s. from Eel River in Sec. 24, T. 1 N., R. 1 E., S. B. M., for irrigation on 42.6 acres. Estimated cost \$200.

EL DORADO COUNTY—Permit 3565, Application 6685. Issued to J. S. Goldie, Sacramento, September 19, 1930, for 400 g.p.d. from unnamed creek in Sec. 19, T. 11 N., R. 16 E., M. D. M., for domestic purposes. Estimated cost \$200.

RIVERSIDE COUNTY—Permit 3566, Application 6661. Issued to J. O. Blackburn, Hemet, September 19, 1930, for 0.005 c.f.s. from Bee Canyon Springs in Sec. 12, T. 5 S., R. 1 E., S. B. M., for irrigation and domestic on 5 acres. Estimated cost \$3,000.

EL DORADO COUNTY—Permit 3567, Application 6679. Issued to Sierra Camps, Inc., Berkeley, September 22, 1930, for 0.1 c.f.s. from Ralston Creek in Sec. 34, T. 12 N., R. 17 E., M. D. M., for recreation and domestic purposes. Estimated cost \$200.

FRESNO COUNTY—Permit 3568, Application 6684. Issued to Sherley De Vine, Dunlap, September 23, 1930, for 0.01 c.f.s. from unnamed spring in Sec. 4, T. 14 S., A. 27 E., M. D. M., for irrigation, domestic and stockwatering on 1 acre. Estimated cost \$250.

SAN BERNARDINO COUNTY—Permit 3569, Application 6592. Issued to John M. Willoughby, Los Angeles, September 23, 1930, for 0.5 c.f.s. from West Fork Dry Creek in Sec. 15, T. 3 N., R. 1 W., S. B. M., for irrigation and domestic on 40 acres. Estimated cost \$600.

MODOC COUNTY—Permit 3570, Application 6681. Issued to C. C. Jones, Cedarville, September 24, 1930, for 3 c.f.s. from Steamboat Creek in Sec. 10, T. 41 N., R. 16 E., M. D. M., for irrigation on 130 acres.

SAN BERNARDINO COUNTY—Permit 3571, Application 6663. Issued to Otto E. Kanka, Lucerne Valley, September 24, 1930, for 0.5 c.f.s. from 2 unnamed springs in Sec. 10, T. 3 N., R. 1 W., S. B. M., for irrigation and domestic on 80 acres. Estimated cost \$3,000.

SAN JOAQUIN COUNTY—Permit 3572, Application 5248. Issued to Banta Carbona Irrigation Dist., Tracy, September 25, 1930, for 40 c.f.s. from San Joaquin River in Sec. 34, T. 2 S., R. 6 E., M. D. M., for irrigation and domestic on 18,321.19 acres. Estimated cost \$334,000.

EL DORADO COUNTY—Permit 3573, Application 6626. Issued to El Dorado National Forest, Placerville, September 25, 1930, for 0.0019 c.f.s. from Hemlock Creek in Sec. 35, T. 12 N., R. 17 E., M. D. M., for domestic purposes. Estimated cost \$250.

EL DORADO COUNTY—Permit 3574, Application 6627. Issued to El Dorado National Forest, Placerville, September 25, 1930, for 0.0019 c.f.s. from Hemlock Creek in Sec. 35, T. 12 N., R. 17 E., M. D. M., for domestic purposes. Estimated cost \$200.

BUTTE COUNTY—Permit 3575, Application 6697. Issued to H. N. Dally, Magalia, September 26, 1930, for 2 c.f.s. from Middle Butte Creek in Sec. 34, T. 23 N., R. 3 E., M. D. M., for mining and domestic purposes. Estimated cost \$500.

SAN BERNARDINO COUNTY—Permit 3576, Application 6687. Issued to Stanley Visel, Los Angeles, September 27, 1930, for 446 g.p.d. from unnamed spring in Sec. 9, T. 2 N., R. 3 W., S. B. M., for domestic purposes. Estimated cost \$300.

SISKIYOU COUNTY—Permit 3577, Application 6619. Issued to John A. Foss, Hamburg, September 27, 1930, for 0.25 c.f.s. from Caroline Creek in Sec. 13, T. 46 N., R. 12 W., M. D. M., for irrigation of 20 acres. Estimated cost \$500.

SANTA CLARA COUNTY—Permit 3578, Application 6601. Issued to G. T. Letcher, San Jose, September 29, 1930, for 0.08 c.f.s. from unnamed spring in Sec. 10, T. 7 S., R. 3 W., M. D. M., for irrigation and domestic purposes.

Applications for permit to appropriate water filed with the Department of Public Works, Division of Water Resources, during the month of September, 1930.

LOS ANGELES COUNTY—Application 6785. B. F. Porter Estate (a corporation), 58 Sutter St., San Francisco, for 0.50 c.f.s. from Mormon Canyon Creek tributary to Browns Canyon thence San Fernando Valley to be diverted in Sec. 32, T. 3 N., R. 16 W., S. B. E., and M., for domestic and irrigation of 40 acres. Estimated cost \$2,000.

SHASTA COUNTY—Application 6786. August L. Cox and W. E. Winston, c/o J. P. Kelly, 605 10th St., Sacramento, for 0.93 c.f.s. from Nelson Creek tributary to Pit River to be diverted in Sec. 29, T. 37 N., R. 1 E., M. D. M., for irrigation and domestic purposes. Estimated cost \$1,200.

HUMBOLDT COUNTY—Application 6787. C. M. Salyer, Salyer, Trinity County, for 50 c.f.s. from Madden (sometimes called Campbell) Creek tributary to South Fork of Trinity River to be diverted in Sec. 20, T. 6 N., R. 5 E., H. M., for mining purposes. Estimated cost \$91,000.

TRINITY COUNTY—Application 6788. Mrs. Chas. H. Miller, Chico, for 600 g.p.d. from unnamed spring tributary to S. Fk. Trinity River to be diverted in Sec. 19, T. 1 S., R. 8 E., H. M., for domestic purposes. Estimated cost \$600.

CALAVERAS COUNTY—Application 6789. Lloyd B. Frenshel, 929 N. Eldorado St., Stockton, for 500 g.p.d. from Big Meadow Creek tributary to N. Fk. Stanislaus River to be diverted in Sec. 32, T. 7 N., R. 17 E., M. D. M., for domestic use.

BUTTE COUNTY—Application 6790. Edward Steadman, Oroville, for 3 c.f.s. from Feather River tributary to Sacramento River to be diverted in Sec. 27, T. 18 N., R. 3 E., M. D. M., for domestic and irrigation on 253.117 acres. Estimated cost \$8,000.

SIERRA COUNTY—Application 6791. William F. Bickel, Palace Hotel, San Francisco, for 25 c.f.s. from Goodyear Creek tributary to N. Fk. Yuba River to be diverted in Sec. 9, T. 20 N., R. 10 E., M. D. M., for mining purposes.

INYO COUNTY—Application 6792. A. Z. Borden & James Brown, Skeleton Mining Co., c/o James Brown, 7712 Hampton Ave., Hollywood, for 0.65 c.f.s. from 4 springs tributary to Emigrant Canyon thence Death Valley to be diverted in Secs. 31 and 32, T. 7 N., R. 44 E., M. D. M., for mining, milling and domestic use. Estimated cost \$1,000.

KERN COUNTY—Application 6793. J. R. Blanco, Maricopa, for 720 g.p.d. from unnamed spring tributary to Stork Creek, thence Kern River to be diverted in Sec. 36, T. 28 S., R. 30 E., M. D. M., for stock-water purposes.

MONTREY COUNTY—Application 6794. Stuart Haldorn, c/o Agnew & Boekel, Attys., Federal Reserve Bank Bldg., San Francisco, for 2 c.f.s. from Higuera Creek tributary to Sur River to be diverted in Sec. 24, T. 19 S., R. 1 E., M. D. M., for power purposes. 20 theoretical horsepower to be developed.

MONTREY COUNTY—Application 6795. Stuart Haldorn, c/o Agnew & Boekel, Attys., Federal Reserve Bank Bldg., San Francisco, for 0.2 c.f.s. from Higuera Creek tributary to Sur River to be diverted in Sec. 24, T. 19 S., R. 1 E., M. D. M., for irrigation and domestic on 10 acres.

HUMBOLDT COUNTY—Application 6796. State of California, Department of Public Works, Division of Highways, Sacramento, for 0.0015 c.f.s. from unnamed spring tributary to S. Fk. of Eel River to be diverted in Sec. 28, T. 2 S., R. 3 E., H. M., for recreational purposes. Estimated cost \$250.

EL DORADO COUNTY—Application 6797. Gertrude E. White, Woodland, for 200 g.p.d. from Forni Creek tributary to S. Fk. American River to be diverted in Sec. 24, T. 11 N., R. 16 E., M. D. M., for domestic purposes. Estimated cost \$50.

SIERRA COUNTY—Application 6798. Kate Hardy Mining Co., c/o R. F. Taylor, Downieville, for a total of 0.2 c.f.s., 0.1 from each of 2 unnamed ravines tributary to Woodruff Creek, thence N. Fk. Yuba River to be diverted in Sec. 19, T. 19 N., R. 10 E., M. D. M., for mining and domestic purposes. Estimated cost \$650.

TUOLUMNE COUNTY—Application 6799. Oakland Piedmont Council, Boy Scouts of America, 221 Thayer Bldg., Oakland, for 0.1 c.f.s. from Middle Fk. Tuolumne River tributary to Tuolumne River to be diverted in Sec. 15, T. 1 S., R. 13 E., M. D. M., for recreational and domestic purposes. Estimated cost \$1,560.

PLUMAS COUNTY—Application 6800. S. E. Colburn & A. E. Banks, c/o S. E. Colburn, Crescent Mills,

for 1.0 c.f.s. from unnamed stream tributary to Indian Creek, thence N. Fk. Feather River to be diverted in Sec. 35, T. 26 N., R. 9 E., M. D. M., for power and domestic purposes. Estimated cost \$2,000.

EL DORADO COUNTY—Application 6801. Frank La Montagne, Walter Kurtz & Carl Larsen, c/o Frank La Montagne, Antioch, for 600 g.p.d. from unnamed spring tributary to S. Fk. American River to be diverted in Sec. 29, T. 11 N., R. 16 E., M. D. M., for domestic purposes. Estimated cost \$30.

SAN JOAQUIN COUNTY—Application 6802. Western Pacific Railroad Co., c/o J. W. Williams, City Engr., 220 Montgomery St., San Francisco, for 0.885 c.f.s. from Potato Slough tributary to S. Fk. Mokelumne River to be diverted in Sec. 13, T. 3 N., R. 3 E., M. D. M., for industrial purposes. Estimated cost \$11,500.

EL DORADO COUNTY—Application 6803. May A. Sanborn, 547 Ralston St., Reno, Nevada, for 0.025 c.f.s. from Cox Creek tributary to S. Fk. American River to be diverted in Sec. 21, T. 11 N., R. 14 E., M. D. M., for domestic and fire protection.

MONTREY COUNTY—Application 6804. Fort Klamath Meadows Co., c/o C. N. Hawkins, Hollister, for 100 c.f.s. and 15 ac. ft. from Peach Tree Creek tributary to San Lorenzo Creek to be diverted in Sec. 12 (direct div.) T. 20 S., R. 10 E., M. D. M., (storage) Sec. 20, T. 20 S., R. 11 E., M. D. M., for irrigation. Estimated cost \$3,000.

MENDOCINO COUNTY—Application 6805. L. A. Howie, c/o A. L. Wenek, Atty., Ukiah, for 0.14 c.f.s. from Russian River (Redwood Valley Br.) tributary to Russian River to be diverted in Sec. 32, T. 17 N., R. 12 W., M. D. M., for irrigation and domestic purposes. Estimated cost \$1,000.

TRINITY COUNTY—Application 6806. John H. Dequay, 47 W. 44th St., New York City, for 4 c.f.s. from Scorpion Creek tributary to Trinity River to be diverted in Sec. 4, T. 37 N., R. 7 W., M. D. M., for power purposes. (45.45 h.p.)

MERCED COUNTY—Application 6807. El Nido Irrigation Dist., Bank of America Bldg., Stockton, 80 c.f.s. from (1) Deadman and (2) Dutchman Creek tributary to (1) San Joaquin River, (2) Deadman Creek to be diverted in Sec. (1) 26 and (2) 35, T. 8 S., R. 14 E., M. D. M., for irrigation and domestic purposes. Estimated cost \$135,000.

MONO COUNTY—Application 6808. Wm. Symons, Box 118, Laws, for 3 c.f.s. from an abandoned well tributary to Adobe Creek to be diverted in Sec. 29, T. 1 N., R. 30 E., M. D. M., for irrigation purposes.

SONOMA COUNTY—Application 6809. Albert P. Kozler, 1307 Webster St., San Francisco, for 0.037 c.f.s. from Porter Creek tributary to Mark West Creek and Russian River to be diverted in Sec. 14, T. 8 N., R. 7 W., M. D. M., for irrigation and domestic purposes. (23 acres). Estimated cost \$750.

DAM APPLICATIONS

AND APPROVALS

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources during the month of September, 1930.

MODOC COUNTY—Rye Grass Swale Dam No. 150. First National Bank of Alturas, Alturas, owner; earth fill, 8.8 feet above streambed with a storage capacity of 160 acre-feet, situated on Rye Grass Swale tributary to Canyon Creek, in Sec. 25, T. 41 N., R. 11 E., M. D. M., for storage purposes for irrigation use.

NEVADA COUNTY—Shady Creek Dam No. 312. Empire Mines, Inc., San Francisco, owner; gravity, 12.3 feet above streambed, situated on Shady Creek tributary to South Yuba River in Sec. 15, T. 17 N., R. 8 E., M. D. M., for diversion purposes for irrigation use.

NEVADA COUNTY—Pine Grove Dam No. 312-2. Empire Mines, Inc., San Francisco, owner; earth fill, 29 feet above streambed with a storage capacity of 250 acre-feet, situated on an unnamed creek tributary to South Yuba River in Sec. 19, T. 17 N., R. 8 E., M. D. M., for storage purposes for mining use.

INYO COUNTY—Horton Lake Dam No. 74. Round Valley Irrigation District, Bishop, owner; rock fill, 12 feet above streambed with a storage capacity of 20

acre-feet, situated on Horton Creek, tributary to Owens River, located in Sec. 23, T. 7 S., R. 30 E., M. D. M., for storage purposes for irrigation use. Estimated cost \$1,500.

SACRAMENTO COUNTY—Willow Hill Dam No. 453-2. Natomas Water Company, Sacramento, owner; earth fill, 16 feet above streambed with a storage capacity of 125 acre-feet, located in Sec. 12, T. 9 N., R. 8 E., M. D. M., for storage purposes for irrigation and mining use.

PLUMAS COUNTY—Grizzly Creek Dam No. 285. Clover Valley Lumber Company, Loyalton, owner; buttress, 30 feet above streambed with a storage capacity of 174 acre-feet, situated on Grizzly Creek, tributary to Middle Fork of Feather River in Sec. 20, T. 23 N., R. 14 E., M. D. M., for storage and diversion purposes for various uses.

SIERRA COUNTY—Lower Sardine Dam No. 294-4. E. A. & J. O. Hayes, San Jose, owner; wood, 6 feet above streambed with a storage capacity of 62 acre-feet, situated on North Fork of Yuba River, tributary to Yuba River in Sec. 9, T. 20 N., R. 12 E., M. D. M., for diversion purposes for power use.

SIERRA COUNTY—Summit Lake Dam No. 294-5. E. A. & J. O. Hayes, San Jose, owner; rock and earth fill, 6 feet above streambed with a storage capacity of 106 acre-feet, situated on North Fork of Yuba River tributary to Yuba River in Sec. 21, T. 21 N., R. 12 E., M. D. M., for storage purposes for power use.

RIVERSIDE COUNTY—Reynolds Slough Dam No. 523. Santa Ana River Development Company of Anaheim, owner; earth fill, situated on Mill Creek tributary to Santa Ana River, for storage purposes for recreation use.

Applications for approval of plans and specifications for construction or enlargement of dams filed with the State Department of Public Works, Division of Water Resources during the month of September, 1930.

STANISLAUS COUNTY—La Grange Dam No. 68-2. Turlock & Modesto Irrigation District, Turlock and Modesto, owner; gravity arch, 131 feet above streambed with a storage capacity of 3000 acre-feet, situated on Tuolumne River tributary to San Joaquin River in Sec. 16, T. 2 S., R. 14 E., M. D. M., for storage purposes for irrigation use. Estimated cost of enlargement \$7,500. Fees paid \$75.

MODOC COUNTY—Porter Dam No. 162. Pearl F. Porter, Alturas, owner; earth and rock fill, 22 feet above streambed with a storage capacity of 250 acre-feet, situated on a ditch tributary to Parker Creek in Sec. 12, T. 42 N., R. 13 E., M. D. M., for storage purposes for irrigation use. Estimated cost of enlargement \$750. Fees paid \$20.

LOS ANGELES COUNTY—Whittier Reservoir No. 4. Dam No. 13-2. City of Whittier, Whittier, owner; earth fill, 54½ feet above streambed with a storage capacity of 32.3 acre-feet, situated on a canyon tributary to San Gabriel River in Sec. 16, T. 2 S., R. 11 W., S. B. M., for storage purposes for municipal use. Estimated cost \$65,000. Fees paid \$650.

SAN BENITO COUNTY—Hawkins Dam No. 651. C. N. Hawkins, Hollister, owner; earth fill, 67 feet above streambed with a storage capacity of 1000 acre-feet, situated on Los Yubas Creek tributary to Pajaro River, located on Rancho Ausaymas, San Felipe, for storage purposes for irrigation use. Estimated cost of enlargement \$2,000. Fees paid \$30.

LOS ANGELES COUNTY—Pine Canyon Dam No. 19. City of Pasadena, Pasadena, owner; gravity, 265 feet above streambed with a storage capacity of 63,660 acre-feet situated on San Gabriel River, tributary to Pacific Ocean in Sec. 13, T. 1 N., R. 10 W., S. B. M., for storage purposes for municipal use. Estimated cost \$6,500,000. Fees paid \$10,250.

Applications for approval of plans and specifications for repair or alteration of dams filed with the State Department of Public Works, Division of Water Resources during the month of September, 1930.

MODOC COUNTY—Cummings No. 2 Dam No. 148-2. John O. Cummings, Alturas, owner; earth, situated on Rock Creek, tributary to Pit River in Sec. 25, T. 43 N., R. 11 E., M. D. M. Nature of repairs, pave spillways.

MODOC COUNTY—Cantrall Dam No. 140. Charlotte Cantrall, Alturas, owner; earth fill, situated on a ditch tributary to Pine Creek in Sec. 33, T. 42 N., R. 13 E., M. D. M.

MODOC COUNTY—James Porter Dam No. 142. James C. & Phear E. Porter, Alturas, owners; earth fill, situated on an unnamed drainage, tributary to Parker Creek in Sec. 1, T. 42 N., R. 13 E., M. D. M.

MODOC COUNTY—Crowder Dam No. 128. Lake Short Cattle Company, Davis Creek, owner; earth fill, situated on Franklyn Creek tributary to North Fork of Pit River, in Sec. 7, T. 44 N., R. 14 E., M. D. M.

MODOC COUNTY—Kelley Dam No. 152. Kelley & Meckfessel, Davis Creek, owners; earth fill, situated on tributary of Canyon Creek tributary to Pit River in Sec. 6, T. 41 N., R. 11 E., M. D. M.

MODOC COUNTY—Dannhauser Dam No. 161. Weber & Moffitt, Alturas, owner; earth fill, situated on a ditch tributary to Pit River in Sec. 8, T. 41 N., R. 13 E., M. D. M.

MODOC COUNTY—Upper Pasture Dam No. 161-2. Weber & Moffitt, Alturas, owner; earth fill, situated on Yankee Jim Slough tributary to Pit River in Sec. 3, T. 41 N., R. 13 E., M. D. M.

MODOC COUNTY—Nelson Spring Dam No. 137. J. D. Flournoy, Likely, owner; earth fill, situated on Nelson Spring tributary to Pit River in Sec. 33, T. 40 N., R. 12 E., M. D. M.

ALPINE COUNTY—Lower Blue Lake Dam No. 97-62. Pacific Gas & Electric Co., San Francisco, owner; earth fill, 43 feet above streambed with a storage capacity of 4130 acre-feet, situated on Blue Creek for storage purposes for power use.

LASSEN COUNTY—Fleming Dam No. 241. Richard Casseleas, Wendell, Lassen County, owner; earth, situated on unnamed drainage tributary to Ash Creek in Sec. 6 T., 37 N., R. 11 E. M. D. B. and M.

ALPINE COUNTY—Twin Lakes (American) No. 97-59. Pacific Gas & Electric Company, San Francisco, owner; arch dam, situated on branch of Silver Fork tributary to So. Fork American River in Sec. 22, T. 10 N., R. 17 E., M. D. B. and M.

SHASTA COUNTY—North Battle Creek Dam No. 97-96. Pacific Gas & Electric Company, San Francisco, owner; rock fill, situated on North Battle Creek tributary to Battle Creek in Sec. 20, T. 32 N., R. 3 E., M. D. B. and M.

MODOC COUNTY—Williams Dam No. 149. Sheldon Potter, San Francisco, owner; rock dam in Sec. 29, T. 43 N., R. 9 E., M. D. B. and M.

MODOC COUNTY—Duncan Dam No. 149-2. Sheldon Potter, San Francisco, owner; earth dam located in Sec. 33, T. 43 N., R. 9 E., M. D. B. and M.

MODOC COUNTY—Jacks Swamp Dam No. 149-3. Sheldon Potter, San Francisco, owner; rock dam, situated in Sec. 28, T. 43 N., R. 10, M. D. B. and M.

LASSEN COUNTY—Caribou Lake Dam No. 234. J. A. Bennett, Chico, owner; tributary to Susan River in Sec. 34, T. 31 N., R. 7 E., M. D. B. and M.

MODOC COUNTY—Kelley & Greiner Dam No. 133. L. McHugh & Geo. L. Dewey, Alturas, owners; earth and rock dam.

PLANS APPROVED

Plans and specifications for the completion, enlargement or construction of dams approved by the State Department of Public Works, Division of Water Resources during the month of September, 1930.

SOLANO COUNTY—Swanzey Dam No. 443. California and Hawaiian Sugar Refining Corp., San Francisco, owner; earth dam, 55 feet above streambed with a storage capacity of 107 acre-feet, located in Sec. 30, T. 3 N., R. 3 W., M. D. B. and M. For balancing purposes, for industrial use.

Plans for the repair or alteration of dams approved by the Department of Public Works, Division of Water Resources during the month of September, 1930.

PLACER COUNTY—Kelley Lake Dam No. 97-24. Pacific Gas & Electric Company, San Francisco, owner; earth dam situated on Six Mile Valley tributary to North Fork American River in Sec. 25, T. 17 N., R. 12 E., M. D. B. and M.

ALPINE COUNTY—Twin Lakes (Electra) Dam No. 97-69. Pacific Gas & Electric Company, San Francisco, owner; earth dam situated on a small creek tributary to North Fork Mokelumne River in Sec. 25, T. 9 N., R. 18 E., M. D. B. and M.

ALPINE COUNTY—Upper Blue Lake Dam No. 97-70. Pacific Gas & Electric Company, San Francisco,

owner; earth dam situated on Blue Creek tributary to North Fork Mokelumne River in Sec. 18, T. 9 N., R. 19 E., M. D. B. and M.

ALPINE COUNTY—Lower Blue Lake Dam No. 97-62. Pacific Gas & Electric Company, San Francisco, owner; earth dam situated on Blue Creek tributary to North Fork Mokelumne River in Sec. 30, T. 9 N., R. 19 E., M. D. B. and M.

MODOC COUNTY—Crowder Dam No. 128. Lake Shore Cattle Company, Davis Creek, owner; earth dam situated on Franklyn Creek tributary to North Fork Pit River in Sec. 7, T. 44 N., R. 14 E., M. D. B. and M.

MODOC COUNTY—Kelley Dam No. 152. John Kelley and Gus Mockfessel, Davis Creek, owner; earth dam situated on creek tributary to Canyon.

MODOC COUNTY—Upper Pasture Dam No. 161-2. Weber and Moffitt, Alturas, owner; earth dam situated on Yankee Jim Slough tributary to Pit River in Sec. 3, T. 41 N., R. 13 E., M. D. B. and M.

MODOC COUNTY—Cummings Reservoir No. 2, No. 148-2. J. W. Cummings Estate, Alturas, owner; earth dam situated on Rock Creek tributary to Pit River in Sec. 25, T. 43 N., R. 11 E., M. D. B. and M.

MODOC COUNTY—Nelson Spring Dam No. 127. J. D. Plournoy, Likely, owner; earth dam situated on Nelson Spring tributary to Pit River in Sec. 33, T. 40 N., R. 13 E., M. D. B. and M.

MODOC COUNTY—Dannhauser Dam No. 161. Weber & Moffitt, Alturas, owner; earth dam situated on ditch from Yankee Jim Slough tributary to Pit River in Sec. 8, T. 41 N., R. 13 E., M. D. B. and M.

MODOC COUNTY—Williams Dam No. 149. Sheldon Potter, San Francisco, owner; rock dam located in Sec. 29, T. 43 N., R. 9 E., M. D. B. and M.

MODOC COUNTY—Duncan Dam No. 149-2. Sheldon Potter, San Francisco, owner; earth dam located in Sec. 33, T. 43 N., R. 9 E., M. D. B. and M.

MODOC COUNTY—Jack's Swamp Dam No. 149-3. Sheldon Potter, San Francisco, owner; rock dam located in Sec. 28, T. 43 N., R. 10 E., M. D. B. and M.

LASSEN COUNTY—Caribou Lake Dam No. 234. J. A. Bennett, Chico, owner; earth dam situated on drainage tributary to Susan River in Sec. 34, T. 31 N., R. 7 E., M. D. B. and M.

LASSEN COUNTY—Fleming Dam No. 241. Richard Castaneda, Wendell, owner; earth dam situated on unnamed drainage tributary to Ash Creek in Sec. 6, T. 37 N., R. 11 E., M. D. B. and M.

AUTOING 25 YEARS AGO

How would you like to have an automobile that could make a trip from Los Angeles to Santa Barbara in a single day? This question may sound funny today, but it was asked in all seriousness 25 years ago in motordom when an endurance run was planned by the Automobile Club of Southern California and Los Angeles motoring enthusiasts.

The start was made from Los Angeles at 8 o'clock in the morning and it was expected the speedsters would arrive in Santa Barbara at 6 o'clock the same evening. This distance was 110 miles and only experienced motorists having high class cars attempted the stunt.

PANAMA CANAL ZONE—Engineers of the Panama Canal Zone have completed a survey for a highway across the Isthmus of Panama. The length of the road is 46 miles; the highest altitude reached 482 feet above sea level; number of bridges required, 46; number of culverts per mile, 10; estimated cost, \$6,000,000.

"Gosh," exclaimed the young doctor, looking at that car he was thinking, thinking, thinking, of buying, "the mere sight of it sets up violent cardiac disturbances, superinduces dryness of the palate, epiglottitis and larynx, brings on symptoms of vertigo and raises the diastolic blood pressure 20 centimeters."—*The Garageman.*

Traffic Safety Campaign Program for 1931 Told

Concentrating each month on a specific type of traffic law violation, a program for a continuous statewide effort during 1931 by the California Committee on Public Safety has been announced by Senator Arthur H. Breed, chairman of the committee. The committee is composed of representatives of forty organizations and state departments concerned with the traffic problem.

The success of the month to month campaigns which were begun last year, with each period devoted to a different phase of safe driving, has prompted the committee to formulate a program for another twelve months of activity along similar constructive lines. The program follows:

January—Failure to yield right of way at intersections.

February—Unlawfully passing standing street cars.

March—Failure to give required arm signals; failure to keep in the proper lane when turning; cutting in and other law violations when overtaking another motorist.

April—Excessive speed at intersections where view is obstructed.

May—Disobeying boulevard stop regulations.

June—Endangering safety of children at play; speed or inattention.

July—Railway stop signals (wig-wags).

August—Failure to keep to the right; "hogging the road."

September—Unlawful speed in school zones.

October—Inadequate brakes.

November—Illegal and glaring headlights.

December—Disobeying regulations for pedestrian protection.

While traffic authorities will intensify attention to certain enforcement provisions each month, there will be no let up in the general and systematic enforcement of all the laws.

SPEED LAWS ARE NOT SO NEW

At Boston, and in 1757—one hundred and seventy-three years ago—the board of "selectmen" passed an ordinance which read:

"Owing to the great danger arising oftentimes from coaches, sleighs, chairs and other carriages on the Lord's days, as people are going to or coming from the several churches in this town, being driven with great rapidity, and the public worship being oftentimes much disturbed by such carriages, it is therefore voted and ordered that no coach, sleigh, chair, chaise or other carriage at such times be driven at a greater rate than a foot-pace, on penalty to the master of the slave or servant so driving of the sum of 10 shillings."

STOP SIGN

Bridegroom—Step up, Bill, it's time to kiss the bride.

Bill—You're wrong, it's time to quit.—Exchange.

State Moves to Aid Unemployed

MOVING swiftly to assure maximum aid from the state to relieve unemployment conditions in California, B. B. Meek, director of the Department of Public Works, announced to the Governor's Council on October 28th that plans had been perfected by the California Highway Commission and Division of Highways whereby from 2000 to 3200 additional men will be given work during the winter months with maintenance crews and at labor camps to be established on the state highway system.

The California Highway Commission at its meeting on November 6th formally ratified the plans of the Division of Highways for the unemployment relief work, and set up a fund of \$1,000,000 to finance the work.

Following immediately upon Mr. Meek's announcement, the machinery of the Division of Highways was put into motion arranging for the enlargement of maintenance crews and selecting sites for the new camps and building housing accommodations for the men to be employed there.

BASIS OF CAMP SITE SELECTION

The sites for the new camps were determined by the following conditions:

First, adaptability for profitable use of a maximum of hand work and a minimum of machinery;

Second, adaptability for operation during the winter months;

Third, advantages that the locations offer for an even distribution of employment between the northern and southern sections of the state.

MAINTENANCE CREWS

Crews engaged in maintenance work in various parts of the state will be enlarged and approximately 1200 men employed in this manner in addition to those now engaged in maintenance operations.

The enlargement of the maintenance crews will enable relief to be afforded over a large section of California without necessity of providing housing accommodations for the men thus employed.

Commenting upon his first announcement, Director Meek further stated that the new employment will be confined strictly to bona fide residents of California, and that labor

B. B. MECK

will be employed through the free employment agencies operated by the State Department of Industrial Relations.

A wage of \$3 per day with board and lodging will be paid to the men in camps and \$4 a day to the men in maintenance crews who provide their own upkeep.

In working out the details of the plans for the new labor camps, the Division of Highways is having the full cooperation of Director Will J. French of the Department of Industrial Relations and his corps of assistants.

The Division of Highways will operate the camps in which the men will be housed and fed.

CAMP SITES

The camp sites thus far selected are as follows:

Feather River Lateral—Camp site at Rich in Plumas County; A. N. Lund, superintendent.

Carmel-San Simeon Highway—Camp site at Anderson Canyon in Monterey County south of the Big Sur; W. B. Albertson, superintendent.

Valley Route, Sacramento to Los Angeles—Camp site on Ridge Route alternate in Los

Angeles County; R. L. Thomas, superintendent.

Arroyo Seco Highway—Camp site at Arroyo Seco in Los Angeles County; A. N. George, superintendent.

Each camp will accommodate 250 men.

FOLLOWS POLICY

The operation of these camps is in accordance with the established policy of the administration to expand public works to the maximum during the present period of depression and unemployment. This policy during the past three years has been reflected in the largest state highway building program in the history of California. The new labor camps now being established are a further expression of this policy, and are intended to reduce distress from unemployment during the winter months as far as it lies within the ability of the state so to do.

The added work is being financed from savings made on contracts and money accumulated through the progressive reduction of overhead costs on state highway construction.

Commenting on the employment of these men as a means of assisting the labor situation in the state, Mr. Meek had the following to say:

"It is indeed gratifying to the Department of Public Works that it finds itself in a position to render substantial aid to the unemployed of California during the coming winter months. The fact that the work to be provided for this purpose is financed from the savings on contracts and from the reduction in overhead costs evidences the thrifty manner with which the Division of Highways has conducted its affairs.

"There is one further phase of this matter that will be of particular interest.

"Without the budget system governing state highway expenditures which was put in force for the first time during the first year of Governor Young's administration, it would be impossible to employ the 2000 additional men that it is now proposed to put at work on the state highway system. One of the by-products of the budget system, as it applies to state highways, has been the creation of a reserve of construction projects, capable of being drawn upon to provide employment in times of depression. The reason for this is that the budget is for all practical purposes a program for highway construction prepared in advance for a two-year period. The preparation of such a program requires that the basic engineering on projects, proposed for inclusion in the program, be completed in advance of the presentation and adoption of the budget. It obviates the long delays for engineering investigation that frequently makes public works unavailable for relief to labor and business in times of stress. By reason of the fact that this basic engineering has been completed in advance on a large number of highway projects, California has been able to expand its highway building program in the past two years and is now able to further expand it, and to offer work to the public at a time when this work is most needed."

Value of Tourist Industry Told by U. S. Commerce Department

We hear much about the "tourist industry" being one of the state's largest industries. But outside of a general notion that "lots" of people visit California every year, and spend a good deal of money here, we seldom get any definite idea of just what the "tourist industry" means to the state in dollars and cents, says San Francisco *Business*.

Dr. Julius Klein, Assistant Secretary of the United States Department of Commerce, has made an exhaustive study of the way in which tourist money is diffused through the community. He arrives at the conclusion that it is distributed in the following percentages:

Six per cent goes for confectionery and sweets; 11½ per cent for garage and accessories; 10 per cent for transportation; 17 per cent for hotels or lodging, while 25 per cent is spent in retail stores. Restaurants receive about 20 per cent, while 8½ cents of the tourist's dollar goes for amusements or theaters.

Californians, Inc., estimated early in the spring of this year that 760,000 tourists would come to northern and central California during 1930. This estimate has now been borne out by the reports of the various transportation and tourist agencies, and the check on visiting pleasure cars at the various points of entry to the state.

Californians, Inc., also finds that the average tourist stays 5½ days, and spends, conservatively, \$7.50 per day. Using these figures and applying them to Dr. Klein's percentages, the organization finds that northern California's 1930 tourist crop is contributing about \$30,400,000 to the community in the following manner:

For hotel rooms or lodging.....	\$5,528,000
For restaurant meals and groceries.....	6,080,000
For clothes, novelties and souvenirs.....	7,600,000
For transportation, train, bus, steamer, plane.....	3,400,000
For tires, tubes, gasoline and oil.....	3,740,000
For movies, resort concessions, etc.....	2,584,000
For soda fountains, refreshments and candy bars.....	1,824,000

From all of which it appears that the tourist industry is indeed a profitable one for business in California. To be sure, no way has yet been determined of ascertaining accurately and exactly just how many tourists come to the state, and just how much they spend here. In the very nature of things, estimates on the subject can only be approximations, but all the evidence indicates that the calculations of Californians, Inc., are well within the bounds of probabilities, and for that matter are more than likely even too conservative.

Mrs. Bindler—"Is there any difference, Thomas, do you know, between a fort and a fortress?"

Mr. Binder—"I should imagine a fortress, my dear, would be more difficult to silence."—*Utica Press*.

Irrigation in California

By A. N. BURCH, Engineer, Irrigation and Irrigation Investigations, Division of Water Resources

IRRIGATION has been practiced in California from the time of the first Spanish settlements in 1769. However, the practice was not looked upon as of special importance until after the admission of California into the Union in 1850. In fact, for fifteen years after that period no striking progress in irrigation was recorded, but from 1865 to 1880 remarkable development was shown, particularly by the settlers in the southerly arid regions of the state. The area irrigated in 1880 is estimated at 300,000 acres, nearly all of which was located south of Madera County. All irrigation water was then supplied by private companies, by small mutual organiza-

difficulties which beset the irrigators. Many solutions of these problems were suggested. Among other things it was proposed that the federal government should purchase all water rights and canals in the state, construct storage and other necessary works and operate them for the sale of water to the landowners; or, if not the federal government, that the state should do all of these things. There were proposals to abolish riparian rights without compensation to riparian owners; and later it was contended that the state should adopt some comprehensive plan for developing all of the waters of the state and so adjust the rights to use such waters that the people as a

An irrigation scene in the Turlock Irrigation District

tions or by individually-owned works. Although diversion works and canals were generally crude and the use of water wasteful, the great benefit of irrigation in the production of crops was apparent. Even at that early day it was realized that the water supply was inadequate for the lands in the regions of the state where it was most needed, and there occurred rivalry and litigation and sometimes armed conflict over the rights to divert water and over the use of the water once it was taken from the streams.

Through all this contention the riparian doctrine, with the idea that water should be allowed to remain in the streams "unpolluted in quality and undiminished in quantity," loomed large among the multitude of other

whole would derive the greatest possible benefit therefrom. However, it took about forty years to get this idea over, and it was not until 1921 that the legislature made funds available for beginning investigations definitely looking toward the working out of such a plan. Meantime, while the status of water rights has not greatly changed, legislation has been enacted which has served to materially facilitate the irrigation movement and has resulted in a very large development of the irrigation resources of the state, until now over half of the cropped land in the state is irrigated and our irrigated land represents 23 per cent of all of the irrigated area in the United States.

While many water conservation measures have been passed, no other legislation has

(Continued on page 18.)

The Feather River Gateway Bridge

THE largest concrete arch bridge span in California will be opened to travel when on November 28th, the Feather River Gateway Bridge will be formally dedicated.

The new bridge, of which the great concrete arch is the dominating feature, is situated on the Feather River lateral, a short distance above Oroville. Its location is one of surpassing beauty. The bridge itself was designed to take full advantage of the commanding scenery of the Feather River at this point. Massive concrete piers with battered sides and recessed buttresses, together with the graceful sweep of the arch, so harmonize the bridge with its setting that the structure gives the impression of having grown there.

The people of Oroville have planned an impressive ceremony to mark the dedication of the structure in connection with the annual Orange and Olive Exposition held there. Dignitaries of both California and Nevada have been invited to be present upon the occasion.

THE COVER PAGE PICTURE

The picture on the cover page of California Highways and Public Works is that of Miss Florence Johnson, formerly of Oroville and now employed in the Division of Motor Vehicles, Department of Public Works. The picture is that of the Feather River Highway Gateway Bridge, which will be dedicated on November 28th at Oroville.

the importance of which is enhanced by the fact that the ceremony will mark not only the dedication of one of the most important bridges on the state highway system, but will also mark the opening to travel of the first link in the Feather River Highway. This highway when completed will be an all-year route over the Sierras into California, and will open up to travel one of the most interesting and scenic recreational areas of the state.

The bridge itself crosses both the Feather River and the tracks of the Western Pacific Railroad at a point four and one-half miles east of Oroville. The over all length of the bridge is 757 feet 6 inches. The main arch, now the largest concrete arch in California, has a span 270 feet in length, and 145 feet in height above the river. A twelve story building could be placed beneath the struc-

Scene on the Feather River lateral above the new bridge. This portion of the highway was built by convict labor.

ture. On either side of the main bridge are two 84-foot spans. The river gorge proper is of solid rock with a sheer drop of over 50 feet on the south bank. The two largest piers are 108 feet in height.

Approximately 6000 cubic yards of concrete and 283 tons of reinforcing steel went into the structure. Excavation of earth and rock amounted to 2400 cubic yards. Material was handled by a high line, set on 80 foot towers, 840 feet apart, carrying a movable carriage with which material could be lifted and placed at any part of the bridge. The structure cost \$170,000. Paul M. White of Santa Monica was the contractor, and I. O. Jahlstrom was the resident engineer for the Division of Highways. The bridge was designed by the Bridge Department of the Division of Highways.

The bridge connects with 4.06 miles of highway connecting the structure with the state highway system at Oroville. On its northern end it connects with 5.6 miles of highway built by a convict highway camp.

How the State Secures Stability, Durability and Economy in its Buildings

By D. C. WILLETT, Associate Structural Engineer, Division of Architecture

IN THE design of a building, the first and foremost factor is utility, that is, designing the building for the purpose for which it is to be used. Another very important factor is the esthetic. These two are products of the architect. The mechanical

comforts of the building are supplied by the mechanical and electrical engineers. Stability and durability are dependent upon the structural engineer, and upon the economy with which these are obtained, his efficiency is determined. In the past, mathematics played but little part in

D. C. WILLETT

design. What had been found by experience to be safe practice was handed down from one generation to the next. Progress through trial and error from one innovation to the next was necessarily slow; but scientific research has developed more or less accurate data on the properties of material, so that with our mathematical knowledge and skill the design of a structure is now an almost exact science, which takes into account all of the stresses to which the building may subsequently be subjected.

Approximately \$4,000,000 per year has been allotted to provide for the new buildings required by California's some sixty institutions. Between 40 and 50 per cent of this amount is spent in assuring the structural stability of the buildings.

The architect provides the structural engineer with plans and elevations of the proposed

building. In providing for the structural stability of the building, the engineer attacks his problem in the reverse. The builder starts from the foundation, while the engineer begins from the roof and works down, providing for the loads as they accumulate from the roof and from floor to floor.

The first problem is: What are the requirements laid down by the architect? Knowing these, what is the most economical material to use that will give the stability and durability required? Determined upon the materials, the engineer first provides for the actual load of the materials, known as dead load, a constant load that must be carried. To this he adds the varied loads that are intermediately applied, such as wind, snow, and other applied loads, known as live loads. The next and important problem is: What is the deflection or permissible sag allowed in the various structural members?

Knowing the load and the permissible deflection, size of the structural members can be obtained. The limitation of deflection, and not the loads, determines the size of a structural member in many cases. In this way, the size of each structural member of the building is determined until the footings are reached. Knowing the loads from the structure above, and by predetermining the bearing value of the soil on which the building is placed, the size of the footings can be determined. In designing a foundation, it is important that the loads be equally distributed over the entire area so that unequal settlement will not occur to crack the building.

Not only is it important that the most economical material be used, but the most economical layout and use of materials must be had. An engineer may be able to design and properly provide for the superimposed loads that are to be carried, and at the same time be far from an efficient engineer. To this the state is always on its guard. There are many ways in which the structure can be framed, but some are more economical than others. An economical design should also be a balanced design; that is, a design in which the strength of the various units is equal, considering the loads carried. A chain is no stronger than its weakest link. So it is

California's School for the Deaf, Berkeley. Kitchen and dining room of the primary unit is shown on the above picture. The building will be a reinforced concrete structure and will be erected in 1931.

Patrol Officers' Duties Cover Range From Saving Purses to Saving Lives

THE WIDE and varied service that the California Highway Patrol is called upon to give motorists of California is reflected in scores of appreciative letters received during the month by the Division of Motor Vehicles.

Excerpts from just a few of these letters follow:

Woman Saved From Drowning.

Captain J. E. Blake reports a summer occurrence as follows:

About 5:30 p. m., Officer Francis (Tony) Beard was hailed on the Donner Lake highway about three miles from Truckee by a man named Brown.

Officer Beard stopped his car and found that there was a woman drowning in Donner Lake. He immediately jumped from the car, dived into the lake and swam about 40 yards to the woman, Mrs. Leida Brown of Reno, who was going down for the second time. He grasped her and swam safely to shore.

This rescue was made by Officer Beard while in uniform, as he did not have time to remove any clothing.

Lost Purse Found.

From Santa Monica comes the following letter:

In July, 1926, I was journeying northward to Berkeley with my infant son and about nine miles north of King City I encountered engine trouble and also discovered I had left my purse at King City. Fortunately for me, Mr. Reinhold came along and not only made three attempts to phone to King City trying to locate my purse, but went two miles out of his way to procure water for the radiator of the car (which lack of water was causing the trouble). At the fourth farmhouse he visited he located a phone and succeeded in locating my purse.

Caution Brings Commendation.

An attorney of Los Angeles writes as follows:

I was stopped on the highway by your Traffic Officer No. 385, yesterday. He cautioned me for what he said was a trivial infraction of traffic law. On this point I disagreed with him, but that is not the purpose of writing this letter.

This officer was unusually courteous and gentlemanly. This so impressed me and the passenger I had in the car that I decided to let your office know that at least one motorist will take the time and trouble to compliment your traffic department and encourage your office and particularly Officer No. 385 in its policy of true law enforcement.

Hit and Run Driver Captured.

This letter is from a Hayward autoist:

I wish to commend the promptness with which Officer George Nardi, No. 242, of Sonoma, captured a hit and run driver who damaged my car on July 6th, endangering the lives of my passengers, the efficient manner in which he acted during the time, held the above driver in custody, and also the manner in which he officiated at the trial of those concerned.

Tire Change Brings Praise.

The following letter from Riverside is self-explanatory:

I was driving with another woman on the lonely road leading to San Juan Capistrano from San Juan Hot Springs. It was about 7 o'clock and very dark. We had a blowout, and while we were waiting there without either equipment or skill to fix it, and miles from a garage, two men came along. We asked them to send back help for us, but instead they stopped and changed the tire. They refused to take any money for the service, and when I asked their names one of them said he was Captain Meehan of Orange County.

Officer Proves Expert in Repairs.

A San Francisco attorney writes in as follows:

On Sunday, July 6, 1930, about 2:15 p. m., between Placerville and Folsom, about eight miles from Folsom, a party of four of us were traveling in an automobile, and by reason of motor trouble, were unable to proceed any further, and were unable to locate our trouble. The officer of the State Highway Patrol in that vicinity on duty, patrolling on a motorcycle, within a few minutes located and cured the motor trouble which had developed. The trouble was of an unique nature and something that would probably happen once in a lifetime.

Unfortunately, in the excitement of getting away, we neglected to obtain the officer's name or badge number, and can only describe him by his location at the particular time above mentioned.

Stolen Car Recovered.

A Long Beach autoist makes the following report:

Your patrolman, Mr. Geo. W. Peterkin, recently did such a wonderful job of recovering my automobile for me and catching the thieves that I want to send you a note telling you that he is a real fellow and understands his business thoroughly. He caught these fellows entirely on suspicion, having no report at all that the car had been stolen, and my car was returned to me immediately.

High School Cooperation.

The following letter is from G. J. Badura, principal of the Fortuna High School, to Mr.

(Continued on page 19.)

Auto License Renewal Period Approaches

BY FRANK G. SNOOK, Chief of the Division of Motor Vehicles

WITHIN a few days the Division of Motor Vehicles will be engaged in its annual task of renewing the licenses of more than two million motor vehicles.

The stage is all set for the task, which promises to be greater than in any previous year. Best available estimates at this time indicate there will have been from 80,000 to 100,000 more cars registered in California in 1930 than in 1929.

In order to provide faster service to the public as well as to "get the jump" on the job we will start receiving applications by mail, as we did last year, on December 1st. These applications will come directly to Sacramento where a large staff of clerks will sort them, type the certificates and put the plates in shape for mailing right after the holidays.

On December 15th we will throw open our counters at Sacramento and at our branch offices, located in Los Angeles, San Diego, Long Beach, Fresno, Oakland and San Francisco, and will receive direct applications for new plates.

Motorists making application in person will receive their license plates at once while certificates will be forwarded to them by mail at a later date.

During the height of the renewal season as many as 2000 persons will be employed. Fortunately for us we do not have to depend entirely on green help as past years have served to train a large number of persons who come in each year and assist us for the short period they are needed.

The task of handling so many license renewals in so short a time is one of great magnitude and must, of necessity, be attended with some confusion because the human element is involved.

It is our hope, however, to get through with a minimum of mistakes and if delay occurs in an occasional case we ask the indulgence of the public.

Under our law all licenses expire at midnight December 31st. Motorists are required to apply for a new license within fifteen days after that time.

January 15th will, therefore, be the "deadline" in making applications although those who can show they have made application are permitted by law to operate fifteen days more.

In addition to the service we ourselves will give, some 120 branch offices of the automobile clubs will assist us by distributing plates to their members. This work on the part of the clubs saves the state many thousands of dollars in overhead expense annually.

During this renewal period we probably will collect in excess of \$6,000,000, the major part of which will go back to the motorists in the form of better roads. California motorists certainly have little to complain of as our fees for registration are cheaper than any other state and the moneys collected all go for building and patrolling the roads and in paying the expenses of the division.

Fees for both pleasure and commercial vehicles are exactly the same as last year.

It is important to remember that all vehicles under 3000 pounds unladen pay a straight fee of \$3 whether used for pleasure or commercial purposes, this change having been effected by legislation which became effective last year.

Owners who have for any reason decreased or increased the weight of their vehicles are required to state the change in making application for license renewal.

We are encouraging the motorists to forward their applications by mail to Sacramento instead of appearing in person. We find it is not only easier and cheaper for us to handle such applications because of their volume but that it is a great accommodation to the motorist inasmuch as it saves him the time and annoyance of a special trip to a branch office where he may be required to stand in line for some time before he can receive service.

The importance of getting the applicant's present proper address is stressed constantly. The only application we require is the white certificate of registration mailed along with the fee. If the applicant has changed his address during the year and does not make the change on his certificate when he sends it in, his plates will go to the wrong address and he will be subjected to delay.

This point can not be stressed too much for every year thousands of motorists fail to observe this instruction.

Another point we have trouble over is getting the motorist who has paid off the contract on his car during the year to have the legal owner sign over the pink certificate to him.

In such cases we require a fee of \$1 for the transfer, in addition to the regular fee.

A few figures on our registrations may be interesting at this point. At this writing the only totals available are those of October 1st. These show a total of fee-paid registrations for the year to that date of 2,048,131 divided as follows: Automobiles, 1,897,807; solid tire trucks, 15,299; pneumatic tire trucks, 79,774; motorcycles, 8973; solid tire trailers, 9321; pneumatic tire trailers, 36,957.

Fee-paid registrations for 1929 totaled 2,026,868. Thus there was a gain for 1930, up to October 1st, of 21,263. Our estimate of 60,000 more for October, November and December would make the year's gain about 81,000.

This is not as large a gain as in previous years but considering general business conditions we regard it as very good.

THE HIGHWAY

From the trail I was but yesterday,
From jog and wiggle and hollow and hump,
From mud and dust and chuck and bump,
I've smoothed my form to the great Highway.

With a graceful sweep of line and grade,
With cut and fill to a figured plan;
Or leaping the gorge with a magic span
I challenge the best that man has made.

I glide through fields aglow with flowers—
Cheery fields where the warm sun smiles.
I thread the maze of forest aisles
Where Woo I Nymphs dance in elfin bowers.

I climb the peaks where lone crags dim
To purple mists with the Evening Star.
I crawl where the broad Stream gleams afar
From my eerie ledge on the canyon's rim.

I explore wide wastes of desert lands
Where the Rulers of Silence dwell
In grandeur more weird than the Lords of Hell
Could mould with myriad Demon hands.

I follow the shore of the majestic Sea,
Where a restless surge chafes the mighty bowl;
And all things merge with an Oversoul
In the vast dim sweep of Infinity.

I call men away from the toiling throng
And bear them afar on humming wheel,
That rings with a message all men feel
Where the open space breathes a wordless song.

It may be the thundering tread of War,
Or wheels of Pleasure, or wheels of Trade,
But there's no rival yet of things man-made
For a good Highway and a motor car.

—ANON.

DRAINAGE SUMPS

By E. EVERS, District Maintenance Engineer

In the San Joaquin Valley, traversed by the Golden State Highway, or State Route 4, are many sags or pockets with no natural drainage outlets, or regions of very slight gradient where irrigation systems have long been in operation, where a condition obtains by reason of which it would be very expensive and difficult to drain the highway by utilizing natural drainage channels.

In Tulare and also in Madera counties, a large measure of relief has been obtained by

View of sump.

constructing dry wells or drainage sumps. The standard sump is eight feet by four feet in plan, and in depth varies from eight feet to twenty-three feet. The depth to which they are carried depends on the tightness of the soil. It is very desirable to reach a coarse sand or gravel stratum which will be pervious. If satisfactory pervious material is not reached at a reasonable depth, the bottom is loosened with powder.

When a depth is reached which shows satisfactory material or beyond which it seems impracticable to excavate, the hole is filled with boulders or broken concrete of approximately uniform size ranging from first size to about twelve inches maximum dimension. The top may be finished off with crushed rock or gravel. In certain cases it is desirable to convey the water from the ditch to the center of the sump by pipe or other means, to prevent caving in of the sides and consequent sealing.

Of those installed in District VI, it is estimated that 10 per cent are complete failures, 40 per cent give results which are worth while, and the remainder give complete satisfaction.

Roadside Clearing on State Highways Pays Big Dividends in Fire Prevention

By M. B. PRATT, State Forester

THE roadside clearing program of the Division of Highways paid big dividends to the State of California this year. It was instrumental in preventing scores of fires in the state and in saving property owners many thousands of dollars in

M. B. PRATT

potential property damage to forests, grain fields and range.

This has been determined by means of a statewide survey just completed by the Division of Forestry through its rangers in all parts of the state.

Each ranger was requested to relate the benefits of roadside clearing in his particular district, the benefits that could be derived if other areas were cleared up, the number of fires that have started along the highway where roadside clearing has not been done, and the number of fires started where it has been done.

The replies were very enlightening. In 22 out of the 28 counties reporting there had not been a single fire this year along highways that had been cleared. In the remaining five counties there had been only seven fires along highways that had been burned.

COUNTIES WITH CLEAR RECORDS

The counties reporting no fires along cleared highways were: Mendocino, Sonoma, Yuba, Trinity, San Benito, Lassen, Tuolumne, San Diego, Siskiyou, Lake, Riverside, Amador, Madera, Tehama, Fresno, Butte, Napa; Santa Clara, Orange, San Luis Obispo, San Bernardino and Santa Cruz.

The five counties reporting fires along areas that had been burned were: Santa Barbara 2, Shasta 2, Tulare 1, Colusa 1, and Monterey 1.

ON UNCLEARED HIGHWAYS

In the counties reporting, a total of 89 fires swept over land adjoining highways that had not been cleared, as follows: Mendocino 1, Shasta 2, Sonoma 5, Yuba 7, Trinity 3, San Benito 6, Lassen 3, Tuolumne 4, Lake 6, Amador 2, Madera 1, Tehama 14, Colusa 8, Fresno 6, Butte 1, Monterey 1, Santa Clara 5, Orange 8 and San Luis Obispo 4.

This is a record of which not only the Division of Highways but the entire State of California may well be proud. To estimate the fire damage prevented by this method in dollars and cents would be an impossibility. But it is sufficient to say that the property saved was worth many, many times more than the state outlay involved in clearing the highways.

STATE PROTECTED

The writer can remember only a few years ago when California's State Highway Commission refused to do any roadside burning

Logging in the older days.

on the ground; that if a fire should get away from a crew the state didn't want to be held responsible for any damage it might do.

The present system of obtaining the consent of the owner before any burning is done along his property has proved to be a protection both to the state and to the owner.

FIRES CAUSED BY CARELESSNESS

Virtually all roadside fires are caused by cigarettes or matches carelessly tossed out of automobiles by motorists or their passengers. The roadside clearing program has nearly eliminated fires from this cause. It has also made it much safer and more convenient for

A highway slope cleared of inflammable material.

campers to park their cars along the roadside for lunch. In Colusa County ranger Charles D. Wilcher says the clearing of roadsides "is keeping down the star thistle, which is fast becoming a nuisance to crops in this valley."

SAN BERNARDINO FIGURES

Before the roadside clearing in San Bernardino County, there was approximately one fire to every 10 miles of highway in grass land, ranger A. T. Sharp reported. This year there has not been a single fire in that county where the highway was properly cleared, and this includes the Waterman canyon road, where more than 100,000 cars travel annually.

"One of the Motor Transit trucks was completely destroyed by fire," Sharp wrote, "on the Waterman Canyon road. This was within a high brush-covered area and no fire equipment was handy. Due to the clearing along

the highway the fire did not escape. Without the clearing it would have spread into the brush and caused considerable damage to the watershed."

TEHAMA COUNTY REPORT

In Tehama County, ranger R. H. Gossett reported, there have been no fires on either the west side highway south of Red Bluff or on the east side highway to the Butte County line. On other uncleared roads in the county there have been 14 fires to date.

EL DORADO COUNTY

Out of a total of 111 fires in El Dorado County, only one was started along state highways that were cleared, according to ranger W. C. Austin.

KERN HAS GRAPHIC STORY

Another outstanding example of the effectiveness of this clearing work may be found in Kern County, on the Bakersfield-to-Tehachapi lateral. In 1928 there were at least 12 roadside fires on this highway, reported ranger Harold P. Bowhay. In 1929 and 1930 the road was cleared, and thus far this year there has not been one fire reported.

ALONG REDWOOD HIGHWAY

How the giant redwoods along the famous Redwood highway have been protected from destruction was told briefly by ranger A. A. Wilkie of Sonoma County, who said: "Clearing that has been done on the Redwood highway in this county has held the fires down 100 per cent."

Before roadside clearing was done in Mendocino County, at least 25 per cent of the fires started along the highways, from campfires or discarded cigarettes. Since this work has been carried on, Inspector R. E. Roach reports the number has been reduced to almost nothing.

TESTIMONY FROM TAHOE-UKIAH ROUTE

The importance of continuing the highway clearing work on the scenic Tahoe-Ukiah route was stressed by ranger W. F. Sharp.

"This highway runs through a very dense growth of timber of about an average age of 40 years," he said. "This area has been logged off in the last few years and a great deal of the old slash is still on the ground, together with a very thick stand of small cedar understory which is about 6 to 8 feet high.

"I understand that the right of way along this highway is 600 feet wide for most of the way, so if we were able to clear only part of the roadside this winter it would be a still

(Continued on page 13.)

HOW THE STATE SECURES STABILITY, DURABILITY AND ECONOMY IN ITS BUILDINGS

(Continued from page 6.)

with a structure. In other words, it is a waste to design or build one unit stronger than necessary or twice as strong as another carrying corresponding loads.

STRUCTURAL MATERIALS

The many structural materials now used can be classed in four general groups, which are, timber, masonry, steel and concrete.

In the determination of the material that will be used in any building, consideration is given to the relative merits and demerits of the various materials named above, with particular reference to the use to which the building is to be put and any peculiar condition that may characterize the site. It is these conditions that determine the real cost of the material, and the economy of its use.

Without entering into the discussion of the relative strength or weakness of these materials, it might be well to add a word relative to concrete.

CONCRETE

Concrete differs from most of the other structural materials in that it must be manufactured at the job. Reinforced concrete has become a universal material in construction and is proving a very durable one even with the careless methods of construction. From a financial standpoint, speed is of prime importance to construction; but this demand for speed and time saving has resulted in careless working methods, thus reducing the strength of concrete. Physical characteristics of concrete are determined not only by the quality of the several materials which enter into it, but perhaps to a greater degree by the proportions in which the materials are mixed; for the proper proportioning of fine and coarse aggregates may double the strength. It is a matter of common experience that the old method of arbitrary selection in which fixed quantities of fine and coarse aggregates are mixed without regard to the size and grading of the individual materials, is far from satisfactory. Not only is it essential that the aggregates be properly graded and proportioned, but the proper amount of mixing water must be used. Tests have shown that "an increase of 13 per cent in the mixing water caused the same reduction in strength as if 33 per cent of the cement is omitted."

The aggregates, which form about 85 per cent of the structural material of a concrete building, are in cases obtained at or near the institutions. This tends to a greater economy of concrete.

The proper placement of the reinforcing in the concrete is another very important feature in concrete construction. Allowing the reinforcement of the average floor slab to be dropped one-half inch from the figures shown is equivalent to a reduction in the strength of the slab of approximately 30 per cent.

By the proper selection of the structural materials, the economical use of these materials, providing properly for the loads to be carried and by proper and intelligent inspection, eliminating the carelessness in construction, is the state provided with stable, durable and economical buildings.

ROADSIDE CLEARING ON STATE HIGHWAYS PAYS BIG DIVIDENDS IN FIRE PREVENTION

(Continued from page 12.)

greater step in the reduction of the present fire hazard, say about 100 feet on each side of the pavement, and another time by clearing another strip."

Dead trees and snags present another problem in highway clearing that deserves careful attention of everyone concerned, because they constitute not only a traffic hazard, but also an extremely dangerous fire menace.

NEED FOR SNAG REMOVAL

Through the courtesy of T. H. Dennis, maintenance engineer, it has been brought to our attention that there are some 2836 snags, by actual count, in Highway District Two.

It would cost approximately \$20,000 to dispose of the snags in this district, Mr. Comley estimates, and an additional \$30,000 to clean up slash and other debris in connection with this snag disposal along the highway.

The condition in the rest of California in the timbered areas is very similar to that of District Two. Although great strides are being made in cleaning up the highways, I am convinced that this is a phase of the work that should be given early attention.

It is hoped that funds may be made available for the purpose of cleaning up dead trees and snags as a further step in the splendid work that has thus far been completed by the Division of Highways in its roadside clearing program.

Tunneling for Highway Under Town

By RICHARD H. WILSON, Office Engineer, District III

ONE'S FIRST association with the word "tunnel" is a hole through a hill through which a railroad train may pass. However, with the present-day standards of highway improvement, the construction of tunnels has become a necessity to accommodate modern road traffic problems.

The latest highway development of this character is now under construction at Newcastle, in Placer County, where a tunnel, 531 feet long, is being driven under a portion of the town and incidentally under the main east-west line of the Southern Pacific Railroad.

Newcastle is located between Roseville and Auburn on State Route 17 and Government Route 40, which road, aside from its local importance, is a portion of one of the main transcontinental highways.

Newcastle is one of the original small towns established in California's early days when high speed automotive traffic was not even a dream. Situated on a high knoll as it is, its tortuous narrow streets lend themselves to most anything else than the condition expedient for boulevard construction, and the necessary widening and straightening would have practically wiped out the small city.

As the Southern Pacific Railroad must be crossed at this point, and is of such height as to allow the construction of an underpass, all other tentative locations, after careful weighing of such factors as cost, alignment, grade, and public convenience and safety, were abandoned in favor of the more direct route through the hill under the town and the railroad. A few of the salient features of a comparison between the present traveled way and the new location may be readily visualized by scanning the tabulation given below:

Comparison of present highway and highway under construction:

	Highway under construction	Present highway	Difference favoring new route
Length	6182 ft.	7606 ft.	1418 ft.
Total rise	145 ft.	219 ft.	74 ft.
Adverse grade	None	74 ft.	74 ft.
Minimum radius curve	1509 ft.	50 ft.	----
Maximum grade	5.12%	*8.00%	----
Minimum width roadway	46 ft.—	21 ft.	----
	30' in tunnel		
Total central angles in curvatures	71°	670°	599°

*2260 feet of present grade is 7.80% or greater.

In addition to the problems stated, the new location involved many local problems which necessitated a great deal of care and planning. The present water and sewer system of the town must be entirely changed and several houses moved; two county roads and the main ditch of the Pacific Gas and Electric Company had to be relocated so as to pass on the railroad sides of the tunnel portals.

Preliminary borings were taken and the elevation of the grade of the tunnel established so that its entire length is in solid granite. This established the elevation of the grade of the tunnel under the Southern Pacific tracks a depth of approximately 86 feet below the base of rail.

The roadway of the new section is normally 46 feet in width, narrowing to a paved 30 feet through the tunnel and heavy approach cuts with a three-foot sidewalk on either side. The center line clearance of the tunnel is 20 feet 9 inches.

Three types of lining will be used, the sections at the two ends and the section immediately under the railroad tracks being concrete and the balance being redwood timber lined, heavy and light types.

An electric lighting system is also to be installed, which should eliminate all hazards from that angle.

The actual cost of tunnel itself, including boring, lining concrete portals, lighting, and contingencies, is \$121,500, or approximately \$230 per lineal foot.

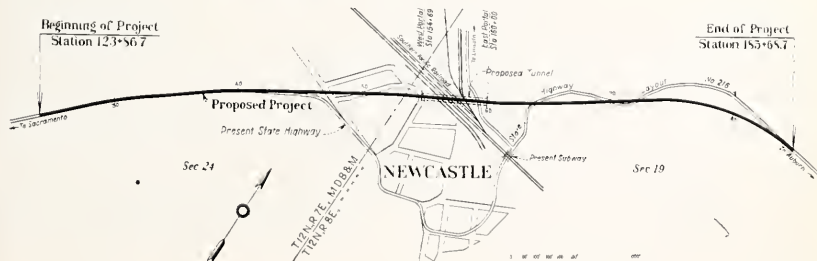

The total estimated cost of the project now under contract, 1.17 miles in length, is approximately \$225,000.

Work started on this project on September 2, 1930, and the date for completion is May 27, 1931.

The T. M. Morgan Paving Company is the contractor, C. H. Whitmore is district engineer, and J. W. Trask is resident engineer in immediate charge of the work under C. Cleman, district construction engineer.

THE SKETCH ON THE OPPOSITE PAGE

shows the new highway at Newcastle with its tunnel beneath the town. The lower map shows the beginning and ending of the project with reference to Newcastle.

Outdoor Christmas Trees For California's Highways

By JEAN SCOTT FRICKELTON

CALIFORNIA highways are winning fame throughout the nation as the "roads of Christmas-out-of-doors."

Not only are homes and public buildings transformed at Christmas time into the settings for scintillating outdoor living trees for everybody to enjoy, but our highways are becoming part of this general festive decoration plan, sponsored by an association of progressive and beauty-loving citizens.

Highway beautification has long been a popular cause, but stimulated by the Outdoor Christmas Tree Association of California, ambitious plans are now being made by many communities throughout the state which are destined to result in the planting of many miles of stately Christmas trees along the highways.

When the last outdoor Christmas tree campaign was launched for the 1929 holiday season, Clarence F. ("Sandy") Pratt of San Francisco, state president and founder of the association, interested the city of San Francisco in decorating and illuminating a "Mile of Living Christmas Trees" in the Panhandle of Golden Gate Park. Everybody knows the result. During the ten-night period that the colorful lights were turned on, thousands of motorists, thrilled with the beauty of this spectacle, came to admire and enjoy this great outdoor Christmas tree party.

These motorists were not San Franciscans alone, for as the news spread, Mesdames and Messrs. Sacramento, Salinas, San Jose, Fresno, Redding, Tulare and way points visited the site and put their official stamp of approval on the outdoor Christmas tree movement.

As a result, before Christmas had even arrived, the Outdoor Christmas Tree Association received word that Santa Cruz and Watsonville were hatching up a scheme to go San Francisco one bet-

ter and, instead of just one mile of trees, they were going to illuminate twenty miles of trees between the two cities, to form a mighty illuminated parade of giants of the forest whose fame would spread far and wide. The mayors of the two cities held frequent conferences and, although the twenty miles is still unaccomplished, the project has been started with the planting of two miles of trees extending out of Watsonville.

The popularity of the movement resulted in the Outdoor Christmas Tree Association's decision to incorporate into its activities this highway beautification plan by advocating that each town and city in California plant a mile of living Christmas trees along the highway leading into the city or along the main artery within the city. Thus tourists as well as residents would be able to enjoy California's outdoor Christmas, and between yuletide celebrations the trees would be enjoyed for their beauty and shade.

Soon service clubs, chambers of commerce, garden clubs, women's organizations, school children and various other groups began to communicate with the Outdoor Christmas Tree Association inquiring for instructions on highway planting or announcing plans for

An outdoor Christmas tree on the State Highway at Selma.

their own communities. The association decided to sponsor an arbor day to provide a uniform occasion for the planting of outdoor Christmas trees, and set aside March 7, which happened to be Luther Burbank's birthday, for this purpose.

Many towns throughout the state joined in with a vim. School children took part. Some even staged parades. The town of Gilroy was one of these, planting more than half a mile of trees on the Hecker Pass.

Some of the other communities who launched their "Mile of Living Christmas Trees" program during the year include South San Francisco, which is planning its mile on the highway near the railroad track so that tourists can enjoy the picture; Tulare on the Golden State Highway; Auburn and Lincoln on the Lincoln Highway; Sausalito at the end of the Redwood Highway; San Jose, with its mile of trees along The Alameda; Bakersfield along the Golden State highway toward Delano, and many others. Altadena, in southern California, has had its mile of Christmas trees for several years.

B. B. Meek, director of California Highways and a director in the Outdoor Christmas Tree Association, is of the opinion that the ideal way to plan highway beautification through Christmas trees is to place the trees in groups of a quarter or a half mile, instead of in one continuous line. This plan would present a series of inspiring pictures to the traveler.

As plans progress for the 1930 yuletide season, all indications point to an even greater public response to the tree-planting movement. With momentum growing yearly, California highways in future years are bound to provide a treat of natural beauty not only for our own citizens, but also for the throng of tourists who motor from one end of this state to another. California's highways are one of her greatest assets. When we unite in planting trees—particularly the universally beloved Christmas trees—along the edges, this state will have just cause for even more pride in its roads.

Despite an increased registration of motor vehicles and an increased number of fatalities due to motor vehicle operation in the country during 1929, fatalities in railway crossing accidents during the year were actually reduced 3 per cent according to the Grade Crossing Committee of the Association of Railway Claim Agents.

Two little boys came into the dentist's office. One said to the dentist: "I want a tooth took out, and I don't want no gas, because I'm in a hurry."

Dentist: "That's a brave little boy. Which tooth is it?"

Little boy: "Show him your tooth, Robert."

THE ARMY OF CIVIL ENGINEERS

By ALFRED DAMON RUNTAN

No hands are playing gaily when they're going into action.

No crowds are cheering madly at their deeds of derring-do;

They are owing small allegiance to any flag or faction—

Their colors on the sky-line and their war cry, "Put it through!"

Ahead of bath and Bible and of late repeating rifle,

The flags can only follow to the starting of their trail;

They herd the leagues behind them, every mile the merest trifle;

They mark the paths of safety for the slower sail and rail.

They work the Quite Impossible; they scoff the earth and water—

They've solved the problems of the air and found them easy, too.

They quell the ocean's raging, the mountain's fearful hauteur,

As they march toward the sky-line with the war cry, "Put it through!"

Their standards kiss the breezes from the Arctic's cooling ices

To where the South Pole's poking out its undiscovered head;

You can see their chains a-snaking through the lands of rum and spices

And East and West you'll always find their unrepining dead.

No time for love and laughter, with their rods upon their shoulders,

No time to think with vain regret of home or passing friends.

They are slipping down the chasms, charging up the mighty boulders.

The compass stops from overwork; the pathway never ends.

They slit the gullet of the earth, disgorge its hoarded riches

(But life's too short for them to stop and snatch a rightful share);

They've a booking on the Congo, putting in some water ditches;

A dating to take tea with death, they make it by a hair!

You will find their pickets watching in the unexpected places;

You will hear them talking freely of the Things-That-Can't-Be-Done;

Oh, the Faith they speak so strongly and the Hope that's in their faces—

It lights the gloom of What's-the-Use as brightly as the sun!

No hands are playing gayly and no crowds are madly cheering;

No telegraph behind them tells their deeds of derring-do;

But forward goes the legion, never doubting, never fearing—

Their colors on the sky-line and their war cry, "Put it through!"

IRRIGATION IN CALIFORNIA

(Continued from page 3.)

given such impetus to irrigation development in California as has the irrigation district law. This law confers on a farming community the right to organize into a self-governing corporate body, with the power of eminent domain, the power to tax all real property and the right to issue bonds to become a lien on all real property within the organized district. The purpose of such organization is to provide and distribute water for irrigating the lands in the district.

The first comprehensive California irrigation district law was passed in 1887, and was known as the Wright Act. In 1897 the Wright Act, which on the whole did not prove workable, was repealed by the enactment of the Bridgford Act. The latter act, through a great many amendments as well as through supplemental legislation, has developed into our present California irrigation district law. Under this law, certain state agencies are concerned in the major operations of organizing and financing irrigation districts. Organization is initiated through a petition to the county board of supervisors who, if they find the petition sufficient, refer the same to the State Engineer for investigation and report on the feasibility of the project. If such report is favorable the supervisors call an election at which the question of organization is decided by a majority of the ballots cast by those qualified by the general election laws of the state to vote in the district. Districts are governed by elective boards of directors, to whom the law delegates the management of all district affairs. Questions of incurring special indebtedness must be submitted to the voters, but in all other matters of internal management the directors have complete control.

IRRIGATION DISTRICT BOND COMMISSIONER

In 1913 the legislature passed the Irrigation District Bond Commission Act, creating a commission consisting of the Attorney General, the State Bank Superintendent and the State Engineer; this commission to be of service in financing irrigation districts should such service be requested. Bond elections may be authorized and called by directors of districts with the approval of the bond commission, or such elections may be called without the approval of the bond commission through petitions of a majority of the landowners, representing a majority of the assessed value of the land in the district. If it is desired that irrigation district bonds be certified by the

State Controller as legal investments for public funds, savings banks, etc., they must be submitted to and recommended by the bond commission for such certification. If bonds are certified, then all expenditures for funds realized from their sale are placed by law under the supervision of the bond commission. Districts can not legally enter into certain contracts without the approval of the commission.

Besides the many direct contacts with irrigation districts provided by law, the State Engineer acts as the agent of the bond commission in many of its relations with the districts. His office is required to investigate the feasibility of any proposed bond issues, to investigate, check and report on all plans submitted to the bond commission for expenditures on construction work or for any other proposed expenditures. It is also the state agency through which engineering investigations are made and through which expenditures approved by the bond commission are supervised.

DEVELOPMENT DURING BIENNIUM

While there has been little encouragement for the extension of agriculture during the present biennium, five petitions for the formation of new irrigation districts were received by the State Engineer. Three of these, involving a total area of about 40,000 acres, were approved and proceeded to organization. During the biennium, major transactions of irrigation districts with the State Engineer and the bond commission involved consent to the voting of bonds in the amount of \$640,000, the recommendation for certification of \$1,349,731, and the consent to the private sale of \$452,500, in bonds. Expenditures approved for irrigation districts amounted to \$1,528,623, and for water storage districts \$942,731, or a total approval by the bond commission, under the recommendation of the State Engineer, of \$2,471,354.

EIGHTY-NINE OPERATING DISTRICTS

There are now 89 districts actively operating under the California irrigation district law, all but seven of which have been formed since 1910. The total area embraced within the boundaries of these districts is 3,520,000 acres, and of the estimated total of 4,400,000 acres irrigated in California in 1930, more than two-fifths was contained within their boundaries. Twenty-one irrigation districts own or control reservoirs of a combined storage capacity of 1,150,000 acre-feet. Reliable data on the amount of water used by all districts are difficult to obtain, but 66

irrigation districts reported a total diversion of 6,366,000 acre-feet in 1929.

EXTENT OF BOND ISSUES

The financing of California irrigation districts has been largely through the sale of bonds. To January 1, 1930, the districts had sold \$108,326,221 in serial bonds, and of the total sold had retired \$11,234,339. The total financial transactions of irrigation districts during the year 1929 involved the payment of \$6,900,000 for bond interest, bond retirement and the retirement of other interest bearing obligations, and approximately \$4,600,000 for betterments and for the administration, operation and maintenance of their irrigation systems, a total of \$11,500,000, all from revenues derived from land taxes and water sales.

CONSERVATION DISTRICTS

In addition to the irrigation district act, California has passed several conservation district laws of general application, under which irrigation may form a part or the whole of the object of organization. Reclamation and drainage laws provide for the organization of districts for reclaiming swamp and overflowed lands and for any necessary irrigation of such lands after they are reclaimed. California has about 2,275,000 acres of land included in districts of this character, a considerable portion of which is farmed to crops requiring irrigation.

WATER STORAGE ACT

The California water storage district act authorizes the organization of districts whose primary purpose is to provide storage for irrigation. There are at this time two districts with a total area of 280,000 acres operating under this law.

There are 19 districts operating under the county water district act. These districts are organized by petition to county boards of supervisors and are under the jurisdiction of no state agency. Apparently the principal purpose for which most of such districts are formed is to supply domestic water to their residents, and it is estimated that only about 30,000 acres are irrigated under these organizations.

There are several other water conservation acts which were passed to meet special conditions or are of local application, but they have as yet served little or no part in the development of irrigation in California.

PATROL OFFICERS' DUTIES COVER RANGE FROM SAVING PURSES TO SAVING LIVES

(Continued from page 8.)

Vierling Kersey, State Superintendent of Public Instruction:

I want to report a splendid piece of cooperation on the part of the State Traffic Department with the adult evening school administration at Fortuna, and will appreciate it if your department will let the State Traffic Department know that we appreciate such splendid cooperation.

We held our opening night program and reception for adult evening school work last night and had sent out approximately 1000 invitations to adults in our school district. The response was wonderful. People came from all parts of the district to register, some traveling as far as twenty miles.

The State Traffic Department, under the able leadership of Inspector M. E. Brown of Eureka, by strange coincidence, set up a light raid at the entrance of town and stopped every car that came in, issuing tickets to those that had faulty lights. I felt that this was a poor reception for those people who were coming to attend our evening school reception and registration, hence I went to Inspector Brown and explained the situation to him. I also requested that they postpone their activities until a later date.

Inspector Brown very considerably assured me that they desired to cooperate with the evening school in every way, and promptly withdrew his force to a different locality or district for the rest of the evening. He further promised to assist us in every way possible at all times. We in turn have pledged 100 per cent cooperation with the State Traffic Department in a program of education and law enforcement.

Escorts Are Praised.

Many letters were received from organizations and communities to which the Highway Patrol had extended assistance either as escorts to caravans or as aids in handling crowds. William E. Metzger, secretary-manager of the San Joaquin Tourist and Travel Association, concludes such a letter with the following paragraph:

I am of the opinion that California State Motor Patrol under your guidance is the finest organization of its kind in the world. The men are intelligent, courteous, efficient and able to meet any emergency with the best of judgment.

INTERNATIONAL—When representatives of 50 or more governments met in the sixth international road congress in Washington, October 6-11, they were seated according to languages, and questions were translated at a central point and transmitted to the delegates through earphones. English, German, French and Spanish were used.

MASSACHUSETTS—State Department of Agriculture has developed a plan whereby tourists will be able to identify roadside stands which are sanitary and which sell quality products. Signs patterned after the New England quality products labels will be issued to stands complying with the state regulations.

Barber—Wet or dry, madam?

Lady—Never mind the politics, just comb my hair.

Industries and the
Salt Water Barrier

Water Studies in
Sacramento Valley

October Activities

In the

Division of Water Resources

EDWARD HYATT, Chief of Division

Salinity Investiga-
tion Nears
Completion

Preparing For
New Snow Surveys

INDUSTRIES AND THE SALT WATER BARRIER

During the past month investigations and studies in connection with the salt water barrier have proceeded on the relations of the proposed barrier to the industrial development in the Bay region and to the agricultural development in the Delta and in the marsh land and upland areas contiguous to Suisun and San Pablo bays. A field survey was completed of the upland areas contiguous to Suisun and San Pablo bays, including all marginal lands from the marsh lands up to elevation 150 feet above sea level. This survey included the classification of the lands as regards crops, irrigation development, soil and adaptability and feasibility of irrigation and the necessity and desirability of additional water supply for irrigation. All available data in regard to the reclamation development in the Delta of the Sacramento and San Joaquin rivers have been gathered and are being compiled and analyzed with particular regard to the possible beneficial or detrimental effects of the barrier upon developments within this area. Preliminary studies have been started for the purpose of determining the feasibility and cost of furnishing water for irrigation and industrial uses by means of conduits extending from the Delta region down to the agricultural and industrial areas contiguous to Suisun Bay.

The intensive studies on the relation of the proposed salt water barrier to the industrial development in the upper San Francisco Bay area have been practically completed during the past month. Professor Geo. W. Dowrie, consulting economist from the Stanford Graduate School of Business, will shortly submit his final report to the special Industrial Economics Committee for final review and approval. This committee is composed of Professor W. E. Hotchkiss, dean of the Stanford Graduate School of Business, as chairman; Professor H. S. Grady, dean of the Graduate School of Business of the University of California; Mr. A. D. Schindler, consulting engineer of San Francisco.

This report contains the results of intensive investigations and studies of the economics of plant location in general and as directly applied to the San Francisco Bay region, the importance of water supply as a plant location factor in general and as directly applied to the San Francisco Bay region, the present magnitude and the past and future growth of the industries in the upper bay region, the relation of water costs to the present and future growth of industries in the upper bay region, and finally the possible economic advantages and benefits to the industries which might accrue from the construction of the proposed salt water barrier. The data obtained from the intensive survey of the industrial development have been of invaluable aid in carrying out this economic study on

the relation of industrial development to the proposed barrier. The cooperation and assistance of the industries in furnishing the basic data on the industrial development have largely contributed to the successful prosecution of this particular phase of the salt water barrier investigation. Substantially complete data on all of the industrials in the area affected by the proposed barrier have been obtained. Based upon the records furnished, complete data on the consumption and cost of water used by the industries have been compiled and analyzed. In addition, statistical data showing the past growth and present magnitude of the development have been compiled and analyzed for the purpose of estimating the future trend and growth of the industrial development.

GEOLOGICAL STUDIES

The special geological studies which have been under way by Professor C. F. Tolman, consulting geologist of Stanford University, have been completed and report submitted. These geological studies and report thereon include determinations of the geological formations and location of earthquake faults and all pertinent geological data related to the various sites proposed for the salt water barrier.

SEWAGE INVESTIGATION

The very detailed investigation and intensive study on sewage pollution and industrial wastes and the relation of the proposed salt water barrier thereto have been practically completed by Mr. C. G. Gillespie, chief engineer of the Bureau of Sanitary Engineering of the State Board of Health. The investigation has included the determination of all points and sources of pollution in the entire area affected from Sacramento and Stockton down to Richmond. Special pollution surveys have been made to determine the effect of sewage pollution and industrial wastes of various types on the quality and redeemability of the water. The report is now being prepared.

COOPERATIVE WORK

The cooperative work on the salt water barrier investigation under the direction of Colonel Thomas M. Robins of the U. S. Army Engineers has been proceeding on an intensive scale and substantial progress has been made. The work of the U. S. Army Engineers has involved detailed investigations and studies of the effect of the barrier on movement of silt and water borne debris in the rivers and bays and the effect on tidal action and tidal currents.

SACRAMENTO VALLEY INVESTIGATIONS

Estimates of the full natural and present impaired run-offs of all the minor streams in the Sacramento

Valley have been completed. Preliminary studies have been made for the Kennett reservoir and for the American River units operated to supply prior rights, salinity control and for an imported supply to the San Joaquin Valley. Studies to determine the economic installed capacities of power plants at the major reservoirs and the power output of the plants operated primarily for power have been completed for several of the units. Studies were completed for different methods of operating the upper Sacramento River units in combination with the Trinity River diversion to determine the relative value of each combination. Flood concentrations at five points in the Sacramento Valley have been determined for different sizes and frequencies of floods. Flood frequencies at the gaging stations have been completed for the major streams and studies have been initiated to determine the amount of space required in the major reservoirs to control floods to various magnitudes. Detail cost estimates have been completed for the major reservoirs in the Sacramento Basin and also for the Trinity River diversion, including costs of power plants. Annual costs for operating and maintaining these works have also been estimated. A report on the geology of the Sacramento Valley as related to the ground water storage has been prepared by Mr. Hyde Forbes, engineer-geologist. Measurements of depth to water on wells distributed throughout the Sacramento Valley floor have been continued during the month; 188 wells out of a total of 225 have been measured.

SAN JOAQUIN VALLEY INVESTIGATION

Examination and classification of all the mountain and agricultural land on the east side of the valley and north of the San Joaquin River have been completed. A map delineating the crop classification of 1929 has been completed. This is being used in determining the probable crop adaptability of the lands in the San Joaquin Valley and also in the study of the areas of deficient water supply. Maps of the ground water elevation of the upper San Joaquin Valley for all years of ground water observation, 1921 to 1929, were completed during the month. Maps of lines of equal total lowering of water table for the same period and of equal depth to water table as of October, 1929, were also completed for this area. Studies of the average seasonal inflow required to supply crop needs and maintain the position of the water table were completed for several hydrographic divisions of the upper San Joaquin Valley. Economic studies were completed during the month covering the following subjects:

1. Comparison of the economics of developing storage on the San Joaquin River at the Friant or at the Temperance Flat site.
2. The economics of the development of storage at the Friant site.
3. The economics of the utilization of the waters of the San Joaquin River with storage at Friant and canals diverting water northward to the Madera area and southward to the upper San Joaquin Basin. This study covers both the proposed initial development and the ultimate.
4. Economics of the proposed initial development as it affects the individual landowner in the upper San Joaquin Valley.

Cost estimates have been completed for reservoir development on the Kern River at Isabella and on San Joaquin River at Friant. A final layout with map and profile together with cost estimate has been com-

pleted for the San Joaquin River pump system using the San Joaquin channel to the mouth of the Merced River and thence following high ground on the west side to Mendota.

Preliminary studies completed and costs estimated of the feasibility of utilizing existing and artificial channels to connect the Sacramento River near Hood with the San Joaquin River at the mouth of the Mokelumne for the purpose of delivering Sacramento River water nearer to the center of demand in the Delta, to control salinity and to deliver water for export to the San Joaquin Basin.

OTHER INVESTIGATIONS

MOJAVE RIVER INVESTIGATION

During the month data for the progress report to complete the year's work up to September 30, 1930, were being collected.

It has become apparent that additional gaging stations must be established in order to complete the investigation. The run-off from the mountains is quite definitely established but the amount of water wasted by noneconomic vegetation above the lower rights is not known and the previous conception of the investigation could not be known until a year or two of sufficient high water to run through to the end of the river had occurred. By establishment of three new stations at a total cost of about \$1,300 it is believed that this can be determined in one year's time and report completed.

SOUTH COASTAL BASIN INVESTIGATION

This investigation is handicapped by lack of funds. An engineer was put in the field on October 1st with headquarters at Alhambra. He will get in touch with all those interests now measuring wells and prepare these data for publication. Numerous meetings have been held with various committees to organize the people of the area so that the information would be made available to this office. At the present time the expenditures should be proceeding at the rate of \$4,000 per month while actually expenditures are in the neighborhood of \$500 per month.

VENTURA COUNTY INVESTIGATION

Progress report for the past year is now being mimeographed for distribution to those interested.

ANTELOPE VALLEY INVESTIGATION

A reconnaissance was made of Antelope Valley to determine what could be done toward investigation. On October 14th a meeting was held with Los Angeles Chamber of Commerce which had promoted the investigation, and it was stated that the only work which this office could recommend would be consistent measurement of water levels at wells at a cost of approximately \$400 per year. The amount of water available to the valley is estimated to be between 80,000 and 100,000 acre-feet per year. It was stated that due to the physical situation there was no way by which closer estimate could be made without an unduly large expenditure and that it was felt that consistent measurement of wells would finally answer the same question much more cheaply. The Chamber of Commerce was advised that if funds were made available this year this office would undertake to keep up records on wells.

FIT RIVER (MODOC AND LASSEN COUNTIES)

Routine field work was continued throughout the month; plating of irrigated areas about 80 per cent completed.

SANTA CLARA AND NAPA COUNTY INVESTIGATION

Preparation of a progress report covering the year's work in Santa Clara County to September 1st continued throughout the month. The first season's field work in connection with the Napa County investigation was completed and preparation of a progress report for the year will start at once.

MISCELLANEOUS INVESTIGATIONS

Investigation of a water supply for proposed hospital site in the neighborhood of Camarillo in Ventura County was made. The water supply appears to be sufficient.

HOOVER-YOUNG COMMISSION, LEGISLATIVE WATER COMMITTEE

The ninth meeting of the Legislative Water Commission and Hoover-Young Commission convened at Hotel Oakland, Oakland, on September 22d and 23d. At this hearing, conducted as an executive session, deliberations of the above bodies were devoted to consideration of economic justifications for the development of the state-wide water resources plan. Federal benefits to be derived from these developments were weighed and reviewed. Comparisons were discussed for plans of construction of projects based on federal interest-bearing funds and federal interest-free funds. The tentative form and items of general policy for the composition of a constitutional amendment looking toward adoption of the state-wide water resources construction program were extensively discussed.

The tenth hearing of the fore-named bodies convened in executive session on October 6th and 7th, at Hotel Oakland, with an excellent attendance by members of both bodies. A summary of capital and annual costs for the development of the water resources projects of the great central valley was presented for study and discussion. Alternative programs of financing and construction were offered by members of the Legal Subcommittee of the Federal-State Commission.

SALINITY INVESTIGATION

During the past month a first draft of the report on salinity investigations has been completed. In connection with the report about 70 plates consisting of maps and diagrams and 50 tables summarizing the data and an analysis on the investigations and studies have been prepared. Relations have been established between the variation in advance and retreat of salinity and the basic factors of stream flow and tidal action which affect the same. The studies have resulted in the determination of the amounts of stream flow required to control salinity to various degrees and at various points in the Delta and upper bay region. The results of the investigation will be submitted to a special engineering advisory committee for complete review. Field work has been continued on the maintenance of 40 regular salinity observation stations and numerous automatic tide gage stations in the Bay and Delta regions.

IRRIGATION, WATER STORAGE DISTRICTS

The preparation and assembling of material for the report on irrigation district activities for the year

1929 has been completed and the manuscript transmitted to the State Printer for publication.

Visits were made during the present month to the Montague, Grenada, Big Springs and Scott Valley irrigation districts, located in Siskiyou County, to advise with their officers in connection with the maintenance and operation of these districts.

A hearing was held by the State Engineer at Hanford, on October 14th, in the matter of petitions for the exclusion of 1584 acres of land from the Tulare Lake Basin Water Storage District.

Officials of the Madera Irrigation District, located in Madera County, appeared before the California Bond Certification Commission for the purpose of discussing a proposed change in the plans of the district. This district proposes to proceed with its developments for which a bond issue was voted a number of years ago.

The California Bond Certification Commission approved a bond issue in the amount of \$175,000 for improvements and developments by the El Nido Irrigation District, located in Merced County. This district, recently organized, contains approximately 9000 acres and the purpose of the proposed bond issue is for raising funds for the construction of its irrigation system.

The bond commission also approved an agreement entered into between the Nevada Irrigation District and the Pacific Gas and Electric Company confirming previous agreements made between these parties.

DAMS

The activities of this department have been directed not only to studying and inspecting existing dams, but also much time has been spent on new construction and repairs which will be discussed in detail below.

To date 707 applications for approval of existing dams have been filed; 49 applications for approval of plans for the construction or enlargement of dams, and 66 applications for approval of plans for repair or alteration of dams.

APPLICATIONS RECEIVED FOR APPROVAL OF PLANS AND SPECIFICATIONS FOR CONSTRUCTION OR ENLARGEMENT

Dam	Owner	County	Estimated cost
Hawkins	C. N. Hawkins	San Benito	\$3,000
Pine Canyon	City of Pasadena	Los Angeles	6,500,000
And Springs	Richard Talbot	Lassen	38,700
Peters Canyon	The Irvine Company	Orange	55,000

Application for approval of plans and specifications for Pine Canyon Dam was filed with the department on September 30 by the city of Pasadena. This is to be a huge concrete gravity structure 265 feet high and containing almost 700,000 cubic yards of concrete.

Because of the importance, magnitude and location of the proposed dam and the many involved technical features, the State Engineer has appointed a consulting board consisting of Chas. P. Berkey, professor of geology, Columbia University, New York City; N. Y.; Geo. D. Londerback, professor of geology, University of California; Ira A. Williams, consulting geologist, Portland, Oregon; J. L. Savage, chief designing engineer, U. S. Bureau of Reclamation, Denver, Colorado; George A. Elliott, consulting engineer, San Francisco; and M. C. Hinderlider, state engineer, Denver, Colorado, to investigate and report upon the safety features of the structure.

These nationally known consultants, possessing unquestioned ability and integrity, are preeminently qualified and widely experienced in their respective professions. They are to complete an intensive examination of the site of the proposed work and com-

prehensively review all technical phases of the proposed dam. The results of their investigation, together with their conclusions, will be embodied in a report to the State Engineer upon the safety features of the dam.

This board consists of the same members who last November reported to the state regarding the proposed Forks dam on the San Gabriel, a few miles above the Pine Canyon site, and are therefore already generally familiar with San Gabriel area.

The Pine Canyon Dam will also be under the jurisdiction of the U. S. Forest Service, and the federal department, through Mr. E. W. Kramer, regional engineer, will cooperate with the state in the investigation.

APPLICATIONS RECEIVED FOR APPROVAL OF PLANS AND SPECIFICATIONS FOR REPAIRS OR ALTERATIONS

Twenty-three such applications have been received during this period in line with the endeavor of the owners and of this department to get all dams in shape for final approval.

PLANS APPROVED FOR CONSTRUCTION

Dam	Owner	County
Whittier Reservoir No. 4	City of Whittier	Los Angeles
Tiger Creek	Pacific Gas and Electric Company	Anaheim

PLANS APPROVED FOR REPAIRS AND ALTERATIONS

Fourteen applications of this nature were approved by the State Engineer.

FLOOD CONTROL AND RECLAMATION

MAINTENANCE OF SACRAMENTO AND SAN JOAQUIN DRAINAGE DISTRICT

Aside from clearing of second growth timber in the by-pass, only routine maintenance work has been carried on in connection with the flood control project. An average of 25 men have been employed during this period.

FLOOD CONTROL PROJECT MAINTENANCE—BANK PROTECTION

Two tree current retards have been constructed on the left bank of the Sacramento River at Twenty Mile Bend, in cooperation with Reclamation District No. 70, at a cost of \$4,200.

Bank protection work in cooperation with Reclamation District No. 317 has been undertaken on the San Joaquin River side of Andrus Island. The work is approximately one-third complete and consists of rebuilding the levee and facing it with rock rip-rap for a distance of 3500 feet. The dredger *Trojan* and one dragline machine are at work and approximately 6000 tons of rip-rap rock will be placed. The estimated cost is \$23,500.

Approximately 500 tons of rock additional have been deposited on the Brannan Island protection on the Sacramento River opposite Rio Vista, in cooperation with Reclamation District No. 2067.

In cooperation with the Division of Highways and Reclamation District No. 556, bank protection work is being installed on the left bank of the Sacramento River on Andrus Island, two miles below Ryde. The estimated cost of this work is \$2,300.

SACRAMENTO FLOOD CONTROL PROJECT

An average of 70 men have been engaged during the period in clearing in the Sutter-Butte Slough and Tisdale by-passes and two camps have been in opera-

tion. Clearing work on the Feather River bottom near Marysville under five contracts is 97 per cent complete, three of the contracts being entirely finished. Considerable detail work has been done in connection with the flood control construction program for the current fiscal year and various surveys have been made in this connection. The deputy in charge of flood control and reclamation attended two meetings of the Reclamation Board and one meeting of the construction committee of the Flood Control Association.

SANTA MARIA RIVER

The work of clearing the channel of the Santa Maria River near Guadalupe was commenced on September 22, 1930, and has continued with a force of 50 men under D. W. Roberts. This work is in cooperation with the counties of Santa Barbara and San Luis Obispo.

RUSSIAN RIVER JETTY

The funds available for the construction of the jetty at the mouth of the Russian River have been exhausted and the work was discontinued on October 11. The south jetty is well toward completion and lacks only about 10,000 tons of rock to finish. The condition of the jetty is fairly good and it will withstand ordinary winter storms. The channel has remained open.

NAVARRO RIVER JETTY

The rock jetty at the mouth of the Navarro River, constructed for the Division of Fish and Game, was completed on October 1, 1930, under contract by Christie and Allen at a cost of \$5,250. The bar was opened after the completion of the jetty.

SALINAS RIVER

It is expected to have the work of opening the channel of the Salinas River into Elkhorn Slough completed by October 30. The barge for the transportation of equipment has been completed, and it is expected to move the machine in on October 20.

During the period since September 15, 1930, an average of 145 men have been employed on the above work exclusive of contractor's employees.

WATER RIGHTS

APPLICATIONS TO APPROPRIATE

During the month of September twenty-five applications to appropriate water were received, sixteen were canceled and twenty-five were approved. Seven permits were revoked and two licenses were issued.

Among the applications received of more than ordinary interest are those by C. M. Salyer to appropriate for mining purposes from South Fork of Trinity River in Trinity County at an estimated cost of \$91,000, the application of Western Pacific Railroad Company to appropriate from Potato Slough, a tributary of South Fork of Mokelumne River, in San Joaquin County, for industrial purposes, at an estimated cost of \$11,500, and the application of El Nido Irrigation District to appropriate from Deadman and Dutchman creeks, tributaries of San Joaquin River, in Merced County, for irrigation purposes, at an estimated cost of \$135,000.

Permits of more than ordinary interest issued during the month are those approving the applications of C. Fred Holmes et al., to appropriate from East Dredger Cut of Sutter By-pass, in Sutter County, for the irrigation of 1897 acres at an estimated cost of \$15,000 and the application of Santa Carbona Irrigation District to appropriate from San Joaquin

River, in San Joaquin County, for irrigation purposes at an estimated cost of \$334,000.

ADJUDICATIONS

Shasta River (Siskiyou County). Case pending in the superior court of Siskiyou County.

Whitewater River (San Bernardino and Riverside Counties). Case pending in the superior court of Riverside County awaiting development in regard to the proposed All American Canal from Colorado River.

North Cow Creek (Shasta County). Submission of referee's final report still being withheld pending negotiations now in progress toward settlement of one of the important issues.

Oak Run Creek (Shasta County). Case pending in superior court of Shasta County awaiting the entry of a decree in the North Cow Creek case.

Clover Creek (Shasta County). Case pending in the superior court of Shasta County awaiting the court's pleasure in placing it on the calendar.

Butte Creek (Siskiyou County). Case pending in the superior court of Siskiyou County awaiting action by the parties involved.

Los Alamos Creek (Santa Barbara County). Action by referee being deferred awaiting the outcome of the circulation of a stipulation for consent judgment among the parties involved.

Davis Creek (Modoc County). Negotiations relative to a consent judgment being carried on.

Mill Creek (Modoc County). Administration of the tentative schedule of allotments which was authorized for the 1930 season was completed October 1st.

Deep Creek (Modoc County). The field investigation of water supply and use of water was completed October 1st.

Franklin Creek (Modoc County). The field investigation of water supply and use of water was continued throughout the month. A survey of the lands irrigated from the stream was completed during the month.

WATER DISTRIBUTION

Water master service on *Little Shasta River and Lower Shasta River (Siskiyou County)*, *North Cow, Oak Run and Clover creeks (Shasta County)*, *Davis, Emerson, Mill, Owl and Soldier creeks (Modoc County)*, and *West Fork of Carson River (Alpine County)*, was discontinued for the season October 1st. Water master service on *Hat and Burney creeks, both in Shasta County*, was discontinued for the season on October 10th.

Pit River (Modoc and Lassen Counties). Supervision over diversions from Pit River in Big Valley was continued throughout the month by the resident engineer on the Pit River investigation. Considerable work was done by the water users, under the supervision of the resident engineer, in the repair of the dams along the river in order to increase the efficiency of the water distribution next season.

CALIFORNIA COOPERATIVE SNOW SURVEYS

The work in the past month has been almost entirely in the field. Trips have been made to make the necessary arrangements for the surveys in the coming season, such as the proper stocking of shelter cabins, distribution of equipment and discussion of plans with cooperating agencies and the personnel to be used on the surveys.

On a trip through Yosemite Park, all snow courses were marked with the new State-U. S. Department of the Interior signs and one course was relocated.

At Fresno, arrangements were made with the San Joaquin Light and Power Corporation for the North Kings surveys.

At Hume, plans were completed with the city of Los Angeles for the Middle and South Kings surveys. New snow courses at Bullfrog Lake and Copper Creek Summit are contemplated for the 1931 surveys.

At General Grant Park and Hanford, the cooperation with the General Grant Park and Tulare Lake Water Storage District for South Kings surveys was worked out.

At Sequoia National Park, new snow courses were located at Panther and Hockett in the Kaweah Basin and at Quinn Ranger Station Meadow in the Kern Basin. These courses and the one at Giant Forest will be surveyed monthly, January to May, through the cooperation with the Sequoia National Park.

In Lassen Volcanic National Park, arrangements were completed for the construction and stocking of shelter cabins at Lake Helen and Supan Springs, and certain of the snow courses were marked with pipe standards.

The relocated Haskins Flat course near Bucks Reservoir was signed.

In the Stanislaus Basin new snow courses to be surveyed through cooperation with the Pacific Gas and Electric Company were located and marked at Soda Creek Flat, Lower Relief Valley and Eagle Meadows.

In the Carson and Mokelumne basins, arrangements were made for stocking the regular shelter cabins.

In the San Joaquin Basin, the Florence Lake course was relocated.

SACRAMENTO-SAN JOAQUIN WATER SUPERVISOR

Regular field and office work comprising measurements of all diversions, stream flow, and return flow throughout the Sacramento-San Joaquin territory, has continued. The field work has been devoted chiefly to the annual census of irrigated crops and areas under all diversions measured throughout the Delta region.

Field and office work has been done to determine the segregation of San Joaquin return water as to districts and certain stretches of the river.

Salinity investigations have been continued with the maintenance of sampling at forty-six stations in the Bay and Delta areas. Six regular tide gage stations have been maintained and recently, upon the withdrawal of the army engineers from field work, the maintenance of the Benicia, Antioch and Collinsville tide gages has been taken over.

The following are comparative data for 1929 and 1930:

Station	Salinity in parts of Chlorine per 100,000	
	October 2, 1930	October 2, 1929
Bullhead Point	1,090	1,230
O. & A. Ferry	400	660
Collinsville	250	410
Antioch	225	365
Jersey	48	170
Emmatt	—	119
Webb Pump	14	40
Rio Vista	2	3
Isleton	2	2

Station	Discharge in second-feet	
	October 8, 1930	October 8, 1929
Sacramento River at Sacramento	6,850	5,450
San Joaquin River near Vernalis	1,720	1,490
Combined flow to delta	8,570	6,940

Progress on State Highway System

MAJOR PROJECTS COMPLETED, UNDER WAY AND ADVERTISED AS REPORTED
TO GOVERNOR'S COUNCIL ON OCTOBER 29th

C. H. PURCELL, Chief of Division of Highways.

The following statement summarizes the work of the Division of Highways since September 23d, when the September report was made to the Governor's Council:

Work placed under contract.....	\$962,900
Contracts pending and projects advertised.....	1,052,100
Work in process, anticipated to be advertised during the coming month.....	1,781,000

Total\$3,796,000

CONTRACTS COMPLETED

During the same period contracts on construction of state highways have been completed and work accepted on a number of projects, including the following:

SAN DIEGO-EL CENTRO LATERAL

Three miles of Portland cement concrete pavement, 20 feet wide, have been placed on the San Diego-El Centro lateral in Imperial County from the Myers Creek bridge to three miles west of Coyote Wells; the cost was \$131,300. This improvement on the route connecting the Imperial Valley with the coast at San Diego was placed on the roadbed which was built following the destruction of the old paved road by the flood of December, 1926. The new highway is well up on the mountain side and will be safe from damage by future storms.

DESERT GAP BRIDGED

The extension of modern highway construction on one of the most traveled transcontinental roads has bridged another gap across the desert in San Bernardino County. This project covers nearly twenty miles of the interstate highway which enters southern California at Needles and via San Bernardino. The work extended from two miles west of Argos to one and one-half miles west of Siberia and consisted of grading and placing an oil treated crushed rock surface, twenty feet wide. The usual method of desert construction was used, with protection to the roadbed against damage by cloudbursts in the form of an adequate system of ditches and dikes which parallel the highway and carry flood waters into large cross channels. This new desert highway carries the improvement, which was recently completed, from Daggett to Siberia and there connects with the 51 miles now under construction as far as Essex. The cost of the twenty miles just completed amounted to \$400,000.

COAST ROUTE BETTERMENT

The paving of over eleven miles of the important Coast Route connecting Los Angeles and San Francisco has been completed, comprising the four miles between Zaca and Wignmore in Santa Barbara County and from the Santa Maria River north to Los Berros Creek in San Luis Obispo. On these two sectors the

roadbed was widened and straightened and the old fifteen-foot concrete pavement has been replaced with a modern reinforced concrete slab twenty feet wide. The total cost of these two projects was \$397,500, and their improvement has brought to modern standards of highway construction two of the few remaining old stretches of this heavily traveled artery.

ANGELS CAMP-BIG TREES HIGHWAY

In Calaveras County, 15.5 miles of the mountain highway from Angels Camp to Markleeville has had the old base thickened and widened to a uniform width of 15 feet from Murphy's to Big Trees and is now being given a bituminous surface treatment by state forces. The cost of reconstructing the base and stockpiling the screenings for the surface treatment amounted to \$18,200. When completed this improvement will give a satisfactory mountain road from Angels Camp to Big Trees, making a safe and smooth highway to this popular resort for both summer vacationists and those wishing to enjoy winter sports.

REDWOOD HIGHWAY PROJECTS

The continued improvement of the Redwood Highway, which extends from San Francisco through the beautiful redwood groves along the coast to the Oregon line, is noted by the completion of five projects at various points along its route.

In Marin County the two miles from San Rafael to Gallinas Creek was constructed on a new alignment around the hills north of San Rafael. The new road is surfaced with bituminous macadam over the fills and with Portland cement concrete pavement on the portions which are not subject to settlement. An overhead grade separation across the tracks of the Northwestern Pacific Railroad was constructed at Forbes Station. This new routing eliminated some exceptionally bad alignment of adverse grades and blind curves and shortened the road between these two points by 1600 feet.

In Humboldt County two needed improvements have been made between Loleta and Beatrice. An underpass beneath the tracks of the Northwestern Pacific Railroad was constructed at Loleta and the five miles from Loleta to two miles north of Beatrice was reconstructed to present day standards of alignment and grade with an adequate screened gravel surfacing. An overhead crossing is now under construction across the railroad at the north end of this project.

From Garberville to Bluff Creek, a mile of poor alignment along the Eel River has been replaced by a modern highway with easy grades and large radius curves surfaced with twenty-two feet of untreated crushed rock.

A substantial base for future surfacing has been placed from Smith River to Patrick's Creek in Del Norte County on that portion of the Redwood Highway between Crescent City and Grants Pass, Oregon. Fifteen miles of untreated crushed rock, from four

inches to six inches in thickness and from eighteen feet to twenty feet wide, comprised this improvement.

The total expenditures of these five projects on this coastal route amounted to \$338,500.

RED BLUFF-SUSANVILLE LATERAL

The completion of the last unimproved gap on the lateral between Red Bluff and Susanville is noted by the construction of the four and one-half miles between Goodrich and Coppervale in Lassen County. This work consisted of constructing a graded roadbed and placing crushed rock surfacing twenty feet wide. Traffic on this section is largely local travel between Westwood and Susanville, but it is now expected that through traffic from Red Bluff to Susanville will materially increase due to the improvement over the entire length of the lateral. The cost of this last improvement was \$77,000.

PROJECTS ON WHICH BIDS WERE OPENED

Important projects for which bids were opened during the past month include the following:

GRADE SEPARATIONS

A project for placing a forty-foot Portland cement concrete pavement through the grade separation which is now being built by the Pacific Electric Railway at its crossing of the Foothill Boulevard near Malaga street, eight miles west of San Bernardino. The construction of this subway will be a much needed safety factor on this heavily traveled road, as the old grade crossing has been the scene of many accidents, some of which have resulted in fatalities. The cost of the pavement at this structure will be \$36,800.

CASTAIC CREEK CROSSING

On the Los Angeles-Sacramento highway, just south of the Ridge Route, the road is to be reconstructed on a new alignment at its crossing of Castaic Creek. A reinforced concrete girder bridge is now under construction on the new location replacing the old existing bridge which was built on an alignment unfitted for present day high speed traffic. The new routing will have a roadbed of 36 and 40 feet wide and will be paved with 20 feet of Portland cement concrete. Costing \$44,900 this project is another improvement of this artery which runs through the heart of the state.

COAST ROUTE WORK

The extensive improvement of the Coast Boulevard between Long Beach and Newport Beach was given further impetus when bids were opened for the construction of a 326-foot timber bridge across Alamitos Bay on the new alignment of this route between Anaheim street in Long Beach and Seal Beach. The construction of the roadway and a bridge across the San Gabriel River on this new location is now under way. The cost of the Alamitos Bay bridge will be \$53,100.

SANTA MARIA RIVER BY-PASS

To be constructed at a cost of \$25,000 a low level by-pass road across the old channel of the Santa Maria River and overflow channel of the Cuyama River is necessitated by the recent failure of one span of the old county bridge across the Santa Maria River in Santa Barbara County about one-half mile north of Santa Maria. The by-pass, while consisting of a twenty-foot Portland cement concrete pavement on a standard 36-foot roadbed, is only of a temporary nature and the permanent improvement of this sector

of the important Coast Route will be carried out in the near future.

BAY SHORE PROJECTS

The steady progress of construction on the Bay Shore Highway is evidenced by the opening of bids on two projects and the advertising of a third. The recently graded roadbed constructed across low marsh lands between San Mateo and Redwood City is to have a bituminous treated surface 42 feet wide, placed on the heavy fill and to serve until final settlement of the embankment has taken place, at which time a four-lane Portland cement concrete pavement will be laid. The cost of surfacing this 7.3 miles will be \$134,900. At the southerly end of this project a four-span reinforced concrete girder bridge 127 feet long, with a 76-foot roadway and two twelve-foot sidewalks, is to be constructed across Redwood Slough at an estimated cost of \$43,000. This project was advertised for bids on October 1, 1930. The second project for which bids were opened was for the placing of a 40-foot Portland cement concrete pavement in the city of South San Francisco, and will cost \$97,500. The work will be the final stage of construction on the section of the Bay Shore Highway from the northerly city limits of South San Francisco to the grade separation under the tracks of the Southern Pacific Railroad. The paving on the five miles south of the subway is now under way.

BRIDGE WIDENING WORK

As a factor for greater adequacy and added safety on the heavily traveled artery between the bay region and Sacramento is the widening of five concrete bridges between Vacaville and Dixon in Solano County. The existing bridges were built some 15 to 18 years ago by the county, before present day high speeds had influenced highway construction. The improvement will bring the bridges from 18 or 20 feet in width to 28 feet of clear roadway, at a cost of \$12,000.

LINCOLN HIGHWAY ALIGNMENT

On the Lincoln Highway, just west of Placerville, is an improvement of far-reaching interest as the realignment of this portion of the Sacramento-Placerville lateral has long been a necessity. To cost \$97,600, the project calls for the placing of 22 feet of untreated crushed gravel or stone surfacing on a standard 36-foot graded roadbed. The new alignment is between Clark's Corners and Placerville, a distance of nearly two miles, and will eliminate the existing hairpin turns and materially improve the grade on this westerly approach to "Old Hangtown." The project includes the construction of a bridge across Hangtown Creek.

PACIFIC HIGHWAY CONSTRUCTION

In Colusa County the second stage of the ultimate improvement of the West Side Pacific Highway is to be constructed on the eight miles between Williams and Maxwell. The work will consist of placing a gravel base 33 to 39.5 feet wide over the recently graded roadbed which was constructed to the west of the existing pavement. The present improvement, to cost \$100,700, is preparatory to placing the new pavement, which will be the third and final stage of the highway reconstruction between these towns.

PROJECTS ADVERTISED

Among the more important projects advertised during the past four weeks are the following:

DESERT HIGHWAY WORK

The continued improvement of the desert lateral from El Centro to San Bernardino will be pushed forward by the reconstruction of that portion of this route from the Arroyo Salado to the northerly boundary of Imperial County. The new road will be built to a higher grade than the existing one, so as to give proper drainage and an adequate system of side ditches is to be constructed to protect the roadbed from damage by the severe desert storms. An asphalt concrete pavement 20 feet wide will be placed on a standard 36-foot roadbed section. The high volume of traffic, including much produce trucking, using this route between the Imperial Valley and the metropolitan area surrounding Los Angeles, necessitates the highest type of highway and improvement of the route to modern standards is being made as rapidly as is possible.

MANHATTAN BEACH BRIDGE

An improvement on the Coast Boulevard as it passes through Manhattan Beach, in Los Angeles County, will be the construction of a reinforced concrete girder bridge 135 feet long, and 60 feet wide with two five-foot sidewalks over the tracks of the Atchison, Topeka and Santa Fe Railroad. This overhead structure is being built in conjunction with the grading and paving of this route through Manhattan Beach, which is now in progress under a contract let by the city of Manhattan Beach.

CHOLAME LATERAL IMPROVEMENT

At the crossing of the Cholame Pass lateral with the tracks of the Atchison, Topeka and Santa Fe Railroad at Wasco, in Kern County, the railroad is now constructing a concrete and steel grade separation and the state has now advertised for bids on the grading and paving with Portland cement concrete the highway through the underpass. This construction is a unit in the improvement of this lateral, which connects the coast route at Paso Robles with the valley route at Famoso, just to the north of Bakersfield.

MARIN REALIGNMENT

Three miles of the Redwood Highway are to be constructed on new alignment between Alto and Waldo, in Marin County. This project is the southerly portion of a new location on this popular route from San Rafael to Sausalito, and will materially shorten the distance between these two cities as well as eliminate the difficult Corte Madera grade. The present improvement will consist of constructing a graded roadbed 46 feet and 56 feet wide and placing a bituminous macadam pavement 30 and 40 feet wide. The new routing crosses the tracks of the Northwestern Pacific Railroad and an arm of Richardson's Bay. This crossing will be effected by the construction of a bridge, which will be advertised for bids in the near future.

FEATHER LATERAL BRIDGE

A project of difficult proportions will be the construction of a steel cantilever bridge across the deep gorge of the beautiful canyon of the North Fork of the Feather River at Pulga in Butte County. The erection of this structure is to be accomplished by two contracts, one comprising the placing of the reinforced concrete abutments and piers and the other entailing the erection of the steel cantilever and anchor arm superstructure. Advertisements for bids on the substructure were published October 22, and the superstructure will be advertised in a week or two. This project is located on the Oroville to Quincy lateral, which is being constructed on a new alignment.

The grading of the adjoining roadway to the south of the bridge and along the precipitous slopes of the canyon side is now under way. The bridge will swing high above the river, crossing over the bridge of the Western Pacific Railroad and carrying the highway to the solid rock wall on the east side of the canyon where future road work will lead the route up the river.

OCTOBER REPORT OF
DIVISION OF MOTOR VEHICLES

FRANK SNOOK, Chief

MOTOR VEHICLE REGISTRATION SHOWS INCREASE

As of October 1, the Division has registered the following number of vehicles as to classification:

Automobiles	1,897,807
Solid trucks	15,299
Pneumatic trucks	79,778
Motorcycles	8,973
Solid trailers	9,321
Pneumatic trailers	36,957
Transfers	435,375

In every classification excepting solid tire truck equipment an increase is noted over 1929. The total fees collected is \$9,320,590.78.

As of October 1, the Division has issued 66,186 nonresident permits. We have also registered 36,656 exempted automobiles, motorcycles and trailers; 139,664 chauffeur licenses have been issued as of October 1.

HIGHWAY PATROL ACTIVITIES

During the past month the men patrolling the highways covered a total mileage of 672,402 miles.

During September, 13,860 stops were made in light tests and 6094 persons arrested.

The Bureau of Brakes examined and submitted for approval during the last month 100 applications for brake adjusting stations and 210 adjusters. At the present time the Division feels that a sufficient number of stations have been authorized to handle the cars cited in our enforcement program and a number of applicants have been advised to this effect. Practically all arrangements have been completed for the enforcement of the brake laws in Los Angeles and should be put in effect in a few weeks. The Los Angeles Police Department has expressed a desire to operate along the lines of the California Highway Patrol in the matter of retesting and allowing a certain period of time for a courtesy campaign before imposing fines. To date there are 1177 authorized brake adjusting stations and 2635 adjusters.

During the month of September, 42,444 applications were received for operators' licenses. Of this number 34,597 were issued. Some were temporarily rejected. One applicant was permanently rejected as incompetent.

PATROL SCHOOL NOW AT MATHER FIELD

On August 4, the California Highway Patrol school moved to new quarters at Mather Field. The first class at Mather Field completed their course of instructions October 1, and on October 4, the second class reported and completed their instructions October 17. We have found the new quarters ideal in almost every way. The health of the men in the last two classes has been excellent, which we attribute in a large measure to the location of the school.

HIGHWAY BIDS AND AWARDS

For Month of October

SAN MATEO COUNTY—Through South San Francisco about 0.9 of a mile to be graded and paved with Portland cement concrete. Dist. IV, Rt. 68, Sec. A. W. A. Dantanville, Salinas, \$104,365; Hanrahan Co., San Francisco, \$89,487; N. M. Ball, Porterville, \$96,600. Contract awarded to Basich Bros. Const. Co., Torrance, \$89,162.50.

SANTA BARBARA COUNTY—About $\frac{1}{2}$ mile north of Santa Maria, 0.6 of a mile to be graded and paved with Portland cement concrete. Dist. V, Rt. 2, Sec. A. Maceo Const. Co., Clearwater, \$33,764; Santa Maria Const. Co., Santa Maria, \$26,227. Contract awarded to Cornwall Const. Co., Santa Barbara, \$22,362.

SAN BERNARDINO COUNTY—At Malaga Street, about 0.3 of a mile to be paved with Portland cement concrete. Dist. VIII, Rt. 9, Sec. A. Matich Bros., Elsinore, \$34,523; F. W. Teschke, Los Angeles, \$33,319; George Gardner & Sons, Redlands, \$33,362. Contract awarded to Martin Green, San Bernardino, \$32,389.70.

LOS ANGELES COUNTY—Bridge across Alamitos Bay near Long Beach. Fifteen 19-ft. timber spans with concrete deck and one 41-ft. 4-inch steel beam removable span. Dist. VII, Rt. 60, Sec. F. J. F. Knapp, Oakland, \$51,945; Oberg Brothers, Los Angeles, \$58,726; Gist & Bell, Arcadia, \$51,799; R. R. Bishop, Long Beach, \$54,682; Merritt, Chapman & Scott, San Pedro, \$55,190. Contract awarded to Carpenter Bros., Inc., Beverly Hills, \$50,545.40.

COLUSA COUNTY—Between Bear Creek and 8 miles west of Williams, construction of new property fence. Dist. III, Rt. 15, Sec. D. A. Mitchell, Sacramento, \$11,499; California Wire Cloth Co., Oakland, \$12,044; B. C. Burnett, Turlock, \$10,970; Standard Fence Co., Oakland, \$11,997; Anchor Post Fence Co., San Francisco, \$8,447. Contract awarded to G. E. McDaniel, Marysville, \$7,843.

LOS ANGELES COUNTY—At Castaic Creek, about 1 mile to be graded and paved with Portland cement concrete. Dist. VII, Rt. 4, Sec. A. McCray Co., Los Angeles, \$41,916; Kovacevich & Price, Inc., South Gate, \$43,421; Gibbons & Reed Co., Burbank, \$45,724; Southwest Paving Co., Los Angeles, \$50,450; Griffith Company, Los Angeles, \$45,130. Contract awarded to F. W. Teschke, Hollywood, \$39,544.

SAN MATEO COUNTY—Between San Mateo and Redwood City, 7.3 miles to be surfaced with bituminous treated crusher run base. Dist. IV, Rt. 68, Sec. C. Healy-Tibbitts Const. Co., \$181,639; Fred W. Nighbert, Bakersfield, \$209,792; Clyde W. Wood, Stockton, \$130,530; Peninsula Paving Co., San Francisco, \$151,970; Granite Const. Co., Watsonville, \$179,615; V. R. Dennis Const. Co., \$163,328; W. A. Dontanville, Salinas, Cal., \$181,389; Basich Brothers Const. Co., Torrance, \$143,169; N. M. Ball, Porterville, \$142,337; C. Mankel, Sacramento, \$173,215; Jack Casson, Hayward, \$163,189; Hemstreet & Bell, Marysville, \$151,691; M. J. Nevada, Stockton, \$144,421. Contract awarded to Fredrickson & Watson, Oakland, \$120,819.75.

DEL NORTE COUNTY—Construction of Maintenance Yard Building at Idelwild, about 9 miles south of Oregon line. Dist. I, Rt. 1, Sec. E. Mercer Fraser Co., Eureka, \$16,700. Contract awarded to Oliver S. Almlie, Crescent City, \$13,868.

HUMBOLDT COUNTY—At High Rock Hill on the Redwood Highway, 0.4 of a mile to be graded and surfaced with untreated gravel. Dist. I, Rt. 1, Sec. D. I. V. Galbraith, Petaluma, \$21,759; Hemstreet & Bell, Marysville, \$16,289; Engelhart Paving Const. Co., Eureka, \$16,617. Contract awarded to Chigris & Sutcos, San Francisco, \$15,020.20.

HUMBOLDT COUNTY—Construction of Maintenance Yard buildings at Garberville. Dist. I, Rt. 1, Sec. A. Smith Bros. Co., Eureka, \$12,237; J. R. Evans, Garberville, \$14,600; Oliver S. Almlie, San Francisco, Louis Halvorsen, Santa Rosa, \$11,841; Mercer-Fraser Co., Eureka, \$13,750. Contract awarded to McCarthy & Johannis, San Francisco, \$10,648.

PLACER COUNTY—Truck shed 80' x 30' and gas and oil house at Roseville Maintenance Station. Dist. III, Rt. 17, Sec. A. W. E. Truesdale, Sacramento, \$4,669; C. J. Hopkinson, Sacramento, \$4,697; Campbell Construction Co., Sacramento, \$4,168; G. E. McDaniel, Marysville, \$5,932; Wilke & Tropper, Roseville, \$4,794; Henry A. Dewing, Walnut Grove, \$5,000. Contract awarded to Yoho & Daugher, Sacramento, \$3,900.

SOLANO COUNTY—Widening to 28 feet 5 existing bridges between Vacaville and Dixon. Dist. X, Rt. 7, Sec. D. Ralph Hunter, Sacramento, \$18,713; P. F. Bender, North Sacramento, \$12,614. Contract awarded to George J. Ulrich, Modesto, \$11,462.95.

IMPERIAL COUNTY—Between Arroyo Salado and north county boundary, 13.1 miles to be graded and paved with asphalt concrete. Dist. VIII, Rt. 26, Sec. DE. Central Cal. Road Co., Los Angeles, \$583,454; V. R. Dennis Const. Co., San Diego, \$544,473; H. W. Rohl Co., Los Angeles, \$549,411; Basich Brothers Const. Co., Torrance, \$575,571; Hanrahan Co., San Francisco, \$499,584; Peninsula Paving Co., San Francisco, \$534,971; George R. Curtis Paving Co., Los Angeles, \$597,795; Gibbons & Reed Co., Burbank, \$549,682; Chas. V. Heuser, Glendale, \$571,072; Clark & Henry Const. Co., San Francisco, \$532,485; Allied Contracting Co., Inc., Omaha, Neb., \$670,749; New Mexico Const. Co., Inc., Albuquerque, N. M., \$552,207; Griffith Co., Los Angeles, \$544,400; Geo. H. Oswald, Los Angeles, \$551,415; Southwest Paving Co., Los Angeles, \$521,596. Contract awarded to R. E. Hazard Contracting Co., San Diego for \$489,125.

HUMBOLDT COUNTY—Removing and replacing timber lift span of the bridge across Eureka Slough at Eureka. Dist. I, Rt. 1, Sec. GII. Fred Maurer & Son, Eureka, \$5,393; Henry Padgett, Fiddlers Landing, \$4,870; Mercer-Fraser, Eureka, \$6,134; Contract awarded to Smith Bros., Eureka, \$4,247.24.

SANTA BARBARA COUNTY—Timber bridge to replace collapsed span across the Santa Maria River. Dist. V, Rt. 2, Sec. A. Santa Maria Const. Co., \$5,432; San Atlas Const. Co., San Luis Obispo, \$5,683; Maceo Const. Co., Clearwater, \$6,100; Greene Const. Co., Los Angeles, \$6,236; Silveria & Robbiss, Ventura, \$6,293; Cornwall Construction Co., Santa Barbara, \$6,368; Theo. M. Maino, San Luis Obispo Co., \$6,906. Contract awarded to William Lane, Paso Robles, \$4,998.60.

The officer had laid violent hands on the drunk who stood on the corner. Finally the drunk got angry.

"Shay," he said, "I've a good notion to punch you again."

"Again?" asked the cop. "Why, you haven't done it the first time."

"Well," replied the drunk, "I had the same notion before."—*Kreolite News*.

DIVISION OF ARCHITECTURE

Awards for Month of October

CALIFORNIA STATE BUILDING, Los Angeles: Contracts for general work awarded to Weymough Crowell Co., Los Angeles, \$635,800; plumbing work to Pacific Pipe and Supply Co., Los Angeles, \$47,673; ventilating work to J. Herman Co., Los Angeles, \$16,850; structural steel to Consolidated Steel Corp., Los Angeles, \$128,775; heating work to Lohman Brothers, Los Angeles, \$33,383; electrical work to H. H. Walker, Los Angeles, \$48,894; granite work to McGilvray Raymond Corp., Los Angeles, \$65,985; elevators to Consolidated Steel Corp., Los Angeles, \$47,900.

HUMBOLDT STATE TEACHERS COLLEGE, Arcata: Contract for putting in a 6-inch sewer main from Gymnasium Building to connect with city sewer system, awarded to A. Brizard, Inc., of Arcata, \$2,736.

Receiving Ward Building, and Auditorium Building, to John Strona of Chino, \$38,990; contract for plumbing, heating and ventilating work to Thomas Haverly Co. of Los Angeles, \$9,840; contract for electrical work to R. R. Jones Electric Co., South Pasadena, \$1,300.

DAM APPLICATIONS, AND APPROVALS

Applications for approval of dams built prior to August 14, 1929, filed with the State Department of Public Works, Division of Water Resources, during the month of October, 1930.

SIERRA COUNTY—Smith Lake Dam No. 287. Mrs. J. C. Knickram, Blairsden, owner; rockfill, 4 feet above streambed with a storage capacity of 100 acre-feet, situated on Smith Creek tributary to Feather River, in Sec. 30, T. 22 N., R. 12 E., M. D. B. and M., for storage purposes, for domestic and irrigation use.

NEVADA COUNTY—Island Lake Dam No. 61512. Nevada Irrigation District, Grass Valley, owner; rock and earth, 11½ feet above streambed with a storage capacity of 330 acre-feet, situated on Canyon Creek tributary to South Yuba River in Sec. 27, T. 18 N., R. 12 E., M. D. B. and M., for storage purposes, for all uses.

NEVADA COUNTY—Middle Lake Dam No. 61-13. Nevada Irrigation District, Grass Valley, owner; rock and earthfill, 10 feet above streambed with a storage capacity of 72 acre-feet, situated on South Fork Canyon Creek tributary to S. Yuba River, in Sec. 23, T. 18 N., R. 12 E., M. D. B. and M., for storage purposes, for all uses.

NEVADA COUNTY—Crooked Lake Dam No. 61-14. Nevada Irrigation District, Grass Valley, owner; rock and earthfill, 10 feet above streambed with a storage capacity of 11 acre-feet situated on South Fork Canyon Creek tributary to South Yuba River in Sec. 23, T. 18 N., R. 12 E., M. D. B. and M., for storage purposes, for all uses.

LASSEN COUNTY—Diversion Dam No. 237-5. Red River Lumber Co., Westwood, owner; timber and earth dam, 12 feet above streambed with a storage capacity of 20 acre-feet, situated on Hamilton Branch tributary to North Fork Feather River in Sec. 14, T. 28 N., R. 8 E., M. D. B. and M., for diversion purposes, for power use.

SAN MATEO COUNTY—Dennis Martin Creek Dam No. 610. A. Schilling, Woodside, owner; earth dam, 20 feet above streambed with a storage capacity of 9.95 acre-feet, situated on Dennis Martin Creek tributary

to Searsville Lake, located in Rancho Canada de Raymundo, for storage purposes, for recreation use.

PLUMAS COUNTY—Long Lake Dam No. 286. Ed Burke, Blairsden, owner; rock dam, 5½ feet above streambed with a storage capacity of 1200 acre-feet, situated on Frazier Creek tributary to Feather River in Sec. 1, T. 21 N., R. 11 E., M. D. B. and M., for storage purposes, for irrigation and power use.

SIERRA COUNTY—Gold Lake Dam No. 286-2. Ed Burke, Blairsden, owner; rock dam, 4 feet above streambed with a storage capacity of 1200 acre-feet, situated on Frazier Creek tributary to Feather River in Sec. 16, T. 21 N., R. 12 E., M. D. B. and M., for storage purposes for irrigation use.

PLACER COUNTY—Quail Lake Dam No. 326. D. H. Chambers, Chambers Lodge, owner; rockfill dam, 6 feet above streambed with a storage capacity of 17 acre-feet, situated on Quail Lake tributary to Lake Tahoe in Sec. 12, T. 14 N., R. 16 E., M. D. B. and M., for storage purposes for domestic, irrigation and power use.

MODOC COUNTY—Duke Reservoir No. 163. Royal E. Williams, Likely, owner; earth dam, 10 feet above streambed with a storage capacity of 20 acre-feet, situated on drainage tributary to Pit River in Sec. 9, T. 39 N., R. 13 E., M. D. B. and M., for storage purposes, for irrigation and stock use.

Applications for approval of plans and specifications for construction or enlargement of dams filed with the State Department of Public Works, Division of Water Resources, during the month of October, 1930.

LASSEN COUNTY—Mud Springs Dam No. 240. Richard Talbot, Portland, Oregon, owner; earth dam, 21½ feet above streambed with a storage capacity of 13,000 acre-feet, situated on Deep Creek tributary to Clear Creek in Sec. 35, T. 31 N., R. 16 E., M. D. B. and M., for storage and diversion purposes for irrigation use. Estimated cost, \$36,700; fees paid \$367.

ORANGE COUNTY—Peters Canyon Dam No. 793-2. Irvine Company, Tustin, owner; earth dam, 41 feet above streambed with a storage capacity of 1030 acre-feet, situated on Peters Canyon in Block 16, Irvine's Subdivision, for storage purposes, for irrigation use. Estimated cost, \$55,000; fees paid, \$550.

AMADOR AND CALAVERAS COUNTIES—Tiger Creek Afterbay Dam No. 97-105. Pacific Gas and Electric Company, San Francisco, owner; arch dam, 85 feet above streambed with a storage capacity of 3800 acre-feet, situated on North Fork tributary to Mokelumne River in Sec. 23, T. 7 N., R. 13 E., M. D. B. and M., for diversion purposes for power use. Estimated cost \$1,200; fees paid \$20.

SHASTA COUNTY—Digger Dam No. 222. G. L. Childs and A. P. Waller, Mantion, owners; earth dam, 22 feet above streambed with a storage capacity of 34 acre-feet, situated on a dry ravine tributary to Digger Creek in Sec. 18, T. 30 N., R. 1 E., M. D. B. and M., for storage purposes, for recreation use. Estimated cost, \$2,517; fees paid, \$25.17.

SAN MATEO COUNTY—Dennis Martin No. 2 Dam No. 610-2. A. Schilling, Woodside, owner; earth dam, 16 feet above streambed with a storage capacity of 8.54 acre-feet, situated on Dennis Martin Creek tributary to Searsville Lake in Rancho Canada de Raymundo, for storage purposes, for recreation use. Estimated cost \$1,200; fees paid \$20.

SISKIYOU COUNTY—Kathriner Dam No. 186. Frank Kathriner, Weed, owner; hydraulic fill dam, 25.9 feet above streambed with a storage capacity of 322 acre-feet, situated on Haystack Draw tributary to Whitney Creek in Sec. 27, T. 43 N., R. 4 W., M. D. B. and M., for storage purposes, for domestic and irrigation use. Estimated cost, \$9,000; fees paid, \$90.

Applications for approval of plans and specifications for repair or alteration of dams filed with the State Department of Public Works, Division of Water Resources, during the month of October, 1930.

NEVADA COUNTY—French Lake Dam No. 61-6. Nevada Irrigation District, Grass Valley, owner; rock dam situated on Canyon Creek tributary to South Yuba River in Sec. 17, T. 18 N., R. 13 E., M. D. B. and M.

NEVADA COUNTY—Sawmill Dam No. 61-10. Nevada Irrigation District, Grass Valley, owner; rock dam situated on Canyon Creek tributary to South Yuba River in Sec. 11, T. 18 N., R. 12 E., M. D. B. and M.

MODOC COUNTY—Plum Canyon Dam No. 139. Alice I. Porter and John Page, Alturas, owners; earth

dam situated on Plumb Canyon tributary to Parker Creek in Sec. 32, T. 42 N., R. 14 E., M. D. B. and M.

NEVADA COUNTY—Floriston Dam No. 305-2. Crown Willamette Paper Company, San Francisco, owner; crib dam situated on Truckee River in Sec. 30, T. 18 N., R. 18 E., M. D. B. and M.

LASSEN COUNTY—Nelson Dam No. 231. Fred S. Benedict, Likely, owner; earth dam situated on Dry Creek tributary to Pit River in Sec. 24, T. 38 N., R. 12 E., M. D. B. and M.

INYO COUNTY—Tinemaha Dam No. 6-26. City of Los Angeles, Los Angeles, owner; earth dam, situated on Owens River in Sec. 25, T. 10 S., R. 34 E., M. D. B. and M.

NEVADA COUNTY—Faucheur Dam No. 61-5. Nevada Irrigation District, Grass Valley, owner; timber dam, situated on Canyon Creek tributary to S. Yuba River in Sec. 13, T. 18 N., R. 12 E., M. D. B. and M.

MODOC COUNTY—Bonde Dam No. 124. M. H. Payne, Merrill, Oregon, owner; earth dam, situated on Antelope Drainage tributary to Tule Lake in Sec. 27, T. 47 N., R. 6 E., M. D. B. and M.

LASSEN COUNTY—Antelope Dam No. 242. Pierre Ducasse, Termo, owner; earth dam, located in Sec. 3, T. 34 N., R. 13 E., M. D. B. and M.

MODOC COUNTY—Upper Roberts Dam No. 157. H. M. Roberts, Lookout, owner; earthen, situated on Antelope Drainage tributary to Pit River in Sec. 29, T. 40 N., R. 7 E., M. D. B. and M.

MODOC COUNTY—Lower Roberts Dam No. 157-2. H. M. Roberts, Lookout, owner; earthen, situated on Antelope Drainage tributary to Pit River in Sec. 11, T. 39 N., R. 7 E., M. D. B. and M.

MODOC COUNTY—Payne Dam No. 143. H. G. Payne, Alturas, owner; earth dam situated on unnamed drainage tributary to E. Fk Pitt River in Sec. 15, T. 41 N., R. 13 E., M. D. B. and M.

NEVADA COUNTY—Middle Lake Dam No. 61-13. Nevada Irrigation District, Grass Valley, owner; rock and earth, situated on S. Fk Canyon Creek tributary to S. Yuba River in Sec. 23, T. 18 N., R. 12 E., M. D. B. and M.

MARIPOSA COUNTY—Mountain King Dam No. 95-11. San Joaquin Light and Power Corporation, Fresno, owner; gravity, situated on Merced River tributary to San Joaquin River in Sec. 1, T. 4 S., R. 17 E., M. D. B. and M.

BUTTE COUNTY—Lost Creek Dam No. 63-2. Oroville-Wyandotte Irrigation District, Oroville, owner; arch dam, situated on Lost Creek tributary to S. Fk Feather River in Sec. 24, T. 20 N., R. 7 E., M. D. B. and M.

SANTA CLARA COUNTY—Lake Ranch Dams A and B No. 622. San Jose Water Works, San Jose, owner; earthen, situated on Beardsley Creek tributary to Los Gatos Creek in Sec. 23, T. 8 S., R. 2 W., M. D. B. and M.

YUBA COUNTY—Lake Francis Dam No. 97-3. Pacific Gas and Electric Company, San Francisco, owner; earth, situated on Dobbins Creek tributary to Yuba River in Sec. 5, T. 17 N., R. 7 E., M. D. B. and M.

SIERRA COUNTY—Upper Sardine Dam No. 294-3. E. A. and J. O. Hayes, San Jose, owners; rock and earth, situated on Sardine Creek tributary to N. Fk Yuba River in Sec. 9, T. 20 N., R. 12 E., M. D. B. and M.

LOS ANGELES COUNTY—Mulholland Dam No. 6-17. City of Los Angeles, Los Angeles, owner; concrete gravity, situated on Weid Canyon in Sec. 3, T. 1 S., R. 14 W., S. B. B. and M.

SAN BERNARDINO COUNTY—Bear Valley Dam No. 803. Bear Valley Mutual Water Company, Redlands, owner; multiple arch, situated on Bear Creek tributary to Santa Ana River in Sec. 22, T. 2 N., R. 1 W., S. B. B. and M.

ALAMEDA COUNTY—Dingee Dam No. 31-14. East Bay Municipal Utility District, Oakland, owner; earth dam situated on unnamed draw, located at Estates drive and Euclid's drive, Oakland.

SIERRA COUNTY—Huntington Flat Dam No. 331-2. Loftus Blue Lead Mines Co., Los Angeles, owner; earth dam, situated on no stream in Sec. 7, T. 21 N., R. 10 E., M. D. B. and M.

SIERRA COUNTY—Mose Emery Dam No. 331-3. Loftus Blue Lead Mines Company, Los Angeles, owner; earth dam, situated on gulch tributary to Cedar Grove Ravine in Sec. 12, T. 21 N., R. 9 E., M. D. B. and M.

SIERRA COUNTY—Gardner's Point No. 331-4. Loftus Blue Lead Mines Company, Los Angeles, owner; earth dam situated on no stream in Sec. 13, T. 21 N., R. 9 E., M. D. B. and M.

SONOMA COUNTY—Lawler Reservoir No. 581-3. California Water Service Company, San Francisco, owner; earth, situated on North Creek tributary to Adobe Creek in Sec. 12, T. 5 N., R. 7 W., M. D. B. and M.

SANTA CLARA COUNTY—Lower Howell Dam No. 622-2. San Jose Water Works, San Jose, owner; earth, situated on Rundell Creek tributary to Los Gatos Creek in Sec. 31, T. 8 S., R. 1 W., M. D. B. and M.

SANTA CLARA COUNTY—Upper Howell Dam No. 622-3. San Jose Water Works, San Jose, owner; earth, situated on Rundell Creek tributary to Los Gatos Creek in Sec. 31, T. 8 S., R. 1 W., M. D. B. and M.

MODOC COUNTY—Little Juniper Dam No. 136. G. M. and J. E. Clark, Alturas, owners; earth, situated on little Juniper Creek tributary to Pit River in Sec. 4, T. 40 N., R. 13 E., M. D. B. and M.

PLACER AND NEVADA COUNTIES—Van Geisen Dam No. 61-9. Nevada Irrigation Districts, Grass Valley, owner; arch dam situated on Bear River tributary to Yuba River in Sec. 2, T. 13 N., R. 8 E., M. D. B. and M.

LASSEN COUNTY—Lake Leavitt Dam No. 236-2. Lassen Irrigation District, Standish, owner, earth dam located in Sec. 15, T. 29 N., R. 13 E., M. D. B. and M.

MODOC COUNTY—James Flat Dam No. 121. W. O. Blasingame and Fred H. Huffman, Alturas, owners; earth dam situated on Mosquito Creek tributary to Willow Creek in Sec. 25, T. 47 N., R. 10 E., M. D. B. and M.

MODOC COUNTY—Ess Ex Dam No. 121-2. S. X. Ranch, Alturas, owner; earth, situated on Salsbury Creek tributary to Pit River in Sec. 6, T. 42 N., R. 11 E., M. D. B. and M.

MODOC COUNTY—Huffman-Antelope Dam No. 121-3. W. O. Blasingame and Fred H. Huffman, Alturas, owners; earth dam situated on Antelope Plains tributary to Pit River in Sec. 11, T. 43 N., R. 10 E., M. D. B. and M.

MODOC COUNTY—Willow Creek Flat Dam No. 121-4. W. O. Blasingame and Fred H. Huffman, Alturas, owners; earth dam situated on Willow Creek tributary to Clear Lake in Sec. 24, T. 46 N., R. 10 E., M. D. B. and M.

PLANS APPROVED

Plans and specifications for the construction or enlargement of dams approved by the State Department of Public Works, Division of Water Resources, during the month of October, 1930.

LOS ANGELES COUNTY—Whittier Reservoir No. 4/18-2. City of Whittier, Whittier, owner; earthen, 543 feet above streambed with a storage capacity of 32.3 acre-feet, situated on a foothill canyon tributary to San Gabriel River in Sec. 16, T. 2 S., R. 11 W., S. B. B. and M., for storage purposes for municipal use.

AMADOR COUNTY—Tiger Creek Dam No. 97-104. Pacific Gas and Electric Company, San Francisco, owner; slab and buttress, 100 feet above streambed with a storage capacity of 540 acre-feet, situated on Tiger Creek tributary to N. Fk Mokelumne River in Sec. 8, T. 7 N., R. 14 E., M. D. B. and M., for regulating purposes, for power use.

Plans for the repair or alteration of dams approved by the State Department of Public Works, Division of Water Resources, during the month of October, 1930.

NEVADA COUNTY—Floriston Dam No. 305-2. Crown Willamette Paper Company, San Francisco, owner; crib dam, situated on Truckee River in Sec. 30, T. 18 N., R. 18 E., M. D. B. and M.

MODOC COUNTY—Plum Canyon Dam No. 139. Alice I. Porter and John Page, Alturas, owner; earth, situated on Plum Canyon tributary to Parker Creek in Sec. 32, T. 42 N., R. 14 E., M. D. B. and M.

LASSEN COUNTY—Nelson Dam No. 231. Fred S. Benedict, Likely, owner; earth, situated on Dry Creek tributary to Pit River in Sec. 24, T. 38 N., R. 12 E., M. D. B. and M.

INYO COUNTY—Tinemaha Dam No. 6-26. City of Los Angeles, Los Angeles, owner; earth, situated on Owens River in Sec. 26, T. 10 S., R. 34 E., M. D. B. and M.

MODOC COUNTY—Bonde Dam No. 124. M. H. Payne, Merrill, Oregon, owner; earth, situated on Antelope Drainage tributary to Tule Lake in Sec. 27, T. 47 N., R. 6 E., M. D. B. and M.

MODOC COUNTY—Kelley & Greiner Dam No. 133. L. McHugh and Geo. L. Dewey, Alturas, owners; earth and rock dam.

SHASTA COUNTY—North Battle Creek Dam No. 97-96. Pacific Gas and Electric Company, San Francisco, owner; rockfill dam situated on North Battle Creek tributary to Battle Creek in Sec. 20, T. 32 N., R. 3 E., M. D. B. and M.

LASSEN COUNTY—Antelope Dam No. 242. Pierre Ducasse, Termo, owner; earth dam situated on Madeleine Plains in Sec. 3, T. 34 N., R. 13 E., M. D. B. and M.

MODOC COUNTY—Upper Roberts Dam No. 157. H. M. Roberts, Lookout, owner; earth, situated on Antelope River tributary to Pit River in Sec. 29, T. 40 N., R. 7 E., M. D. B. and M.

NEVADA COUNTY—French Lake Dam No. 61-6. Nevada Irrigation District, Grass Valley, owner; rockfill, situated on Canyon Creek tributary to S. Yuba River in Sec. 17, T. 18 N., R. 13 E., M. D. B. and M.

MODOC COUNTY—Cantrall Dam No. 140. Charlotte Cantrall, Alturas, owner; earth dam, situated on a ditch tributary to Pine Creek in Sec. 33, T. 42 N., R. 13 E., M. D. B. and M.

BUTTE COUNTY—Lost Creek Dam No. 63-2. Oroville-Wyandotte Irrigation District, Oroville, owner; arch dam situated on Lost Creek tributary to S. Fork Feather River in Sec. 24, T. 20 N., R. 7 E., M. D. B. and M.

SIERRA COUNTY—Upper Sardine Lake Dam No. 294-3. E. A. and J. O. Hayes, San Jose, owners; rock and earth dam, situated on Sardine Creek, tributary to North Fork Yuba River in Sec. 9, T. 20 N., R. 12 E., M. D. B. and M.

BUTTE COUNTY—Magalia Dam No. 73. Paradise Irrigation District, Paradise, owner; earth dam situated on Little Butte Creek tributary to Sacramento River in Sec. 25, T. 23 N., R. 3 E., M. D. B. and M.

SIERRA COUNTY—Huntington Flat Dam No. 331-2. Loftus Blue Lead Mines Co., Los Angeles, owner; earth, located in Sec. 7, T. 21 N., R. 10 E., M. D. B. and M.

EDWARD HYATT, State Engineer.

November 1, 1930.

WATER APPLICATIONS AND PERMITS

Applications for permit to appropriate water filed with the Department of Public Works, Division of Water Resources, during the month of October, 1930.

STANISLAUS COUNTY—Application 6810. Turlock Irrigation District, c/o R. V. Meikle, Chief Eng., Turlock, California, for 800 c.f.s. from Tuolumne River tributary to San Joaquin River to be diverted in Sec. 16, T. 3 S., R. 14 E., M. D. B. and M., for power purposes.

STANISLAUS COUNTY—Application 6811. Turlock Irrigation District, c/o R. V. Meikle, Chief Eng., Turlock, California, for 800 c.f.s. from Tuolumne River tributary to San Joaquin River to be diverted in Sec. 16, T. 3 S., R. 14 E., M. D. B. and M., for domestic purposes. Estimated cost, \$50,000.

TULARE COUNTY—Application 6812. A. E. Stegeman, Posey, California, for .022 c.f.s. from an unnamed spring tributary to Bull Run Creek to be diverted in Sec. 36, T. 24 S., R. 31 E., M. D. B. and M., for recreational purposes. Estimated cost, \$200.

SANTA CRUZ COUNTY—Application 6813. Theodore J. Hoover, Swanton, California, for 5 c.f.s. from Battle Creek tributary to the Pacific Ocean to be diverted in Sec. 35, T. 9 S., R. 4 W., M. D. B. and M., for irrigation purposes. Estimated cost, \$2,500.

SAN BERNARDINO COUNTY—Application 6814. The Metropolitan Water District of Southern California, 222 South Hill St., Los Angeles California, for 15,000 c.f.s. and 717,000 a.f. from Colorado River Tributary to the Pacific Ocean to be diverted in Sec. 4, T. 2 N., R. 27 E., S. B. B. and M., for power purposes. Estimated cost, \$20,000,000.

RIVERSIDE COUNTY—Application 6815. Charles A. Buck, P. O. Box 111, Banning, California, for 0.25 m.f. from an unnamed spring tributary to Whitewater River Watershed to be diverted in Sec. 7, T. 4 S., R. 2 E., S. B. B. and M., for irrigation and domestic purposes. Estimated cost, \$175.

HUMBOLDT COUNTY—Application 6816. George H. Bergin, Weaverville, California, for 150 c.f.s. from Cedar Creek and Horse Linto Creek tributaries to Trinity River to be diverted in Sections 29 and 8, T. 7 N., R. 6 E., H. B. and M., for mining purposes. Estimated cost \$150,000.

EL DORADO COUNTY—Application 6817. H. A. Linthicum and W. D. Meyers, 137 Carmel Ave., Roseville California, for 400 g.p.d. from an unnamed stream tributary to S. Fk. of American River to be diverted in Sec. 24, T. 11 N., R. 16 E., M. D. B. and M., for domestic purposes. Estimated cost, \$200.

ILLUMAS COUNTY—Application 6818. Victor Challen, c/o Cooper Challen Reed Co., Inc., 7 West Santa Clara St., San Jose, California, for 1.0 c.f.s. from Clear Creek tributary to Butt Creek, thence N. Fk. Feather River to be diverted in Sec. 27, T. 25 N., R. 7 E., M. D. B. and M., for mining and domestic purposes. Estimated cost \$100.

EL DORADO COUNTY—Application 6819. H. L. Fowler, Georgetown, California, for 12 c.f.s. from Pilot Creek tributary to Rubicon River, thence Middle Fork American River to be diverted in Sec. 4, T. 12 N., R. 12 E., M. D. B. and M., for irrigation purposes.

SISKIYOU COUNTY—Application 6820. Mrs. Elia E. George, Cecilville, California, for 50 c.f.s. from E. Fk. of Six Mile Creek tributary to E. Fk. of S. Fk. of Salmon River to be diverted in Sec. 11, T. 39 N., R. 10 W., M. D. B. and M., for mining purposes. Estimated cost, \$5,000.

LOS ANGELES COUNTY—Application 6821. Gus Wissendorf, Swartout, California, for 13 c.f.s. from Mine Gulch tributary to Frairle Fork, thence San Gabriel River to be diverted in Sec. 17, T. 3 N., R. 8 W., S. B. B. and M., for mining and domestic purposes.

MODOC COUNTY—Application 6822. Bidwell Electric Co., c/o C. H. Aldridge, owner, Fort Bidwell, California, for 1.0 c.f.s. from Harper Creek tributary to Bidwell Creek to be diverted in Sec. 6, T. 46 N., R. 16 E., M. D. B. and M., for power purposes. Estimated cost, \$1,000.

AMADOR COUNTY—Application 6823. Frank Du Bois, 2951 First Ave., Sacramento, California, for 0.04 c.f.s. from Crystal Spring (formerly Twin Spring) tributary to N. Fk. of Tuolumne River to be diverted in Sec. 31, T. 7 N., R. 12 E., M. D. B. and M., for mining and domestic purposes. Estimated cost, \$1,000.

Permits to appropriate water issued by the Department of Public Works, Division of Water Resources, during the month of October, 1930.

EL DORADO COUNTY—Permit 3579, Application 6727. Issued to Ira W. Kibby, Sacramento, Cal., October 1, 1930, for 0.01 c.f.s. from an unnamed spring in Sec. 15, T. 11 N., R. 17 E., M. D. M., for domestic use.

MONO COUNTY—Permit 3580, Application 6686. Issued to C. E. Brodie, Los Angeles, Cal., October 1, 1930, for 0.01 c.f.s. from Dry Creek in Sec. 33, T. 4 S., R. 30 E., M. D. M., for domestic use. Estimated cost \$175.

MERCED COUNTY—Permit 3581, Application 6603. Issued to J. L. Firpo and J. Caraglio, Cressey, Cal., October 2, 1930, for 4 c.f.s. from Merced River, in Sec. 35, T. 5 S., R. 12 E., M. D. M., for irrigation on 329.7 acres. Estimated cost \$2,200.

MERCED COUNTY—Permit 3582, Application 6479. Issued to C. L. Schmidt, Gustine, Cal., October 2, 1930, for 0.31 c.f.s. from Dry Creek in Sec. 13, T. 5 S., R. 12 E., M. D. M., for irrigation on 25 acres. Estimated cost, \$500.

SAN BERNARDINO COUNTY—Permit 3583, Application 6695. Issued to Robert S. Irwin, Lucerne Valley, Cal., October 3, 1930, for 0.5 c.f.s. from two unnamed springs in Sec. 10, T. 3 N., R. 1 W., S. B. M., for irrigation and domestic on 40 acres. Estimated cost \$3,000.

RIVERSIDE COUNTY—Permit 3584, Application 6623. Issued to O. J. McMahan, Idyllwild, Cal., October 17, 1930, for 0.02 c.f.s. from an unnamed stream in Sec. 4, T. 7 S., R. 3 E., S. B. M., for irrigation and domestic use on 10 acres. Estimated cost, \$2,000.

EL DORADO COUNTY—Permit 3585, Application 6730. Issued to Mrs. Ida Raught et al. Kyburz, Cal., October 17, 1930, for 0.002 c.f.s. from an unnamed spring in Sec. 30, T. 11 N., R. 16 E., M. D. M., for domestic purposes. Estimated cost \$200.

MONO COUNTY—Permit 3586, Application 6547. Issued to Gladys Koebig, Los Angeles, Cal., October 17, 1930, for 240 g.p.d. from small unnamed stream in Sec. 17, T. 4 S., R. 27 E., M. D. M., for domestic use. Estimated cost \$90.

AMADOR, CALAVERAS COUNTIES—Permit 3587, Application 5128. Issued to East Bay Municipal Util.

ity Dist., Oakland, Cal., October 18, 1930, for 375 c.f.s. and 50,000 acre-feet from Mokelumne River in Sec. 26, T. 5 N., R. 10 E., M. D. M., for power use.

COLUSA COUNTY—Permit 3588, Application 6672. Issued to Colusa Development Co. of Colusa, Cal., October 21, 1930, for 9.87 c.f.s. from Sacramento River in Sec. 25, T. 14 N., R. 1 E., M. D. M., for irrigation on 789.7 acres. Estimated cost \$20,000.

COLUSA COUNTY—Permit 3689, Application 6696. Issued to J. W. Browning, Grimes, Cal., October 21, 1930, for 5.95 c.f.s. from Sacramento River in Sec. 6, T. 14 N., R. 1 E., M. D. M., for use for irrigation on 476.2 acres. Estimated cost \$6,690.

STANISLAUS COUNTY—Permit 3590, Application 6574. Issued to J. M. de Souza, Modesto, Cal., October 21, 1930, for 9.41 c.f.s. from Tuolumne River, in Sec. 12, T. 4 S., R. 7 E., M. D. M., for irrigation on 33 acres. Estimated cost, \$1,500.

NEVADA COUNTY—Permit 3591, Application 5876. Issued to Spanish Mining Co., San Francisco, Cal., October 25, 1930, for 15 c.f.s. from Poorman's Creek in Sec. 31, T. 18 N., R. 11 E., M. D. M., for use for power. Estimated cost, \$11,000.

LASSEN COUNTY—Permit 3592, Application 5812. Issued to G. L. Kramer Bieber, Cal., October 25, 1930, for 6.75 c.f.s. from Widow Valley Creek in Sec. 31, T. 39 N., R. 7 E., M. D. M., for irrigation and stock watering on 540 acres. Estimated cost, \$3,000.

SAN BERNARDINO COUNTY—Permit 3593, Application 4807. Issued to Water Conservation Association of Riverside, Cal., October 25, 1930, for 250,000 acre-feet per annum storage from Santa Ana River in Sec. 4, T. 1 S., R. 2 W., S. B. M., for use for irrigation and domestic on 52,640 acres. Estimated cost, \$100,000.

COLUSA COUNTY—Permit 3594, Application 6760. Issued to M. E. Hastings, Maxwell, Cal., October 27, 1930, for 1.0 c.f.s. from Stone Corral Creek in Sec. 33, T. 17 N., R. 3 W., M. D. M., for use for irrigation on 81 acres.

INYO COUNTY—Permit 3595, Application 6724. Issued to Burnham Chemical Co., Westend, Cal., October 28, 1930, for 0.007 c.f.s. from Parsons and Barnett canyons in Secs. 28 and 34, T. 23 S., R. 42 E., M. D. M., for use for industrial and domestic purposes. Estimated cost \$10,000.

SAN BERNARDINO COUNTY—Permit 3596, Application 6736. Issued to Raymon M. Hart of Pine Knot, Cal., October 28, 1930, for 0.014 c.f.s. from an unnamed spring in Sec. 28, T. 12 N., R. 1 E., S. B. M., for irrigation, domestic, and fox raising. Estimated cost, \$500.

SUTTER COUNTY—Permit 3597, Application 6527. Issued to J. T. Cummins Ranch Co. of Knights Landing, Cal., October 28, 1930, for 5.96 c.f.s. from Sacramento River in Sec. 1, T. 12 N., R. 1 E., M. D. M., for irrigation on 476.75 acres. Estimated cost, \$7,000.

MONO COUNTY—Permit 3598, Application 6692. Issued to Henry Heyman, Long Beach, Cal., October 29, 1930, for 200 g.p.d. from Rock Creek in Sec. 33, T. 4 S., R. 30 E., M. D. M., for domestic use. Estimated cost \$200.

TRINITY COUNTY—Permit 3599, Application 6752. Issued to Charles Roderic Delaney, Forest Glen, Cal., October 29, 1930, for 2.5 c.f.s. from Little Rattlesnake Creek in Sec. 17, T. 1 S., R. 8 E., M. D. M. for mining and domestic purposes. Estimated cost, \$100.

JAPAN BANS GRADE CROSSING CLAIMS

While American railroads continue the expenditure of millions of dollars annually on safety devices and educational work to prevent grade crossing accidents, the supreme court of Japan has approached the solution of the problem from an altogether different angle.

"In the future," it is reported in a recent issue of the Japan Advertiser, published in Tokio, "the motorist who races trains to crossings will do so at his own risk. His heirs will have no claim on any railway company, public or private, if his temerity sends him on a journey he had not expected to take so immediately.

"The new ruling," the article continues, "is a recognition of the fact that this is an age of speed and that the country will be benefited more by faster train schedules than by preserving the lives of idiots who race trains to crossings."

NIGHT DRIVING

Big yellow headlights coming down the road,
Little red tail lights, each one with a load;
Whirring of the motor—bang! goes the exhaust.

Hurry, for each minute lagged is a minute lost.

Run up the speedometer—never mind the law—

Pass that poky driver—he's the worst I ever saw!

An extra shot of gasoline, see her waste the oil—

Watch the motometer red—almost at a boil.
Lots of miles behind us—just a few to make—

And we'll beat the record by the risks we take.
Aw, what's the use of rushing, now we trail a truck

On a twisting mountain road—doggone the luck!

—ADRIA S. HARRISON.

THE ROAD OF YESTERDAY

By WILLIAM FELTER

Along the Road of Yesterday
The ox-wain creaked across the plain.
'Twere men of vision blazed the trail,
Or else today had dawned in vain.
A cabin stands beside the road.
Its crumbling walls gone to decay.
Who knows its story? Who can tell
When love and laughter passed this way?

Along the Road of Yesterday
Came caravans for golden gain;
The wrecks still strew the desert sand,
Their bones lie bleaching on the plain.
Who knows what failure or success
Rewarded effort? Who can say
Who faltered? Who at last won through
Uncharted Roads of Yesterday?

For now great highways gird the plain
That once was trackless. Cities sprang
Like magic at Industries' touch—
The whistles shrilled, the school bells rang.
Though sand has drifted o'er the bones
Of those who perished on the way,
Those who won through built monuments
Along the Road of Yesterday.

Sister—Was Maude in a bright red frock at the dance?

Brother—Some of her, darling, some of her.

"Do you know how to find the horse power of a car?"

"No."

"Easy—just lift the hood and count the plugs."—
oil Weekly.

A Message From the Director

By B. B. MEEK, Director of the Department of Public Works

IN THE first issue of CALIFORNIA HIGHWAYS AND PUBLIC WORKS, I wrote to the members of the Department of Public Works as follows:

THE THOUGHT that I would convey to every official and every employee of the Department of Public Works in this, the first issue of CALIFORNIA HIGHWAYS AND PUBLIC WORKS, is that YOU form the BUILDING branch of the state government of California.

To be a builder is a great thing.

To be a BUILDER OF CALIFORNIA should be sufficient to enthral the imagination, arouse the ambition and enlist the energy and the efforts of every one to whom has been given the privilege of such service.

For IT IS a privilege to have an active part in building California into the great commonwealth that geography and nature both intended it to become.

And as the privilege is great, so is the responsibility.

To those of us to whom is now entrusted the responsibility of building the highways of the state; of developing its water resources; of planning, designing and constructing its public buildings, the thought should ever come that if we do our work well, the prosperity, the well being, the happiness of the people of this state for centuries to come will reflect the fact that our service was well and honorably performed.

And it is in these terms of human value that I would ask those who are connected with the department to view their tasks.

When pouring concrete or spreading asphalt, we are building not roads alone, but we are also building happiness, contentment, comfort, patriotism and loyalty into the lives of a whole people.

And so it is with every activity of every division of this department. It is PEOPLE whom we are building and not things. * * *

The department is entitled to your best and independent judgment on all matters that affect your work here. This is no place for "Yes-men" or "Amen-ers."

We must be willing, yes anxious, to work with others, knowing that the job is too big for any one person.

We must give some thought to the other fellow's problems, and in our turn must be willing to accept suggestions from the other fellow. An outside viewpoint sometimes corrects an opinion, faulty by reason of being formed from "too close a close-up."

We must recognize that the interest of this glorious state of ours always comes first.

We must realize that primarily we are dealing with human values.

We must BELIEVE in the California that has been, that is, and that is to be.

Therein is the code for the conduct of our duties.

Accept it as a challenge or receive it as a religion, as you wish.

Be that as it may be, it is the steel tape by which the usefulness of each and every one of us engaged in this work must and will be measured.

In a few days my term of office as Director of the Department will end. At this time, I

desire to thank my associates and co-workers in the department for the magnificent response that has been made to the ideals that we first set before ourselves.

No official could have received more and better cooperation than has been accorded me, both from those immediately associated with me in the great work of building California, and from the public as a whole.

This support has been most loyal, and that is in agreement with the only quality of loyalty that I believe any public official has the right to ask or expect, namely, a loyalty that recognizes that its first obligation lies to the people of the State of California rather than to the particular person who may be in administrative control for the moment. This is a continuing loyalty that takes no cognizance of changes in administration but always gives to the state the best in ability and the best in service that the individual possesses. It is this loyalty that I have desired, a loyalty that recognizes its first duty to the state, and this is the quality of loyalty that I have received.

I bespeak for the new administration and for my successor, the incoming director, the same degree of able and gracious support accorded me, and which has made my work, however heavy it might appear, not a burden, but an ever-continuing and increasing joy.

If we of the Department of Public Works have lived up to the ideals to which we set ourselves four years ago; if we have been able to keep faith with the people of California; if we have been of assistance in relieving the distress of the unemployed; if we have been a factor in building a better and more beautiful state—we can take pride in the fact that while we may be forgotten, yet the work that we have done will live on, adding to the comfort, increasing the prosperity, and ever enriching the lives of the people of the great commonwealth whose privilege it has been ours to serve.

DEPARTMENT GRIEVES AT

DEATH OF DEPUTY DIRECTOR

Corning De Saules, Deputy Director of the Department of Public Works since the reorganization of the department in 1927, died at his home in Sacramento on Tuesday, December 23d. In his death the state lost the services of a faithful, loyal, and able official.

3107 Men Now at Work Under State Highway Unemployment Relief Program

R EPORTS as of Saturday, December 20, 1930, show that the program for unemployment relief upon the state highway system is affording employment to 3107 men who otherwise would be without work.

On that day 1732 men were at work on relief maintenance crews working out from over 200 centers in California. These men are working upon a three-day-a-week basis and are paid \$4 per day. They provide their own board and lodging. The work assigned to them is that which lends itself to the use of a maximum of hand labor and a minimum of machinery.

These crews are organized in addition to the regular maintenance organization. Men given employment on the special relief crews are certified to by community relief agencies as bona fide residents of California and in great need of employment.

In order to afford relief to unemployed labor in the metropolitan areas of California five labor camps have been established and are now carrying their full quota of 250 men each. These camps are respectively located in Plumas County on the Feather River lateral; on the alternate Ridge Route and on the Arroyo Seco Highway in Los Angeles County; on the Yosemite lateral in Mariposa County and on the Carmel-San Simeon Highway in Monterey County. A special relief construction crew of 125 men is working on the latter highway south of Monterey.

The men employed in labor camps are selected by the state free employment agencies and are again selected on the basis of their great need for labor and ability to qualify as bona fide residents of California. They are paid \$3 a day and provided with board and lodging. The special construction crew working out of Monterey and Carmel provide their own board and lodging.

EDITORIALS IN STATE HIGHWAY RELIEF PROGRAM

(From the Gridley Globe)

We like Bert Meek's way of relieving the unemployed.

While Congress, the President, governors, etc., are telling what is going to be done and quarrel over appropriations that under their provisions and restrictions will not provide work for months, and even in some cases a year or two to come, Bert, without unnecessary talk, goes ahead providing more and more work for idle men on the state road system, over which he at present has jurisdiction.

Bert's efforts mean that a thousand or two families are already enjoying food and comfort and that Christmas will mean joy to them.

The other method already means that hundreds of thousands of families are in needless misery and that literally millions of children will have a joyless Christmas.

(From the San Luis Obispo Telegram)

While municipal officials, groups of business men, welfare agencies and similar organizations are holding meetings and talking about what to do for the unemployed, the State of California, through the Highway Commission, is going ahead, giving work to the workless.

California's highway department, under the leadership of Bert B. Meeks, Nipomo boy, and Director of Public Works, jumped into the breach immediately the unemployed crisis reached noticeable proportions, and began to use its organization and all its available funds for relief.

Starting out with plans for establishment of four labor camps in the state to give jobs to at least 1000 men, other plans to give work while the camps were being established, were launched.

Each division of the Commission was authorized to add to the number of men on its maintenance crews, so that in the division with headquarters in San Luis Obispo, 100 men will be on this work before the first of the year.

Still seeking to serve, the officials rushed to completion plans and specifications for contemplated work, advertising for bids at earlier dates than had been planned, so that work would be available during the winter months when, of course, the needs for food and fuel are greatest.
